INCREASE IN BLOC AID TO NORTH VIETNAM

The dispute between the USSR and Communist China has benefited North Vietnam by encouraging a greater display of concern for its economic well being on the part of the disputants. A concrete manifestation of this has been the extension during the past year by the USSR and Communist China of large new credits amounting to $350 million for support of the first Five-Year Plan of North Vietnam (1961-65).

Although there are no indications that either China or the USSR is attempting to become a monopolist in providing aid to North Vietnam, it is apparent that neither is willing to leave the field to the sole influence of the other. It is of common interest to both the USSR and China that North Vietnam develop a well rounded economy, and the two large Communist powers have committed themselves to assist in a comprehensive and diversified economic plan. But, in view of its own economic deficiencies, the fact that China is providing any economic assistance at all to North Vietnam indicates concern that it not be deprived of influence in this bordering state; and the largeness of its program suggests the degree of its concern. Thus, the new Soviet commitments during 1960, even though they may have resulted from motives to which the Chinese could not object, have prompted China to extend additional credits in order to retain a prominent economic role in the economy of North Vietnam.

Economic assistance extended to North Vietnam by the Bloc since 1955 has totaled about $882 million. Of this amount Communist China has extended $457 million and the Soviet Union $365 million. Of the total, about 58 percent--$510 million--has been in the form of credits, with the Soviet Union providing about 50 percent and Communist China roughly 45 percent of the total. These two countries have also been the major sources of grants, supplying together about 90 percent of the total grants of $372 million. Communist China, however, has supplied about 60 percent and the Soviet Union about 30 percent of total grants. Other Bloc countries have given the remaining grants and credits to North Vietnam, some in substantial amounts, others in token amounts (see Table).

Extensions of economic aid to North Vietnam have increased greatly in recent months. The most recent agreement was announced on 31 January 1961 and calls for a long term credit from China amounting to $157 million, the largest credit extended by Communist China to any Bloc or Free World country, for the construction or expansion of 28 industrial and transport enterprises. 1/ Aid for a number of the enterprises covered by this agreement was provided by China under an earlier economic assistance agreement concluded in February 1959. Under the new credit, to be used from 1961 to 1967, China will provide aid for raising the output of the Thai-Ngyuen iron and steel plant to 200,000 tons per year and for

the construction of several smaller iron and steel enterprises. Other assistance will be provided to the chemical and cement industries and for railway and bridge installations. In the field of light industry China will construct three mills for the manufacture of sugar, paper, and cotton yarn.

In November 1960, Communist China signed its first Scientific and Technical Cooperation Agreement with North Vietnam. 2/ Under the agreement China will send to North Vietnam scientists and technicians, furnish technical data in various industrial fields, and train Vietnamese technicians and students in China. In the field of agriculture China had agreed in March 1960 to build eight farms and a middle agricultural technical school. 3/

On 23 December 1960 the Soviet Union extended a credit of $107.5 million to aid in the realization of North Vietnam's Five-Year Plan. 4/ Under the terms of the agreement the Soviet Union will provide economic and technical assistance over the plan period for the construction of 43 new industrial enterprises and projects. Soviet aid will be used to expand the fuel and power industry, lay the foundations for a modern machine-building industry, and strengthen the scientific research institutes in the country. This aid will include the construction of eight thermal and hydro-electric stations with a total capacity of 200,000 kilowatts; the expansion of the Hongay-Campha coal mines; the construction of eight machine-building factories; the construction and equipping of three scientific and research training institutes; and the exploration of mineral resources; as well as the planning of other industrial works. Soviet specialists will be sent to North Vietnam while Vietnamese workers will receive training in the Soviet Union. In addition to this credit, the Soviet Union extended at the same time a grant of $5 million for medicine, insecticides and equipment, and specialists for an anti-malaria program. Also during December 1960, the 1961 protocol of the Soviet-Vietnamese Commission on Scientific and Technical Cooperation was concluded under which the Soviet Union will provide North Vietnam with assistance in the machine tool, electrical equipment, automotive, construction and other industries. 5/

In mid-1960 the Soviet Union extended a credit of $87.5 million for expanding the production and processing of tropical crops (coffee, tea, rubber, fruits) in North Vietnam. 6/ The agreement envisages Soviet assistance in the setting up of a State farm, the reconstruction of existing State farms, the organization of supporting workshop facilities, and the construction of factories for processing tea, coffee, and fruit. Soviet specialists will be sent to North Vietnam and Vietnamese are to be trained in the Soviet Union so that eventually they may take over full operation of the projects.

Although Communist China has striven to maintain as prominent a role as the Soviet Union in the development program of North Vietnam, there has been no apparent effort to compete directly with

the USSR. In fact there are many indications of cooperation in planning and administering an overall aid program that will yield maximum benefits to the economy of North Vietnam. Aid and advice are given in the areas most appropriate to the capabilities of the contributing nations. The Communist Chinese assumed a leading role in the early rehabilitation of North Vietnam's transportation and communications facilities as well as in the reconstruction and development of its irrigation system. In more recent years, Communist China has undertaken the construction of several important light industrial projects, including 10 rice husking plants, two sugar refineries, a cigarette factory, a match factory and a rubber-goods factory, a soap factory, and a knitted-goods factory. A Chinese credit of $75 million, extended in February 1959, is being used to finance construction of several heavy industrial plants, including the Viet Tri and Thai Ngyuen power plants and Thai Nguyen iron and steel plant. In addition to the material assistance provided, the Chinese have provided a large number of technicians to install equipment, to manage operations, and to train indigenous personnel. 7/ It is estimated that about 1,000 Chinese advisers, technicians, and laborers were working in North Vietnam during 1960. More than 3,000 Vietnamese workers and students have gone to Communist China for training during the past five years.

While the Chinese have furnished large quantities of basic materials and manpower, the Soviet Union has sent machinery and equipment in the heavy industrial field. Soviet advisers have been particularly active in the mining and manufacturing industries. Soviet aid projects include the Hanoi Machine Tool Plant, the Lao Kay apatite mine, the Tinh-Tuc Tin mine, the Long-Cam coal mines, and the Viet Tri super-phosphate plant. 8/ In addition about 400 Soviet advisers and technicians were present in North Vietnam during 1960, and about 2,000 Vietnamese were studying at higher educational institutions in the Soviet Union.

Aid from Bloc countries other than Communist China and the Soviet Union has been small by comparison. Poland has built a sugar refinery and several power plants; East Germany has contributed a 500-bed hospital, some modern fishing trawlers, and automatic telephone equipment; and Czechoslovakia has given three plywood factories, a 600-bed hospital, and technical aid in the opening of two zinc mines and a plant for concentrating zinc ore. 9/ The other Satellites have given lesser amounts of technical aid, raw materials, and consumer goods.

Bloc aid to North Vietnam has averaged 12 percent of North Vietnam's GNP over the period 1955-59. Only because of this continuing large net inflow of goods and services from the Bloc has North Vietnam been able to support an investment program of increasing significance. The new credits will enable North Vietnam to continue to develop a diversified construction program and greatly improve the chances of success for the first Five-Year Plan.

SPECIAL NATIONAL INTELLIGENCE ESTIMATE

PROBABLE REACTIONS TO CERTAIN COURSES OF ACTION CONCERNING LAOS

NOTE: This is an advance copy of the estimate as approved by the United States Intelligence Board. The printed text will be circulated within five days of this issuance.

APPROVED FOR RELEASE
DATE: JAN 2001

Central Intelligence Agency

~~TOP SECRET NOFORN~~

Submitted by the

DIRECTOR OF CENTRAL INTELLIGENCE

The following intelligence organizations participated in the preparation of this estimate: The Central Intelligence Agency and the intelligence organizations of the Departments of State, the Army, the Navy, the Air Force, and The Joint Staff.

Concurred in by the

UNITED STATES INTELLIGENCE BOARD

on 5 July 1961. Concurring were the Director of Intelligence and Research, Department of State; the Assistant Chief of Staff for Intelligence, Department of the Army; the Assistant Chief of Naval Operations (Intelligence), Department of the Navy; the Assistant Chief of Staff, Intelligence, USAF; the Director for Intelligence, Joint Staff; the Assistant to the Secretary of Defense, Special Operations; and the Director of the National Security Agency. The Atomic Energy Commission Representative to the USIB and the Assistant Director, Federal Bureau of Investigation, abstained, the subject being outside of their jurisdiction.

5 July 1961

SUBJECT: SNIE 58-2-61: PROBABLE REACTIONS TO CERTAIN COURSES OF ACTION CONCERNING LAOS

THE PROBLEM

To estimate whether South Vietnam and the rest of Southeast Asia can maintain their independence if southern Laos should come under predominant Communist control; and to estimate the consequences of certain courses of action by non-Communist forces in the area.

NOTE

This estimate has been prepared in response to a request by the Department of State for answers to several specific questions relating to certain postulated courses of action. The questions and the courses of action are set forth below, and the paper is organized to correspond

directly to the terms of the request. The assumed courses of action here considered were provided for the purposes of this estimate and are not intended to represent the full range of possibilities.

THE ESTIMATE

I. CONSEQUENCES FOR SOUTH VIETNAM AND SOUTHEAST ASIA OF PREDOMINANT COMMUNIST CONTROL OF SOUTHERN LAOS

Question: If southern Laos falls under predominant Communist control, will it become impossible for South Vietnam to maintain its independence, and will all of Southeast Asia be opened to predominant Communist influence?

A. South Vietnam. The fall of southern Laos would radically increase the already very great difficulty of preserving South Vietnam's independence. The Communists would gain the advantage of a safe haven and secure lines of communications in Laos, and could greatly expand their support of the Viet Cong. This would open the possibility that the Viet Cong campaign in South Vietnam might come to resemble recent Communist tactics in Laos, with the Viet Cong operating from secured areas in which a Communist or ostensibly independent government had been established, militarily and

politically supported by the Bloc. There is, however, no simple correlation between the fall of southern Laos and the fall of South Vietnam. The latter might fall even if southern Laos did not. On the other hand, the Communists face in South Vietnam much more formidable armed forces and a less flabby political situation than they do in Laos. There would be no immediate collapse. The long-term chances for the maintenance of South Vietnam's independence, however, would rest principally on the nature and amount of US support, and on the ability of Saigon to develop the political, psychological, and security programs required to gain and retain popular support.

B. The Rest of Southeast Asia. The fall of southern Laos would greatly increase the difficulties of the non-Communist position in Southeast Asia, but would not of itself inevitably open the area to predominant Communist influence. Long-term developments would still depend not merely on the Communist threat, but on US actions and on those of the various governments in the area.

II. CONSEQUENCES OF CERTAIN GIVEN COURSES OF ACTION

Question 1. What would be the short-term and long-term reactions of the Communists (PL/DRV/Chicom/USSR) to the following military actions in southern Laos and along the Mekong:

A. Coordinated South Vietnamese-Thai-RLG military action, beginning gradually and on a small scale, designed to secure the Savannakhet-Tchepone-Lao Bao line (Route 9) and extending eventually to a cleanup of southern Laos?*

(1) The Communists would probably contest the allied action in the vicinity of Route 9 with whatever forces they considered necessary to resist it, including unacknowledged DRV forces. As the allied action progressed, the Communists at some point would probably declare that the non-Communist side had broken the ceasefire, and would resume military operations throughout the country. At the same time, the Bloc would almost certainly conduct a worldwide political-propaganda campaign to highlight and to condemn the US-backed intervention in Laos.

(2) The degree of Communist military counteraction would depend on the success of the allied operation, and on the Communist estimate of the allied objectives. If their earlier, small-scale responses did not frustrate or neutralize the allied course of action, the Communists would probably expand their military operations in Laos to include attempts to seize Vientiane, Luang Prabang, and other key points. DRV regular forces might be overtly introduced into Laos.

---

* See full text of postulated course at Annex.

(3) The PL/DRV would meanwhile continue to attempt to infiltrate cadres and logistic support to South Vietnam through the mountain routes of eastern Laos.

(4) We do not believe that, in response to course A, DRV forces would make a military attack on South Vietnam, lest they provoke large-scale US counteraction. Neither do we believe that Chinese Communist armed forces would be committed in this circumstance, either in Laos or in South Vietnam.

B. In conjunction with Course A, temporary US occupation of Vientiane, Thakhek, and Savannakhet, together with coordinated actions by Thai, Lao, and Meo troops in the Mekong Valley and northern Laos?*

(1) Pathet Lao forces, with unacknowledged North Vietnamese participation and continued Soviet-DRV-Chinese Communist support, would probably step up the scale of their military actions throughout Laos, with the aim of confining US-allied control to the three towns, and of destroying RLG armed forces and political control elsewhere in the country.

---

* See full text of postulated course at Annex. See also SNIE 10-2-61, "Likelihood of Major Communist Military Intervention in Mainland Southeast Asia," dated 27 June 1961.

PL forces, with DRV cadres, would harass US supply and communications lines, and Communist agents would probably undertake terrorist and sabotage activities within the US-occupied towns.

(2) Depending on the size and apparent intent of the US intervention, it is possible that DRV military forces would be overtly introduced into Laos. Even so, we believe these forces would not, at least initially, attempt to drive the US troops from the towns or otherwise seek direct engagement with US forces.

(3) The Bloc political-propaganda response to course B would be more intense than that estimated for course A above.

(4) The Chinese Communists would probably be more aroused by course B than by A, and might press for a more aggressive DRV response than that estimated. We believe that the USSR would not share the Chinese view, however, and would exert a restraining influence.

(5) The Communists would probably consider that over the longer term, confinement of US and allied forces to the towns in question, together with world pressures on

the US, would place the US in an awkward military-political predicament and might cause the US to withdraw from Laos. If, however, US-PL clashes expanded and the Communists came to believe that US forces threatened Communist-controlled areas of Laos, direct engagement with DRV forces would probably result. It is also possible in this circumstance that the Chinese Communists would introduce forces into Laos, and they would almost certainly do so if the US action appeared to constitute a threat which the DRV forces could not counter.

Question 2. What would be the reaction of the Royal Laotian Government (RLG) and principal political groupings in Laos to the foregoing courses of action?

A. RLG leaders without significant exception would be reluctant to accede to course A unless US forces were also committed. They would be aware that course A implied their having to give up northern Laos including the royal capital of Luang Prabang -- in return for an uncertain venture in the south, still with no guarantee that the US would intervene to save the RLG. General Phoumi's reluctance would stem also from a belief that this course would preclude his salvaging at least some political future for himself in a neutralist government. Nevertheless, with sufficient US urging, the RLG leaders would probably accept course A, in

part because many of these leaders and their troops are southerners. Indeed, many of them might stir themselves to a more effective effort in the south than the RLG has generally shown to date. There would be considerable chance, however, that if Course A did not immediately succeed, much RLG political and military resistance to Communist pressures would evaporate.

B. RLG leaders would strongly prefer that courses A and B be undertaken concurrently. Most of them would welcome course B, hoping that this first step in direct US military intervention in Laos presaged further steps which would restore RLG fortunes. The King would be concerned lest this course involve the loss of Luang Prabang, and his continued backing of US-RLG moves would probably require additional guarantees or assurances to him.

Question 3: What would be the attitudes of:

A. South Vietnam? Diem would probably agree without hesitation to participate in course A, although he would probably seek greater assurance than he now has of US assistance. He would welcome course B as tangible evidence of US determination, but would be aware that this course by itself

would not arrest the flow of Communist cadres and arms into South Vietnam through southern Laos.

B. Thailand? The Thais would be very reluctant to undertake course A. They would interpret it as a further sign of US intention not to commit its own combat forces to Laos, and it has been their position that they would not make a major commitment of Thai forces to Laos unless US military forces were there. Moreover, course A would appear to them to benefit only South Vietnam, while leaving Thailand open to Communist retaliation across the long border with PL-controlled northern Laos. Course B would be welcomed by the Thai because it promised some protection along this border. If they were convinced that course B would follow course A, they might be favorably inclined to the latter.

C. SEATO members? France would probably strongly oppose either course. The UK would probably object to either course as long as the Geneva Conference was continuing, but might not object if the Conference had broken down. Australia, New Zealand, Pakistan, and the Philippines would in general applaud either course.

D. Other Asian states? India, Cambodia, Burma, and Malaya would almost certainly criticize course A, although

certain of their leaders might privately indicate sympathy with it. Their reactions would be more adverse in the case of course B. The GRC would welcome either course, but would be critical of the US for not making a greater intervention, especially if course A alone had been undertaken. The noisy Japanese Left would agitate against both, although the more so in the case of course B. The Japanese Government would be critical of course B, but would generally attempt to dissociate itself from either course.

Question 4: Would the Sino-Soviet Bloc be likely to consider these courses of action as not vital to their own interests and therefore only a limited war?

Yes. Communist reactions, as discussed above, would be based on confidence that the Bloc's capabilities in the Laos area could frustrate the design of courses A or B and preserve Communist assets there without incurring significant risk of unacceptable US responses. Accordingly, the USSR, the DRV, and China would almost certainly limit their response, seeking to force either a US withdrawal or the protracted commitment of US and allied forces to indecisive and humiliating action in a remote area. If the US should extend hostilities in Laos, however, the Bloc would respond vigorously but still almost certainly on a scale intended to avoid the spread of conflict beyond Laos.

Question 5. Would hostilities be limited to the type outlined in the courses of action and is it likely that they could be contained within the area of southern Laos and the Mekong Valley?

The Communists would believe themselves capable, through limited action, of preventing the US from accomplishing its objectives, and they would probably leave a decision to expand hostilities up to the US. Under course B, or in the event of large scale action under course A, the necessity to protect US or allied forces and their supporting lines would pose the constant danger of some expansion.

Question 6. What would DRV reaction be to a US threat or actual air attack against targets near Hanoi or Haiphong if the DRV stepped up its commitment of troops in Laos?

A. We do not believe that in present circumstances the Communists would take such a threat very seriously unless it were accompanied by evidences that the US was preparing for a major military effort in Southeast Asia. Accordingly we doubt that the threat would cause the DRV to alter its courses of action in any significant way. Moscow and Peiping would almost certainly announce their determination to defend the DRV against attack and stress that any such US action would carry the risk of general war.

B. An actual US air attack on the DRV would provoke a strong Bloc response and an entirely new crisis situation. Soviet or Chinese Communist aircraft would almost certainly be committed to the defense of the DRV, and Bloc aircraft might attempt to attack bases from which the US strikes had been mounted. At the same time the USSR would probably seek to keep hostilities from further expanding, and would attempt to marshal world opinion against the US. We cannot rule out the possibility that Communist China, considering the US action a threat to its security, might undertake major military action in Laos, or even in the Taiwan Strait or Korea.

Question 7. Could the recommended courses of action clean up, or effectively curtail, Communist (chiefly Viet Cong) infiltration into South Vietnam? Would they be successful without the commitment of US troops in southern Laos?

Most of the eastern two-thirds of Route 9 is now held by the Communists, with about 1,500 troops on or near the road. About 4,000 additional Communist forces are in Laos south of Route 9. Since the Thai and Vietnamese special forces together total only about 2,000 at present, we do not believe that they could secure the road and the surrounding area, either by themselves or with FAL assistance. To clear the Communists from all of southern Laos would of course be a

still more difficult task. Taking into consideration the Communist capability for reinforcement in the area, we believe that the stated objectives could only be accomplished by a major military operation (major certainly by Laotian standards), involving the commitment of substantial Vietnamese and possibly US forces. The Thai and Vietnamese special forces, by a long-continued harassment of Communist positions, could hinder but probably not effectively curtail Communist infiltration into South Vietnam. Additionally, the postulated courses of action would not solve the problem of continuing Viet Cong success in enlisting the majority of its strength locally in South Vietnam.

Question 8. How long would these recommended courses of action have to be continued in order to safeguard the security of South Vietnam? If the initial actions were successful, could the level of activity in southern Laos be reduced?

A. The Communists are capable of keeping up military and paramilitary pressures in southern Laos for an indefinite period, and they would probably do so.

B. If military action were sufficient to clear the Communists from Route 9 and southern Laos, these pressures would probably be relaxed for a time, as has been the Communist habit when faced with superior force. Given substantial

US, GVN, and Thai support, a Lao government confined to this southern part of the country would probably be able to resist internal and external Communist pressures for some time.

Question 9. Would the recommended courses of action prevent the Geneva Conference on Laos from reaching any agreement, assuming that these actions are taken while the Conference is still in session?

Course A in its initial, inconspicuous stages, would probably have little effect on Communist conduct at the Geneva Conference. Course B or the advanced stages of course A might cause the Communists to withdraw from the Conference, though we believe it more likely that the Communists would use the Conference as a platform for castigating the US intervention as obstructing a Laotian settlement, and would seek to gain political capital from the situation. We do not believe that either course would exert any significant pressure on the Communists to become more reasonable at Geneva.

Question 10. Would the Communist reaction be greater if these actions are taken after the Geneva Conference fails to agree on Laos?

We believe that the Communist response to courses A and B would be influenced more by the military-political situation in Laos and the world reaction to the US-backed moves than by the status of the Geneva negotiations.

ANNEX: GIVEN COURSES OF ACTION

"A. Coordinated moves by picked Vietnamese, Thai, Laos troops to push salients westward from Viet-Nam and eastward from Thailand along Route 9 for the purpose of securing this road and the surrounding area. The Vietnamese would use a four force clean up using (1) hunter-killer groups (whose training will be finished in early July) to locate Commie radio stations and concentrations without engagement. They would radio back the information. The killers would then tailor a force for the job which would smash the target and escape. If these forces were insufficient, ARVN elements would be used. Secretary Thuan reports they are eager to attack Communists in southern Laos. The Thais would use elements of the Thai PARU units who have already fought in Laos. Ambassador Young believes Sarit might be induced to use them in southern Laos in a coordinated effort. Encourage Phoumi to hold his present positions if he can and withdraw to the south if he cannot. Elements of FAL, with US advisers, can be used in the clean up of southern Laos. Continue to supply the Meos by air drop as a built-in force behind the enemy lines for so long as the Meos can hold out (in the forests of Laos this might be a long period). These moves would be supported by US arms and advice, but not by US troops. US air drops and airlifts would be used if necessary. The action would be undertaken quietly over a period of two or three months. The increase in pressure would be relatively gradual for the purpose of avoiding dramatic military confrontations and resultant international excitement. World opinion would be presented slowly with a situation of increasing Thai-Vietnamese strength in the area. This slow pace would be consonant with limited Thai-Vietnamese military potential. It should also be synchronized with increasing world acceptance of the fact that Lao independence and neutrality cannot be guaranteed at Geneva. But the action on Route 9 should be started as soon as possible and <u>not</u> be delayed until the end of the Geneva Conference. Delay will require a larger and internationally more dangerous operation.

"B. If the action along Route 9 succeeded or if it became clear that the Geneva Conference had failed (whichever came first), we decide whether to carry out plans now under consideration (Operation Porkchop) to hold the Mekong Valley and as much of Laos to the north as feasible. It is understood that US occupation forces would move temporarily into Vientiane, Thakhek, and Savannakhet and there would be coordinated actions by Thai, Lao, and Meo troops."

SECRET

6 July 1961

Basic Doctrine Re The Support of Violence Across Borders

1. The United States (and virtually all other nations) has always historically supported the doctrine of nonintervention in the internal affairs of other nations. It has occasionally been suggested that our vigorous, and often self-righteous, public support of this doctrine inhibits us in efforts to counter communist subversion and communist use of violence, especially in the underdeveloped nations, and that we should therefore consider some modification of the doctrine. The counter argument seems however not only to have more support within the U.S. Government but also to have greater validity. It is to the effect that the doctrine of nonintervention, even though universally flouted by the communists, nevertheless is more valuable to us than to them. The reasoning is that although the open societies of the West are less successful than the communist societies in practicing covert intervention while publicly adhering to a doctrine of nonintervention, nevertheless the public doctrine does exercise considerable restraint on the communists. Since it is alleged that the communists, if unrestrained, would have vastly greater capability of violent intervention than the West, the conclusion is that the West can well afford to accept a greater restraint on the use of its lesser capability in order to maintain a ~~greater~~ degree of restraint on the communists' very much greater capability.

2. This appears to be the reasoning behind what might be described as the cold-blooded case for continuing publicly to uphold the doctrine of nonintervention. A more powerful pragmatic case is simply that this doctrine has acquired such wide respectability and appeal that the U.S. could not propose publicly to modify or weaken it without paying an unacceptably heavy price. Accordingly, it is probably not worthwhile to debate whether if we threw off some of the restraints we could not develop a capability fully equal to that of the communists. Realistically, our public commitment to the doctrine of nonintervention has to be accepted as a fact of life.

3. Taking this as a starting point, however, an ingenious application and extension of the doctrine is proposed. It can be expressed in the following propositions:

APPROVED FOR RELEASE
5/21/98

SECRET

JFK LIBRARY
MANDATORY REVIEW
CASE # NLK-97-72
DOCUMENT # 12

(a) Since all nations accept the doctrine of nonintervention, the U.S. is going to treat the activities of any nation which incites and supports violence within another nation as a form of aggression morally equivalent to the military crossing of a border.

(b) When a situation arises in which this subversive form of aggression is threatened or is being practiced, the U.S. will generally favor the use of international control machinery to halt it, provided such machinery can be made to operate with full effectiveness.

(c) If, however, in the face of clear evidence that violence is being supported across an international border, the establishment of international machinery to curb this type of aggression is opposed, or the machinery is ineffective, the U.S. reserves the right to employ force (or to support the employment of force) up to at least the same scope and level in defense of the threatened nation.

(d) Any such unilateral use of force by the U.S., or with U.S. support, will be strategically a defensive action. That is to say, it will have as its purpose to induce a cessation of the subversive aggression to which it is a response.

(e) Nevertheless, in taking such action the U.S. will not deny itself (or its friends) the advantage of the tactical offensive, nor will it limit itself to weapons of the enemy's choosing. Specifically, it will feel free to incite and support violence within the aggressor's territory and to use weapons in which it has an advantage, but will endeavor to avoid major escalation of the scale of violence or sophistication of weapons.

4. In the above form, this doctrine is proposed both as a policy to guide the U.S. response to situations of violence and as a rationale which would underly the public posture of the U.S. As a rationale this amounts to an assertion that the U.S. (a) takes the doctrine of nonintervention so seriously that it is going to treat violent intervention as the equivalent of overt aggression, and (b) recognizes the right of any country which is the victim of subversive violence to practice subversive violence in its own defense. It may well be asked whether this is not a justification for a declaration of war by the victim of subversion against the aggressor. It could, of course, be just that. But

the essence of the doctrine is that, because subversive violence involves the use of force for purposes of aggression but on a scale considerably less than that typical of a declared war, it is necessary to recognize the right of the victim to use force on a similarly limited scale in its own defense. It could well be argued that unless either this remedy of the unilateral limited use of force or the preferred remedy of effective international policing is available, then the doctrine of nonintervention operates one-sidedly to benefit the nation that undertakes violent subversion. In a situation like that existing between the DRV and South Vietnam, it would be difficult to justify to what is called "world opinion" a declaration of war by SVN as a response to the guerrilla activity of the Viet Cong within its own borders. A declared war would indeed involve a major escalation of the scale of violence as well as serious danger of a widening of the conflict. Under these circumstances, a persuasive case could be made to the effect that the doctrine of nonintervention should not deny South Vietnam any remedy against this form of aggression.

5. As an operational policy, this doctrine has important implications for U.S. action in situations of the type to which it is intended to apply.

(a) First, it puts a premium on acquiring persuasive proof that subversive violence is being employed in a particular situation. The test set up in this doctrine is that support is being provided and control exercised across a border. The aggressor country in such a situation has always claimed that the violent resistance is a purely indigenous revolution. Persuasive proof will presumably have to take the form of intercepting communications or of prisoners who can be produced in sufficient numbers or of captured boats, trucks, or aircraft. If the support being rendered across the border is in a mild enough form (for instance limited to money payments), it will usually not be worthwhile to try to invoke this doctrine.

(b) The most interesting concept in the doctrine is that of the tactical offensive and of the independent choosing of weapons. As to the former, the advantages of carrying the war to the enemy's country are obvious. It is particularly unjust that the population which supplies most of the victims in guerrilla warfare should be that of the victim of aggression while the aggressors people and lands

are untroubled. As to the latter, it is indeed high time that we applied ingenuity to the choosing or the development of weapons which involve no major escalation in the degree of sophistication but in which for one reason or another our friends have a relative advantage in a given situation. For instance, small boat operations may be much easier in certain situations than the infiltration of guerrillas into enemy territory by land. We may be able to develop weapons (other than conventional bombs) that could be used from aircraft with effects having some similarity to those of sabotage carried out by teams on the ground.

6. Finally, although the doctrine as here stated makes no specific reference to covert activities, it has an important application to them. It would lose much of its value as operational policy unless, in its aspect as a rationale, it became widely known. Accordingly, it must be assumed that, even if not in some official manner announced by the U.S. Government, public expression would be given to the rationale in various ways. This would have two implications. On the one hand, it would permit the U.S. to support more or less openly certain activities which, without such a rationale, can be supported only covertly. In this way, the adumbration of the doctrine would permit the realm of covert paramilitary action to be narrowed. On the other hand, the political risks of certain covert actions would be significantly reduced, since a rationale for such actions would have been made known publicly. Taking these two implications into account, it seems likely that it would still be desirable for tactically offensive actions, those involving the support of violence within the territory of the enemy, to be done in such a manner as to be at least officially disclaimable. The whole reason for limiting the scale and technical sophistication of a paramilitary action taken in response to violent subversion is to avoid escalation. This advantage is lost if an offensive operation against the aggressor is conducted in such a manner as to compel him to regard it as a formal act of war. Unless, therefore, the enormous advantages of being free to employ the tactical offensive are to be foregone, every precaution should be taken to make such acts symmetrical in form, as well as in scale and technical sophistication, to the strategic offensive originally mounted by the aggressor. This would usually require that the acts be disclaimable but, with the proposed new rationale, it is far less important that they be truly covert.

STATUS REPORT
OF THE
TASK FORCE OF SOUTHEAST ASIA

COVERT ANNEX - LAOS
(11-24 July)

1. On 21 July an estimated force of 1,000-1,500 Vietnamese Communist and Pathet Lao began a "mop-up" operation against the central Laos counterguerrilla force. These guerrilla forces were forced to withdraw to a predesignated rallying point. There is no indication at this time on the extent the enemy is or will follow up their initial success. Friendly casualties were three killed, six injured, and two missing. Enemy casualties were estimated at 40-50 wounded and killed. The enemy captured one radio and a 100-man weapons unit. The friendly force was able to destroy all their heavy weapons prior to their withdrawal.

E0 12958
3.4(b)(1)>25Yrs
E0 12958
3.4(b)(6)>25Yrs
(C)

2. In order to prevent support to the Meo program being considered violation of the Geneva Accords, [redacted] has ceased all ammunition drops to the Meos with the signature of the Geneva agreements. Weapons drops were discontinued on 27 June. Rice and other non-military supply drops will continue.

COVERT ACTIONS IN VIETNAM

1. The following paragraphs summarize the program which CIA is now undertaking in liaison with the Government of Vietnam (GVN). Not included are those purely unilateral activities which are for the most part agent penetrations of government and opposition political parties and of the ministries and security services of the GVN.

EO 12958
3.4(b)(1)>25Yrs
(C)

a. Establishment of intelligence, psychological warfare, political action, and paramilitary nets [redacted]

b. Rural reconstruction operations conducted in the eastern region of South Vietnam employing small teams of volunteers engaged in reactivation of village administration, medical assistance to villagers, establishment of village defense systems, and the formation of intelligence networks to report on Viet Cong agents and activities in villages.

EO 12958

d. Establishment, guidance, training, and financial support to the newly organized Central Intelligence Organization (CIO) which has been given over-all responsibility for collating and evaluating all intelligence from Vietnamese sources and acts as the central coordinating body for intelligence activities of all GVN services, both military and civilian.

e. Training of National Police and Surete Service (NPSS) in counter-subversion techniques and support and guidance of operations run jointly with the NPSS to penetrate the Viet Cong mechanism in South Vietnam. Plans are being developed for revitalizing a nationwide "Special Branch" for Viet Cong penetration operations when final transfer of the NPSS to the CIO is effected within the very near future.

f. Viet Cong penetration operations run jointly with the Military Security Service (MSS) in the Saigon-Cholon area and training of MSS personnel in counter-subversion techniques.

g. Covert political and psychological warfare activities targetted against the DRV and run jointly with the Vietnamese National Army Psychological Warfare Directorate. These include "black" and "gray" radio operations, propaganda leaflet drops over North Vietnam territory, and a letter-writing campaign through which anti-DRV propaganda material is forwarded to North Vietnam via the international mails.

h. [redacted]

EO 12958
3.4(b)(1)>25Yrs
(C)

i. Special intelligence operations with the South Vietnamese Intercept Service against the DRV and Viet Cong targets in South Vietnam.

191482
Copy 1 - 3

2. As an adjunct to these liaison activities with the Vietnamese, both CIA and MAAG are also now entering into an expanded program of placement of intelligence advisors into the military and civilian components of Vietnamese intelligence and security services. In an effort to improve the functioning of the NPSS, CIA is in progress of placing one representative at each of six NPSS Directorates. These CIA officers are to be supplemented by U. S. Army military intelligence specialists who will work with and advise the NPSS at the provincial level, insofar as the NPSS intelligence function is concerned. The CIA officers at the directorate level will, in addition, regularly visit their provincial counterparts to exchange ideas and to improve the targetting and conduct of intelligence operations. MAAG, on its part, is placing intelligence advisors at General Staff J-2, Field Command G-2, Corps G-2, Division G-2, and Regimental S-2 levels. In addition to and separate from these advisors, an intelligence staff is being established under Chief, MAAG to supervise the operations of these advisors and to process information coming from them.

3. The Evaluation Center, which has heretofore existed as a means of collating all source information for use primarily in identifying military targets is also being expanded through contributions of personnel by all U. S. agencies engaged in intelligence collection in Vietnam. A fulltime CIA officer has been assigned to the Evaluation Center.

4. In addition, there has been established an intelligence committee with representatives from appropriate U. S. agencies in Saigon, chaired by CIA, the purpose of which is to provide regular reporting to Washington plus special reporting on emergency situations as they arise.

5. Provincial surveys designed to assess the criticality of intelligence collection, economic and programs, etc., are also now being organized under the direction of Ambassador Nolting.

21482

9c

CIA is contributing to these surveys by the assignment of personnel now in Saigon and by the provision of TDY personnel. It is estimated that these surveys will begin early in December and will last approximately four months.

6. CIA is also exploring with the Department of State the possibility of obtaining policy authorization for the use of a small number of Chinese Nationalist personnel as pilots and Special Forces instructors for covert operations mounted from South Vietnam.

VIENTIANE

Question	Answer
1. What is your assessment of the increase in the fighting capabilities of the FAL forces that will have been brought about during the cease fire and their prospective fighting capabilities as of end of this rainy season. In this connection would particularly like your comments on:	1. Unlikely to be substantially greater than as described in ML 2902 of 1 July. In absence of improved leadership, FAL will be incapable of more than delaying action against enemy at that time.
a. Morale, motivation and willingness to fight.	a. Function of leadership which seriously lacking in FAL.
b. Degree of improvement in technical proficiency.	b. Slow but steady progress with MAAG help. Overall improvement - 20%.
c. Quality of FAL troop commanders.	c. Officers lack leadership ability and competence. There is no short-term solution to this.
d. Areas where U.S. support would be required to provide more effective fighting force (e.g., logistics, communication, engineer, air support, etc.)	d. Cadre FAL using foreign resources, and provide USMTT's to command elements to Battalion level. Logistics a major FAL weakness. Encadrement will help here and MAAG studying best methods.
2. What is your assessment of the improvement in the fighting capabilities of the PL during this period?	2. Improving tactical positions; effecting logistical build-up; morale appears high; has capability of initiating offensive on all major fronts at a time and location of his own choosing.
a. What is your assessment of probable relative strengths of the two forces at the end of the rainy season?	a. FAL capability will continue inferior to pro-Communist forces in Laos.
b. In connection with foregoing, what explicit judgments do you make re extent of current Viet Minh support of PL?	b. VM cadres provided in required numbers; some artillery units 100% VM; some Bns believed to be completely VN as spearhead major enemy offensives.

~~TOP SECRET~~

Vientiane (Cont'd)

c. What account could FAL give against PL, assuming no increase in current level of VM support, if Phoumi were to concentrate his forces in the South trying to hold roughly along the present cease fire lines and to mop up PL pockets in S. Laos including Tchepone area?

c. Concentration of FAL in South would enhance capability to delay PL/KL forces, but no scheme of maneuver can offset leadership weakness of FAL.

3. If you judge Phoumi's forces inadequate for foregoing mission, how large a supplement to those forces from SVN and Thai would be required to do the job?

3. If outside troops are well trained, well equipped, and properly employed, a division with supporting combat arms and adequate logistic support from each of the two countries, a wing of efficient fighter-bombers, and a troop carrier wing would be adequate, provided FAL leadership were improved. Air support should include reconnaissance capability. These forces would permit fairly rapid clearing of organized Communist forces in South, including Vientiane area and consolidation operations to suppress PL guerrillas. This response includes no reinforcement of Pro-Communist forces in Laos by Sino-Soviet cadre, volunteers, or combat units, an assumption which is believed to be unrealistic.

4. What are the current capabilities of Meos and what will be their capabilities by end of rainy season? Are more special forces men needed for Meo training?

4. Improvement of Meo irregular forces continuing at satisfactory pace. Organization deficiencies in hastily armed Meo groups are being corrected and new areas opened for recruitment.

These forces will possess a very substantial guerrilla capability if employed in coordination with effective regular forc in renewed hostilities.

To realize maximum Meo capability, addition of a special forces command and staff detachment and 5 12-man field training detachments are required. This requirement may increase if recruitment potential realized. PARU capability for stiffening Meos should be fully utilized.

Vientiane (Cont'd)

5. Other than major U.S. combat land forces, what level and nature of U.S. support would be required:

a. To generate sufficient willingness to undertake the operation described above?

EO 12958
3.4(b)(1)>25Yrs
EO 12958
3.4(b)(6)>25Yrs
(C)

b. To maximize the operation's chance for success?

[redacted]

Do you see any special problems such as in command relationships or in planning and implementation of operations which might be anticipated given the diverse personalities involved?

What arrangements to you think most likely to be conducive to cooperative effective effort?

What would be the nature and extent of U.S. role in providing guidance or direction to this effort?

7. Is MAAG in Laos adequate in size and qualifications of personnel to meet requirements implicit in such an operation?

5. U.S. air support (see 3 above) and encadrement (see 1.d above). Air support to:
(1) Maintain air superiority
(2) Interdict supply routes
(3) Destroy enemy bases in Laos
(4) Close air support
Phoumi would undertake operation in South Laos if circumstances dictated but would continue to hope for U.S. support. He probably also feels reasonably sure of support from SVN and possibly Thai.

6. Most certainly.

Phoumi would wish overall command of a combined staff though his plans so far do not deal with this. Thai and Vietnamese would probably not like this arrangement in view of their investment in the enterprise and their past observation of FAL efficiency.

A combined staff nominally headed by Phoumi but with a U.S. officer as Deputy or C/S.

It is a question whether this would be acceptable to all concerned in the absence of U.S. ground forces.

7. Headquarters personnel sufficient if projected TD is met. Field representation another matter - need staff advisory team with adequate support, and special forces personnel will be required (see 4 above).

Vientiane (Cont'd)

8. Additional comments.	8. To hold Luang Probang would require perhaps another division. Believe also should consider steps to hold Sayaboury.

BANGKOK

1. What measures do you believe Sarit would be willing and able immediately to undertake in NE Thailand directed toward deterrence of the development of any guerrilla threat in that area which might be expected to arise from Lao situation?	1. If U.S. assures necessary support and if Laos situation requires action, Sarit would probably reorganise set-up in Thailand for better counter-guerrilla deterrence in North and NE Thai which are equally vulnerable to Communist infiltration. First priority is centralised control for intelligence and operations in special security areas. Measures recommended: Position aircraft and ground forces near border; organise Mekong R. patrol; train 2 battalions for specialised warfare; concentrate intelligence effort in NE; train border police.
In this connection, do you now have any specific recommendations on magnitude and nature of U.S. assistance in such a program? For example, do you believe Sarit would be receptive to MAP equipping Thai engineer construction battalion for construction of secondary and access roads?	U.S. to provide 1 squadron of helos and 1 squadron of transports such as Caribou, and field radios. Need U.S. Army Eng. Construction Battalion because Thai do not have such unit. Road network just adequate; to improve and maintain existing roads is large and time-consuming job. U.S. must also develop airfields for airlift capability, build field quarters and facilities for redeployment of Thais to Northern areas, deploy one U.S. Special Forces Bn. to NE, assist in move of Vietnamese minority to internment camps provide relief for Lao refugees, increase political communication capability.

Bangkok (Cont'd)

2. Would Sarit be willing to join a cooperative military action with Phoumi and Diem designed to hold roughly along present cease fire lines, mopping up pockets of PL resistance in S. Laos including Tchepone? If so, what types of support and guarantees would Sarit expect from U.S.?	2. Sarit would join if U.S. ground and air forces also engaged in cooperative military action in Laos. U.S. contribution to include logistic support of RTAF, U.S. ground units, U.S. air support and reconnaissance in Laos, and U.S. aid in air defense of Thailand, possibly U.S. advisor in RTG combat units in Laos, and share financial burden. U.S. to make commitment protect Thai unilaterally and outside SEATO if attacked. Believe fight in Laos would be on large scale, not mop-up unless partition possible.
3. Is the MAAG in Thailand adequate in size and quality of personnel to meet the requirements of the action described above?	3. JUSMAG needs 100 additional positions now for above program. Quality of personnel under review. JUSMAG not organized for operational task and need field headquarters.
4. What is your estimate of the capability of Thai troops if they should become engaged in joint operation with FAL and SVN as projected in 2 above?	4. Thai capabilities good. Would make good anti-guerrilla showing in Thailand and, with U.S. soldiers alongside, would fight well in Laos.
5. Do you see any special problems, such as in command relationships or in planning and implementation of operations which might be anticipated given diverse personalities involved? What arrangements do you think most likely to be conducive to cooperative and effective effort? What would be the nature and extent of U.S. role in providing guidance or direction to this effort?	5. The more U.S. assumes leadership, the less problems in command and intra-national differences. Do not believe Thai would accept command by Lao or Vietnamese, and vice versa. Suggest joint intelligence and planning group be set up - US/Thai/Laos/SVN.
6. Additional comments.	6. Emphasizes urgency due to coming dr season. Stresses need hold Lao Panhandl and all of Mekong Valley. If not hold, eventual U.S. commitment would be large salvage situation.

SAIGON

1. What is your assessment of the likely scale and character of the Viet Cong effort over coming months?

1. VC likely concentrate on increased number small-scale military attacks and political action in all parts of SVN. Stepped-up action in central VN, and near Lao border, and probably in Saigon area expected. Larger scale activity not likely without obvious increase in DRV aid which not expected. DRV overt aggression inhibited by possible ICC action and provocation of U.S. or SEATO intervention. We will emphasise organisation of national revolution [redacted]

EO 12958 3.4(b)(1)>25Yrs
EO 12958 3.4(b)(6)>25Yrs
(C)

VC logistic base not sufficient to support large-scale military operations, but can gain objectives by successful guerrilla action to frustrate GVN armed forces to point of bringing about coup.

2. When are the Vietnamese likely to produce a plan for the systematic elimination of the Viet Cong; and what ideas does Task Force Saigon have about what such a systematic plan should look like?

2. Cannot predict when; continue to press for action. CIP action completed in areas of major command organisation. and concept of operation. Need statement of objectives, statement of responsibilities, machinery for coordination and execution, detailed annexes supporting concept of operation, annex showing geographic priorities for action and goals for pacification phases. Plans must be flexible and recognise prerequisite for military action in strong VC areas.

Saigon (Cont'd)

3. What are the possibilities of further action by Diem's forces against NVN: (1) by airdrops? (2) by coastal raids? What would be Diem's attitude to an enlarged program supported by U.S.?

3. Diem not impetuous man. Actions to date - build intelligence base and provide foundation for restricted harassment and sabotage. He seeks to avoid encouraging any premature violent uprising which would be repressed for lack of sufficient support from free world. Diem sees that larger scale attacks upon NVN would extend DRV's liberty of action against SVN when he has enough problems from DRV's covert attacks.

(1) Accepted tactic, but fears loss of few qualified pilots available to SVN. Within limits outlined above, he would probably accept an enlarged program, especially if modern aircraft and additional crews provided.

(2) Diem accepts coastal infiltration of agents. Any program of raids would be evaluated against above considerations and problems of DRV naval defenses (includes 25 modern Swatow class patrol gunboats).

4. Is the counter-guerrilla training adequate which is being conducted? Do we have the necessary U.S. Special Forces personnel for the job?

4. Quality of training excellent. Problem lies in ARVN making available sufficient forces for training. Success will depend on completion 20,000 increase which will free more operational units for this purpose.

Sufficient U.S. Special Forces personnel are available for the job.

Saigon (Cont'd)

5. What would be the effect upon Viet Nam troop requirements if Diem were encouraged to push out into Laos in order to control infiltration routes? Would Diem be willing to join in a cooperative action with Laos and Thailand to clean up the Panhandle of Laos?

5. Diem concerned with S. Laos and would like to see clean-up action there. His decision to join would have to consider broadening of SVN war and limited available forces to meet current military mean. Believe he would seriously consider some additional forces beyond small number of SVN Special Forces and regulars now engaged in Laos and along Lao border. Such additional forces would be small except might risk commitment larger forces to prevent intensified future VC infiltration through Laos as calculated risk. In latter case, probable only be considered in time frame required ready additional forces already authorized (late 1961). Should be recognized that commitment poses possible escalation (from small to sizeable SVN force). In this case keep in mind that the additional 30,000 increment is needed for internal counter-insurgency at present intensity.

Diem might not insist on actual involvement U.S. forces at outset of cooperative action but would seek commitment to send in U.S. forces if need developed.

EO 12958
3.4(b)(1)>25Yrs
EO 12958
3.4(b)(6)>25Yrs
(C)

What is your assessment in Saigon of the likelihood that Sarit and [redacted] would cooperate in such an effort?

[redacted] Sarit might balk at emphasis on Southern Laos as against all of Mekong Valley (or Thai border). If both operations undertaken, Sarit would join.

6. Additional comments.

6. GVN not capable controlling rugged border infiltration points. Force required for this purpose prohibitive. It is possible, however, control sizeable Communist troop units or supply routes

Saigon (Cont'd)

by location GVN on major avenues of approach and on commanding terrain. Troop commitments for this purpose based same factors as above (see 5). MAAG studying R&D methods halt infiltration which are long range in effect and are expected reduce not stop infiltration.

GVN will have to depend on U.S. advisory capability to plan for large scale or combined operations.

Command should remain national, coordinated by U.S. headquarters. Possible major obstacle might arise in getting agreement on U.S. direction unless U.S. troops committed.

MOSCOW

1. What would be USSR and ChiCom reaction to U.S. action in Laos?

1. Embtell 1721 of 23 Jan 1961 still valid. If large scale hostilities resumed, USSR would seek keep ChiCom out of Laos by providing logistic support themselves, and rely on DRV to provide combat support to PL. However, if operations serious threat to PL, Soviets and ChiCom have analogous interests in seeking prevent Bloc loss of prestige.

Reference telegram states USSR would react, short of total war, if onus of situation could be placed on U.S.

SPECIAL
NATIONAL INTELLIGENCE ESTIMATE
NUMBER 58-62

RELATIVE MILITARY CAPABILITIES OF OPPOSING FORCES IN LAOS

Submitted by the
DIRECTOR OF CENTRAL INTELLIGENCE

The following intelligence organizations participated in the preparation of this estimate: The Central Intelligence Agency and the intelligence organizations of the Departments of State, Defense, the Army, the Navy, the Air Force, and The Joint Staff.

Concurred in by the
UNITED STATES INTELLIGENCE BOARD

on 11 January 1962. Concurring were The Director of Intelligence and Research, Department of State; The Director, Defense Intelligence Agency; the Assistant Chief of Staff for Intelligence, Department of the Army; the Assistant Chief of Naval Operations (Intelligence), Department of the Navy; the Assistant Chief of Staff, Intelligence, USAF; the Director for Intelligence, Joint Staff; the Assistant to the Secretary of Defense, Special Operations; and the Director of the National Security Agency. The Atomic Energy Commission Representative to the USIB, and the Assistant Director, Federal Bureau of Investigation, abstained, the subject being outside of their jurisdiction.

APPROVED FOR RELEASE
DATE: JAN 2001

CENTRAL INTELLIGENCE AGENCY

DISSEMINATION NOTICE

1. This estimate was disseminated by the Central Intelligence Agency. This copy is for the information and use of the recipient and of persons under his jurisdiction on a need to know basis. Additional essential dissemination may be authorized by the following officials within their respective departments.

a. Director of Intelligence and Research, for the Department of State
b. Director, Defense Intelligence Agency
c. Assistant Chief of Staff for Intelligence, Department of the Army
d. Assistant Chief of Naval Operations for Intelligence, for the Department of the Navy
e. Director of Intelligence, USAF, for the Department of the Air Force
f. Director for Intelligence, Joint Staff, for The Joint Staff
g. Director of Intelligence, AEC, for the Atomic Energy Commission
h. Assistant Director, FBI, for the Federal Bureau of Investigation
i. Director of NSA for the National Security Agency
j. Assistant Director for Central Reference, CIA, for any other Department or Agency

2. This copy may be retained or destroyed by burning in accordance with applicable security regulations, or returned to the Central Intelligence Agency by arrangement with the Office of Central Reference, CIA.

3. When an estimate is disseminated overseas, the overseas recipients may retain it for a period not in excess of one year. At the end of this period, the estimate should either be destroyed, returned to the forwarding agency, or permission should be requested of the forwarding agency to retain it in accordance with IAC-D-69/2, 22 June 1953.

4. The title of this estimate when used separately from the text, should be classified: **FOR OFFICIAL USE ONLY**

WARNING

This material contains information affecting the national defense of the United States within the meaning of the espionage laws, Title 18, USC, Secs. 793 and 794, the transmission or revelation of which in any manner to an unauthorized person is prohibited by law.

RELATIVE MILITARY CAPABILITIES OF OPPOSING FORCES IN LAOS

THE PROBLEM

To estimate the relative military capabilities of the government and antigovernment forces now in Laos, assuming no change in the levels of aid and assistance that have obtained over the past several months.

THE ESTIMATE

1. Both government and antigovernment forces have increased their strength and improved their capabilities during the cease-fire.[1] The government forces, which in May were defeated, demoralized, and near collapse, have made relatively greater improvement. Their regular army strength has increased from about 39,000 in May to 51,500, and their total armed strength to over 71,000. Now they are much better trained and equipped, and they have established some self-confidence. They have extensive technical, logistical, and communications support from experienced US, Thai, and Filipino personnel. This has probably provided the government forces important advantages in supply and mobility. US encadrement of army units down to selected battalions and, in some instances to companies, provides stiffening and tactical guidance in combat. Moreover, in the Meo tribesmen the government forces now have for the first time an effective guerrilla force in the enemy's rear, an advantage previously enjoyed only by the antigovernment forces.

2. At the same time, the antigovernment forces have increased their strength from about 20,000 at the time of the cease-fire to about 34,000. This includes experienced North Vietnamese cadres who provide technical and tactical support and about 3,500 regular North Vietnamese combat troops held in readiness for the defense of key areas or for spearheading attacks on government positions. The rate of improvement of the antigovernment forces has probably been slower than that of the government forces. Training facilities available to the antigovernment forces are limited and many of the new troops, particularly those under Kong Le and Kham Ouane, are probably inadequately trained. There has been evidence of some friction between the Kong Le and Kham Ouane forces on one hand and the Pathet Lao on the other due to inequities in the distribution of supply and jealousy concerning command responsibilities in certain areas. This dissension, and lowered morale in some Kong Le units, has

[1] Estimated strengths

Government Forces		*Antigovernment Forces*	
Regular Army	51,500	Pathet Lao	19,000
Auto Defense	11,000	Kong Le	6,000
Meo Guerrillas	9,000	Kham Ouane (Phong Saly)	4,000
TOTAL	71,500	North Vietnamese cadres	1,600
		North Vietnamese combat troops	3,500
		TOTAL	34,100

contributed to the slower rate of improvement by the antigovernment forces as a whole. The antigovernment forces have received considerable additional equipment from the Bloc since the cease-fire. Most important is the recent arrival in the Plaine des Jarres area of 40–50 PT–76 light amphibious tanks, probably manned by North Vietnamese crews. We believe the most effective use of these tanks would be for the defense of the Plaine des Jarres. Outside this area their use would be limited by terrain to main roads. It is also possible that they could be used in support of operations against major lowland objectives, if a protected debouchment had previously been made.[2]

3. In the past there has been wide variation in capabilities among the units on both the government and antigovernment sides. This is still the case; each has its poor and its elite units, making difficult any overall assessment of relative capabilities. The critical weaknesses of the government forces in the past have been their lack of motivation, unstable morale, and poor leadership at all echelons of command. Recent successes in patrol activity and small-scale attacks, as well as formalized training of officers and NCOs, have increased the self-confidence of government troops and resulted in improved leadership by the commanders. However, the retrained and re-equipped government forces have not yet had a significant test, even in a localized skirmish, and their steadfastness under the strain of serious combat is still uncertain. There have been periods in the past when their morale appeared high in times of relative quiet or success, but deteriorated quickly in the face of adversity. Among the antigovernment forces, morale has not heretofore been a critical weakness. The Pathet Lao have maintained discipline and a relatively high degree of effectiveness over a number of years, in times of adversity as well as success. Their morale is probably good. Among the Kong Le and Kham Ouane forces, however, morale appears spotty and probably only a few of these units would perform well. The morale and combat capability of the North Vietnamese forces probably remain good.

4. Major factors in the present military situation are the changes which have occurred since the cease-fire in the deployment and the missions of the opposing sides. The government forces, with greatly reduced territory to control, can concentrate their strength and maintain some reserves for emergency. Their lines of communication are much shorter and, in general, reasonably dependable. The antigovernment forces, by seeking to control large and widely separated areas in Laos, have increased their logistics problems, lessened their mobility and diffused their strength. Their rear areas have poor lines of lateral communication, and some of those are under harassment by the Meo guerrillas.

5. The terrain and difficulties of conducting conventional military operations in Laos are such that it has always been relatively easy to deny control of territory to an enemy. We do not believe that either side has the capability to destroy the other or even to take over and hold key territory in the hands of the other. If either side were to initiate a concentrated offensive, it could probably make considerable initial gains at almost any point it chose to attack. How long and how well it could sustain its advance or retain control of what it occupied would depend in large part upon the extent to which, and the manner by which, the opposing force chose to challenge it.

6. On this basis, we believe that if the antigovernment forces were to concentrate an attack upon an important government stronghold (including almost any one of the major

[2] Weapons in the hands of the government forces capable of stopping the PT–76 amphibious tank are:

2.36 inch	Rocket Launcher	400
3.5 inch	Rocket Launcher	750
57 mm	Recoilless Rifle	300
75 mm	Recoilless Rifle	38
75 mm	Pack Howitzer	12
105 mm	Howitzer	25
M–24	Tank	19
	Grenade Launcher	7,800
	Antitank Mine	16,700

towns along the Mekong) they could probably succeed but could not hold it against a determined counterattack by government forces. Similarly, we believe that the government forces could make initial gains against antigovernment forces on the Tha Thom-Xieng Khouang perimeter or, with even greater effectiveness, in southern Laos. If defeated by sustained government attack, the Pathet Lao and Kong Le troops would quickly revert to guerrilla tactics of the type they have so successfully employed in the past and could continue to contest government authority over wide areas of the country. We believe that in this event the government forces could not establish firm control over presently held Communist territory, particularly in such critical areas as the Plaine des Jarres and Nhommarath-Mahaxay, and the Tchepone area.

7. In short, we believe that the government forces would have a slight edge if fighting were resumed on a pattern comparable to that prior to the cease-fire but intensified as a consequence of the strengthening of both sides over the past several months. This edge would be increased during ensuing months if the conditions of relative quiet which have prevailed during the cease-fire continue and if recent rates of improvement in the two sides are continued. We continue to estimate that the antigovernment forces have the greater capability for guerrilla warfare. We also believe that if the antigovernment position should be endangered or if the areas considered critical by the Communists were threatened by the government forces, the antigovernment forces would be quickly and effectively reinforced from North Vietnam to the degree necessary to protect the threatened area.

SPECIAL

NATIONAL INTELLIGENCE ESTIMATE

Number 58/1-62

(This estimate supplements and in some respects supersedes SNIE 58-62.)

Relative Military Capabilities of Opposing Forces in Laos

Submitted by the
DIRECTOR OF CENTRAL INTELLIGENCE
Concurred in by the
UNITED STATES INTELLIGENCE BOARD
As indicated overleaf
31 JANUARY 1962

APPROVED FOR RELEASE
DATE: JAN 2001

The following intelligence organizations participated in the preparation of this estimate:

The Central Intelligence Agency and the intelligence organizations of the Departments of State, Defense, the Army, the Navy, the Air Force, and The Joint Staff.

Concurring:

Director of Intelligence and Research, Department of State
Director, Defense Intelligence Agency
Assistant Chief of Staff for Intelligence, Department of the Army
Assistant Chief of Naval Operations (Intelligence), Department of the Navy
Assistant Chief of Staff, Intelligence, USAF
Director for Intelligence, Joint Staff
Director of the National Security Agency

Abstaining:

The Atomic Energy Commission Representative to the USIB, and the Assistant Director, Federal Bureau of Investigation, the subject being outside of their jurisdiction.

WARNING

This material contains information affecting the National Defense of the United States within the meaning of the espionage laws, Title 18, USC, Secs. 793 and 794, the transmission or revelation of which in any manner to an unauthorized person is prohibited.

RELATIVE MILITARY CAPABILITIES OF OPPOSING FORCES IN LAOS

THE PROBLEM

To estimate the relative military capabilities of the government and antigovernment forces now in Laos.

THE ESTIMATE

1. In SNIE 58–62[1] we described substantial improvements in training, equipment, morale, and deployment of the Royal Laotian Army (FAR), which had occurred since the cease-fire in May. We estimated that the government forces would probably have a slight edge if fighting were resumed on a pattern comparable to that prior to the cease-fire. We also pointed out that lack of motivation, unstable morale, and poor leadership had been in the past critical weaknesses of the government forces, and that their steadfastness under fire was still uncertain despite the training and new equipment they had received. We also stated our belief that the antigovernment forces would be quickly and effectively reinforced from North Vietnam to the degree necessary to protect any important antigovernment position threatened by the government forces.

2. In recent weeks units of the FAR have had several military clashes with antigovernment forces and have been

[1] SNIE 58–62, "Relative Military Capabilities of Opposing Forces in Laos," dated 11 January 1962.

forced to withdraw each time: (a) between 7 and 10 January, FAR units of Mobile Group 11 on sweeping operations in the Nam Beng Valley region southwest of the antigovernment stronghold and supply depot of Moung Sai were hit and dispersed by enemy forces; (b) on 18 January, after a series of air strikes and of probing and sweeping operations in the Nhommarath-Mahaxay area, some 70 kilometers north and east of Thakhek, government forces mounted an attack on Mahaxay. The antigovernment forces in the region counterattacked and, in the ensuing action, the 8th Infantry Battalion of Mobile Group 14 was dispersed (though later reorganized about 10 miles to the rear) and the 24th Infantry Battalion of Mobile Group 12 withdrew under enemy pressure; (c) on 22 January, government forces attacking at Ban Nam Mo—35 kilometers east of Nam Tha in northern Luang Prabang Province—were repulsed and over the following week driven back to Nam Tha. General Phoumi has airlifted a battalion of troops from Paksane to reinforce his two battalions at Nam Tha, but the position of the government forces there is still seriously threatened. Although the evidence as to the numbers involved is inconclusive, North Vietnamese cadres and combat troops supplemented the Pathet Lao/Kong Le forces, and it is likely that they played an important part in the recent operations.

3. We now estimate that there are about 9,000 North Vietnamese troops in Laos (6,000 combat; 3,000 cadre and support) as compared with about 5,000 estimated in SNIE 58–62. Two battalions of North Vietnamese (as many as 1,000 men) may have entered Laos in recent weeks; the balance is attributable to a reassessment of indications previously available, and to new evidence. Our estimates of the numbers of North Vietnamese in Laos are highly tenuous because of the various possible interpretations of the available evidence. Moreover, the numbers may change quickly; the North Vietnamese are well organized and prepared to move units easily to and fro across the Laotian-North Vietnamese border.

4. The performance of FAR units in recent skirmishes was not as unsatisfactory as it generally was immediately before the cease-fire. It is clear, however, that problems of morale and leadership are still critical. We now believe it was too optimistic to estimate in SNIE 58–62 "that the government forces would have a slight edge if fighting were resumed on a pattern comparable to that prior to the cease-fire but intensified as a consequence of the strengthening of both sides over the past several months." In particular, we believe that the FAR is unable to deal with any substantial number of North Vietnamese forces, whom they greatly fear. The Communists are able to bring these forces into play where they wish or need to do so.

5. Although outnumbered by the Lao armed forces, the antigovernment forces now in Laos have a superiority in artillery and armor. They are generally capable of maintaining their main forward positions and of conducting local operations to counter aggressive actions by the government forces. Without further external reinforcements, they could, by concentrating their forces, seize and hold certain key positions now held by government troops. If reinforced by additional combat units from North Vietnam, they could quickly overrun the remainder of Laos.

CENTRAL INTELLIGENCE AGENCY

DISSEMINATION NOTICE

1. This estimate was disseminated by the Central Intelligence Agency. This copy is for the information and use of the recipient and of persons under his jurisdiction on a need to know basis. Additional essential dissemination may be authorized by the following officials within their respective departments:

a. Director of Intelligence and Research, for the Department of State
b. Director, Defense Intelligence Agency, for the Office of the Secretary of Defense
c. Assistant Chief of Staff for Intelligence, Department of the Army, for the Department of the Army
d. Assistant Chief of Naval Operations (Intelligence), for the Department of the Navy
e. Assistant Chief of Staff, Intelligence, USAF, for the Department of the Air Force
f. Director for Intelligence, Joint Staff, for the Joint Staff
g. Director of Intelligence, AEC, for the Atomic Energy Commission
h. Assistant Director, FBI, for the Federal Bureau of Investigation
i. Director of NSA, for the National Security Agency
j. Assistant Director for Central Reference, CIA, for any other Department or Agency

2. This copy may be retained, or destroyed by burning in accordance with applicable security regulations, or returned to the Central Intelligence Agency by arrangement with the Office of Central Reference, CIA.

3. When an estimate is disseminated overseas, the overseas recipients may retain it for a period not in excess of one year. At the end of this period, the estimate should either be destroyed, returned to the forwarding agency, or permission should be requested of the forwarding agency to retain it in accordance with IAC-D-69/2, 22 June 1953.

SOURCE [redacted]

1. [redacted] THE STRATEGIC HAMLETS' PROGRAM WOULD BE MORE THAN A METHOD OF AFFORDING DEFENSE FOR THE POPULATION OF VIETNAM, IT WOULD BE A BASIC STRATEGY FOR THE DEVELOPMENT OF VIETNAM. [redacted] A COMMON COMPLAINT IN VIETNAM WAS THE WEAKNESS OF ITS CADRES, WHO FAILED TO TURN THE GOVERNMENT'S REVOLUTIONARY PROGRAM INTO REALITY. [redacted] THE COMPLAINT WAS ONLY PARTIALLY TRUE, AS THE OTHER ASPECT HAD BEEN THE INABILITY OF THE CADRE TO OPERATE IN THE CONDITION OF INSECURITY IN THE COUNTRYSIDE. IT WAS NECESSARY FOR THE GOVERNMENT TO SO ORGANIZE THE SITUATION THAT THE CADRE COULD BE PLACED IN THE AREA OF HIS WORK AND AFFORDED THE NECESSARY PROTECTION AND FACILITIES FOR THE WORK. THE STRATEGIC HAMLETS' PROGRAM WOULD PROVIDE BOTH OF THESE.

[redacted] JAN 1998

(16)

2. THE PROGRAM [redacted] HAD THREE MAIN ELEMENTS WHICH WOULD MAKE IT PARTICULARLY APPROPRIATE FOR VIETNAM.

A. IT WAS FIRST OF ALL TRADITIONAL, RESTING UPON THE BASIC UNIT OF VIETNAMESE SOCIETY. THUS IT CAPITALIZED UPON THE INGRAINED HABITS OF THE POPULATION.

B. THE SECOND ASPECT WAS THAT IT WOULD AFFORD THE MEANS TO MODERNIZE VIETNAMESE LIFE. [redacted] IT WAS LESS A PROBLEM OF RAISING THE STANDARD OF LIVING THAN OF CHANGING THE MODE OF LIVING. [redacted] IF ATTENTION WAS GIVEN TO INSERTING NEW MODES OF LIFE INTO THE ORDINARY PEASANT'S EXISTENCE, IT WOULD INEVITABLY BRING SUBSTANTIAL CHANGES IN HIS ORIENTATION. [redacted] COMPARED THE RESULT OF THE INSERTION OF SMALL AUTOMOBILES, WASHING MACHINES, ETC., INTO THE LIFE OF THE EUROPEAN WORKING CLASS WHICH HE CLAIMED HAD DISRUPTED COMMUNIST INFLUENCE OVER THIS CLASS. AS A RESULT [redacted] MOST EUROPEAN COMMUNIST PARTIES OPPOSED MODERNIZATION. [redacted] THE ASIAN COMMUNIST PARTIES WERE LESS INTELLIGENT IN THEIR APPROACH, AS THEY ADVOCATED MODERNIZATION OF ASIAN LIFE WITHOUT REALIZING THAT IT WOULD INEVITABLY REDUCE THEIR OWN ORGANIZATIONAL POWER. [redacted] A STUDY OF STEPS APPROPRIATE FOR VIETNAM ALONG THIS LINE SHOULD BE MADE AND A CONSCIOUS EFFORT DEVOTED TO INSERTING THESE NEW MODES OF LIFE INTO VIETNAM. AS AN EXAMPLE [redacted] THE EFFECT OF DISTRIBUTING BICYCLES WITH MICROMOTORS, THUS MAKING THE PEASANT MOBILE AND CHANGING HIS MODE OF LIFE. THE STRATEGIC HAMLET [redacted] WOULD AFFORD THE NECESSARY PROTECTION AND ECONOMIC BASE FOR SUCH A MODERNIZATION PROGRAM.

C. THE THIRD ELEMENT, [redacted] WOULD BE DEMOCRATIZATION. [redacted] DEFINED IT AS THE APPLICATION OF LAW AND ORDER TO RURAL LIFE. [redacted] AT PRESENT THE PEASANTS WERE EXPOSED TO ILLEGALITY BY THE VIETNAMESE COMMUNISTS AND BY GOVERNMENT OF VIETNAM (GVN) ELEMENTS, BOTH MILITARY AND CIVIL. THIS WAS IN PART A RESULT OF THE DISPERSION OF THE POPULATION AND ITS INABILITY TO ASSUME ITS OWN GOVERNANCE. AS AN INDUCEMENT TO FORM A STRATEGIC HAMLET [redacted] THE POPULATION SHOULD BE ASSURED THAT THE HAMLET WOULD BE GUARANTEED THE FULL APPLICATION OF LAW BY ITS OWN AUTHORITIES, THUS MOVING IT TOWARD A SYSTEM OF DEMOCRATIZATION APPROPRIATE TO THE COMMUNITY. HOWEVER, IT WOULD HAVE LITTLE OR NOTHING TO DO WITH CHANGES OF THE GOVERNMENT IN SAIGON. [redacted] ONE COULD CHANGE THE GOVERNMENT IN SAIGON 35 TIMES WITH NO EFFECT UPON THE REAL SITUATION IN THE COUNTRYSIDE, BUT THAT THE APPLICATION OF THE STRATEGIC HAMLETS' SYSTEM WOULD DEFINITELY AFFECT THE DEMOCRATIZATION OF THE COUNTRYSIDE IN A WAY WHICH TOUCHED THE POPULATION ITSELF. THE STRATEGIC HAMLET WOULD ALSO, [redacted] AFFORD A BASIS FOR THE BUILDING OF INSTITUTIONS IN VIETNAM TO GIVE ADDITIONAL STABILITY, E.G., COOPERATIVES, MEDICAL SERVICES, EDUCATION, WOMENS' MOVEMENTS, YOUTH MOVEMENTS, ETC.

3. [redacted] THE STRATEGIC HAMLETS' [redacted] AND HAD MADE ONE VERY STRONG ADDITIONAL POINT TO THEM. [redacted]

[redacted] THAT THERE WAS MUCH DISCONTENT AMONG THE VARIOUS LEVELS OF THE GOVERNMENT, WHICH, [redacted] STEMMED FROM THE GOVERNMENT'S APPROACH TO THE JOB. ANY LOCAL OFFICIAL WHO FACED A PROBLEM MADE A REQUEST TO HIS NEXT HIGHER AUTHORITY FOR ASSISTANCE AND WAS DISCONTENTED IF THE ASSISTANCE WAS INADEQUATE. THE NEXT LEVEL REQUESTED THE CHIEF OF PROVINCE, WHO REQUESTED ASSISTANCE FROM THE MINISTRY, AND HAD THE SAME REACTION. THE MINISTER MADE THE REQUEST OF THE PRESIDENT AND WAS DISCONTENTED AT INADEQUATE SUPPORT. THEORETICALLY, THE PRESIDENT SHOULD MAKE REQUESTS OF THE AMERICANS AND BE DISCONTENTED WITH THE AMERICANS FOR LACK OF ADEQUATE SUPPORT. [redacted] THE ENTIRE PROCESS WAS INFANTILE, AND A CHILDISH WAY OF DEPENDENCE UPON A SUPERIOR TO SOLVE ONE'S PROBLEMS. [redacted] IT WAS NECESSARY TO DEVELOP A MATURITY IN THE VIETNAMESE PEOPLE SO THAT THEY WOULD TAKE THE RESPONSIBILITY FOR SOLVING THEIR OWN PRORLEMS, UTILIZING SUCH ASSISTANCE AS WAS GIVEN THEM, BUT NOT ATTEMPTING TO SHIFT RESPONSIBILITY FOR THE SOLUTION OF THE PROBLEM. [redacted] THE STRATEGIC HAMLET WAS THE WAY TO INTRODUCE THE PROCESS OF BEGINNING MATURITY TO THE VIETNAMESE PEOPLE AND THE GOVERNMENT. [redacted] THE OFFICIALS WERE MUCH AMUSED AT THE DESCRIPTION OF THE DISCONTENT AND FOUND MUCH VALIDITY IN HIS STATEMENT OF HOW TO OVERCOME IT. [redacted] IT WAS NECESSARY TO KEEP REPEATING THE LESSON, AS OTHERWISE THE OLD HABITS OF DEPENDENCE UPON POWERS ABOVE WOULD RETURN AND THE WHOLE VICIOUS CYCLE OF DISCONTENT WOULD START AGAIN.

4. [redacted] THE STRATEGIC HAMLETS' PROGRAM BE CONDUCTED UNDER THE FULL CONTROL OF THE NEW INTERMINISTERIAL COMMISSION. [redacted] THE GOVERNMENT DID NOT WISH A REPETITION OF THE ERRORS MADE IN THE INITIATION OF THE AGROVILLE PROGRAM. [redacted] THE NECESSITY OF EXPLAINING TO THE POPULATION WHAT IT WAS BEING ASKED TO DO AND OF FOLLOWING VERY STRICT RULES, FOR INSTANCE, THAT THE POPULATION BE ASKED TO ASSIST ONLY IN ITS OWN LOCALITY AND NOT BE REQUIRED TO WORK ON DISTANT AREAS. [redacted] THE PROVINCE CHIEFS WERE INSTRUCTED NOT TO LAUNCH OFF IN ALL DIRECTIONS, CREATING STRATEGIC HAMLETS ACCORDING TO THEIR OWN IDEAS, BUT TO FOLLOW THE PROGRAM AND PATTERN TO BE ESTABLISHED BY THE STRATEGIC HAMLETS' COMMITTEE.

5. [redacted] DISSEM. STATE ARMY NAVY AIR MAAG AID CINCPAC PACFLT ARPAC PACAF.

(C)

[redacted]

EO 12958
3.4(b)(1)>25Yrs
(C)

d. through i.: No significant change.

2. through 6.: No significant change.

7. Other Activities:

Several VC attacks have been carried out against 12 fortified Rhade villages near Ban Me Thuot. Trained Rhade from the training center pursued the VC and prepared an ambush in which one armed VC was caught and killed. Following the attacks friendly patrols from the Rhade training center visited each village, gave assistance, and helped to repair damage. As a result of the VC attacks and the support furnished by the Rhade training center, additional Rhade volunteers have approached the training center seeking arms and training.

STATUS REPORT ON COVERT ACTIONS IN VIETNAM (Keyed to 28 November Report)

1. a. Montagnard (Highlander) Program:

174 Rhade highlanders completed training at Buon Enao in Darlac Province and returned to the villages. Three VC surrendered and are being interrogated. Training was initiated at Buon Enao for neighboring villagers. Each villager will be trained for four days. Seventy-Six men trained and dispatched to their home village; 60 additional men are in training. In Truong Hoa, 10 cadre previously trained under supervision of U.S. personnel, begain training 20 to 30 Vietnamese personnel selected from each village in the neighborhood.

A highlander intelligence net provided information which led to two Vietnamese Army operations in the first and second corps area. The results of both operations were highly pleasing to the corps commanders. CAS Saigon is being requested to furnish additional details on these operations.

b. No significant change.

18 April 1962

STATUS REPORT
ON
COVERT ACTIONS IN VIETNAM
(Keyed to 28 November Report)

1. a. Montagnard (Highlander) Program:

According to reports received by the Vietnamese Army tactical area commander, the VC in Darlac Province are disturbed over progress being made in the highlander village defense program and its eventual reduction of their operational freedom. The VC have decided on two countering measures: to overrun the villages by force, or convert the villagers to their side after they have been trained and armed.

A program to recruit a company of highland trail watchers in Quang Tri Province was initiated, and CVN authorities agreed to use the graduating class of the highlander school of the social action directorate at Hue for use as civic action cadre in conjunction with this trail watcher program.

b. Rural Reconstruction Operations:

On 13 April the second five-week civic action ministry paramilitary training course at Danang Training Base graduated 100 civic action cadres and 100 youth leaders. Most of the civic action group were then assigned to Binh Duong Province for duties with operation SUNRISE.

STATUS REPORT
ON
COVERT ACTIONS IN VIETNAM
(Keyed to 2 May Report)

1. a. Montagnard (Highlander) Program:

On 24-25 April several of the fortified hamlets built by the Rhade ethnic tribesmen in the Buon Enao area of Darlac Province were again attacked by Vietnamese communists (VC) under the leadership of a NVN captain who was in uniform. Vietnamese National Army reinforcements helped the fortified village repulse the attack.

On 28 April approximately 3,000 Rhade from north of Buon Ho, which is in the 38 hamlet Rhade defense complex, came to Buon Enao seeking refuge from the Viet Cong and volunteered for resettlement and training against the Viet Cong.

An additional 330 Montagnard (Highlander) Commandos were recruited to be trained as commando teams in six of the CVN provinces; the provinces of Phu Yen, Khanh Hoa and Tuyen Duc were included.

b. Rural Reconstruction Operations:

200 additional civic action ministry cadres arrived at the Thu Duc training center (near Saigon) for a weapons familiarization course

EO 12958 3.4(b)(1)>25Yrs
EO 12958 3.4(b)(6)>25Yrs
(C)

c. Para-Military/Intelligence Operations Against Viet Cong [redacted]

At the Danang training center near Tourane, 350 members of the force populaire, an organization of the elite youth of CVN, also began a weapons familiarization course.

D. Joint Penetration Operations with National Police and Security Services (NPSS):

The first course for 73 Domestic Intelligence Service officers (DIS) was graduated the last week of April and further on-the-job training is carried out in the Saigon area.

Dr. Tran Kim Tuyen, Director of SEPES, stated that some coolness had developed between President Diem and his political advisor and brother, Ngo Dinh Nhu, which resulted in delays and confusion in the implementation of joint programs. Further Dr. Tuyen described a developing mistrust by Diem of key government figures such as Assistant Minister of National Defense Nguyen Dinh Thuan. Minister for Civic Action, Ngo Trong Hieu has also described differences in policy in the President's family.

Buildings were obtained and rennovation will be started for the future headquarters of DIS and the National Interrogation Center. Temporary quarters have been obtained in order that interrogation center work could begin.

EO 12958 3.4(b)(6)>25Yrs
(C)

been completed.

6. [redacted]

No significant change.

7. Other Activities:

After considerable prodding through CAS liaison and unilateral channels, the GVN was influenced to permit the formation of the National Student Congress representing all university students. This is a reversal of policy heretofore strictly limited and monitored activities of a small national union of students.

SPECIAL NATIONAL INTELLIGENCE ESTIMATE

cve

THE CURRENT MILITARY SITUATION AND OUTLOOK IN LAOS

NOTE: This is the final version of the estimate and additional text will not be circulated.

APPROVED FOR RELEASE
DATE: JAN 2001

Central Intelligence Agency

Submitted by the

DIRECTOR OF CENTRAL INTELLIGENCE

The following intelligence organizations participated in the preparation of this estimate: The Central Intelligence Agency and the intelligence organizations of the Departments of State, Defense, the Army, the Navy, the Air Force, The Joint Staff, and the Director of the National Security Agency.

Concurred in by the

UNITED STATES INTELLIGENCE BOARD

on 14 May 1962. Concurring were the Director of Intelligence and Research, Department of State; The Director, Defense Intelligence Agency; the Assistant Chief of Staff for Intelligence, Department of the Army; the Assistant Chief of Naval Operations (Intelligence), Department of the Navy; the Assistant Chief of Staff, Intelligence, USAF; the Director for Intelligence, Joint Staff; and the Director of the National Security Agency. The Atomic Energy Commission Representative to the USIB and the Assistant Director, Federal Bureau of Investigation, abstained, the subject being outside of their jurisdiction.

CLASSIFICATION OF TITLE IS OFFICIAL USE ONLY WHEN USED SEPARATELY

WARNING

This material contains information affecting the National Defense of the United States within the meaning of the espionage laws, Title 18, USC, Secs. 793 and 794, the transmission or revelation of which in any manner to an unauthorized person is prohibited.

~~SECRET~~

CENTRAL INTELLIGENCE AGENCY

14 May 1962

SUBJECT: SNIE 58-4-62: THE CURRENT MILITARY SITUATION AND OUTLOOK IN LAOS

THE PROBLEM

To assess the military situation and outlook and to estimate Communist short-run intentions in Laos.

THE ESTIMATE

I. THE SITUATION

1. Following the rout of Nam Tha, Laotian Government influence has been virtually eliminated from all of north and northwestern Laos. Although Luang Prabang is still in government hands, its last main avenue of supply, which ran from Thailand through Ban Houei Sai and down the Mekong, has been interdicted eastward from Pak Beng. Communist units have been for some time in key positions about the city and could take it at

will. Many of the Laotian troops defeated at Nam Tha have crossed the Mekong at Ban Houei Sai and are assembling in northern Thailand for airlift back to Laos. Among the eight Royal Laotian Government (RLG) battalions at Nam Tha were Phoumi's three best paratrooper units. The surviving troops will have to be regrouped, retrained, and largely re-equipped. Their morale has been shattered and their combat effectiveness is, at present, nil.

2. The defeat at Nam Tha and the subsequent forced withdrawal into Thailand following the military reverses during January further undermine the morale of the Laotian Government forces as a whole. Extensive North Vietnamese troop participation and unfounded government claims of direct Chinese Communist military involvement have almost certainly contributed to the demoralization of the Lao Army. Events of the past week demonstrate the ineffectiveness of the Laotian Army and emphasize its lack of motivation and will to resist. They underscore the continuing weakness of army leadership on all levels of command. The most effective element in fighting the Communists is the Meo guerrilla whose harassing efforts are pinning down several Communist battalions in northeastern Laos. We believe that the Laotian Army is not capable of resisting a determined enemy attack anywhere in the country.1/

1/ (See next page for footnote)

3. Over the past few months, the termination of US financial aid has had a considerable psychological impact on the Laotian Government leadership. It has also had an adverse effect on the urban economy. The Boun Oum government probably could limp along financially for a few months longer. Nevertheless, this US action and the US attitude since Nam Tha probably have convinced some key Laotian elements of the US determination to withdraw support from Phoumi and to bring about a coalition government. Moreover, we believe that the course of recent events must lead to some diminishing of Phoumi's prestige. Whereas his intransigent attitude had gained considerable support among the more vocal elements of the Laotian Government during the earlier part of the year, his failure to rally support abroad, particularly in Thailand, and his recent military defeats, particularly the one at Nam Tha, must result in considerable loss of confidence in his leadership. There is little chance that the present Laotian Government is capable of mustering sufficient enthusiasm or strength to overcome its recent military and political reverses. No opposition element has yet emerged, and Phoumi's control still appears to be intact. He will seek to salvage his position by pointing out that he was absent from Laos during the Nam Tha affair, that the rout was due to Chinese Communist and North Vietnamese military participation, and that the US has progressively withdrawn support from him and applied sanctions which have diminished his capability to act. Many Laotians will be disposed to accept

16 May 1962

Effective this date, the "Status Report on Covert Actions in Vietnam" has been redesignated "Covert Annex to Status Report of Task Force Vietnam." The new format is designed to group CIA activities in accordance with their geographical area of activity and, where possible, activities of a similar nature will be reported on together.

In addition, subsequent status reports will be accompanied by a summary of significant developments as follows:

Highlights (1-15 May)

1. 612 of the highlander refugees camped outside of the Buon Enao Camp located near Ban Me Thuot, capital of Darlac Province, have requested self-defense training (paragraph IA,1a).

2. The NPSS Route Police Unit initiated effective operations against VC harassment units, eliminating several (paragraph IA,2b).

3. The Vietnamese Army Psychological Warfare Directorate grey radio station--purporting to be located within North Vietnam--began broadcasting 12 May from the Quang Tri area (paragraph IIIC).

4. [redacted] (paragraph IIIA,1).

APPROVED FOR RELEASE
DATE: MAR 2001

Highlights (16-27 May)

1. Citizens Irregular Defense Groups training has mushroomed with 1054 new students in various courses.

2. Twenty-two new highland commando teams (330 men) began training.

3. One hundred twenty of the Bru tribe began training as a trail-watching contingent.

4. The Viet Cong stepped up military activities attacking and capturing 34 men from a defended hamlet near Buon Enao, Darlac Province.

EO 12958
3.4(b)(1)>25Yrs
(C)

5. [redacted] officers completed surveying seven more provinces. CIO officers told [redacted] of a split between CIO Commissioner Nguyen Van Y and the Deputy Director of NPSS, Nguyen Van Hay.

6. Two sabotage and reconnaissance teams were dropped into NVN. Also 300,000 leaflets were dropped in NVN.

~~7. Confidential reports indicate a rift developing between CIO Commissioner Nguyen Van Y and his Deputy Director General at NPSS, Nuyen Van Hay.~~

COVERT ANNEX
TO
STATUS REPORT OF TASK FORCE VIETNAM
(29 May to 12 June 1962)

I. SOUTH VIETNAM

A. Counterinsurgency Programs

1. Citizens Irregular Defense Groups (CIDG's)

a. The Vietnamese Communist (VC) attack of 29 May at Kinh Quoc Gia in Father Hoa's area resulted in 27 "Sea Swallows" killed in action, 18 wounded in action and the loss of two BAR's. While only 17 VC bodies were found, an investigation revealed 60 new graves north of the Tan Hung Tay market, presumably VC victims of the battle with the "Sea Swallows".

b. Six steel matting helicopter pads were installed at Binh Hung and will be used for training Father Hoa's "Sea Swallows" in helicopter-borne operations and for delivery of supplies and transportation of personnel.

c. As of 10 June, a total of 1,580 Rhade villagers had been trained at Buon Enao. This brings the total of defended villages to 69, of which 35 have medical specialists trained at Buon Enao. Two ARVN platoons completed training and returned to their units in Darlac Province, making a total of six such platoons trained. Another two ARVN scout platoons and one Surete platoon entered training.

EO 12958 3.4(b)(1)>25Yrs
(C)

d. A group of 300 raw recruits provided by the Presidential Liaison Office are being processed at the [redacted] Thu Duc training center to enter training. After completion of training they will be assigned to form two new Clandestine Action Service Airborne Companies (ARC), the 5th and 6th.

2. Joint Operations with GVN Intelligence and Security Services

a. The preliminary interrogation of a North Vietnamese Army Signal Corps Lieutenant who defected to the GVN on 24 May has been completed [redacted] A

1. Plans for an extensive reorganization for the CIA-directed Meo operation in north Laos, which were submitted in early May, are now being implemented [redacted] with the assistance of MAAG/Laos. This reorganization calls for the division of the Meo forces of approximately 14,500 into three basic types of units:

a. Special Units which will be volunteer, full-time, and mobile,

b. Ordinary Units which will be volunteer, full-time, local area or defense forces and,

c. Reserve units which will be volunteer, part-time duty reserve units responsible for local area security and initial defense.

This organization also touches on the command structure of the Meo operation, communications, and special operations.

EO 12958

TO
STATUS REPORT OF TASK FORCE VIETNAM
(13 June to 26 June)

I. SOUTH VIETNAM

A. Counterinsurgency Programs

1. Citizens Irregular Defense Groups (CIDG's)

a. Fighting Fathers program in the Delta area now includes 1,831 persons trained and 1,185 armed. This does not include Father Hoa's "Sea Swallows."

b. There are 830 additional men of the Fighting Fathers group now being trained by the 77th Group as follows: Catholic refugee resettlement area at Cai San (WS 360230), 600 men; Father Day's parish at Hoa Thanh (WR 201109), 120 men; Father Tong's parish at Long Phu (WR 754664), 60 men; and Father Phuoc's parish at Rach Tranh (XR 382585), 50 men.

c. Among the Rhade tribesmen at Buon Enao, 1,802 villagers are now trained, 2,096 weapons have been issued, 77 villages are organized, 86 medics have been trained. Two platoons and one surete section have completed training, and a strike force of 101 Rhade is being trained. Over 4,000 Rhade await training. On 13 June, 26 low-level Viet Cong surrendered at Buon Enao.

d. At the Danang training camp of Hoa Cam, there are 1,355 men or women being trained as trailwatchers (499), airborne rangers (122), mountain commandos (393), Civic Action and Republican Youth cadres (626), and district volunteer cadre (105). Ten female mountain commandos are being given medical aid training.

STATUS REPORT OF THE TASK FORCE SOUTHEAST ASIA

COVERT ANNEX - VIETNAM (8-21 August)

I. SOUTH VIETNAM

A. Unconventional Activities

1. Buon Enao:

a. Buon Enao complex now includes 130 villages of which 88 have trained medics. The strike force totals 965, all armed and trained. Refugees awaiting training number 2,016.

b. As of 10 August, Viet Cong (VC) attacks against the Buon Enao complex resulted in the following enemy casualties since February 1962: 122 VC killed, 148 VC captured, and 35 VC surrendered. Of captured personnel, 36 in confinement are being interrogated. The remainder are being resettled in a nearby area.

c. Two additional VC attacks on the Buon Enao complex occurred during the period. Both attacks were replused, one with support of Second ADVON strike aircraft.

2. Song Mao:

a. A strike force company of 113 men have completed advance training. 258 village defenders commenced training on 13 August. A strike force attack against a VC build-up in nearby Song Mao resulted in one VC killed, four captured, no friendly losses.

3. A site for a new Citzens' Irregular Defense Group (CIDG) training camp in Serienac Valley, of Tuyen Duc Province, was approved by the province chief on 15 August. A Special Forces team is to be assigned on 5 September.

STATUS REPORT OF THE TASK FORCE SOUTHEAST ASIA

COVERT ANNEX - VIETNAM (25 July - 7 August)

I. SOUTH VIETNAM

A. Counterinsurgency Programs

1. Citizens Irregular Defense Groups (CIDG's)

a. The following developments in the Fighting Fathers program in the delta area are worthy of noting:

(1) On 1 August an alleged company-size Vietnamese Communist unit attacked the Binh Hung area. The attackers were driven off by 60 mm and 81 mm mortar fire. [redacted] estimated that 30-40 VC were killed or wounded, but no VC corpses were left on the battle field.

EO 12958 3.4(b)(1)>25Yrs
(C)

(2) Since the arrival of the Chinese Nationalist training team in April 1962, a total of 597 personnel have been trained in the Binh Hung complex. The training programs have included eight weeks of basic training, seven weeks of advanced, five weeks of heavy weapons, two weeks of UDT, eight weeks of medical and eight weeks of psychological warfare training.

b. In the Rhade Buon Enao complex, the total number of villagers trained is 4,571; weapons issued, 5,005; and 112 villages organized; strike force strength, 776.

c. On 24 and 26 July Buon Trap Mewal (B. Trap) in the Buon Enao complex was attacked by two companies of VC. The village defenders were driven out after the first attack when their ammunition became exhausted. After receiving a resupply of ammunition and strike force reinforcement, the villagers returned the same day and drove out the VC. (For further details please see TDCS-3/518,485.)

these explanations. On the other hand, dissatisfaction may reach such a point that there may be an attempt within the government and/or army to decrease the influence of Phoumi and his followers by a move to form a government more willing to come to an agreement with the neutralist and Communist elements.

II. COMMUNIST INTENTIONS

4. The Communist attack in the north was a calculated, well-planned move. It almost certainly was concurred in by the three Communist powers concerned -- Hanoi, Peiping, and Moscow. In reaching their decision to mount the attack the Communist powers almost certainly considered that the risk of US intervention in Laos had lessened significantly and that they could increase the level of military operations in pursuing their objectives. They probably were fully confident that the military capabilities of the Pathet Lao and North Vietnamese forces in Laos were superior to those of the Laotian Government forces. They had probably become impatient with the lack of progress toward the establishment of a coalition government. Furthermore, they are probably concerned over the implications of the sharply increased role of the US in South Vietnam.

5. We believe that the attack probably was designed to take advantage of a local tactical opportunity in northwest Laos. The Communists

probably calculated that the defeat of the Nam Tha garrison and the loss of the town would contribute to the demoralization of the Laotian Army and RLG. Moreover, Nam Tha is strategically critical for the control of north and western Laos. In addition, the Communists, particularly the Chinese, probably considered Nam Tha in Laotian Government hands as an impediment to the expansion of their influence in Phong Saly and among the hill peoples of northwestern Laos and northern Thailand.

6. It is possible that the Nam Tha attack may indicate that the Communist side has lost interest in a negotiated settlement and written off the idea of a coalition government under Souvanna Phouma in favor of a de facto partition, a campaign of gradual military conquest, or an all-out offensive. Peiping and Hanoi have been somewhat less willing than Moscow to settle for a coalition government. Moreover, in the light of the increased US commitment in South Vietnam, Moscow may have become convinced that more aggressive Communist military action in Laos was necessary. However, we continue to believe that the Nam Tha attack and the pursuit of the fleeing Laotian Army troops did not mark the beginning of an immediate military drive to seize all of Laos. Nor do we believe that the Communist side would, in terms of the present line-up of forces, be willing to settle for a de facto partition.

7. In the Communist view, the attack on Nam Tha probably did not foreclose further negotiations for a political settlement or compromise Souvanna as a potential leader of a coalition government. They could argue that Souvanna was not in Laos; he publicly "disapproved" of the attack; and his troops did not participate. Indeed, the Communists may have estimated that a victory at Nam Tha would enhance the possibilities of renewed negotiations and, in addition, improve their bargaining position.

8. Although the rout of the government forces at Nam Tha and thereafter may have been more sweeping than the Communists expected, their victory will very soon be reflected in their military and political policies. With respect to the resumption of negotiations and the terms for agreement, the Communists will probably leave the initiative to the other side and assume a stiffer attitude. In the absence of effective military response to the Nam Tha action, which we believe is beyond the capabilities of the Laotian Government forces, or of significant progress toward a coalition government, there will be an increasing likelihood that the Communists will undertake offensive operations on the scale of Nam Tha elsewhere in Laos.

9. The Communist forces will probably follow up their capture of Nam Tha by clearing the entire area of north and northeast Laos of government forces and consolidating their control over the area. The Communist

forces, perhaps with the Kong Le troops playing some role, may further tighten their circle around the lightly-held royal capital, Luang Prabang, increasing the pressure on the King who has, thus far, supported Phoumi. It is possible that Communist forces may cross the Mekong west of Luang Prabang and occupy Sayaboury province which lies between the Mekong and the Thai border. Such a move would sharply raise the level of Thai concern. Troop movements and attacks on outposts recently reported in south Laos suggest that Communist forces may soon seize Saravane and Attopeu to further secure the overland route between North and South Vietnam. These major outposts are already virtually surrounded and neither would be likely to hold out long under attack. We still do not believe, however, that the Communists will seize the major towns along the Mekong remaining in Laotian Government hands, at least until they have had time to assess the political and military effects in Laos of the recent moves and any US reaction.

COVERT ANNEX
TO
STATUS REPORT OF TASK FORCE VIETNAM
(1-15 May 1962)

I. SOUTH VIETNAM

A. Counterinsurgency Programs

1. Citizens Irregular Defense Groups (CIDG's)

a. 612 of the highlander refugees camped outside of the Buon Enao Camp have requested self-defense training. The large number of highlander refugees in this area is being fed and cared for on an emergency basis. Toward this end, 105 village medical assistants have been trained by American Special Forces corpsmen assigned to CAS Saigon and 32 more are currently in training. To date, a total of 1346 personnel have been trained, 1217 weapons issued and 45 hamlets organized and equipped for defense in the Buon Enao complex.

b. To date, 614 Catholic youth from various parish projects in the delta and southwest provinces have had defense training; 278 more currently in training. 49 weapons were issued to Father Du's hamlet program in Tay Ninh.

EO 12958 3.4(b)(1)>25Yrs
(C)

c. Supplementary training in weaponry was given at [redacted] Thu Duc Training Center 1-7 May to 180 civic action cadres who had just graduated from ARVN Quang Trung Basic Training Center.

d. 120 highlanders were recruited in Quang Tri Province to form a trail-watcher company there. 450 highlanders in Kontum were recruited to be used in a trail-watcher company and the intervention company for its backup support was trained. 40 highlander social action cadres who will be used as leader and intelligence cadres in highlander commando teams began training at [redacted] Da Nang Base.

EO 12958 3.4(b)(1)>25Yrs
(C)

[redacted]

Copy 1

2. Joint Operations with GVN Intelligence and Security Services

a. Central Intelligence Organization (CIO):

EO 12958 3.4(b)(1)>25Yrs (C)

18 CIO and NPSS officers in an on-the-job interrogation training program have begun the processing of six selected VC prisoners [redacted]

EO 12958 3.4(b)(1)>25Yrs (C)

[redacted]

b. National Police and Security Service (NPSS):

EO 12958 3.4(b)(1)>25Yrs (C)

NPSS Route Police Unit, whose intelligence components were recently trained [redacted] began operations on major highways north of Saigon, encountering and eliminating several small VC harassment units.

EO 12958 3.4(b)(1)>25Yrs (C)

B. [redacted]

[redacted] continued to report GVN reactions to the 20 April Vinh Lac raid. The Directorate General of Information was reported to have relayed on 27 April a Presidential order that local press criticsm of Cambodia could be allowed. Ngo Dinh Nhu commented that the GVN intended to take a hard line toward Cambodia. Other reports concerned GVN discouragement of any further press comment linking Khmer Krom dissident Son Ngoc Thanh to the incident.

EO 12958 3.4(b)(1)>25Yrs (C)

COVERT ANNEX
TO
STATUS REPORT OF TASK FORCE VIETNAM
(16-28 May 1962)

I. SOUTH VIETNAM

A. Counterinsurgency Programs

1. Citizens Irregular Defense Groups (CIDG's)

a. 406 trainees began a course at the new Citizens Irregular Defense Group training camp near Soc Trang 28 May 1962 under the direction of one CAS officer and a US Special Forces team. Installation of perimeter defenses and construction of a rifle range are in progress. The USMC Heliocopter Squadran based at Soc Trang rendered excellent support in setting up the camp.

b. 330 Highland Commandos (22 teams) reported to the Danang Training Base (Tourane) for a six-week training cycle. The first contingent of 120 Bru Highlanders of a trail-watching company, from Quang Tri Province, began an eight-week course at Danang 25 May 1962.

c. During the period, Vietnamese Communists (VC) stepped up activities against defended hamlets south of Buon Enao near Ban Me Thuot. On 19 May 1962, 34 defenders of one hamlet with their weapons were captured by the VC. Faster communications and larger defense groups are needed to repel VC company-size attacks.

d. The layout and construction of a training camp in Brother Bosco's village in Phuoc Thien in the Phan Rang area was begun 23 May 1962. The training cadre, one half of one US Special Forces team, set up temporary quarters there on 24 May 1962.

E0 12958 3.4(b)(1)>25Yrs
(C)

[redacted]
Copy 1

e. 60 Cao Dai youth at Tan Hoi Dong in Dinh Tuong Province were issued weapons on 17 May 1962. Two men from the 77th Group of Vietnamese Special Forces are carrying out a training program which includes an additional 300 Catholic youth volunteers. 60 Catholic youth in Long Phu in Chuong Thien Province and 40 at Dai Hai in Ba Xuyen Province received arms after training by the 77th Group.

EO 12958
3.4(b)(1)>25Yrs
(C)

f. Father Hoa's Binh Hung special district [redacted] teams are conducting an eight-week basic course for 80 students, a six-week guerrilla staff course for 74 students, and a three-week heavy weapons course for 34 men.

2. Joint Operations with GVN Intelligence and Security Services

EO 12958 3.4(b)(1)>25Yrs
(C)

a. Seven additional provincial surveys were completed [redacted] Vietnamese CIO officers during the reporting period.

EO 12958 3.4(b)(1)>25Yrs
(C)

b. [redacted] gave indications of a widening rift between the Commissioner and his Deputy Director General at NPSS, Nguyen Van Hay, who has increasingly attempted to usurp control of NPSS.

EO 12958 3.4(b)(1)>25Yrs
(C)

c. [redacted]

d. The second course in basic intelligence operations for the intelligence section of the Route Police and NPSS Commandos began 28 May 1962 with 31 students.

e. On 16 May 1962 the Army Psywar Directorate began distributing leaflets attributed to a socialistic organization whose purported objective was to urge working for the defeat of the VC before pressing for government reforms.

[redacted]

EO 12958 3.4(b)(1)>25Yrs
(C)

Copy 1

B. Unilateral Operations

EO 12958 3.4(b)(1)>25Yrs (C)

1. [redacted] This was devoted primarily to a discussion of the strengths and weaknesses of the Strategic Hamlet Program and the Delta Pacification Plan. Ngo Dinh Nhu's ideas on the need for fixed military posts to protect key points from the foothills to the delta areas also were discussed.

EO 12958 3.4(b)(1)>25Yrs (C)

2. [redacted] The objective is to encourage other Asian countries to accept a greater responsibility in the counter-subversion effort.

~~TOP SECRET~~

SPECIAL

NATIONAL INTELLIGENCE ESTIMATE

Number 58-5-62

Probable Communist Reactions to Certain Possible US Actions With Respect to Laos

~~TOP SECRET~~

PROBABLE COMMUNIST REACTIONS TO CERTAIN POSSIBLE US ACTIONS WITH RESPECT TO LAOS[1]

THE PROBLEM

To estimate Communist reactions to certain courses of action by US and allied forces in Laos.

NOTE

The assumptions and courses of action here considered were provided by the Departments of State and Defense for the purpose of this estimate. The paper is organized to respond directly to the considerations raised by the given courses of action.

THE ESTIMATE

I. GENERAL CONSIDERATIONS

1. We believe that up to the present there have not been fundamental differences among the Communist powers concerned—Moscow, Peiping, and Hanoi—with respect to the Communist campaign in Laos or in southeast Asia as a whole. There may have been disagreements as to tactics and timing, with Hanoi and Peiping tending to be more militant and less patient. The Sino-Soviet dispute concerning Bloc leadership and tactics has not appeared to prevent effective coordination of Communist policy in Laos. We believe that

[1] Other recent estimates bearing on the situation in Laos are: SNIE 10-62, "Communist Objectives, Capabilities, and Intentions in Southeast Asia," dated 21 February 1962; SNIE 58-2-62, "Consequences of Certain US Courses in Laos," dated 11 April 1962; SNIE 58-3-62, "Implications of the Fall of Nam Tha," dated 9 May 1962; and SNIE 58-4-62, "The Current Military Situation and Outlook in Laos," dated 14 May 1962.

Sino-Soviet differences are not likely materially to affect the Communist responses to the courses of action discussed in this paper. If, however, the situation threatened to reach a point of serious armed conflict, directly involving US and Chinese Communist forces, latent differences might become acute.

2. It is important to note that the Communists do not consider Laos in isolation from their other objectives in southeast Asia. In fact, the Viet Cong in South Vietnam and the Pathet Lao in Laos are both integral parts of North Vietnamese Communist military and party organizations, and both take their guidance from Hanoi. Hanoi, in turn, is supported and counseled by both Moscow and Peiping who, to some extent, are competing for influence over Hanoi. For this reason, Moscow probably feels under certain limitations in counseling patience and restraint on Hanoi, for the Soviets would not want to appear less willing than the Chinese to support the "national liberation struggles" in Laos and South Vietnam. The USSR has played the key diplomatic role for the Bloc and has provided extensive material support, including the airlift operation. We do not believe that the Soviets are likely to abandon their influence in Laos (and to that extent in North Vietnam) to the Chinese.

3. All the Communist powers probably suspect the US of insincerity or at least of procrastination in its proclaimed effort to bring General Phoumi to serious negotiations. The Communist side has probably lost some of its earlier interest in a coalition government, particularly as the Communist military situation in Laos has steadily improved at the expense of both the "neutralist" forces and the Laotian Government forces. They probably share our judgment that the Forces Armees Royales (FAR) cannot by themselves effectively defend any point remaining in government hands, and that the Pathet Lao, assisted by the North Vietnamese troops now in Laos, could quickly seize all the major towns still held by the FAR forces.

4. The Communists probably interpret the current US troop movement to Thailand as an attempt to deter them

(C)

1. IN MID-SEPTEMBER 1962, TRAN KIM TUYEN, CHIEF, PRESIDENTIAL SECURITY SERVICE, PROPOSED TO HUANG TIEN-MAI, CHIEF OF THE CHINESE NATIONALIST NATIONAL SECURITY BUREAU INTELLIGENCE STATION IN SAIGON, THAT SOUTH VIETNAM AND NATIONALIST CHINA CONDUCT JOINT INTELLIGENCE OPERATIONS IN LAOS. TUYEN CLAIMED THAT THE DETERIORATING SITUATION IN LAOS, AND THE STRONG POSSIBILITY THAT THE GOVERNMENT OF VIETNAM WOULD BREAK RELATIONS WITH LAOS, NECESSITATED IMMEDIATE CONSIDERATION OF SUCH A PROPOSAL. TUYEN TOLD HUANG THAT HE ENVISIONED THE ESTABLISHMENT OF INTELLIGENCE STATIONS ON THE BORDER BETWEEN LAOS AND SOUTH VIETNAM, AS WELL AS IN LAOS, TO SUPPORT JOINT VIETNAMESE/NATIONALIST CHINESE AGENT OPERATIONS.

BUI DIEM

VIET-NAM

Bui Diem is Secretary of State for Foreign Affairs; i.e., deputy to the Minister of Foreign Affairs, Dr. Tran Van Do. To some extent his title is merely honorific, for his most substantive duties are as political advisor to Prime Minister Ky. Bui Diem likes to be called the "McGeorge Bundy of Viet-Nam". Many influential Vietnamese regard him with suspicion as an alleged opportunist and schemer. He has frequent contact with high American officials in Saigon, who have found him an effective intermediary to and from the Prime Minister.

Born in North Viet-Nam in 1923, Bui Diem studied at the Universities of Hanoi and Grenoble, France. Like General Thang, he has a baccalaureate degree in mathematics. He has long been connected with newspaper publishing: first with the newspaper Quoc Dan in Hanoi from 1951 to 1954, and since 1963 as publisher of the English-language Saigon Post. While he has not openly identified himself with the Dai Viet party, Bui Diem has long had the reputation of Dai Viet activist. He was a close associate of former Prime Minister Phan Huy Quat, serving in the latter's Cabinet during February-June 1965 as Minister of State at the Prime Ministry. In 1953 he was Director of Cabinet of the Defense Ministry, then headed by Quat. For some time he served as Quat's confidential secretary.

Although Bui Diem was not an openly active participant in political affairs during the presidency of Ngo Dinh Diem, he was considered to be in sympathy with the Buddhist protest movement and opposed to the Ngo family. During this period Bui Diem was president of a motion picture production company. After the coup d'etat of November 1, 1963, Bui Diem served on the Council of Notables, was reportedly engaged in attemps to form a

(45) (15-30)

from further military action in Laos. They recognize that the move puts the US in an improved position to intervene if fighting is resumed, but they probably believe that the US has not yet taken a firm decision on the particular circumstances which would require it to intervene. They probably have revised upward, however, their estimate of the chances that some major violation of the cease-fire in the future would produce such an intervention.

5. In these circumstances, we believe that the Communists will not alter substantially their current tactic of suspending major military action while waiting for the Royal Laotian Government (RLG) to accept their terms for a political settlement. They are unlikely at this point to move any Chinese combat forces or additional North Vietnamese troops into Laos. If the RLG does not make some substantial movement toward Communist terms, the Communists will probably renew their military pressures. However, the Communist side will probably seek to keep the level and incidence of its military operations below what it believes would prompt US intervention, particularly since it probably calculates that US intervention might, at some juncture, involve air operations against the highly important Communist bases of supply and LOC "safe-havens" of northern Laos and North Vietnam.

II. ASSUMPTION ONE

Neither side has openly repudiated the cease-fire or the principle of a negotiated settlement, but continuing Communist military activity constricts the territory under RLG control. US policy remains to seek a negotiated settlement based upon a neutralist coalition government.

COURSE A: The US provides the RLG and the FAR with assistance of the type and up to the level of that provided to South Vietnam.

6. If the US initiated this course of action, it is possible that the Communist side would see this as no more than a US attempt to strengthen the RLG negotiating position. We

believe it more likely, however, that they would suspect that the US had decided, whatever it might say publicly, to abandon the effort for a coalition government. They would probably believe that the US intended to establish effective non-Communist control over a substantial part of Laotian territory. They might even believe that this was a first step in a US plan to buttress the FAR, if necessary, with US combat forces. The Communist side would almost certainly increase its military investment in Laos, perhaps acknowledging openly the presence of North Vietnamese troops and increasing their number, providing them and the Pathet Lao with increased logistics support, more artillery, and, perhaps, a greatly expanded airlift. The Communists probably would not hesitate to respond to FAR encroachments on areas under their control in Laos with counteraction up to the scale of the Nam Tha operation. They would also probably increase sharply their infiltration and subversion efforts in areas under RLG control but would almost certainly not attempt to seize the major towns along the Mekong remaining in RLG hands.

COURSE B: In addition to the actions assumed in Course A, the US carries out a substantial buildup of its combat forces in Thailand to about 20,000 troops.

7. Although this additional course of action would not present any greater immediate threat to Communist interests in Laos, the Communists would probably take a more serious view of the situation because of the proximity of US forces capable of intervening in Laos. The North Vietnamese would probably reinforce their troops in Laos and the Chinese might move forces to their border with northern Laos. At the same time, the Communists would probably move for a resumption of negotiations.

COURSE C: Troops from the US and Thailand, and from those SEATO members willing to participate, are stationed in RLG-held areas to preserve the cease-fire and to prevent further Pathet Lao/North Viet-

namese military advances. The US and allied troops would initiate no offensive action against Communist-held positions. The limited US military intentions would be conveyed to the Communist side both privately and publicly.[2]

8. Under the assumption given, the cease-fire would still have been generally in force when the US took the given action, although limited Communist military encroachment continued. In these circumstances, the Communist side would probably suspect that the US intent went farther than the stated purpose—preservation of the cease-fire. Their judgment of the real US intention would rest to some extent on the size and disposition of the allied forces moving into Laos and the size and composition of the forces backing them up in Thailand. In any case, they would probably believe that the US, though still prepared to accept a satisfactory political settlement, was willing and ready to participate directly in the event of subsequent Communist military activity in Laos.

9. North Vietnam would almost certainly introduce additional forces into Laos. The Chinese Communists might take this opportunity to move "volunteers" into the northern provinces, and the North Vietnamese and Soviets, although they might not welcome this development, would probably accede. Soviet logistical support would be stepped up. The Pathet Lao, with North Vietnamese participation, would probably increase the scale of their military actions throughout Laos with the intent of confining US-allied control of the specific areas occupied. They would probably harass US lines of communications, outposts, and patrols. Communist agents would probably undertake terrorist and sabotage activities within the US-occupied towns.

10. We do not believe, however, that the Communist forces would attempt to drive the US troops from the areas they

[2] A lesser variant of this course would involve stationing allied forces only in the Mekong valley towns to free FAR troops from garrison duty for active operations against the insurgents (SEATO Plan 5).

occupied. The Communists probably would consider that over the long run, confinement of US and allied forces to these areas would place the US in an awkward military-political position, and might cause the US to withdraw. Meanwhile, they would probably revert to pressures for a negotiated settlement with the withdrawal of US troops as the initial objective of any agreement.

III. ASSUMPTION TWO

The Communist side attacks important RLG outposts—such as Saravane or Attopeu. US policy remains to seek ultimately a negotiated settlement, but immediate steps are required to prevent further cease-fire violations and to forestall the loss of additional RLG-held territory.

COURSE D: Troops from the US and Thailand and from those SEATO members willing to participate, are moved into RLG-held areas to indicate that further violations of the cease-fire will be resisted. US and allied troops would initiate no offensive action against Communist-held positions. The limited US military intentions would be conveyed to the Communist side both privately and publicly.

11. The assumed Communist military operations would probably mean that the Communists had decided to force the RLG into negotiations under more unfavorable conditions or to eliminate, bit by bit, effective RLG control. They would have estimated that, by refraining from an all-out attempt at military takeover, US intervention could, in fact, be avoided.

12. Despite the US assertion of limited military objectives, the Communists almost certainly would suspect that US intentions were broader, and they would take such steps as they deemed necessary to protect themselves and their positions in Laos against further US deployments and a US attack. They would almost certainly intensify their logistical

buildup, further strengthen North Vietnamese forces, and possibly introduce Chinese Communist "volunteers" into the northern provinces of Laos. However, as in the case of Course C, we believe that the Communist forces would probably press for a negotiated settlement with the withdrawal of US troops as the initial objective of any agreement.

IV. ASSUMPTION THREE

The Communist side resumes military activity with offensives against the major towns along the Mekong remaining in RLG hands. US policy shifts from seeking a neutralist coalition government to seeking a *de facto* partition of Laos.

COURSE E: Troops from the US and Thailand, and from those SEATO members willing to participate, enter Laos to establish a *de facto* partition of the country which would leave in RLG hands only that part of Laos south of approximately the 17th parallel. The allied forces would take offensive action to clear and secure southern Laos to the border with South Vietnam.

13. The assumed Communist military operations against the major towns remaining in Laotian Government hands would mean that the Communists had abandoned the idea of a neutral Laos under a coalition government and had determined to end the Laotian conflict by military means. Their intent would be to bring Laos under direct Communist control by achieving a quick and complete victory over the RLG.

14. The Communist decision to conduct such a general offensive would mark a major new step in Communist policy regarding Laos. We believe that such a decision, marking a substantial shift in Bloc policy, would have been based on a belief that the US would not respond by intervening and would have been preceded by considerable debate among the Communist partners. When the US intervened, the Communists

would be concerned to prevent the conflict from spreading beyond Laos. Nevertheless, they would take such steps as they deemed necessary to protect themselves and their positions in Laos against further US deployments and a US counterattack. They would resist strenuously a US effort to clear the area to the South Vietnamese border. They would almost certainly initiate a rapid logistical buildup, further strengthen North Vietnamese forces, and possibly introduce Chinese Communist "volunteers." They would probably assume that the US would not be willing to wage a prolonged and unpopular war, and that the US would in due course be prepared to negotiate a settlement.

COURSE F: In addition to the areas occupied under Course E, allied forces occupy Sayaboury Province and, with the exception of the city of Luang Prabang, the major towns along the Mekong.

15. Movement into these additional areas would increase the apprehension of the Communists about US intentions. They would offer vigorous resistance at points they had already occupied, almost certainly with North Vietnamese reinforcements. Further, the Chinese Communists would be more likely in this circumstance than under Course E above to commit their own forces, probably under the fiction that they are "volunteers."

SPECIAL

NATIONAL INTELLIGENCE ESTIMATE

NUMBER 58-5/1-62

Communist Reactions to Additional US Courses of Action in Laos and North Vietnam

Submitted by the
DIRECTOR OF CENTRAL INTELLIGENCE
Concurred in by the
UNITED STATES INTELLIGENCE BOARD
As indicated overleaf
12 JUNE 1962

APPROVED FOR RELEASE
DATE: JAN 2001

TOP SECRET

SPECIAL

NATIONAL INTELLIGENCE ESTIMATE

NUMBER 58-5/1-62

Communist Reactions to Additional US Courses of Action in Laos and North Vietnam

TOP SECRET

COMMUNIST REACTIONS TO ADDITIONAL US COURSES OF ACTION IN LAOS AND NORTH VIETNAM

THE PROBLEM

To estimate the likely Communist responses to certain courses of action by US and allied forces with respect to Laos which are in addition to those considered in SNIE 58–5–62, "Probable Communist Reactions to Certain Possible US Actions with Respect to Laos," dated 31 May 1962. These courses of action were provided by the Departments of State and Defense.

THE ESTIMATE

A. *US air attacks against Communist supply bases in Laos and against the Laotian parts of the main overland supply routes from North Vietnam.* This course of action might be taken in connection with or subsequent to occupation of the major Mekong River areas of Laos by 8,000–10,000 US troops supported by Thai forces.

1. The Communists would almost certainly conclude that the US was preparing for extensive military operations in Laos, particularly if reinforcements and supplies were being built up in Thailand. They would attempt to cope with the US air attacks by both passive and active means and would maintain their forces in the areas of Laos they now control. Therefore, it seems likely that North Vietnamese antiaircraft units in Laos would be reinforced. In addition, small numbers of fighter aircraft, flown by Chinese Communist and possibly Soviet pilots, perhaps in the guise of North Vietnamese, probably would be introduced into North Viet-

namese airfields. The Soviet airlift would almost certainly continue as feasible. To the extent of their limited capabilities, Communist aircraft would probably attempt some retaliatory action against US positions in Laos. However, as long as the US air attacks were confined to Laos, the Communists would almost certainly not extend their own air operations beyond the Laotian borders.

2. We believe that the Communist ground forces would probably intensify the actions we have already estimated they would take in response to the US occupation of the Mekong River valley areas: they would probably deploy to confine the areas under US control and harass US outposts, patrols, and lines of communications. North Vietnamese reinforcements would almost certainly be introduced. The Chinese Communists would reinforce their border garrisons and some forces might enter northern Laos. Moscow and Peiping would almost certainly increase their logistics support to North Vietnam.

3. At the same time the Communists would be concerned to keep the conflict from spreading beyond Laos, and would take vigorous political action, including intensified propaganda efforts, to obtain a cessation of hostilities and the resumption of negotiations.

B. *US air attacks against North Vietnam.* The US air attacks would be extended to include the North Vietnamese ends of the main supply routes into Laos, but not the principal population centers such as Hanoi. This course of action might be taken as part of a US offensive involving 45,000 US troops to occupy the panhandle area of Laos or might be undertaken in connection with the lesser action involving the occupation of the Mekong River valley only.

4. Attacks on North Vietnam territory would, in the Communist view, mark a major turning point in the situation. The Soviets and Chinese would declare their full support for Hanoi. In an immediate effort to obtain a cessation of the US attacks, they would orchestrate their political, diplomatic, and propaganda moves in the UN and elsewhere against what they would proclaim was an act of outright aggression.

5. Peiping and Moscow would almost certainly introduce air support to protect North Vietnamese territory. The chances of the introduction of Chinese Communist troops into Laos would increase significantly, but we do not believe that they would consider it necessary to introduce them into North Vietnam at this stage. The Communists would be concerned to keep hostilities from spreading and, initially, they would confine their action to the defense of North Vietnam. However, if the US attacks were intense and sustained, and particularly if they were associated with a US investment of the Laotian panhandle, the Communists would be likely to regard them as a forerunner of a general military offensive against North Vietnam. Under these circumstances, they would almost certainly attempt to extend their air attacks to include bases in Thailand and possibly in South Vietnam and US carriers. We do not believe that there would be significant differences between Moscow and Peiping insofar as the question of coming to the aid of Hanoi is concerned.

C. *Amphibious Operations Against North Vietnam.* This situation assumes a division-strength landing in the Vinh area followed by a drive west to the Laos border to link up with US forces in Laos. This course of action would be undertaken in connection with a US offensive involving 45,000 US troops to occupy the panhandle area of Laos.

6. Open invasion of North Vietnam would be considered by the Communist Bloc as a direct challenge to the integrity of the North Vietnamese regime and as a threat to the security of Communist China. Hanoi would take speedy and vigorous action to repel the invasion.[1] Communist China would almost certainly provide additional ground forces if they were needed. The Bloc would launch a violent propaganda campaign, warning of the danger of nuclear war, in an effort to obtain US withdrawal under international pressure and condemnation. If the US was undeterred and the invasion made headway, US ground and naval units in the immediate area would almost certainly be attacked by Com-

[1] The North Vietnamese Army consists of 280,000 regular troops supported by 100,000 militia.

munist air elements, perhaps under the guise of a North Vietnamese air force. In addition, it is possible that Communist submarines would be brought to bear. Supply and operational bases in Laos, South Vietnam, and Thailand would probably be attacked by Communist air forces. The Communists would be highly unlikely to take the initiative to resort to nuclear weapons at this level of US action.

CENTRAL INTELLIGENCE AGENCY

DISSEMINATION NOTICE

1. This estimate was disseminated by the Central Intelligence Agency. This copy is for the information and use of the recipient and of persons under his jurisdiction on a need to know basis. Additional essential dissemination may be authorized by the following officials within their respective departments:

a. Director of Intelligence and Research, for the Department of State
b. Director, Defense Intelligence Agency, for the Office of the Secretary of Defense
c. Assistant Chief of Staff for Intelligence, Department of the Army, for the Department of the Army
d. Assistant Chief of Naval Operations (Intelligence), for the Department of the Navy
e. Assistant Chief of Staff, Intelligence, USAF, for the Department of the Air Force
f. Director for Intelligence, Joint Staff, for the Joint Staff
g. Director of Intelligence, AEC, for the Atomic Energy Commission
h. Assistant Director, FBI, for the Federal Bureau of Investigation
i. Director of NSA, for the National Security Agency
j. Assistant Director for Central Reference, CIA, for any other Department or Agency

2. This copy may be retained, or destroyed by burning in accordance with applicable security regulations, or returned to the Central Intelligence Agency by arrangement with the Office of Central Reference, CIA.

3. When an estimate is disseminated overseas, the overseas recipients may retain it for a period not in excess of one year. At the end of this period, the estimate should either be destroyed, returned to the forwarding agency, or permission should be requested of the forwarding agency to retain it in accordance with IAC-D-69/2, 22 June 1953.

4. The title of this estimate when used separately from the text should be classified: CONFIDENTIAL

DISTRIBUTION:

Federal Bureau of Investigation

EO 12958 3.4(b)(1)>25Yrs
(C)

National Security Agency expert has arrived in Saigon to debrief this defector jointly with [redacted]

b. As of 12 June 1962, all provincial intelligence surveys have been completed. A total of 27 finished reports have been forwarded to Commissioner Nguyen Van Y, leaving 17 in various stages of completion.

c. A contract was signed for the construction of the CIO Interrogation Center and work has begun. The contract calls for completion of the main interrogation facility in eight weeks.

B. Covert Intelligence

EO 12958
3.4(b)(1)>25Yrs
(C)

1. Various [redacted] assets have reported projected changes in the Ministry of Civic Action. On 5 June Minister Ngo Trong Hieu stated that President Diem had directed that the three major elements of youth, civic action, and information revert to their former status of autonomous entities and that the Ministry Secretariat be abolished. Diem also directed that Civic Action teams cease functioning as aggressive combat units and be used only for self defense. The exact date for implementing these changes is not yet known but the changes are regarded as a blow to the prestige of Hieu.

EO 12958
3.4(b)(1)>25Yrs
(C)

2. One [redacted] asset has reported that the Vietnamese Air Force (VNAF) was quite impressed and pleased with the establishment of the Joint Operations Center (JOC) and resultant improvement in operational effectiveness.

EO 12958
3.4(b)(1)>25Yrs
(C)

3. Limited public opinion sampling in Phong Dinh Province (SW of Saigon) confirms previous reporting that the peasant, for the most part, is hostile or has adopted a "wait-and-see" attitude toward the regime. Reasons were: injustices of GVN officials, shelling of village by GVN forces, inadequacy of GVN aid to villages. These reports constitute initial results of a continuing unilateral program designed to better determine rural attitudes and reactions. [redacted] Saigon will attempt to determine the reaction of the population to aerial strikes.

TS 182485

Copy 1

II. SOUTH LAOS (Paramilitary Operations)

On 5 June a special Clandestine Action Service six-man team with two Laotian guides was launched to conduct reconnaissance and harassment operations in the vicinity of Muong Nong, located about 15 miles south of Route 9 (XD 605100).

III. NORTH VIETNAM

A. Intelligence

1. A singleton agent was putashore by junk in the Phat Diem area on the night of 1 June. The agent is to proceed overland to Hanoi to reestablish former contacts with Catholic groups and report on possible sabotage targets, as well as political and economic conditions. The agent is scheduled to return in one month.

2. Another singleton agent was put ashore by junk in Thanh Hoa Province on 10 June. This agent is also to proceed overland to Hanoi in an attempt to recontact persons formerly employed with him in intelligence activities. Targets are order of battle and political and economic information.

B. Paramilitary

EO 12958
3.4(b)(1)>25Yrs
(C)

A [redacted] junk transporting a team of underwater swimmers (UDT) was launched on 30 May on a mission whose objective was to destroy one or more Swatow class gunboats moored near Ba Don, located approximately 75 miles north of the 17th parallel. Within 35 kilometers of the target the junk was challenged and then pursued by two larger enemy vessels. The junk escaped but was unable to reach the target. Excellent reconnaissance support was rendered by COMSUBPAC.

C. Psychological Warfare

EO 12958
3.4(b)(1)>25Yrs
(C)

A black radio, purporting to be voice of the Front for the Liberation for South Vietnam (FLSVN), but long off the air for technical reasons, again began broadcasting. Its objective will be to sow discord between the FLSVN and the Vietnamese communist party (Peoples Revolutionary Party). Thematic guidance and technical help has been provided by [redacted]

~~CONFIDENTIAL~~

Highlights (29 May to 12 June)

1. The preliminary interrogation of a North Vietnamese Army Signal Corps Lieutenant, who defected to the GVN on 24 May, has been completed (paragraph I A 2a).

2. Limited public opinion sampling in Phong Dinh Province (SW of Saigon) confirms previous reporting that the peasant, for the most part, is hostile or has adopted a "wait-and-see" attitude toward the regime. (Paragraph I B 3)

3. Construction of the Central Intelligence Organization (CIO) Interrogation Center has begun (paragraph I A 2c).

4. Two singleton agents were infiltrated via junk into North Vietnam on 1 June and 10 June respectively (paragraphs III A 1 and 2).

TS 182485

ITS HIGH-SACRIFICE SPIRIT AND ITS HATE-AMERICA IDEALS, WILL GET 90 PERCENT SUPPORT FROM THE PEOPLE. ON THE MILITARY SIDE, THE US HAS USED ULTRA-MODERN MECHANIZED WEAPONS TO DESTROY ARMED UNITS BY TACTICS OF AREA PACIFICATION. THUS HARRASSED, THE VC ARE NEVER SECURE. THEIR POLICIES MUST NOW AIM AT THE INTERNAL SITUATION AND AT UPHOLDING THE HARDSHIP-BEARING SPIRIT. MEANWHILE, VC ADMINISTRATIVE ORGANIZATIONS DO NOT YET EXIST, BUT THE PEOPLE HAVE BEEN INSPIRED BY THE REVOLUTIONARY SPIRIT OF THE PARTY. ECONOMICALLY, VC AGRARIAN REFORMS HAVE SOLVED THE LAND PROBLEM FOR THE PEASANTS AND NOW CONSTITUTE THE FOOD SOURCE FOR THE TROOPS AND CADRES. [redacted] COMMENT. "VC AGRARIAN REFORMS" REFER TO THE DE FACTO LAND EXPROPRIATIONS CONDUCTED BY THE VIET MINH DURING THE 1945-54 WAR.) FOREST AND SEA RESOURCES ARE STILL SECONDARY AND BRING IN ONLY SOME SUPPORT IN THE FORM OF TAXES. THE VC ARE MEETING GREAT DIFFICULTIES AT THE PRESENT TIME, BUT THE SVN PROBLEM WILL BE SOLVED BY INTERNATIONAL POLITICS AND INTERNAL MILITARY MEASURES, I.E. STRONG ATTACKS. [redacted] COMMENT. THE SOLUTION THROUGH "INTERNATIONAL POLITICS" REFERS TO THE BELIEF THAT, IF THE VC CAN MAINTAIN THE PRESENT RELATIVE STALEMATE LONG ENOUGH, THE US WILL TIRE OF THE STRUGGLE AND SEEK SOME KIND OF NEUTRALIST SOLUTION.)

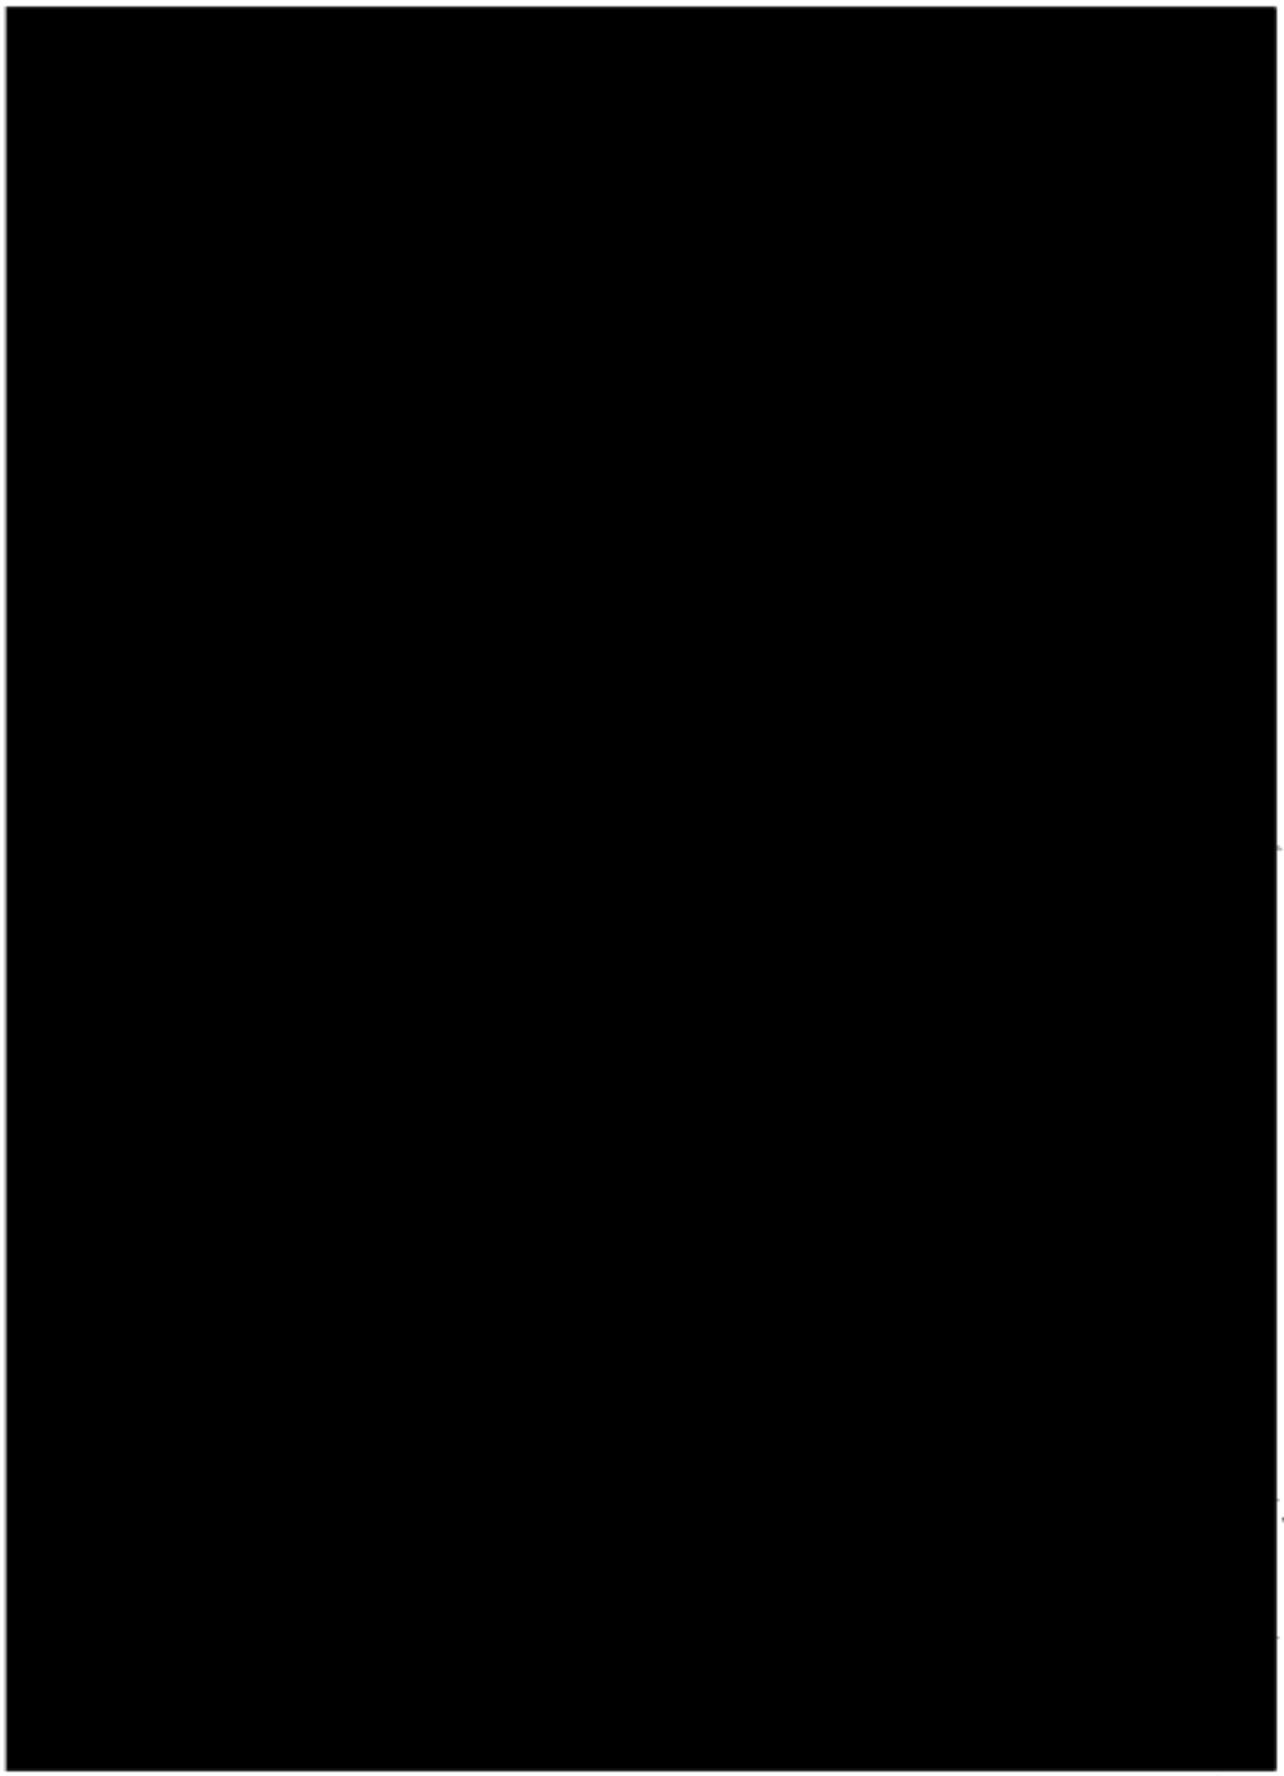
THE PRESIDENT'S INTELLIGENCE CHECKLIST

APPROVED FOR RELEASE
DATE: AUG 2000

20 JUNE 1962
TOP SECRET

JFK LIBRARY
MANDATORY REVIEW
CASE # NLK-99-72 A
DOCUMENT # 13



E0 12958 3.4(b)(1)>25Yrs
(T)

1. Communist China

EO 12958 3.4(b)(1)>25Yrs
(T)

Ground and air movements into the Foochow-Amoy area continued yesterday. [redacted] there are some indications that civilians are being evacuated from the coastal area. [redacted]

2. Thailand

EO 12958 3.4(b)(1)>25Yrs
(T)

The King of Thailand, besides calling publicly for even tempers on the temple issue, is doing what he can in private to hold back the hotheads. [redacted] suspects that the announcement of a boycott of the Geneva conference and SEATO meetings is a device to release pressures and win time for the government to work its way out of its quandary.

3. Brazil

EO 12958 3.4(b)(1)>25Yrs
(T)

President Goulart will probably propose that foreign minister Dantas be moved up to prime minister. The nomination is certain to encounter conservative opposition in the Brazilian congress but stands a fair chance of going through. [redacted] are not enthusiastic about the prospect. They rate Dantas head-and-shoulders above the present prime minister, Tancredo Neves, in skill and effectiveness, but consider him a political trimmer and something of a demagogue. He was a Fascist in the 30's but now stands on the left wing of Goulart's Labor party and has sought and received Communist backing for the prime ministry.

4. Moscow lowers draft age

The Soviet government has reduced the draft registration age from 18 to 17. This will probably be followed by the lowering of the induction age to 18 from the present 19. We think this measure results directly from the sharp decline in birth rate during World War II. (The number of 19 year-old males has fallen from 2.4 million in 1958 to about one million this year.) By inducting two classes in one year, the Soviets will hold their forces at the present levels.

5. Argentina

President Guido is facing a new crisis in the form of heavy pressure from a hard-line military faction which wants him to move further to the right in domestic policy. Guido is ready to reshuffle his cabinet to placate the group, which is described as small but determined, but our people in Buenos Aires are not sure this will be enough to avert a move to supplant him.

6. Laos

The argument over whether the National Assembly will be mentioned in the King's investiture decree continued through yesterday. Souvanna has also taken exception to what he believes to be an implication in the decree, as it now stands, that his coalition government will have only nominal authority until military and administrative integration of the opposing factors has been achieved. Phoumi is being urged [redacted]--and even by the King--to give in on these points.

E0 12958 3.4(b)(1)>25Yrs
(T)

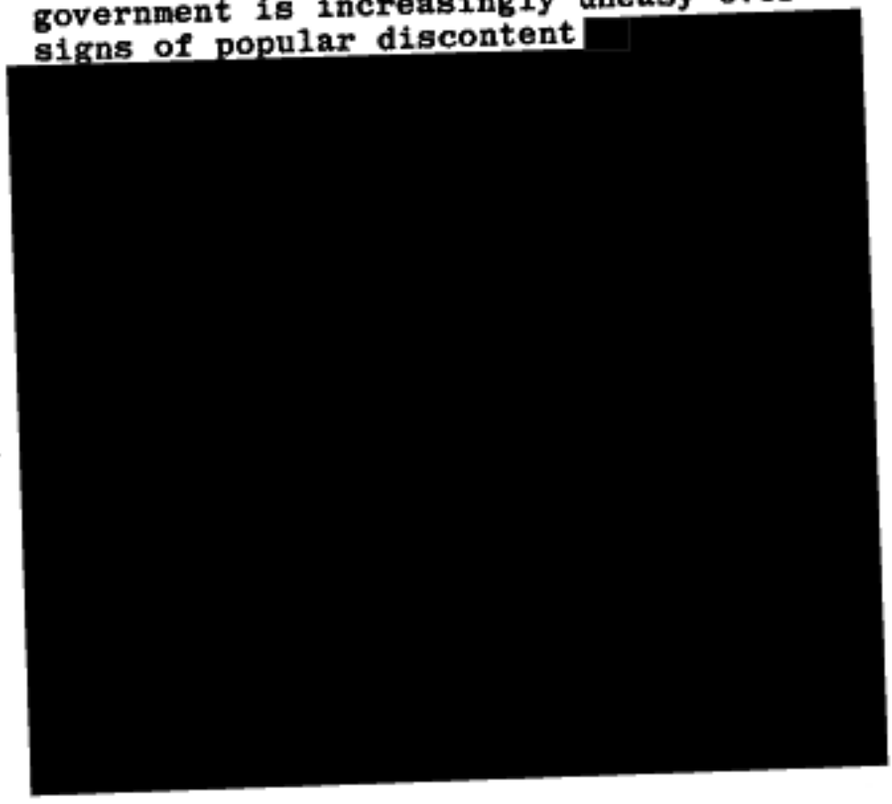
7. South Vietnam - Cambodia

From what we have learned from the [redacted] representative on the ICC, the commission's investigation will support Cambodia's charge that South Vietnamese forces violated the Cambodia border last Saturday and that the incursion resulted in Cambodian civilian casualties--three, according to the preliminary report. [redacted] that there were three US military advisors and three US newsmen with the South Vietnamese who were in pursuit of suspected Viet Cong elements. Witnesses to the incidents are reporting the presence of "white men" and we take it for granted that Communist propaganda will play this to the hilt.

E0 12958 3.4(b)(1)>25Yrs
(T)

8. East Germany

We have been reporting recently in general terms that the East German government is increasingly uneasy over signs of popular discontent [redacted]



E0 12958 3.4(b)(1)>25Yrs
(T)

NOTES

A. On the eve of yesterday's action in the US House, the Dominican government had become so worked up over its sugar quota prospects that it suspended drawings from the $25 million US loan. Ambassador Martin reports that "the Alianza, as of the moment, is at a dead stop."

B. Nehru's daughter has admitted that he has a prostate condition, which she fears may be malignant, and thinks he may undergo surgery, possibly in September.

C. Ghana feels it will reap more prestige from the World Peace Assembly opening in Accra tomorrow if the gathering steers clear of ideological extremes. The generally leftist orientation of the attending delegations gives pretty good assurance, however, that whatever emerges on the disarmament question will be more pleasing to Moscow than to us.

DOCUMENT OF INTEREST

I. French attitude on British EEC accession.

THE DIRECTOR OF CENTRAL INTELLIGENCE

For The President Only—~~Top Secret~~

APPROVED FOR RELEASE
DATE: JUL 2000

EO 12958 3.4(b)(1)>25Yrs
(S)

100, [redacted] We are hopeful that the CIO will represent eventually an intelligence asset, but realistically we cannot expect professional results from it for a considerable period of time.

B. National Police and Security Service (NPSS): In addition to an overt collection function, NPSS is expanding, throughout the country, its special police branch for semi-covert intelligence operations, and is creating, [redacted] a special operations corps for VC penetration. On the whole, NPSS reporting has lacked good sourcing and coverage outside of Saigon, and needs a great deal of improving. The NPSS is frequently capable of detecting VC intentions within Saigon in advance, particularly regarding terrorist attacks. NPSS does have a studies bureau for the correlation of intelligence but the personnel are self-trained and generally not very competent.

EO 12958
3.4(b)(1)>25Yrs
(S)

C. Service des Etudes Politiques et Sociales (SEPES): This is the political intelligence arm of the Presidency and is engaged in both collection and operations. However, we consider this service to be insecure, mismanaged, and filled with bureaucratic pettiness. It is not considered an effective

APPROVED FOR RELEASE
DATE: JUL 2000

tool for collection of intelligence on the VC.

D. Vietnamese Military Intelligence Service (J-2): This service is improving under the guidance of American advisors but its intelligence product is still fragmentary, badly sourced and is often not disseminated with the speed necessary to make it tactically useful. The joint general staff remains reluctant to cooperate with other services and the CIO and these interservice disputes slow down and confuse dissemination. This organization's most serious deficiency is exploitation of prisoners, defectors and captured documents although there has been a small improvement in the field. The evaluative processes employed by J-2 are rudimentary and it is seldom possible for J-2 to identify the ultimate source in even routine reporting.

E. Vietnamese Military Security Service (MSS): In general, training of MSS officers has been good, and the service could, but does not, make a real contribution to the over-all GVN collection and evaluation effort. Its activities have been limited by Ngo Dinh Nhu to loyalty investigations of Vietnamese Army personnel and to the detection of VC within army ranks. The MSS has no effective intelligence evaluation center and is still steadfastly non-cooperative with the CIO. On the other hand, individual MSS field officers are often

APPROVED FOR RELEASE
DATE: JUL 2000

better qualified and more interested in intelligence correlation than the Vietnamese Army G-2 or the civilian security representation.

F. Vietnamese Army Special Telecommunications Exploitation Service: This service is a part of the Joint General Staff and [redacted] it operates a studies bureau whose proficiency in locating some clandestine VC transmitters is improving. This bureau has prepared very practical and useful intelligence for use in planning attacks against VC transmitters. The studies bureau has also recently taken the initiative in interrogating and exploiting two VC defectors and the rapidity with which the defectors were made available for professional interrogation is a promising sign. The evaluative process of the studies bureau is good but is slow and limited.

EO 12958 3.4(b)(1)>25Yrs (S)

3. United States Intelligence Organizations:

A. CIA: Although the CIA Station has expanded very rapidly over the past year, the majority of this expansion has been directed toward action projects in paramilitary and psychological warfare fields. Although the intelligence capability of the Station has improved in the past year [redacted]

EO 12958 3.4(b)(1)>25Yrs (C)

APPROVED FOR RELEASE
DATE: JUL 2008

EO 12958 3.4(b)(1)>25Yrs
(C)

[redacted] the collection capability of these personnel is not yet fully developed. The Station is making a major effort to improve the collection of intelligence [redacted]

EO 12958
3.4(b)(1)>25Yrs
(S)

The evaluative process of the Station is generally very good primarily because of the presence at the Station of many officers with considerable experience in Vietnam and also because of the wide variety of contacts available to Station personnel.

B. J-2 USMACV: J-2 now has 130 personnel in Saigon headquarters and nearly 100 more American advisors in the

APPROVED FOR RELEASE
DATE: JUL 2000

provinces. It is doubtful if adding more United States military intelligence personnel would significantly increase the capabilities of this service.

C. CIC: Its mission is the security protection of USMACV and components, including the collection of information on significant military figures in the GVN and the VC, and the collection of data on civilians who may have aspirations toward the violent seizure of power. An important CIC activity is the briefing and debriefing of selected military advisors concerning their Vietnamese counterparts. CIC, with a staff of 30 officers, coordinates with the CIA Station regarding liaison with the GVN intelligence and security services.

D. The 500th Military Intelligence Group (MIG): This element of the United States Army's clandestine service is charged with regular reporting on political, military, and propaganda activities of the GVN and the VC. The sources of most of its information appear to derive from liaison with Vietnamese services and from a few agent contacts.

4. CIA Station Chief comments:

A. Intelligence on the VC is still unsatisfactory, particularly with reference to adequate sourcing, evaluation,

APPROVED FOR RELEASE
DATE: JUL 2000

collation, and timing. The most important failure in the system is the lack of GVN effective interservice coordination and the haphazard exploitation of prisoners and defectors. With respect to this latter point, interrogators are being trained, a CIO interservice interrogation center is under construction and improved interrogation guides in English and Vietnamese are being provided.

B. The presence of the American intelligence advisors now in each province, [redacted] may help remedy defects on the Vietnamese side. This will, however, be a slow and arduous task. Where possible, the Station is encouraging establishment of provincial councils including representatives of all local United States and GVN services, operating under province chiefs.

EO 12958
3.4(b)(1)>25Yrs
(C)

C. Difficulties continue to exist in the flow of intelligence from the provinces into Saigon. A province chief, for example, who usually is a military officer has more than one information reporting channel; he may forward his information by direct communication to the Palace, avoiding any evaluation process, or he may submit it through military echelons to Saigon. By the latter means, his reporting will go through some evaluation process, but there remains the possibility

APPROVED FOR RELEASE
DATE: JUL 2000

that the province chief will submit less information through military channels.

D. The feasible pace of improvement within the GVN intelligence community depends on President Diem's willingness to make obviously needed changes at a risk, from his point of view, of steadily increasing United States influence within GVN military and internal security establishments. Diem apparently concurs fully in the need for a complete overhauling of the GVN intelligence community but he will continue to set the pace of change and the terms of liaison relationships, in accordance with his estimate of the degree to which United States influence within the internal security establishment poses a possible political threat to the stability of his regime. However, pressure on Diem to increase the pace of improvement would undoubtedly be interpreted by him as evidence of a United States desire to increase its influence in internal affairs, whereas a slower and steadier increase in the GVN intelligence capability, within politically palatable limits, may encourage him gradually to step up the pace. With the United States personnel now present and the plans now in

APPROVED FOR RELEASE
DATE: JUL 2000

process of implementation, it can be expected that the GVN intelligence structure should reach its improved capability by early 1963.

(2)

e. At the Thu Duc training camp, two 200-man airborne ranger companies, six teams of three to seven men each, who are to be sabotage specialists, are in training. A 100-man ranger company completed a six-week course. Also two 15-man operation teams for patrol and document collection completed training.

f. At the Soc Trong training camp there are in training a 400-man commando force, a 150-man strike force. Newly constructed barracks will house 720 trainees.

g. At the Song Mao training camp 353 men have completed training, 216 are in training and 200 weapons have been issued.

h. At the Phan Rang training base, camp and range facilities are being constructed.

EO 12958 3.4(b)(1)>25Yrs
(S)

2. [redacted] GVN Intelligence and Security Services

a. The NPSS Special Operations Corps (formerly DIS) has been activated at Nha Trang. This unit will cover five provinces.

EO 12958 3.4(b)(1)>25Yrs
(S)

b. [redacted] CIO operation located and penetrated a VC installation which housed a VC special zone committee for Saigon. However, ARVN after receiving information failed to move due to CO III Corps instructions because he doubted validity of information. CIO attempting reschedule a strike against the installation.

c. The ARVN Psywar Directorate initiated a domestic aerial leaflet campaign 22 June. Over 400,000 leaflets were dropped in SVN which were attributed to an independent front group seeking support of the peasantry against the VC.

EO 12958
3.4(b)(1)>25Yrs
(C)

B. [redacted]

1. [redacted] the new Director General of Information, Pham Van Tao, is tightening up information activities with the specific result that accurate casualty figures on the 19 June Ben Cat ambush were released. Pham Van Tao is also briefing the Vietnamese press on the propaganda line for the ICC report.

[redacted]

Copy /

(2)

~~SECRET~~

II. SOUTH LAOS

Nothing to report.

III. NORTH VIETNAM

Nothing to report.

is further envisaged that military intelligence capabilities will cover to some extent compliance with or violation of the Geneva Agreements by enemy forces. The latter would include such items as withdrawal of Vietnamese troops from Laos and possible violations of the cease fire by enemy forces.

3. On 16 June Colonel Vang Pao, the Meo commander, addressed a number of Meo commanders and members of his own staff. Colonel Vang Pao spoke of the accomplishments of the Meos in the past 18 months and spoke of the current situation. Colonel Vang Pao told his commanders that Meo troops should keep their unit integrity and retain their organization and weapons. However, the Meos should not launch attacks of any kind against the Communists or Kong Le forces except as ordered by Vang Pao. If a Souvanna government were replaced by a Communist government, the Meos should, said Vang Pao, if the Meo-held area became completely untenable, be prepared to relocate to other parts of Laos, Thailand, or South Vietnam.

4. Plans are continuing for a Laos staybehind headquarters in Thailand in implementation of previous policy guidance. These plans call for a staybehind headquarters in northeast or central Thailand with radio communication from Meo intelligence cadres in Laos to the staybehind command post in Thailand.

5. [redacted]

EO 12958
3.4(b)(1)>25Yrs
EO 12958
3.4(b)(6)>25Yrs
(C)

6. A total of approximately 700 Lao and tribal people formed into six counterguerrilla groups are currently operating [redacted] in areas of central and south central Laos. The groups, based at Thakhek, have the mission

EO 12958
3.4(b)(1)>25Yrs
(C)

of harassing enemy supply lines on and near Routes 8 and 12 in central Laos and collecting intelligence on enemy activities. Heavy enemy pressure forced three groups to return to Thakhek from the Route 12 area in early June, and these groups are being retrained. One group which is in process of establishing a base north of Tchepone (in south central Laos) appears better qualified to fulfill its mission because of better leadership and motivation. The other groups have a limited capability for harassment and intelligence collection which it is hoped can be improved with training and better leadership.

SABOTAGED BY MILITARY FIELD COMMANDERS AND, MOST DANGEROUSLY, BY THE PROVINCE CHIEFS. [redacted] THE MILITARY VIEW THAT THESE HAMLETS FORCED TOO MUCH OF THE ARMED FORCES INTO STATIC DEFENSE, [redacted] OPPOSED TO THE PRACTICE OF IGNORING CHAINS OF COMMAND AND PROPER COORDINATION PRACTICED BY THE MILITARY COMMANDERS, PARTICULARLY THE FIELD GENERALS AND THE REGIONAL AND ZONE COMMANDERS. [redacted] THE INDEPENDENT APPROACH OF THE PROVINCE CHIEFS, RATHER THAN THE MILITARY ATTITUDE, IS WHAT MAY WRECK THE WHOLE STRATEGIC HAMLET PROGRAM. [redacted] AS AN EXAMPLE THE FIRST CLASS OF TRAINEES AT THE THI NGHE STRATEGIC HAMLET TRAINING CENTER FOR WHICH PROVINCE CHIEFS SELECTED PERSONNEL FROM THE LOWEST ELEMENTS POSSIBLE. THE TRAINEES WERE ILLITERATE PEASANTS, THE LOWEST RANKS OF THE SELF DEFENSE CORPS AND THE CIVIL GUARD, CRIMINAL ELEMENTS, JUVENILE DELINQUENTS, AND OTHERS WHO CONSTITUTED A CONTROL PROBLEM OR WERE PERSONS OF WHOM THE PROVINCE CHIEFS SIMPLY WANTED TO BE RID. THIS INDICATED THAT THE PROVINCE CHIEFS HAD PAID NO ATTENTION TO THE INITIAL REQUESTS FOR TRAINEES IN GOOD STANDING IN THEIR COMMUNITIES AND HAVING ENOUGH PRESTIGE TO INFLUENCE THE PEOPLE WHEN THEY RETURNED FROM THE TRAINING COURSE. [redacted] THE PROVINCE CHIEFS SELECT TRAINEES OF THE HIGHEST POSSIBLE CALIBER

FOR THE SECOND TRAINING CLASS, SPECIFYING THAT THEY BE CHOSEN FROM AMONG DISTRICT CHIEFS, ASSISTANT DISTRICT CHIEFS, AND GOVERNMENT BUREAU CHIEFS. IF SUCH PERSONS COULD NOT BE DESIGNATED TO ATTEND THE CLASS, TRAINEES WERE TO BE DRAWN FROM RESPECTED ELEMENTS OF THE BUSINESS COMMUNITY OR FROM THE EDUCATED CLASSES. [redacted] THE PROVINCE CHIEFS HAD POINTEDLY IGNORED [redacted] ORDERS AND THAT THE SECOND CLASS AT THE NGHE WOULD PROBABLY PROVE TO BE LITTLE BETTER THAN THE FIRST.

3. [redacted] THE PRESIDENCY IS CONCERNED OVER THE CONTINUED MISUSE OF THE PEASANTS BY THE PROVINCE CHIEFS IN BUILDING THE STRATEGIC HAMLETS. THE FAILURE HERE IS NOT SO MUCH A QUESTION OF THE NECESSITY FOR USING THE PEOPLE AS IT IS OF THE HARSH, DICTATORIAL APPROACH BY THE PROVINCE CHIEFS, WHICH IS TURNING THE PEASANTS MORE AND MORE AGAINST THE GOVERNMENT AND ENCOURAGING A DEEP-SEATED HATRED AMONG THE PEASANTS AND THE ENTIRE CONCEPT OF STRATEGIC HAMLETS. [redacted] THERE HAS BEEN EXTENSIVE CORRUPTION IN THE USE OF FUNDS AND SUPPLIES PROVIDED THE PROVINCE CHIEFS FOR SETTING UP THE HAMLETS.

4. [redacted] PRESIDENT DIEM IS BECOMING INCREASINGLY FRUSTRATED WITH THE STRAGEGIC HAMLET PROGRAM AS CONCEIVED AND IMPLEMENTED [redacted] DIEM IS ALSO CRITICAL OF [redacted] APPROACH TO THE PROBLEM IN CENTRAL VIETNAM AND [redacted] HE DOES NOT REALLY CARE WHAT THE AMERICANS DO. DIEM RECENTLY TOLD [redacted] THAT

HE IS BECOMING TIRED OF HEARING ABOUT THE DOCTRINE OF PERSONALISM AND REMARKED THAT HE APPARENTLY WAS EXPECTED TO BELIEVE WHAT HE REFERRED TO AS "THIS NONSENSE."

5. [redacted] DISSEM. STATE ARMY NAVY AIR USMAC USOM MAAG CINCPAC PACFLT PACAF ARPAC.

END OF MESSAGE

ELEMENTS FROM LAOS TO SOUTH VIETNAM. ALTHOUGH THIS ALWAYS POSSIBILITY AND IS OF COURSE SOURCE SERIOUS CONCERN GVN, SHOULD BE REMEMBERED THAT BULK OF PAVN ELEMENTS ACCEPTED AS BEING CURRENTLY DEPLOYED IN LAOS ARE BELIEVED BE LOCATED EITHER ALONG ROUTE 7 OR IN NORTHERN LAOS. THEIR REDEPLOYMENT INTO SOUTH VIETNAM WOULD SEEM POSE AT LEAST AS MANY DIFFICULTIES AS INFILTRATION FRESH ELEMENTS DIRECTLY FROM NORTH VIETNAM VIA LAOS. MOREOVER MOST THESE UNITS PROBABLY COMPOSED NORTHERNERS, WHO WHILE PERHAPS SUITABLE FOR OPERATIONS IN NORTHERN LAOS WOULD BE FAR LESS SUITABLE FOR SOUTH VIETNAM THAN LARGE POOL REGROUPED SOUTHERNERS MANY OF WHOM INCORPORATED INTO 305TH, 324TH AND 338TH DIVISIONS.

"3. RE TRUMBULL'S SPECULATION ON "REPORTED PLAN" FOR "LIBERATED AREA," THIS OF COURSE SOMETHING WHICH MAY EVENTUALLY MATERIALIZE; HOWEVER, HANOI'S CURRENT PROPAGANDA STANCE CONTAINS NO HINT OF EARLY ESTABLISHMENT RIVAL GOVERNMENT IN SOUTH NOR IS THERE ANY SUGGESTION OF THIS IN OTHER REPORTING ON SUBJECT. STATION INCLINED THINK EARLY MOVE THIS DIRECTION WOULD BE ILL-TIMED FROM COMMIE STANDPOINT, COMING AS IT WOULD ON HEELS OF ICC DECISION ON SUBVERSION, ESTABLISHMENT OF LAOS COALITION AND IMPENDING 14-NATION GENEVA AGREEMENT ON LAOS. QUESTION SETTING UP RIVAL GOVT MAY WELL HAVE BEEN SUBJECT CONVERSATION BETWEEN HO CHI MINH AND RUSSIANS AT MOSCOW, BUT WE TEND TO DOUBT RUSSIANS WOULD BE VERY KEEN ON ITS EARLY ESTABLISHMENT SINCE IT WOULD VIRTUALLY FORCE THEM PROVIDE OPEN AID TO

VC, THUS LEADING TO ESCALATION IN TERMS OF CONFLICT HERE WHICH WE WOULD NOT THINK SOVIETS AT THIS JUNCTURE PREPARED ACCEPT.

"4. RE ESTIMATE RECENT INFILTRATIONS WHICH TRUMBULL ATTRIBUTED TO GVN, THE CIA STATION IS UNABLE ASCERTAIN WHAT ELEMENT GVN GAVE HIM FIGURE, BUT TOTAL CONSIDERABLY IN EXCESS WHAT MACV CARRYING. OF POSSIBLE INTEREST IS FOLLOWING MACV ESTIMATE MONTHLY FLOW INFILTRATIONS FROM JUNE 1961 UNTIL PRESENT: FROM JUNE TO DEC 1961, 500-1000 PER MONTH; FROM JAN TO APRIL 1962, 100-200 PER MONTH; MAY AND JUNE, 800-1000. ESTIMATE BASED ON ANALYSIS CERTAIN CIA REPORTS (MAINLY FROM ARVN G-2 REPRESENTATIVES IN LIAISON AT SAVANNAKHET WITH FAR G-2), ON-THE-SPOT CONVERSATIONS IN PLEIKU WITH II CORPS INTELLIGENCE OFFICERS AND THE MAAG ADVISOR THERE, AND ESTIMATES GVN JOINT GENERAL STAFF J-2. ALTHOUGH MACV J-2 READILY AGREES HARD INFO ON SUBJECT DIFFICULT TO OBTAIN, ITS ESTIMATE APPARENTLY MADE ONLY AFTER CONSIDERABLE STUDY OF PROBLEM AND IS PROBABLY FAR CLOSER TO TRUTH THAN CONSIDERABLY HIGHER GVN ESTIMATES."

CIA HEADQUARTERS COMMENT:

WE BELIEVE THE FIGURES USED BY THE NEW YORK TIMES ARE GROSSLY EXAGGERATED THOUGH THERE HAVE BEEN REPORTS OF INCREASING INFILTRATION SINCE EARLY MAY. EVEN THESE REPORTS ARE TENUOUS ALTHOUGH THEY DO SUGGEST SOME MOVEMENT IS TAKING PLACE ALONG THE TRAILS. THERE HAS

BEEN NO CONFIRMATION THAT NORTH VIETNAMESE TROOPS HAVE BEGUN WITHDRAWING FROM LAOS. WHILE WE BELIEVE THERE WILL BE SOME COVERT WITHDRAWAL OF NORTH VIETNAMESE FROM LAOS FOLLOWING AN AGREEMENT AT GENEVA AND THAT INFILTRATION INTO SOUTH VIETNAM PROBABLY WILL BE ACCELERATED, WE DO NOT THINK THAT THE BULK OF NORTH VIETNAMESE IN LAOS WOULD BE TRANSFERRED TO SOUTH VIETNAM. PAST EXPERIENCE HAS SHOWN THAT THE NORTH VIETNAMESE NORMALLY PUT INFILTRATORS THROUGH SPECIAL TRAINING AND INDOCTRINATION BEFORE SENDING THEM SOUTH.

DTG: 052150Z

Highlights (27 June - 10 July)

1. The Fighting Fathers program in the delta area of South Vietnam now includes 1831 persons trained and 1217 armed.

2. The Rhade program in the Buon Enao complex has now trained a total of 2308 villagers and 2968 weapons have been issued.

3. President Diem approved a reorganization of the police complex creating a Directorate General of Police.

4. All paramilitary activities [redacted] have been ordered stopped by President Diem pending the outcome of the 14-nation Geneva Conference.

OF THE
TASK FORCE SOUTHEAST ASIA

COVERT ANNEX - VIETNAM
(27 June - 10 July)

I. SOUTH VIETNAM

A. Counterinsurgency Programs

1. Citizens Irregular Defense Groups (CIDG's)

a. Fighting Fathers program in the delta area now includes 1831 persons trained and 1217 armed. This does not include Father Hoa's area. Key developments during the period are as follows:

(1) 32 Thompson submachine guns and grenades were delivered to Father Tung's parrish in Long Phu.

(2) 100 grenades and a flare pistol were delivered to Father Phuoc's parrish in Rach Trang.

(3) 15 new recruits and their families, eight tons of rice and eight tons of lumber were transported to Binh Hung for Father Hoa.

(4) In Kien Giang Province, a conference was held on 5 July to implement an extension of the Catholic Youth program in that province. 30 of the Catholic Youth were armed as a nucleus for future expansion.

b. In the Rhade Buon Enao complex there are now 2308 villagers trained, 2968 weapons issued, 83 villages organized and a strike force of 576 men trained and armed. The VC have raided two villages in the Buon Enao area and have captured small quantities of rice. The VC have also attempted to propagandize the Rhade villagers upon the return from their training program at Buon Enao. An ex-VC village was established six kilometers east of Buon Enao in which 38 re-educated ex-VC are building homes and planting crops.

c. At the Thu Duc Training Camp a 40-man ranger and a 30-man combat police training course have commenced. Two 15-man montagnard commando teams began a seven week course on 2 July and an additional 133 trainees of the Clandestine Action Service, which falls under the Office of the Presidency, began a program of training.

d. At the Soc Trang Training Camp a class of 10 village medics completed training on 9 July. 28 VC suspects were arrested who admitted that they had been intimidated by the VC to obtain the order of battle of the Soc Trang camp and to steal ammunition. The VC have stepped up their propaganda in this area with the theme "You killed French. You can do same to Americans."

e. At the Song Mao Training Camp the third class of 216 villagers completed a three week course in village defense. They then received a 70 percent complement of weapons and returned to their villages for further on-the-job training. Three 11-man combat intelligence teams will begin a two week accelerated course on 25 July. Medical kits and modest funds for village first aid stations have been turned over to the village chiefs of Hoa Da and Phan Ly. This medical aid program will be integrated into the USOM village aid system on 1 August.

2. [redacted] GVN Intelligence and Security Services

An encouraging step in the development of the Vietnamese Students' Organization took place in Quebec, Canada, in early July when the Cosec International Conference voted to grant full delegate status to the National Union of Students (NUS) of Vietnam.

B. Covert Intelligence

1. President Diem on 26 June approved the reorganization of the police complex by creating a Directorate General of Police. The National Police and Security Service)NPSS) was absorbed into the new directorate as was the Special Operations Corps (SOC) which was transferred from the Central Intelligence Organization (CIO). SOC now has a clear and exclusive charter for covert penetration of key VC apparatus.

WHOM HE RECEIVED THE INFORMATION.)

3. CHAU ADDED THAT THE COUP WAS ALLEGEDLY BEING PLANNED BY A GROUP OF SENIOR ARVN OFFICERS LED BY ARVN CHIEF OF FIELD COMMAND MAJOR GENERAL DUONG VAN MINH. CHAU ALSO STATED THAT HE BELIEVED THAT BRIGADIER GENERAL MAI HUU XUAN, CHIEF OF THE QUANG TRUNG TRAINING CENTER, MIGHT ALSO BE INVOLVED. CHAU INDICATED THAT XUAN'S INVOLVEMENT WAS INFERENTIAL AND NOT EXPLICIT.

4. CHAU COMMENTED WITHOUT FURTHER EXPLANATION THAT THE FRENCH MIGHT ALSO BE INVOLVED. CHAU CONJECTURED THAT NOT MORE THAN TWO ARVN BATTALIONS WERE INVOLVED. HE DID NOT EXPLAIN THE BASIS OF HIS CONJECTURE.

5. AT APPROXIMATELY 2200 HOURS ON 1 AUGUST, MAJOR LONG, CHIEF OF THE CAPITAL REGION MILITARY SECURITY SERVICE (MSS) STATED THAT A CENTRAL TELE-COMMUNICATIONS OFFICER OF THE GIA DINH PROVINCIAL GOVERNMENT HAD INTERCEPTED ON 1 AUGUST A VIETNAMESE COMMUNIST (VC) RADIO MESSAGE IN PLAIN TEXT ADDRESSED TO THE VC SAIGON/CHOLON ZONE COMMITTEE INSTRUCTING ALL VC MILITARY UNITS TO BE PREPARED FOR AN UPRISING AT MIDNIGHT ON 1 AUGUST. [redacted] COMMENT. MAJOR LONG DID NOT IDENTIFY THE ORIGINATOR OF THE MESSAGE.) (HEADQUARTERS COMMENT. [redacted] REPORTED THAT ON 23 JULY 1962 THE VC IN THE SAIGON AREA WERE ORDERED TO CEASE ALL TERRORIST ACTIVITIES AND TO PREPARE FOR A POSSIBLE COUP D'ETAT.)

E0 12958 3.4(b)(1)>25Yrs
(C)

6. MAJOR LONG ADDED THAT GENERAL XUAN HAD INFORMED THE VIETNAMESE GOVERNMENT ON 25 JULY 1962 THAT HIS INTELLIGENCE SECTION HAD INTERCEPTED A VC DOCUMENT INSTRUCTING VC PERSONNEL TO BE READY FOR AN UPRISING IN ABOUT ONE

WEEK. [redacted] COMMENT. MAJOR LONG DID NOT KNOW THE ORIGINATOR OR THE ADDRESSEE OF THE INTERCEPTED DOCUMENT, NOR DID HE STATE TO WHICH VIETNAMESE GOVERNMENT AGENCY GENERAL XUAN HAD REPORTED.)

7. MAJOR LONG ALSO REVEALED THAT AN MSS AGENT PENETRATION OF THE VC OF UNTESTED RELIABILITY HAD REPORTED ON 1 AUGUST THAT HIS VC SUPERIOR IN CHAU HIEP (THIRTY KILOMETERS WEST OF SAIGON) HAD INSTRUCTED HIM ON 31 JULY TO BE ALERT FOR A COUP, AND TO MEET HIS VC SUPERIOR IN SAIGON FOUR HOURS AFTER THE COUP BEGAN. E0 12958 3.4(b)(1)>25Yrs (C)

8. MAJOR LONG ALSO STATED THAT A HAND GRENADE HAD EXPLODED IN THE GO VAP AREA OF SAIGON ON THE NIGHT OF 1 AUGUST INJURING SEVEN VIETNAMESE WOMEN AND CHILDREN. [redacted] COMMENT. THE RELEVANCE OF THE EXPLOSION TO A COUP ATTEMPT IS NOT CLEAR, BUT MAJOR LONG BELIEVED THAT THE EVENTS MIGHT BE CONNECTED.)

9. THE PRESIDENTIAL SECURITY SERVICE (SEPES) INTERCEPTED CODED RADIO MESSAGES ON 1 AUGUST ON UNUSUAL FREQUENCIES. THE TEXT OF THE MESSAGES WHEN DECODED WERE IN VIETNAMESE AND FRENCH, AND STATED THAT A COUP WOULD OCCUR ON THE NIGHT OF 1-2 AUGUST. ARVN UNITS HAVE BEEN ALERTED IN THE SAIGON AREA.

E0 12958 3.4(b)(1)>25Yrs (C) 10. [redacted] COMMENT. [redacted] WHO HAS PREVIOUSLY STATED THAT OF ALL THE ARVN OFFICERS, GENERAL DUONG VAN MINH WAS THE MOST LIKELY TO LEAD A COUP ATTEMPT. GENERAL MINH HAS BEEN A VOCAL CRITIC OF THE DIEM REGIME INSOFAR AS DIEM'S EFFICACY AGAINST THE VC IS CONCERNED. GENERAL MAI HUU XUAN, FREQUENTLY RUMORED TO BE A MEMBER OF VARIOUS COUP GROUPS,

E0 12958 3.4(b)(1)>25Yrs (C)

E0 12958 3.4(b)(1)>25Yrs
(C)

IS KNOWN TO HAVE BEEN DISSATISFIED WITH HIS PRESENT ASSIGNMENT AND TO HAVE HARBORED RESENTMENTS AGAINST DIEM FOR ALLEGED SLIGHTS, DESPITE THE FACT THAT DIEM PROMOTED HIM FROM COLONEL TO BRIGADIER GENERAL SEVERAL YEARS AGO. MAJOR LONG HAS EXHIBITED PROFESSIONAL COMPETENCE IN HIS PRESENT POSITION.

E0 12958 3.4(b)(1)>25Yrs (C)

11. [redacted] COMMENT. [redacted] THE GOVERNMENT OF VIETNAM (GVN) CENTRAL INTELLIGENCE ORGANIZATION (CIO) WAS UNAWARE OF ANY POSSIBLE COUP SHORTLY AFTER MIDNIGHT ON 1-2 AUGUST. HOWEVER, AT APPROXIMATELY THE SAME TIME, THE NORMAL PRESIDENTIAL GUARD HAD ALREADY BEEN REINFORCED AND POLICE CHECK POINTS ALSO SEEMED TO HAVE BEEN REINFORCED. GIVEN THE ADVANCE ALERT BY THE GVN MILITARY AND SECURITY ELEMENTS, IT IS PROBABLE THAT ANY INTENDED COUP WOULD BE ABORTIVE.

[redacted] COMMENT.

12. /AT 0200 ON 2 AUGUST, SAIGON WAS QUIET AND THERE WERE NO SIGNS APPARENT OF ANY COUP ATTEMPT, EXCEPT FOR THE ALERT OF SOME OF THE GVN ELEMENTS STATED IN PARA. 11.

E0 12958 3.4(b)(1)>25Yrs (C)

13. [redacted] COMMENT. THE INTERCEPT OF A PLAIN TEXT VC RADIO MESSAGE REFERRED TO IN PARA. FIVE IS NOT CONVINCING, AND RAISES THE POSSIBILITY THAT THE VC MIGHT BE ENGAGED IN A CONFUSION MANEUVER. SEPES CAPABILITY TO INTERCEPT AND DECODE A MESSAGE IN THE SAME DAY, AS REPORTED IN PARA. NINE, IS QUESTIONABLE.

14. FIELD DISSEM. STATE CINCPAC ARPAC PACAF PAFLT.

E0 12958 3.4(b)(1)>25Yrs (C)

2c

EO 12958 3.4(b)(1)>25Yrs
(C)

A fragmentary report received by [redacted] indicates that Buon Trap Mewal was under attack again by 6 August. No further details are available at this time.

d. On 24 July a Special Forces "A" team completed the construction of a Buon Enao sub-base located at Buon Ea Khit. Since the initiation of a 12-day training cycle begun on 28 June, a total of 438 villagers have been trained. Buon Ea Khit now comprises 28 armed villages with nine more in process of being organized. Medical personnel at the sub-base treated 1,478 Rhade in the first 25 days of operation.

e. A Special Forces "A" team has begun construction of a CIDG training site at the village of Cong Sum, Phu Yen Province. Facilities of the camp will be used to train Republican Youth as hamlet defenders. During VC probing actions aimed at slowing down construction of the camp, one hand grenade was thrown into the camp on 1 July. However, no casualties have been reported.

f. Since the establishment of the Hoa Cam training camp on 9 January 1962, 3,445 persons have completed training. As of 24 July, an additional 1,137 personnel are in training. These include two trailwatcher companies totaling 360 persons; civic action group, 221; Force Populaire contingent, 417; scout company, 139.

g. At the Du Tho (Soc Trang) training camp a camp security and strike force of three companies consisting of 182 men each has been approved by appropriate GVN authorities. One company is presently in training; a second being assembled; and a third, which is to be made up of Catholic youth, is being recruited.

h. A total of 28,318 patients were treated by all CIDG installations during the month of July. Participating in the program, in addition to Special Forces medical personnel, are 54 indigenous medical personnel who have completed training and 30 additional who are presently undergoing training.

2c

E0 12958 3.4(b)(1)>25Yrs
E0 12958 3.4(b)(6)>25Yrs
(C)

2. [redacted]

a. As of 31 July, each province in central Vietnam had at least one full company of Force Populaire, which was either in training or had finished training and operative in the villages. A total Force Populaire complement of 4,625, which was approved by President Diem during the month of July, will permit the establishment of four companies consisting of 500 men in each of the nine coastal provinces as well as one company for the autonomous city of Danang. As of 26 July, Ngo Dinh Can has been expecting the Presidential decree which will allocate Self-Defense Corps (SDC) funds for the Force Populaire in the high plateau provinces. This decree would result in an increase of 1,938 men to the Force Popualire.

(C)

THAT WORKED OUT FOR LAOS. THE AMBASSADOR SAID THAT THE AMERICANS ARE NOT TRAINED IN GUERILLA WARFARE AND CAN NOT WIN THE WAR AGAINST THE VIETNAMESE COMMUNISTS (VC) IN SOUTH VIETNAM.

2. THE CONVERSATION TOOK PLACE AT THE HOME OF PETER ROBERTS, INFORMATION OFFICER AT THE BRITISH EMBASSY IN SAIGON, WHERE ROBERTS ARRANGED A MEETING BETWEEN THE JOURNALIST AND AMBASSADOR HOHLER. THE JOURNALIST HAS KNOWN ROBERTS FOR SOME TIME THROUGH PRESS CONFERENCES AND SOCIAL AFFAIRS AMONG JOURNALISTS. HE WAS SURPRISED TO LEARN THAT ROBERTS HAD ARRANGED THE MEETING AT THE REQUEST OF THE AMBASSADOR, WHO HAD EXPRESSED A DESIRE TO TALK WITH HIM.

3. NEITHER THE JOURNALIST NOR ROBERTS HAD MUCH OPPORTUNITY TO STATE THEIR VIEWS DURING THE CONVERSATION. THE JOURNALIST ASSURED THE AMBASSADOR THAT, FAR FROM BEING NEUTRALIST MINDED, HE FEARS NEUTRALISM FOR SOUTH VIETNAM MORE THAN ANY OTHER SOLUTION SINCE HE BELIEVES NEUTRALISM TO BE NO MORE THAN A MAJOR STEP TOWARD ULTIMATE TAKEOVER AND CONTROL BY THE COMMUNISTS. ROBERTS POINTEDLY DISAGREED WITH AMBASSADOR HOHLER'S STATEMENT THAT THERE IS NO CHANCE OF WINNING THE WAR IN SOUTH VIETNAM, INDICATING THAT IT IS MUCH TOO EARLY TO MAKE SUCH A BLUNT STATEMENT, ALLUDING TO THE HUGE EFFORT UNDER WAY AND THE GAINS ALREADY APPARENT. ROBERTS DID SAY, HOWEVER, THAT THE SURFACING OF THE OPERATIONS IN NORTH VIETNAM AT NGHE AN AND HOA BINH SHOULD DEMONSTRATE TO THE AMERICANS AND TO THE GOVERNMENT OF VIETNAM THE FUTILITY OF SUCH OPERATIONS.

EO 12958 3.4(b)(1)>25Yrs
(C)

ROBERTS ALSO COMMENTED THAT HE WAS SURPRISED AT THE FAILURE OF THE VC TO REACT EARLIER IN THE PROPAGANDA FIELD TO OBVIOUSLY EXPLOITABLE DIFFERENCES BETWEEN THE GOVERNMENT OF PRESIDENT NGO DINH DIEM AND THE AMERICANS.

EO 12958 3.4(b)(1)>25Yrs
(C)

4. [redacted] COMMENT. THE JOURNALIST SAID THAT HE THINKS THE ARTICLE THAT CAUGHT THE INTEREST OF AMBASSADOR HOHLER MAY HAVE BEEN ONE DATELINED SAIGON, 29 JUNE 1962, APPEARING IN AN EARLY JULY ISSUE OF THE PHILIPPINE HERALD, ENTITLED "INTRA-PARTY RIFT IN RED NORTH VIETNAM - MOSCOW HAS AN EDGE ON PEIPING?" THE JOURNALIST SAID THAT HE BELIEVED THAT THE AMBASSADOR HAD READ OUT OF THE CONTEXT AND MISINTERPRETED VARIOUS STATEMENTS IN THE ARTICLE TO WHICH HE REFERRED, WHICH LED HIM TO CONSIDER THE JOURNALIST A NEUTRALIST. THE STATEMENTS BELIEVED INVOLVED, WHICH APPEAR IN LAST PARAGRAPH OF THE ARTICLE, ARE AS FOLLOWS: "STUDENTS OF COMMUNIST NORTH VIETNAM HERE WERE OF AGREEMENT THAT THE REPORTED GAINS - AT LEAST FOR THE TIME BEING - BY THE PRO-SOVIET GROUP, WILL EXERT A TEMPERATE INFLUENCE ON THE COURSE OF EVENTS. UNLESS THE SCALES ARE TURNED BY PEIPING IN FAVOR OF ITS PUPPETS AND IF THE FREE WORLD KNOWS HOW TO CASH IN ON THE RED DISPUTE, THE CHANCES WERE NOT DISMISSED OF A LONGER TRUCE IN TOTTERING LAOS, AND EVEN OF A POLITICAL SOLUTION TO EMBATTLED VIETNAM.

EO 12958 3.4(b)(1)>25Yrs
(C)

5. [redacted] COMMENT. IN A LATE JULY CONVERSATION WITH AN AMERICAN OBSERVER, THE COUNSELLOR OF THE BRITISH EMBASSY IN SAIGON, R.A. BURROWS, ATTACKED THE DIEM GOVERNMENT, STATING THAT

E0 12958 3.4(b)(1)>25Yrs
(C)

THERE COULD BE NO HOPE OF PROGRESS AGAINST THE VC UNLESS DIEM WERE REMOVED. IN CRITICIZING THE ILLIBERALITY OF THE DIEM REGIME, BURROWS APPLIED STANDARDS OF CRITICISM THAT EVEN THE MOST ADVANCED WESTERN DEMOCRACY WOULD FAIL TO MEET. DURING THE SAME CONVERSATION, COLONEL HENRY LEE, MILITARY ATTACHE TO THE BRITISH EMBASSY, EXPRESSED HIS OPINION THAT THE WAR AGAINST THE VC WAS NOT PROCEEDING FAVORABLY FROM THE WESTERN POINT OF VIEW. HE APPEARED CRITICAL OF DIEM AND SEEMED INCLINED TOWARD A MILITARY JUNTA, POSSIBLY UNDER MAJOR GENERAL DUONG VAN MINH.)

E0 12958 3.4(b)(1)>25Yrs
(C)

6. [redacted] COMMENT. US AMBASSADOR TO SOUTH VIETNAM, FREDERICK E. NOLTING, COMMENTED ON 8 AUGUST THAT AMBASSADOR HOHLER HAS NEVER GIVEN THE SLIGHTEST INDICATION THAT HE HOLDS THE VIEWS ATTRIBUTED TO HIM IN THIS REPORT. ON 8 AUGUST, AMBASSADOR HOHLER TOOK A COMPLETELY CONTRARY LINE IN A DISCUSSION WITH AMBASSADOR NOLTING, EXPRESSING OPTIMISM REGARDING THE PROSPECTS OF THE GOVERNMENT OF VIETNAM. AMBASSADOR NOLTING SAID THAT HE BELIEVED THAT THE INFORMATION SHOULD BE TREATED WITH GREAT RESERVE, AND WITH THE POSSIBLILITY IN MIND THAT IT MAY REPRESENT A DELIBERATE ATTEMPT TO CREATE MISTRUST BETWEEN THE UNITED STATES AND GREAT BRITAIN.)

E0 12958 3.4(b)(1)>25Yrs
(C)

7. [redacted] COMMENT. NGO DINH NHU, BROTHER AND POLITICAL ADVISOR OF PRESIDENT NGO DINH DIEM, TOLD AN AMERICAN OBSERVER

(3c)

4. The Cung Son Camp in Phu Yen Province initiated two training cycles of two groups of 105 village defenders on 12 and 19 August.

5. Hoa Cam:

1,446 trainees are undergoing instruction, including 450 civic action trainees, 278 Mang Buk village defenders, 265 village development trainees from Danang sector, 400 montagnard commandos, 30 nurses, and 23 interpreters being given basic paramilitary training. Training completed: 139 Tama scouts, 425 Force Populaire, 227 Quang Tri trail-watchers, 223 civic action, and 250 Kontum trail-watchers.

6. Camp Du Tho (Soc Trang):

A second strike company of 120 men has completed training. A third company has entered training. On 9 August a medical team from Du Tho about to visit a nearby village warned of VC presence by a villager. Between 125-135 VC attempted an ambush utilizing mortar, two automatic weapons and small arms. The ambush was overrun by standing charge of a strike force company. Battle persisted approximately two hours, was eventually joined by Self-Defense Corps company. Enemy casualties: 12 killed, 10 wounded; friendly casualties: 4 killed, 4 wounded.

B. Covert Activities

1. The interrogation of a VC prisoner indicates the possible existence of a VC Provincial Committee for Kien Phong Province located in Cambodia two and a half kilometers from the Vietnam border. The VC prisoner was a student there from July 1960 to April 1961. A detailed report is being drawn up.

II. SOUTH LAOS

56 Kha were selected for stay-behind missions in the eastern Plateau de Bolvens. Twelve of this group are undergoing radio operator training in Thailand, while the remainder are receiving leadership training. Two base camp locations have been identified and basic preparations made for their establishment. Reassessment of the Kha units trained by MAAG Laos indicates that many more units are reliable and capable enough to include in the stay-behind plan. Operations from South Vietnam into Laos are in abeyance pending policy approval.

3. Camp Phi Ma, Binh Thuan Province. Citizens Irregular Defense Group (CIDG) Class No. 5 graduated 143 men on 15 September; Class No. 6 commenced training on 10 September. Strike Force No. 2, 114 men, commenced four-week second phase training on 10 September. 24 medics also completed their training on 10 September. A strike force raid on a VC patrol was conducted on 5 September about 15 miles southwest of Phan Thiet. Three VC were killed in action. There were no friendly casualties.

4. Camp Da Mpoa in the Serienac Valley of Tuyen Duc Province is now under construction. 79 refugees of the Koho Tribe began training as a strike force on 10 September. A dispensary has been established. Three Special Forces medics had treated 517 patients as of 13 September. An AID American doctor is cooperating in more serious cases.

5. Camp Dak To, Kontum Province. This camp is also under construction. Communications have been established with Saigon. Special Forces "A" Team is in place. A dispensary is being built. A Vietnamese camp commander has been assigned by the Presidential Survey Office.

6. Camp Phuoc Thien, Ninh Thuan Province. Strike Force Company No. 1, 83 men, and Strike Force No. 2, 134 men, completed training. 150 village defenders began training on 17 September.

7. Camp Thu Duc, Gia Dinh Province. As of 17 September 1,143 personnel were on duty, including 779 special assault troops for South Laos ops. 603 more troops were undergoing training, and in addition 4 special teams numbering 46 men have received demolitions and sabotage training. Due to an expansion of Saigon University, a relocation of Camp Thu Duc has been required. A new site, about a mile and a half north of Thu Duc in the direction of Bien Hoa is awaiting approval by President Diem.

8. Danang Area Program. Half of Special Forces "A" Team moved to Phu Hoa on 17 September with 300 civic action cadre and two strike force companies trained at Hoa Cam. The objective is the establishment there of an area development complex.

9. Patients treated by Special Forces medics during the month of August number 30,133.

2. Confidential Ministry of the Interior figures concerning strategic hamlet construction list the number of hamlets to be completed by the end of 1962 as 4,446. To attain this total the Ministry is assuming that all hamlets begun in August (a total of 2,492) will have been completed satisfactorily.

SECRET

BURMA

As previously reported (Covert Annex-Burma, 9 August-22 August) the Burma Army is continuing its operations against the Kachin Independence Army (KIA). The First and Fourth Kachin Rifles were transferred to the Kachin State in late August for action against the KIA insurgents. The Burma Army's plan reportedly is to contain the KIA movement by isolating them in the Sinlum area (N 24-15, E 97-30). Thus far the Army forces have avoided major engagements with the KIA, firing back only in self defense, but have kept the pressure on to force the KIA to retreat to the remote areas of Sinlum.

CENTRAL INTELLIGENCE AGENCY

26 September 1962

SUBJECT: SNIE 58-6-62: SHORT-RUN OUTLOOK FOR THE LAOTIAN COALITION GOVERNMENT

THE PROBLEM

To estimate the pospects for the Souvanna Phouma coalition government in Laos over the next six months or so.

CONCLUSIONS

A. The Souvanna Phouma coalition government has made virtually no progress in establishing effective control throughout Laos, let alone in implementing its policies. Armed forces of the three factions remain in control of and administer the areas they held prior to the formation of the government. (Para. 1)

B. The coalition regime will almost certainly not be able to establish any significant political authority throughout the country during the

GROUP 1
Excluded from automatic downgrading and declassification

period of this estimate. Moreover, the "principle of unanimity" requiring concurrence of the three factions on all government decisions will prevent or postpone resolution of most key issues. Nevertheless, Souvanna, as the instrument of both East and West for a decrease in tensions in Laos, is not without leverage and assets. (Paras. 2, 8, 15, 25)

C. The coalition government will be forced to seek foreign aid not only for economic development, but for the relief of immediate, acute financial problems. It will accept this aid from all countries, though Souvanna will probably look especially to the US for budgetary and foreign exchange support. (Para. 17)

D. The Communists will seek to expand their influence and power in Laos with the ultimate aim of achieving effective control over all the country. To this end, they will nominally support the Souvanna-led government, proceeding toward their goal mainly through political and subversive means. (Para. 13)

E. Phoumi will probably continue to cooperate with Souvanna, however reluctantly, in the conduct of government. He will play an important role in the coalition, having a veto power over those actions of the government which are distasteful to him. (Paras. 9-10)

F. The Communists will almost certainly seek to retain as many North Vietnamese forces and military advisers in Laos as they can do with safety. Souvanna will almost certainly be unable to prevent Communist use of southern Laos as a corridor for assisting the Viet Cong effort in South Vietnam. (Paras. 5, 18, 21)

G. In the absence of an acceptable compromise candidate as a successor, Souvanna's disappearance would probably result in an increase in the strength and influence of the Pathet Lao/Neo Lao Hak Xat (PL/NLHX). (Para. 24)

H. The Souvanna coalition will probably still be in existence six months from now. The longer the coalition is able to stay in existence, the greater its chances for continuance as the new status quo. Nevertheless, Communist influence will continue to grow, especially in those areas where the PL has military control, unless vigorous efforts are made to unify and strengthen the non-Communist elements in Laos. (Paras. 15, 25)

NATIONAL INTELLIGENCE ESTIMATE

NUMBER 58-6-62

Short-Run Outlook for the Laotian Coalition Government

~~SECRET~~

SHORT-RUN OUTLOOK FOR THE LAOTIAN COALITION GOVERNMENT

THE PROBLEM

To estimate the prospects for the Souvanna Phouma coalition government in Laos over the next six months or so.

CONCLUSIONS

A. The Souvanna Phouma coalition government has made virtually no progress in establishing effective control throughout Laos, let alone in implementing its policies. Armed forces of the three factions remain in control of and administer the areas they held prior to the formation of the government. (*Para. 1*)

B. The coalition regime will almost certainly not be able to establish any significant political authority throughout the country during the period of this estimate. Moreover, the "principle of unanimity" requiring concurrence of the three factions on all government decisions will prevent or postpone resolution of most key issues. Nevertheless, Souvanna, as the instrument of both East and West for a decrease in tensions in Laos, is not without leverage and assets. (*Paras. 2, 8, 15, 25*)

C. The coalition government will be forced to seek foreign aid not only for economic development, but for the relief of immediate, acute financial problems. It will accept this aid from all countries, though Souvanna will probably look especially to the US for budgetary and foreign exchange support. (*Para. 17*)

D. The Communists will seek to expand their influence and power in Laos with the ultimate aim of achieving effective control over all of the country. To this end, they will

nominally support the Souvanna-led government, proceeding toward their goal mainly through political and subversive means. (*Para. 13*)

E. Phoumi will probably continue to cooperate with Souvanna, however reluctantly, in the conduct of government. He will play an important role in the coalition, having a veto power over those actions of the government which are distasteful to him. (*Paras. 9–10*)

F. The Communists will almost certainly seek to retain as many North Vietnamese forces and military advisers in Laos as they can do with safety. Souvanna will almost certainly be unable to prevent Communist use of southern Laos as a corridor for assisting the Viet Cong effort in South Vietnam. (*Paras. 5, 18, 21*)

G. In the absence of an acceptable compromise candidate as a successor, Souvanna's disappearance would probably result in an increase in the strength and influence of the Pathet Lao/Neo Lao Hak Xat (PL/NLHX). (*Para. 24*)

H. The Souvanna coalition will probably still be in existence six months from now. The longer the coalition is able to stay in existence, the greater its chances for continuance as the new *status quo*. Nevertheless, Communist influence will continue to grow, especially in those areas where the PL has military control, unless vigorous efforts are made to unify and strengthen the non-Communist elements in Laos. (*Paras. 15, 25*)

DISCUSSION

1. The Souvanna Phouma coalition government in Vientiane has made virtually no progress in establishing effective control throughout the country, let alone in implementing its policies. Although the three Princes agreed to unify their armed forces at their meeting in Zurich on 22 June 1961, their forces still remain in control of and administer the areas they held prior to the formation of the government.* Despite the government's decision that "in principle" there would be freedom of movement throughout the country, the Pathet Lao (PL) continues to deny access to areas under its control. The International Commission for Supervision and Control in Laos (ICC) has stationed inspection teams at the withdrawal checkpoints, but has been given an opportunity to observe the withdrawal of only 15 North Vietnamese personnel. In spite of a formal commitment to work out a cease-fire, clashes continue between PL and FAR (anti-Communist) forces, and the North Vietnamese and PL continue to attack tribal Meo guerrillas. Although some North Vietnamese troops and technicians appear to have been covertly withdrawn, we believe substantial numbers still remain in Laos. Moreover, the US Government probably will not be able to ascertain by 7 October 1962, the withdrawal deadline, how many have left the country.

2. Meanwhile, the three factions in the coalition government remain widely divided and Premier Souvanna Phouma avoids showdowns on touchy questions. Souvanna's establishment of effective government is further inhibited by the agreement to the "principle of unanimity," reached by the three Princes prior to the formation of the coalition. Under this "troika" provision, all decisions must have the concurrence of the three major factions. Although the actual application of this principle has not yet been completely worked out, this rule will almost certainly prevent or postpone resolution of most key issues.

3. In effect, Laos is at present virtually partioned: in the segments it controls, the PL/Neo Lao Hak Xat (NLHX) is consolidating its authority unmolested while attempting elsewhere to disrupt stabilization of the new situation and sow discord among the non-Communists. Immediate prospects in Laos depend principally upon Communist intentions, and upon Souvanna Phouma's ability to develop a neutral and effective government.

Communist Intentions

4. The fact that the Communist Bloc negotiated a settlement rather than attempting a military solution in Laos appears to indicate its desire to avoid the risk of large-scale US-Communist hostilities in southeast Asia, and to win Laos by political-military nibbling. Although the Communists are confronted with some obvious problems and difficulties, a number of factors justify an optimistic Communist outlook: the country is divided and lacks a sense of nationhood, the Communists control and are indoctrinating many areas, the anti-Communist armed forces are weak and will be further weakened by the withdrawal of the US military presence, the coalition government is feeble, and the economy of the country is in serious straits.

5. Soviet—and Bloc—policy in Laos is probably to appear to respect the Geneva Accords, to profess support of Souvanna, and to provide showy economic aid to his government; to avoid the development of such sudden, abrupt challenges to the Laos "solution" as

* See map at Annex.

might lead to the establishing of a major US military presence in or near Laos; to hold and consolidate those areas, including the corridor to South Vietnam, now controlled by the PL; to expand such control into other areas wherever possible; and to bring about an increasingly Communist cast to the coalition government's domestic complexion and international orientation. The Communists will seek to retain both PL and North Vietnamese military forces in Laos for some time. The PL/NLHX will continue to depend chiefly upon Hanoi for support and guidance, though an increased Soviet and Chinese Communist presence in Laos will probably occur, and, with it, more Soviet and Chinese contacts and influence with the PL/NLHX. Sino-Soviet differences evidently have not had a significant effect upon the coordination of Bloc policy regarding Laos.

Factors Affecting Souvanna Phouma's Ability to Develop a Neutral and Effective Government

6. *The Neutralists.* The success or failure of the coalition government will, in large measure, depend on Souvanna's ability to establish a stable and genuine neutralist center and induce the other two factions to cooperate with that center sufficiently to permit the government to function. This is an enormously difficult task which will require a skillful balancing of conflicting interests. Even the neutralists do not agree on the same definition of "neutralism" for Laos. Some, like Foreign Minister Quinim Pholsena, have a long history of anti-West sentiment and activity which has led to clearly pro-Communist views and affiliations; others who initially believed in a policy of neutrality for Laos have found their views compromised in varying degree by their association with the PL and by Bloc blandishments; and the attitudes of still others remain basically hostile to communism.

7. The neutralist military forces are beset by differences and there is friction and dissension within their ranks. Souvanna's present relations with Kong Le are not clear but Kong Le appears to have drifted closer to the PL. Neutralist General Khammouane Boupha appears still loyal to Souvanna but his troops are confined primarily to Phong Saly Province and his ability to provide effective military support to Souvanna is, therefore, limited.

8. Despite this lack of neutralist cohesion and strength, Souvanna is not without assets. He is the instrument of both East and West for a decrease of tensions in Laos. Both the anti-Communists and the NLHX recognize that he is a key element in the situation, and Souvanna is in a position to pressure them by threatening to resign. He has some freedom of maneuver in manipulating NLHX and Bloc support to his own ends. There is considerable public support in Laos for neutrality, however vaguely comprehended, which proides Souvanna with a large, latent, and unorganized reservoir of potential backing. He enjoys the support of the US Government and of remaining French personnel and French interests in Laos. He has already demonstrated that he can at times work with Phoumi and the anti-Communists in offsetting pro-Communist pressures. PL/NLHX organization and influence is probably still minimal in many outlying areas, including certain places where they claim military control. Neutralist or anti-Communist elements thus have a chance to counter Communist influence in many areas of the country. Moreover, Souvanna appears determined to prevent a Communist takeover.

9. *The Phoumi Faction.* The anti-Communist faction of General Phoumi Nosavan joined the coalition government with great reluctance. Only the insistent pressure of the US brought Phoumi to the negotiating table. He is almost certainly not in sympathy with the policies of Souvanna, and his per-

sonal prospects in the new order of things must appear limited to him. Phoumi's sincerity remains questionable and his intentions ambiguous. His popular support is limited and restricted to those areas under the control of his military forces. He does, however, hold many cards. He has a veto power over those actions of the government which are distasteful to him. He is the unquestioned leader of the anti-Communist faction. He and his forces continue to occupy important strategic areas in Laos—the Mekong lowlands—and will attempt to consolidate control there in the face of PL/NLHX pressures. For the moment at least, he dominates the 64,000-man FAR, through the personal loyalty of the army leaders, and he has not despaired of some continuing US support.

10. He will, therefore, play an important role in the coalition government. He will probably continue to cooperate with Souvanna, however reluctantly, in the conduct of government. He will insist on reciprocity by the PL/NLHX in any concessions he may be willing to make, and is not likely to give up control of areas now held by his forces without equivalent territorial concessions from the Communist side. Like Souvanna, he may occasionally seek to exert pressure by threatening to withdraw from the coalition. He will almost certainly continue to maintain close, covert contacts with the Thais, and Marshal Sarit's counsel will carry considerable weight with him. Phoumi will also continue to turn to the US for guidance and support, but will not necessarily follow US advice and on occasion will ignore it. He might even consider a coup, but his control of the FAR and his overall influence in Laos will almost certainly decline as American support is channeled to the coalition government rather than to him directly.

11. *The NLHX.* The Communist presence in Laos is far greater than it was in 1957 when the NLHX participated in an earlier coalition government, also headed by Souvanna Phouma. Since that time the Communist side has defeated the anti-Communist FAR, greatly expanded those areas in Laos under Communist domination, effected an international settlement which by no means precludes further Communist penetration in Laos, more than doubled NLHX 1957 representation and influence in the government, and opened the way for direct Soviet and Chinese Communist influence in an area formerly delegated to North Vietnamese activity. The leadership of the PL/NLHX appears to rest with certain "old guard" Lao Communist Party leaders, mostly civilians, who have worked together for many years, and NLHX participation in the government means direct Communist influence. The top-ranking Communists in Laos, and real leaders of the PL/NLHX, appear to be Nouhak Phoumsavan, Kaysone Phomvihan, and Phoumi Vongvichit, Minister of Information in the coalition government. The exact status of Prince Souphanouvong, titular head of the NLHX, is not clear, but he appears to be more than a figurehead. In any case, his national reputation, leadership ability, skill in administration and negotiations, and family relationship with Souvanna Phouma are valuable assets to the Lao Communist movement.

12. The NLHX is currently by far the strongest political organization in Laos. It has province, county, district, and village organizations in many of the areas dominated by the PL; and it maintains a clandestine hierarchy of "politico-administrative committees" in some areas occupied by neutralist or anti-Communist forces. It also has a newspaper, radio broadcasting facilities, and is able, as demonstrated during the supplementary elections in 1958, to turn out the vote. However, there is some doubt as to how complete NLHX control is in many PL areas and the

extent of its influence in neutralist territory. Harsh PL occupation measures have apparently alienated many villages, and North Vietnamese intervention has associated the PL/NLHX with the much disliked Vietnamese.

Prospects

13. *Communist Policy.* The objective of the Communists will continue to be to expand their influence and power in Laos with the ultimate aim of achieving effective control over all the country. To this end, they will nominally support the Souvanna-led government as the best alternative to a potentially explosive renewal of hostilities. They will probably proceed mainly through political and subversive means since sharply increased Communist military pressures might cause Souvanna to oppose actively the PL/NLHX.

14. It is likely that the Communists will be able to maintain this strategy for some time. Ramifications of the Sino-Soviet dispute, however, could have a significant effect on the conduct of an agreed Communist policy in Laos. Because of the key role of North Vietnam in the area, both the Chinese and the Soviets are concerned to exert their influence over Hanoi. A deterioration of Sino-Soviet relations probably would intensify this competition, and Moscow might find it expedient to give North Vietnamese views greater weight, even if this meant adopting a policy of greater risks. At present, however, the Soviets out of consideration for their broader East-West interests and their stake in a "Laos solution," will probably resist any Chinese or North Vietnamese pressures for a more militant line in Laos and continue to urge a cautious and flexible tactical approach. On the other hand, Moscow will be reluctant to apply unilateral restraints on the PL and North Vietnam in Laos, unless it was convinced the risks of substantial US military involvement were high.

15. *The Souvanna coalition* will probably live out the period of this estimate. Souvanna may make some headway in asserting his influence within the cabinet and, possibly, in extending his government's activities into some PL areas in fields such as health, public works, and transportation. The government will almost certainly not be able, during the period of this estimate, to establish any significant political authority in those areas of Laos now under the control of the PL. Consequently, a loose, informal partition of Laos will probably persist, unacknowledged by any of the principals, but probably not unacceptable to all for the near future.

16. *Political Orientation.* Souvanna will attempt to follow a policy of genuine neutrality in foreign affairs during the period of this estimate, but because of Communist pressures within and upon Laos he may find this increasingly difficult. The government will establish formal diplomatic relations with most Communist states and other countries which wish to have relations with the coalition government.

17. *The Economy.* Souvanna must resolve the serious financial situation confronting the government before any approach to the formidable economic problems of the country is possible. Even in the unlikely event that substantial demobilization of military forces permits a reduction of military expenditures and the coalition government displays a high, and most un-Lao, degree of financial responsibility, it will continue to need substantial foreign aid to stabilize the economy and to avoid headlong inflation. The fact that Phoumi is Finance Minister while NLHX Prince Souphanouvong is Minister of Economy and Plans does not suggest prompt and decisive action in financial and economic matters. The coalition government will be forced to seek foreign aid not only for economic development, but for the relief of immediate, acute financial problems. It will accept this

aid from all countries, though Souvanna will probably look especially to the US for bugetary and foreign exchange support.

18. *Withdrawal of Foreign Communist Armed Forces.* Although a few more technical and noncombat personnel may check out through the ICC, it is highly unlikely that all North Vietnamese forces in Laos will be removed. The PL/NLHX almost certainly will obstruct and obfuscate both the issue itself and ICC verification of the presence of North Vietnamese forces. As many North Vietnamese forces and military advisers as the Communists believe they can safely retain in Laos will almost certainly remain illegally to train and otherwise assist the PL, to establish arms caches, and to support the infiltration of personnel and military equipment into southern Laos and South Vietnam. Many North Vietnamese combat units will probably be moved surreptitiously to North Vietnam or areas of Laos bordering North Vietnam where they could be quickly reintroduced into key areas of Laos. The North Vietnamese will continue to support the Communist forces in Laos.

19. *Withdrawal of Western Military Forces.* The Geneva Accords provide that the Laotian Government may request a French Military Mission (FMM) to train the armed forces of Laos. Unless arrangements with the French are worked out by 7 October 1962, the date by which the US MAAG is to be withdrawn, there will be a hiatus in the Western military presence in Laos. Whether or not the FMM is established, the removal of US forces from Laos will substantially decrease Western military influence on the Laotian Armed Forces.

20. *Demobilization and Integration.* It is unlikely that any substantial progress toward the demobilization and integration of the various Lao armed forces will be achieved in the next six months. A token integration of some forces of each faction may take place, but PL leaders and Phoumi will almost certainly obstruct the solution of this issue, each side insisting on terms which would provide it with a relatively favorable position in an integrated military force. Throughout the period under review, both the PL and Phoumi will probably disperse veterans in their military forces throughout the country to engage in political action.

21. *Use of the Corridor.* Souvanna will almost certainly be unable to prevent Communist use of southern Laos as a corridor for assisting the Viet Cong effort in South Vietnam. It is unlikely that the ICC will be able to carry out effective inspection in this area. Although Communist activity in the corridor would be made somewhat more difficult by the occasional visits of ICC teams, we do not believe the Communist capability to support Viet Cong operations in South Vietnam is likely to be seriously impaired.

22. *Tribal Minorities.* Despite Souvanna's assurances that minorities would receive better treatment in the future, it is unlikely that this will come to pass. The principal sufferers will be the Meos and the Khas who have successfully maintained armed bases within PL territory. The PL will continue to attack the Meos in particular, refusing to recognize them as part of the FAR, although they might agree to their disarmament and resettlement. Souvanna will probably seek to effect this latter solution, but its prospects are dim.

23. *General Elections.* The three factions have pledged themselves to eventual nationwide general elections to a National Assembly, but we do not believe there will be national elections within the period of this estimate.

24. *Souvanna's Departure.* In the event Souvanna disappeared from power, because of death, disability, or voluntary withdrawal, the coalition would probably collapse and hostilities might again break out. In such a case, the danger of the Communists taking over all of Laos would be great. East-West interest

in preventing Laos from becoming an arena of international conflict might suffice to permit a compromise candidate to continue as Premier but no one on the Laos scene at this time, including the King, appears readily acceptable to all interested parties as a successor. Thus, Souvanna's disappearance from power would probably result in an increase in the strength and influence of the PL/NLHX.

25. In sum, during the period of this estimate, we see virtually no chance of the emergence in Laos of an effectively functioning coalition government exercising power throughout the country. At the same time, there is no sufficient reason to estimate that so long as Souvanna remains, the present coalition will collapse, or that Laos will become a Communist state in the near future. The Souvanna government will probably still be in existence six months from now. This estimate is based on the fact that all the principals, local and international, seem at the moment reasonably satisfied with the present arrangement. Moreover, Souvanna has demonstrated a remarkable ability to survive politically. The longer his coalition is able to stay in existence, the greater its chance for continuance as the new *status quo*. Nevertheless, Communist influence will grow, especially in those areas where the PL has military control, unless vigorous efforts are made to unify and strengthen the non-Communist elements in Laos.

ANNEX

THE LAOS SETTLEMENT

1. A new phase in the struggle over Laos opened when the coalition government of Prince Souvanna Phouma was sworn in on 23 June 1962 after 13 months of intermittent negotiations, in Switzerland and Laos, among the three contending factions. The formal agreement on the coalition cabinet was signed on 12 June. The negotiations, which had been interrupted by Souvanna's departure for France in late March, were renewed after his hasty return to Laos in May when the northern town of Nam Tha fell to Communist forces. Prior to his departure, the negotiations had been deadlocked over the distribution of key portfolios in the coalition cabinet. After consulting with the King on 4 June, Souvanna reopened talks at the Plaine des Jarres with Prince Boun Oum representing the Royal Laotian Government (RLG) and Prince Souphanouvong, the Pathet Lao (PL). On 11 June, compromises finally brought about agreement on the 19 individuals to fill the cabinet posts.

2. Seven of the posts are held by Souvanna's Xieng Khouang neutralist group, and four each by the Vientiane neutralists, General Phoumi's rightwing faction, and Prince Souphanouvong's leftwing faction represented by the Neo Lao Hak Xat (NLHX), the political arm of the PL. In addition to his designation as Prime Minister, Souvanna holds the portfolios of Minister of Defense, Minister of Veterans Affairs, and Minister of Civic Action. General Phoumi and Prince Souphanouvong are both designated Deputy Prime Ministers and fill the posts of Minister of Finance and Minister of Economy and Plans respectively.

3. The international aspects of the Laotian settlement were concluded in Geneva on 23 July 1962 with the promulgation of the Geneva Agreements on Laos. These agreements consist of two documents: a "Declaration on the Neutrality of Laos" which is made up of a "Statement of Neutrality by the Royal Laotian Government," and a responsive declaration by the 13 other nations participating in the conference, and a "Protocol to the Declaration on the Neutrality of Laos." The "Statement of Neutrality" by Laos and the responsive "Declaration on the Neutrality of Laos" together are regarded as constituting an international agreement.

4. The Declaration provides for the signatories to respect the sovereignty, independence, neutrality, unity, and territorial integrity of Laos. It contains 10 "undertakings," including respect for the wish of Laos not to recognize the protection of any military alliance or coalition, including SEATO; an undertaking not to introduce or connive in the introduction of foreign troops or military personnel into Laos; and an undertaking to the effect that Laos will not be used as a corridor for infiltration into South Vietnam. The Declaration does not contain a commitment by Laos to demobilize and integrate its armed forces or to refrain from taking reprisals against Laotians, including the Meos, for their activities prior to the agreements. However, Souvanna, in his address to the final plenary

session of the Geneva Conference, pledged his government to a policy of military integration and "elimination of enmities of the recent past."

5. The Protocol consists of 20 articles and is primarily concerned (Articles 9–18) with the terms of reference for and functioning of the International Control Commission for Laos (ICC). However, it does contain other significant articles: Article 2 obliges all parties to withdraw all foreign military personnel, both regular and irregular, from Laos and Article 4 prohibits the introduction of such personnel. As an exception to this rule, Article 5 provides for an arrangement to be made between France and Laos for the presence in Laos of French military instructors, if the RLG considers it necessary. Article 8 provides that the cochairmen of the Geneva Conference "exercise supervision over the observance of this Protocol and the Declaration," placing responsibility on the Soviet cochairman to see that the Communist signatories abide by their commitments. In spelling out the functions of the ICC, a number of the concerned articles—specifically, Articles 9, 11, 15, and 16—contain the qualifying phrase "with the concurrence of the Government of Laos." This concurrence is considered to have been given upon signature of the Geneva Agreements by the coalition government.

6. The principal policies of the coalition government had been previously outlined in the Zurich communique issued by the three Princes on 22 June 1961. These policies have been reaffirmed subsequently by the leaders of the three factions and the coalition government itself. They are: (a) to establish and enforce a cease-fire; (b) to enforce democratic liberties benefiting the people and, specifically, to restore the 1957 electoral law; (c) to preserve and secure respect for the independence, neutrality, unity, and sovereignty of Laos; (d) to assure justice and tranquility with a view to national reconciliation without discrimination for ethnic or political reasons; (e) to unify the armed forces of the three factions into a national army; and (f) to develop the economy and raise the standard of living.

SUBJECT: Manpower Utilization in South Vietnam

I. Summary

1. Some [redacted] Citizens' Irregulars are participating in the protection of their home areas in Vietnam. This figure is expected to increase to approximately [redacted] by the end of calendar year 1963. Since there are 16,000 hamlets approximately in Vietnam this works out to a rough average of approximately [redacted] per hamlet. This is a minuscule figure for the job of local hamlet protection even when supplemented by the approximately 383,000 regular and semi-regular forces and 92,000 police services. As the regular forces must concentrate on offensive actions, the protection of the population rests in the hands of the irregular forces. The task of protection is a difficult one for a province chief, who is responsible for an average of 300,000 persons in an average area of 2,400 square miles.

There is attached hereto a brief description of the various counterinsurgency activities being conducted in South Vietnam.

II. Discussion

2. The recent rapid increase in strength of the Citizens Irregular Defense Groups (CIDG) elements (from approximately [redacted] in September 1962 to [redacted] in January 1963) and the fact that they appear under a variety of different organizational titles has given some concern as to the effects of this manpower drain on the available resources of Vietnam. It has also raised some concern at the possibly uncoordinated aspect of these different organizations which might lead to a wastage or misuse of available manpower resources. A review of the specifics of the situation however will reveal a coordinated concept in the development of these forces and the fact that they will not work in adverse effect upon the total use of manpower in Vietnam, especially in relation to the character of battle going on there at this time.

3. In 1960 the regular Army, Navy and Air Force of Vietnam totalled 150,000. These were supplemented by a poorly trained and equipped 60,000 Civil Guard and approximately 80,000 Self-Defense Corps. These forces were given priority in augmentation, stepped-up training and improved equipment, so that they are today at the following strengths:

~~SECRET~~

GROUP 1
Excluded from automatic downgrading and declassification

Army	188,000
Navy	6,595
Air Force	5,817
Marines	5,281
Civil Guard	75,909
Self-Defense Corps	95,828
Total	385,787

Experience during this build up period revealed, however, that these forces were barely able to hold their own by acting as regular forces and using conventional tactics.

4. Since the nature of the war became clearly a 'people's war' rather than a 'soldier's war', it became essential to engage the population actively in its own defense. For this reason the program of developing the Citizens' Irregular Forces was initiated in 1961. In order to increase the "people's" content of these forces and to avoid the delays and failures which had accompanied efforts to build many national organizations, it was decided that this effort to develop Citizens' Irregular Forces should begin at the bottom rather than the top. An intensive search thus took place for individuals and leaders capable of participating in the development of the Citizens' Irregular Forces. It was apparent however that some coordination was needed in the development of such forces, among other things to maintain GVN approval of their growth. Since the "people's" character was paramount, and since the organizational structure of the Vietnamese Government as it affects the population is centered around the province and district chiefs, it was decided that this coordination function should best be exercised through and with these officials. As a result each and every Citizens' Irregular Defense Force which was discussed in detail with the local province and district chief and extensive efforts were made to maintain their full awareness, control and support of the activity.

5. In order to provide the mechanism for national organization of such forces a variety of national level units was used, such as the Presidential Survey Office, the Directorate General of Youth, and the Directorate of Social Affairs for the Highlands. In all cases their contributions to a particular area situation were funnelled through the province and district chief. Since the province and district chief also controlled the Self-Defense Corps and Civil Guard and police in their areas, this brought about an automatic coordination between these semi-regular forces and the irregular groups. Since 38 of 41 province chiefs are military men, they are well equipped to employ and coordinate these various groups. At the national level a similar total view was held by President Diem and his brother Ngo Dinh Nhu.

6. Concurrently with the development of the above two categories of forces, regular and irregular, the GVN itself undertook a number of programs in the irregular field. These were later consolidated into the Strategic Hamlet Program under which local defense forces were built in many areas, in part using weapons and other equipment available to the GVN which had been freed by the reequipping of regular forces with more modern U.S. equipment. We do not have precise figures available as to the total numbers involved, but we are aware that they are substantial. These activities are also included in the automatic coordination process, as they too are conducted through and by the province and district chiefs.

7. In the irregular field, the basic concept is one of citizens providing their own local defense. Available resources make it impossible for every citizen to be provided with the means for his own defense and consequently efforts are made to group these citizens, provide them with protective shields, and a nucleus of armed and trained men in their community. As a typical example a hamlet which might comprise 500 people would be surrounded by a protective defense and would contain a group of 40 young men trained in defense techniques. Of this 40 approximately 10 to 15 might be armed with guns, the others being armed with homemade weapons, and the remainder of the population participating in the defense work in other ways. Where possible and where sufficiently concentrated effort can be made, it has proved desirable and in some cases essential to organize more formal units among neighboring hamlets to operate in patrols in the areas between the defended hamlets. (Strike Forces). In some more uninhabited areas it has been essential to organize roving patrols or teams to penetrate mountain or jungle areas on a transient basis within a general territory of familiarity to them. (Mountain Scouts). Since most of these forces are essentially local, they obviously will involve more people than would be necessary in a more regular force available for transfer among various areas, wherever the threat might be the greatest at the moment. An idea of the total figures involved can be gained from the fact that there are approximately 16,000 hamlets in Vietnam organized into approximately 2,550 "villages". The average population of the latter "village" is approximately 4,800. Even an average of 10 men per hamlet then would total some 160,000, although both of these figures are obviously open to considerable variation one way or the other.

8. The question is asked why the more regular forces could not supply this type of protection or at least a substantial degree of it. A review of the arithmetic again would indicate

that the Self-Defense Corps which normally is under the control of the "village" chief, has a total strength of approximately 95,000. Taking the figure of 2,550 villages, this would give approximately 40 Self-Defense Corps men per village. Recalling that the average population of a village above is approximately 4,800, this displays the basis for the frequently heard complaint that the Self-Defense Corps is well named since it generally confines its activity to the occupation of a fort at the village center and the defense of its own security. The Self-Defense Corps thus obviously gives the village chief very little handle for the protection of his entire village, and is instead used as a protection for the administrative nucleus. The protection of the population is consequently in the hands of the Irregular Forces. The Civil Guard, some 75,000, is generally under the control of the Province Chiefs (approximately 40 in total) and thus each Province Chief could normally hope to have somewhat less than 2,000 Civil Guardsmen or a battalion and a half to cover his area (average population 300,000 average area 2,400 square miles). The Regular Forces are obviously used as the mobile reserve with an offensive mission against the enemy wherever he can be found. To the extent the above Irregular Forces can protect areas against enemy attack, the Regular Forces are freed for offensive roles rather than static defense duties.

9. The Police Services obviously offer a possible tool for population control in areas where sufficient security can be provided to permit them to operate on other than military or self-defense basis. As in the Soun Enao complex, when a degree of security is provided to an area the government can be expected to recover a substantial amount of the weapons given to the population of their local defense. A police force would then fill the need for a local control mechanism.

10. Against this background the Attachment will identify the various types of Citizens' Irregular Forces which have been developed over the past two years. Despite their variety of nomenclature they are brought into a coordinated whole by the province and district chiefs.

~~SECRET~~

ATTACHMENT

13 February 1963

SUBJECT: Counterinsurgency Activities in South Vietnam

Since the CIDG program involves a wide variety of programs (see below) all designed to meet specific needs of various rural areas in South Vietnam, the CIDG approach to a particular region is called an area development program. CIDG training installations are thus called Area Development Centers (ADC). At present, there are [redacted] ADC, and by April 1963, [redacted] are scheduled to be in existence. At each ADC, all of the CIDG programs directed toward a particular area are carried out. In some cases, specific CIDG groups are trained at some distance from their home areas, but as the number of ADC increases, more and more CIDG training can be carried out close to the home areas of the various trainees.

A. CIDG Activities to be Given Over to Special Forces Control

1. Hamlet Militia

By 31 December 1962, [redacted] had been trained and armed. The hamlet militia are simply people living in Vietnamese villages who have volunteered to accept training and weapons in order to participate actively in defense of their village and immediate areas. In addition to defensive duties, hamlet militia carry out aggressive patrolling in the general area of their villages.

2. Strike Forces

These troops are full-time paramilitary forces which have been recruited from local volunteers and have been given more advanced training than that given the hamlet militia. They are organized and trained aggressive patrol elements but can be committed in platoon or company strength as required. Strike force units patrol continuously throughout areas in which CIDG programs are in progress checking village defenses, weapons, and re-training hamlet militia. Strike forces are prepared to move quickly to assist any village under attack. They are capable of conducting large-and small-scale raids and ambushes in VC controlled areas and long suspected routes of VC movement. Most strike force personnel are paid (currently by CIA) on the same scale as the civil guard. Over 5,900 strike force personnel have been trained as of 31 December 1962.

~~SECRET~~

3. Fighting Fathers/Catholic Youth

This is a local designation applied to Catholic priests who have brought their parishes into active participation under area development programs. Their parish centers become combat villages with the youth of the villages serving as the paramilitary force. [redacted] "Sea Swallows" in An Xuyen Province and [redacted] group in Ninh Thuan Province are examples of these groups. Approximately [redacted] men have been trained under this program. (This does not include [redacted] man Sea Swallow force, which is currently being trained and supported by a [redacted]

The eventual goal of the CIDG/SWITCHBACK program is to train 100,000 people in the programs listed above. By the end of FY 1963, it is anticipated that more than fifty percent of this goal will have been achieved. By that date, approximately [redacted] hamlet militia and [redacted] strike force personnel should have been trained.

B. CIDG to be Retained by CIA

The activities included under the CIDG/non-SWITCHBACK category and those either of a clandestine nature or those which have political overtones and thus fall within the range of CIA's responsibilities. The main categories of CIDG/non-SWITCHBACK activities are defined below:

1. Mountain Commandos

The mountain commandos, which operate in 15 to 18 man teams, are men locally recruited by province and district chiefs from among montagnard tribes in their areas. Their mission is to act in areas influenced or controlled by the Viet Cong (VC) in which GVN military or civilian presence is rarely found, and is to penetrate deeply into enemy-controlled territories, particularly in the central highland region of South Vietnam adjacent to the border of Laos/Cambodia. These teams act as hunter-killer units which seek out VC units, for either interdiction or reporting purposes. A civic action capability has also been built into each of the mountain commando teams in teams of three men who have had specialized training. The teams thus act as a pro-GVN presence in areas normally under VC control, and seek to counter VC cadre who on their part try to win the montagnard

people to their cause. The mountain commando program also has a related intelligence network which is coordinated through the Vietnamese province and district chiefs. As of 31 December, approximately [redacted] of these mountain commandos had been trained with approximately [redacted] more in training.

2. Popular Force

The popular force (PF), also known as the Force Populaire, is an attempt to establish a pro-GVN presence in Vietnamese villages which have not yet been fortified under the strategic hamlet program. Specially selected youths, many of whom have had relatives killed by the VC, are given weapons and civic action training prior to being sent to villages removed from their home areas, where they help defend the villages against VC incursions and establish a pro-GVN presence. This program has been implemented in central Vietnam and, approximately [redacted] PF personnel have been trained.

3. Trailwatchers (border surveillance units)

Members of the border surveillance units (BSU) are recruited from more promising elements of the strike forces (see above) and other CIDG groups. It is planned that these units will be used to check and report on infiltration of VC cadre into South Vietnam from Laos and Cambodia. These units will remain in place along the border only until border residents themselves can be recruited and integrated into a comprehensive border surveillance net. In those border areas where there is no permanent population, the BSU will remain in place, establishing ties with those ethnic groups which constantly shift back and forth across the ill-defined border. Four units of [redacted] men have been trained.

4. Republican Youth Movement (RYM)

The RYM was started in October 1956 and now numbers approximately [redacted] youths of both sexes. Of this number, [redacted] have received basic paramilitary training while approximately [redacted] RYM members have received advanced military and civic action training from CIA. The main contribution of the RYM has been and will continue to be assisting in the defense of the Strategic Hamlets. In the delta region the RYM have replaced many civil guard units in defending recently constructed Strategic Hamlets. In order to exploit the psychological potential of the RYM, a civic action cadre program supported by both AID and CIA has been developed in conjunction with the RYM. Selected RYM members are trained at various area development centers in medical, economic, social and recreational techniques in order to assist the peasantry to improve their living standards.

~~SECRET~~

5. Combat Intelligence Teams

These teams are the activated units of what was originally intended to be a staybehind mechanism. (Planning for this program was implemented at a time that it was thought all of South Vietnam might be lost to the communists.) These teams are selected and recruited by an area organizer and given special training at one of the area development centers. They are directed by Vietnamese area organizers who use them to collect and act on their own intelligence and that which is provided by other clandestine parts of the staybehind mechanism. Combat intelligence teams are composed of 18 men each. By 31 December, [redacted] of these men had been trained.

6. The number of personnel to be trained by the end of FY 1963 under CIDG/non-SWITCHBACK activities are as follows:

COFROR/SR/46

COMMITTEE ON PROVINCE REHABILITATION

SUMMARY REPORT OF MEETING FEBRUARY 11, 1963
(Meeting originally scheduled for February 8)

At the request of General Adams, MACV, the following is to be inserted in lieu of the first paragraph, page 4, Summary Report of the meeting of February 1, 1963:

> "General Adams reported that General Harkins had sent a command letter to Chief MAAG and the four Corps Senior Advisors. This letter placed command emphasis on the Province Rehabilitation Program and pointed out the necessity for close cooperation between the U.S. military and U.S. civilian agencies involved."

Mr. Trueheart complimented Colonel Schaad, MAAG, on the latest issue of the Status Report prepared by Colonel Schaad's section.

Agenda Item I -- Interim report by Subcommittee on resources control.

Mr. Adkins, USOM, reported that although PSD was in possession of some items of information as a result of a survey conducted on resources control, he believed it would be preferable to postpone the interim report until the February 15 meeting. The Committee so agreed.

Agenda Item II -- Discussion and acceptance of such province plans as are ready for submission.

Discussion of the plan for Kontum province (the HAP portion was approved at the February 1 meeting) continued. Mr. Phillips, USOM, stated he was satisfied with the proposed relocation effort involving several thousand montagnards and satisfied also that the plan had been coordinated with Special Forces representatives. He added that it was his understanding that the montagnard program would be tailored to fit montagnard needs and that the Ministry of Interior had already issued guidance on this approach to province officials. More specific instructions and guidance will be issued in the future. Following this discussion, the Kontum province plan was approved.

~~CONFIDENTIAL~~

Major Steinberg, MAAG, opened the discussion of the Pleiku province plan. He summarized the information given at the prior meeting as to the number of hamlets to be built; the number of barbed wire fences to be erected; the number of steel fence posts to be used, etc. Mr. Trueheart inquired why the 2,240 militia were to be trained for thirty days whereas militia recruits in other provinces have received fifteen days' training. Mr. Phillips, USOM, and [redacted] believed that the additional training period stemmed from the province chief's desires to give the trainees additional political indoctrination. During the discussion, the Committee was informed that the province chief wanted to train more than 2,240 militia and that the excess over this number were to be trained by Special Forces at Plei Mrong. Colonel Calloway pointed out that the Special Forces capability at Plei Mrong, and at other camps in the area, was such that they could not absorb more trainees without additional cadres. Mr. Phillips stated that at a meeting attended by Minister Hieu (Civic Action) a plan for the training of additional cadres was outlined. It appeared, therefore, that additional cadres would be available in the future should Plei Mrong be called upon to undertake militia training over and above the 2,240 scheduled by the province chief.

The Committee approved the Pleiku province plan with the understanding that the thirty-day training cycle for the militia would be utilized fully and profitably.

Major Steinberg then introduced the plan for the province of Phu Bon. He outlined the MAP support material to be furnished and the number of hamlets to be constructed in the two phases. Although weapons would not be required, since Special Forces projects had made sufficient weapons available, the province chief did want fifty shotguns and fifty carbines to hold in reserve should the need for them arise. Colonel Patton, MACV, commented that Special Forces were getting more deeply into the hamlet militia training and observed that the "B" team commanding officer in each province has to adapt himself to the province chief, the population, and the specific problems. Therefore, a set approach was not possible since no two provinces or province chiefs or province populations were the same.

The Committee approved the Phu Bon province plan.

Discussion of the Darlac province plan was reopened by Major Steinberg who pointed out that regroupment had reduced the number of defended villages to 162 and that this figure was included in the total of 316 planned strategic hamlets in this province. MAP support

would be

would be allocated for the excess over 162, that is, 154 strategic hamlets. The 154 would be broken down into 61 in the A Zone, each with one squad of militia, and 93 in the C Zone, each with two to three squads of militia. The 162 were broken down into 20 in the A Zone and 57 in the B Zone and 85 in the C Zone. When completed, the total of 316 will break down into 81 in the A Zone, 57 in the B Zone and 178 in the C Zone.

It was noted that 77 strategic hamlets had been completed in addition to the 31 defended villages turned over to province control. However, it is not planned to turn over any more Special Forces-created units until the procedures for the turnover process proposed by MACV J-5 have been accepted. Mr. Trueheart inquired as to the amount of money earmarked for the teacher training school. Mr. Phillips reported that there was an extreme need for teachers and unless montagnards were trained as teachers, it would be necessary to bring in outside Vietnamese teachers which are also in short supply. During the discussion, the Committee was informed that the 31 villages turned over to province control would not be eligible for emergency relief or grant in kind for the construction of hamlet defense perimeters.

The Darlac province plan was approved.

Major Blake, MAAG, outlined a plan to construct 15 new strategic hamlets in Binh Duong and 7 in Tay Ninh province. He summarized the forces to be involved and the construction phases. The purpose of the new hamlets is to clear the highway from a point south of Ben Cat to Tay Ninh. Also, a start will be made to clear the highway from Ben Cat north to Binh Long. The additional funds required are necessary for the additional teams, trainees, self-help projects and supplies for the bulldozers to be used to clear the land.

Mr. Glaser, USOM, outlined the economic projects planned for the new hamlets. USOM would make available livestock, fertilizer, etc., in an effort to make the villagers more self-sufficient.

Mr. Pike, USIS, reported that his agency had been asked to produce two editions of Kien Quoc for these two provinces. He stated that this effort would place an extremely heavy burden on his agency's capability. Mr. Trueheart suggested that USIS might get an agreement to do one edition for both provinces. Colonel Schaad, MAAG, suggested that the publication might be alternated weekly between the two provinces. Given this guidance, Mr. Pike will proceed to work out a mutually acceptable agreement with the province officials concerned.

The proposal for construction of 22 new strategic hamlets in Binh Duong and Tay Ninh was approved.

Agenda Item III -- Discussion of revised memorandum re MACV Concept for Approach to the GVN Takeover of CIDG Areas.

Colonel Cleland, MACV, submitted the revised memorandum and requested additional comments. Mr. Trueheart stated he would examine the memorandum and that if a Committee member had comments or suggestions, he should phone them to Mr. Trueheart. The memorandum will then be submitted to the GVN under cover of a letter addressed to the Minister of Interior as Secretary General of the Interministerial Committee on Strategic Hamlets.

Agenda Item IV -- Other Business

General Adams, MACV, circulated a copy of a letter to Chief MAAG and to the Senior Advisers in which General Harkins expressed the desire that the addressees direct their attention to the Clear-and-Hold Operations in progress and planned within their respective areas. They should make every effort to insure that military forces provided are adequate, operational plans are sound, MAP supplies are properly utilized and that there is continuous coordination between U.S. military and U.S. civilian agencies involved. General Adams said that the letter had been discussed with the GVN but a copy had not been made available to them. The Committee was of the opinion that a copy might be sent to General Te for his information.

Colonel Cleland reported on the JCS briefing. His notes will be put into memo form for circulation to the Committee.

Colonel Kendrick, Special Forces, submitted an interim report on the overall CIDG effort. He stated the report would be up-dated in the near future.

Colonel Schaad informed the Committee that carbines were to be released to hamlet militia.

The Committee agreed to hold its next meeting in the USOM Conference Room on Friday, February 15 at 1000 hours.

MAIN TRENDS IN SOVIET FOREIGN POLICY

THE PROBLEM

To estimate main trends in Soviet foreign policy, with attention to the influence of political developments within the USSR and the world Communist movement.

PRINCIPAL CONCLUSIONS

A. The forced withdrawal of Soviet missiles from Cuba last fall was the most dramatic in a series of disappointments and setbacks which have been plaguing Soviet policy. It is true that these have been offset somewhat by space successes, by advances in the development of missiles and nuclear weapons, and by the retention of a foothold in the Western Hemisphere. Nevertheless, the fundamentally optimistic outlook of the Soviet leaders seems overlaid at present with a sober appreciation of obstacles and dangers and a realization that earlier expectations of rapid advances must be stretched out into the future. The current mood of the Soviet leadership must also be adversely affected by the continuing Chinese challenge to Soviet authority in the Bloc and the Communist movement. *(Paras. 1–7, 30–32)*

B. Largely as a result of these frustrations to Soviet hopes, Khrushchev's leadership appears to have come into question in recent months. Although his colleagues probably have not been seeking his downfall, they have apparently been trying to com-

NOTE: A detailed examination of Soviet military and economic policy appears in two recent estimates: NIE 11–4–63, "Soviet Military Capabilities and Policies, 1962–1967," dated 20 March 1963, TOP SECRET, and NIE 11–5–63, "Soviet Economic Problems," dated 20 March 1963, SECRET.

pel him to take greater account of their collective opinions; Khrushchev has responded with policy revisions which seem to reflect their advice. While Khrushchev's freedom of action may thus be somewhat restricted at present, we believe that his essential authority remains intact. *(Paras. 8–12)*

C. In the present phase, we think that the Soviets are unlikely either to make serious attempts to resolve cold-war tensions or to undertake a vigorous new offensive against non-Communist positions. Instead, they seem to see the present period as one which can best be used to build up their strength and to fortify existing positions in preparation for future opportunities. They apparently do not plan any early moves either toward agreement or toward a heightened crisis over Berlin. We believe that their approach to disarmament will be primarily agitational. In Cuba, their primary present aims are to induce the US to move toward *de facto* acceptance of Castro and to consolidate the Soviet foothold, from which they mean to pursue the longer term struggle for Latin America. *(Paras. 13–29)*

D. We do not mean to imply, however, that Soviet foreign policy in the present phase will be passive. The USSR will be alert to search out vulnerabilities in the non-Communist world which it believes it can usefully exploit. It will also continue efforts to make its influence felt throughout the underdeveloped areas. Furthermore, while we think that the Soviets will take a sober view in the present period of the opportunities for a major advance, there is one important caveat to this judgment. We have identified the need for a major triumph which would reverse a trend of adversity as an important part of the motivation for deploying missiles to Cuba. This need still remains; therefore, we cannot exclude the possibility of some new and audacious move. *(Paras. 17–18)*

E. A key uncertainty surrounding future Soviet policy arises from the problem of the succession to Khrushchev. The initial tendency after his departure would probably be for more conservative elements to gain predominance, but the longer a succession struggle remains unresolved, the more tendency there would be for a wider range of alternative policies to be given active consideration. *(Paras. 42–47)*

F. We see some prospect that, over the long run, the element of ideological hostility in the Soviet outlook might gradually diminish. This depends upon many uncertain factors, however, and even if it should come about, the requirements of Soviet national security, prestige, and ambition would still bring the USSR into frequent collision with the interests of other states. *(Paras. 34–41)*

DISCUSSION

I. THE BACKGROUND OF PRESENT SOVIET POLICY

1. The position in which the Soviet leaders find themselves in 1963 is not the one which they anticipated five years ago. Soviet thinking in 1958 was pervaded by a general optimism arising from a number of factors and calculations. Khrushchev, who had recently obtained a commanding position, apparently judged that he had overcome both economic dislocations and the political turbulence unloosed by de-Stalinization and could look forward to steady and substantial internal progress. His view of relations among Communist States seems to have been that, freed of the burden of Stalinist excesses, Soviet policy could guide the Bloc more effectively with a looser hand while preserving the essentials of Moscow's leadership.

2. Looking out upon the non-Communist world, Khrushchev probably had considerable hopes that trends in the underdeveloped areas would continue to run in his favor and that the USSR's earlier successes in the Middle East could be extended in that area and repeated in Asia, Africa, and Latin America. Most important of all, the USSR's early sputnik and ICBM successes evidently persuaded him that the image and perhaps even the substance of Soviet physical power would soon overbear that of the US and bring the West to the conference table ready for concessions to his demands. In short, Khrushchev in 1958 saw the "world relation of forces" shifting rapidly in favor of the USSR and believed that history, with vigorous assistance from Moscow, would in the coming period reward the Soviet cause with regular, tangible advances.

3. Almost none of this has come to pass. In the relations of military power, regarded by the Soviets as an indispensable element in their general calculation of forces, US military and intelligence programs have led to a situation in which both sides, and indeed much of world opinion, understand that strategic advantage does not lie with the USSR. The Berlin ultimatum of 1958 remains unfulfilled and, save for the constriction of East Germany's refugee flow, basic Soviet aims in the key area of Germany are no further advanced. Although the So-

viets may expect some benefits from present strains in NATO, over the last five years the strength of the West as a whole has almost certainly assumed a more formidable aspect in their eyes. In the underdeveloped countries, postcolonial nationalism has in most areas openly diverged from the hoped-for association with Soviet policies, and the USSR has not succeeded in establishing patronage, much less control, over the new nations.

4. Over the same period, the USSR's relations with its major ally have fallen into acute disarray, and the Soviets must now defend themselves throughout the Communist movement to preserve a leadership which had not been effectively challenged for four decades. At home, economic progress has faltered for a variety of reasons, of which the most important is the impact of military and space spending. At the same time, intellectual circles have used Khrushchev's attacks upon Stalin to raise painful questions which tend to challenge the authority of the party and its present leaders.

5. This is by no means to say that the last five years have brought an uninterrupted series of defeats for Soviet policy. During this period, for example, a procession of space feats has regularly revitalized Soviet prestige and sustained the USSR's lead in this important field of competition. Both nuclear and missile development have recorded notable technical progress. The Berlin Wall has greatly eased the problems of the client state of East Germany. Cuba's accession to the Communist camp remains a major gain despite the October backdown and the subsequent problems and dangers encountered in dealing with Castro and the US. Nevertheless, the Soviet leadership seems to recognize the last five years as a period in which problems accumulated.

6. There is no sign that this trend has caused the Soviets to revise their fundamental assumptions or that they regard these setbacks as more than temporary. There are many signs, however, of a recognition that earlier expectations were overoptimistic. Their unwillingness to turn over Berlin access to East Germany and their precipitate withdrawal of strategic missiles from Cuba are the most striking instances testifying to a sober appraisal of their opportunities under the present relation of forces between East and West. A similar concern can be observed in their treatment of the Sino-Soviet dispute, the importance of which they no longer attempt to deny, and of their military position, where assertions of absolute superiority have given way to claims of parity and expressions of anxiety about US intentions and the future relation of military forces. Similarly, the indiscriminate optimism of Soviet pronouncements concerning new countries and independence movements is now heavily tempered by criticism of the bourgeois and anti-Communist tendencies of nationalist leaders. Domestically, the regime has had to issue warnings to consumers that defense priorities will

cut into the program to raise living standards, and Khrushchev does not seem confident that former rates of general economic growth can be quickly regained. In sum, the leadership appears to realize that the disappointments of recent years are not isolated but in fact represent a series of related setbacks stemming in part from mistaken appraisals of the possibilities open to Soviet policy.

7. In our view, the attempt to deploy strategic missiles in Cuba was in considerable part due to Soviet recognition of this trend. We think that the Soviet leaders, as they pondered this venture, were highly conscious of the failing momentum of their offensive and therefore put a very high premium on a dramatic triumph which they could turn to account in many ways—to alter both the image and the substance of relative power, to prepare a fruitful ground for Berlin negotiations, to undermine US influence in Latin America, to disarm Chinese criticisms. They may have judged the chances of failure as high but nevertheless felt it necessary to take a calculated risk, or the need for a victory may have led them to persuade themselves that the chances of failure were in fact low. In any case, we believe that the accumulated discouragements of recent years contributed to a decision which did not reflect the caution usually characteristic of Soviet foreign policy moves.

II. THE SITUATION IN THE LEADERSHIP

8. The failure of the Cuban missile venture has aggravated all the problems which the Soviets meant it to resolve. There are various signs that it has also affected Soviet top-level politics. Analysis of the workings of the Soviet leadership must always involve considerable speculation, but our tentative conclusions suggest that, at the present time, Soviet foreign policy may be influenced in more than usual degree by internal disagreements.

9. Khrushchev occupies the central position in Soviet politics, and his personality and conceptions give a strong stamp to both the internal and foreign policies of the USSR. He is capable of revising ideology to suit his purposes, but he is a great deal more than merely pragmatic. Compared to his predecessor and apparently also to some of his present colleagues, he is an imaginative innovator in both doctrine and policy, prone to change course rapidly in his incessant search for results. Approaching each new tactic with his characteristic energy, he tends to outdo others in boldness and often to assume considerable risk, trusting to his political skill to retrieve a situation somehow if difficulties ensue, even by reversing himself completely if necessary. The prime move of this type which can be directly associated with Khrushchev is the daring stroke of de-Stalinization, but the same traits can be observed in such disparate moves as the New Lands campaign, the Berlin challenge of 1958, the 1960 military reorganization plan, the

cultivation of a "spirit of Camp David," and the two reconciliations with Tito. This pattern suggests to us that Khrushchev either initiated the Cuban missile venture himself or adopted it early and supported it against any doubters.

10. Because of these tendencies, any opposition to Khrushchev within the Soviet leadership has tended to be a conservative opposition, that is, one which both prefers greater caution in the appraisal of risks and shies away from novel departures in doctrine or policy. Khrushchev is accessible to the ideas of others, but it appears that most of his innovations originate either with himself, younger associates, or specialists rather than with his colleagues in the top leadership. While he is usually able to muster majorities for his proposals, some of them have at various times encountered opposition which has limited or even undone them. And when several of his programs encounter difficulties simultaneously, the restraints exerted by his colleagues accumulate. If the coalescence of opinion is strong, Khrushchev reacts by shifting ground to place himself at the head of the new and more conservative consensus which is forming. But he often returns to his original conceptions when he deems that a propitious moment has arrived.

11. The recent period appears to be one in which Khrushchev has been on the defensive and has had to move away from venturesome positions with which he had clearly identified himself in the past. In February, he all but abandoned his longstanding proposals for a substantial increase in allocations to agriculture and light industry; these had been continually opposed by the military and probably by some political leaders as well. In March, Khrushchev's chastisement of rebellious writers and artists abruptly checked the de-Stalinization campaign which he had himself revived last fall. Khrushchev in the past has used de-Stalinization as a means of direct attack upon political opponents, and it is possible that this latest reversal represents a successful defense by his intended targets. At a minimum, Khrushchev's judgment has probably been discredited by the strong antiregime overtones which emerged when the intellectuals responded to his earlier encouragement to renewed attacks on Stalin.

12. These moves are logical responses to real problems, but they also comport better with the predilections of some of Khrushchev's colleagues than with his own earlier views and this, along with several ambiguous indications of current uncertainty in Moscow, suggests that his predominance has diminished somewhat. The difficulties with China, the frustrations over Berlin, and the humiliation in Cuba have probably worked in the same direction. We think it unlikely that any faction is actively seeking Khrushchev's downfall. Instead, such leaders as Kozlov and Suslov have probably wished to bring about a greater practice of collectivity in Soviet policymaking and, by this route, to tighten central controls, insist upon ideological conformity, and eschew

radical and risky departures in domestic and foreign affairs. Khrushchev's temperament is not amenable to collectivity, however, and he is likely to respond to checks of this kind by moving to reassert his dominance. Kozlov's illness is in this respect convenient; whether real or political, it undermines his present strength and may lead to further personnel shifts which Khrushchev could turn to his own advantage.

III. THE SOVIET VIEW OF PRESENT OPPORTUNITIES

13. We believe that a phase in regime politics of the sort described above has contributed to the relative immobility which seems to characterize current Soviet foreign policy. Even without this factor, however, there are important reasons for the Soviets to avoid major new moves. From the leadership's viewpoint, no major change in Soviet policy, such as a serious attempt to reduce cold-war tensions drastically or a vigorous new offensive against non-Communist positions, seems to offer much promise at present.

14. The Soviets would not expect that they could improve their position through negotiated agreements at a time when they are relatively weak and their enemy feels relatively strong. In such periods, the task of Soviet diplomacy is primarily to pursue defensive tactics until a more favorable correlation of forces can be brought about. Khrushchev's post-October advocacy of negotiation and compromise was intended primarily to buttress his version of the missile withdrawal as a victory for peace rather than a defeat for the Soviet Union and to forestall possible US efforts to follow up with pressures on other Soviet positions. The Soviets did offer one concession which seemed important, probably also to them, when Khrushchev accepted the principle of on-site inspection of a test ban. But the USSR soon indicated, by its conduct of the negotiations which followed and its refusal to go beyond three inspections, that it required greater counterconcessions than were forthcoming from the US before it would actually sign a treaty. The requirement to sustain some commitment to Cuba in the face of continued US hostility to Castro raised a further barrier against any general relaxation of tensions, as did the need for an external threat to justify continuing deprivations at home.

15. In fact, while statements praising the method of mutual concessions have not dropped out of Soviet propaganda altogether, they are now overshadowed by charges that the West remains hostile and has no genuine interest in reaching settlements. This does not mean, however, that aggressive Soviet actions are to follow. In the first place, the USSR recognizes that the world situation currently presents no opportunities for major advances at tolerable levels of risk: indeed, in 1963 it has suffered distinct reverses in the Middle East and is having difficulty in holding its own in some areas of Africa. In the second

place, the Cuban episode has demonstrated to the Soviets that forward action is not without peril. Current Soviet pronouncements betray a keen appreciation of US power, and the October crisis has almost certainly persuaded them that they had underrated US determination to use that power.

16. In these circumstances, the Soviets seem to see the present period as one which can best be used to build up their strength and to fortify existing positions in preparation for future opportunities to make new advances. They seek in the first instance to strengthen their military power in hopes of gaining a position which repairs their prestige and lays greater inhibitions on Western policy.[1] Recent strong reaffirmations of military priorities reflect a determination to proceed with existing programs and, beyond this, a possible decision to increase military spending above previously planned levels. These programs already include the introduction of protected strategic missile systems, the development of very-high-yield warheads, and a major antiballistic missile effort which has already led to the deployment of a first-generation system at one location. The USSR is also pursuing a vigorous research and development effort aimed at technological advances which could radically enhance both the war-fighting capability and the political value of its military establishment. As an important aspect of these efforts, the Soviets are conducting a space program aimed at prestigious accomplishments and are almost certainly investigating the feasibility of military space systems.

17. We do not mean, however, that the Soviets consider that, unless they can achieve some sort of military advantage over the West, their political advances have reached final limits. Military power remains only one ingredient, albeit a very important one, in the Soviet concept of the forces which determine their prospects. Still less do we believe that Soviet foreign policy in the present phase will be passive. The USSR will be alert to search out vulnerabilities in the non-Communist world, to exploit the differences which have arisen in the NATO alliance, and to make its influence felt throughout Asia, Latin America, and Africa. But the Soviet leaders' outlook is not one of high confidence that events can readily be made to move in their favor, and we think it likely that they will take a sober view in the present period of the opportunities for major advance.

18. There is one important caveat to this judgment. We have identified the need for a major triumph which would reverse a trend of

---

[1] The Assistant Chief of Staff, Intelligence, USAF, does not consider the reasons listed sufficiently describe the basis for Soviet military policy decisions. He would insert the following sentence at this point:

This would be in furtherance of a basic Soviet military policy objective of building by such means as become available toward achievement of a military superiority over the West.

adversity as an important part of the Soviet motivation for deploying missiles to Cuba. This need still remains; in fact, it has been magnified by the Cuban failure itself and by subsequent problems, such as the Communist setback in Iraq, the Western gain in India, and the renewed Chinese onslaught on Soviet leadership of the Communist movement. While we think it probable that the Cuban venture has strengthened the counsels of caution in Moscow, we cannot exclude the possibility of some new and audacious move. Such actions are essentially incalculable, although we think they are somewhat more likely when Khrushchev's ascendancy is high than when collectivity, that is, his need to defer to the opinions of others, has been strengthened. Nor can we predict where such a move might be launched. We note, however, that Berlin would offer a field for a far-reaching Soviet victory, although it is obviously an extremely risky area in which to pose a major challenge.

19. It is also conceivable that Khrushchev will react to present frustrations in the opposite way, that is, by focusing upon a major agreement with the West, rather than a major encroachment against it, as the means of restoring movement to Soviet policy and scoring a personal triumph. Given the present status of such issues as a nuclear test ban and Berlin, it is difficult to see how he could expect to achieve an early settlement without making visible concessions or reductions in earlier Soviet demands. If he nevertheless chose to pursue this course, and to represent the results as important advances for the USSR, he would thereby set up a powerful momentum for general detente and bring new confusion into official ideology. This in turn would intensify the strains in the international Communist movement and magnify present doubts within the Soviet Party about his leadership. For these reasons, and because of Khrushchev's own ambitions to achieve the kind of victories abroad which are clear defeats for the West, we think it very unlikely that he will proceed in this direction, although we cannot entirely exclude this possibility.

IV. SOVIET TACTICS IN THE NEAR TERM

20. *Berlin and Germany.* We believe that the USSR does not intend in the near future to pose a sharp and direct challenge to the Western position in Berlin. Khrushchev's remarks in East Berlin last January seemed designed to put Ulbricht on notice that his regime, protected by the Wall, must now concentrate upon a policy of internal stabilization and growth and not expect early progress toward the objective of ejecting the Allies. Similarly, the manner in which the USSR has resumed Berlin conversations with the US suggests that it does not intend an early showdown. We think it unlikely, however, that the Soviets expect these talks to lead to any early agreement on Berlin. Instead, we believe that their motives are, first, to avoid the impression

of weakness which would be conveyed by allowing the issue to die entirely and, second, to get into a position to sow distrust and suspicion among the Allies and West Germany. In pursuing these ends, they are likely to resort to sporadic local harassments.

21. It is possible, however, that the Soviets will in fact seek some sort of mutually acceptable Berlin agreement as a way of discharging Khrushchev's longstanding commitment on this matter and collecting such concessions as can be extracted in return for an easing of pressures on the Allied position in the city. In such an effort, they would presumably have to accept a continued Allied presence in West Berlin and some form of guaranteed access. The USSR for its part would be primarily interested in extracting as much recognition as possible for the GDR, perhaps by involving it in the administration of Allied ground and air access in a way which did not entirely extinguish formal Soviet responsibility. Once such an agreement was achieved, the Soviets would probably feel free to fulfill their long-adjourned promise to conclude a peace treaty with the GDR. The USSR would of course wish to set a predetermined duration on a Berlin agreement and, if this proved impossible, to obtain a formula sufficiently vague on this point to allow them to renew pressures at some future time.

22. Recent developments in the Western Alliance affecting the control of nuclear weapons and the present check to the European unity movement seem to have focused Soviet attention once again on Europe. The prospects for changes of political leadership in West Germany and Britain probably reinforce this tendency. We do not foresee any particular Soviet initiative aimed at European problems, but the possibility of promoting disarray in the Western camp may be more strongly present as a factor affecting Soviet policy than it has been for some time past. Both the Franco-German treaty and the plans to admit West Germany to a larger role in NATO's nuclear policy have already provoked a sharp verbal Soviet response. The vague threat to take countermeasures against West German participation in a multilateral force probably has no more substance than the long series of threats which have accompained the whole process of German rearmament. It is possible, however, that the Soviets will respond by increasing their efforts to extract from the West some formal recognition of the existence of two Germanies, reasoning that this would offset the dangers of a nuclear-armed Federal Republic by making it more difficult for Bonn to mount heavy pressures against East Germany. There may also be a revival of Soviet interest in limited arms control measures affecting Germany.

23. *Disarmament.* The Soviets probably still see certain advantages to themselves in more general measures of arms control and disarmament. They would doubtless count it an advance, for example, if they could find a means of preventing the proliferation of nuclear weapons or reducing the chances of accidental war. The burden of modern arma-

ments on the Soviet economy is an increasingly important argument for the stabilization of the arms race. On the other hand, the Soviets set great store by the political usefulness of great military power. Furthermore, they are aware that broad disarmament or arms control measures would have profound implications—intimate cooperation with the enemy and recognition of a higher sovereignty in an international control organ—running contrary to their assertions of inevitable hostility between the two world camps. As a result, they have regarded disarmament questions primarily as an opportunity to capture peace sentiments and to mobilize pressures against Western military measures.

24. Present Soviet behavior indicates that post-October reappraisals have not altered this approach, and that the USSR does not regard the present period as a favorable one for reaching arms control agreements which would advance Soviet interests. Such a conclusion seems to be reflected in the announcement of economic policies which recommit the Soviets to an intense military competition. Moreover, in the present context, it would be difficult to move on to further significant advances in the field of disarmament and arms control without first concluding a test ban agreement. The Soviets have evidently decided that the gap between Soviet and US positions on this matter, while narrowed, is still too wide to be bridged. In this, we believe that they are influenced by the desire not to encourage hopes for a detente which would be generated inside the USSR by a major East-West agreement. During the present phase, therefore, we believe that the Soviets approach to disarmament will be primarily agitational and will focus on those measures which offer one-sided rather than mutual advantages.

25. *Cuba.*[2] The outlines of a post-October Soviet policy toward Cuba have now emerged. The USSR's immediate objective is to preserve the position it won in 1960–1962, in the face of pressures from the US and problems in dealing with Castro. To this end it is continuing a substantial flow of economic assistance which appears sufficient to maintain the Cuban economy at least at present levels. It regularly reiterates a commitment, albeit undefined, to the security of the regime. While the Soviets of course would prefer a disciplined puppet to take charge in Havana, they have accepted Castro, put up with his periodic public barbs at the USSR, and apparently agreed that the Moscow-oriented Communists should avoid conflict with him. Similarly, they are trying to reduce the chances of heightened US pressures by not firing upon overflights, by withdrawing some personnel, and probably also by urging Castro to soft-pedal the fomentation of armed revolution in Latin America. One purpose of these actions is to induce the US to move toward *de facto* acceptance of Castro.

[2] A fuller discussion will be given in the forthcoming NIE 85-63, "Situation and Prospects in Cuba," SECRET.

26. The pattern of Soviet policy toward Cuba described above probably means that the primary Soviet aim at present is to consolidate communism in Cuba with a view to using it as a foothold from which to pursue the longer term struggle for Latin America which the Soviets foresee. If this is so, it is unlikely that the Soviets would prejudice this aim by again attempting to use Cuba as a strategic base, thus courting violent US action against the Castro regime. This is not to say that the Soviets will never again attempt the introduction of some sort of offensive weapons system into Cuba. The time might come when they would again calculate that the net of advantages and risks would favor such an attempt. For at least the near term, however, the Soviets almost certainly estimate that the risks of such an attempt would be excessive.

27. If this is their present judgment, the Soviet must reconsider the usefulness to them of those forces which went to Cuba as part of the missile deployment. There are some signs that they intend to make gradual further withdrawals, but we would expect a significant number of Soviet military personnel to remain in Cuba indefinitely, in training and advisory roles at least. We expect the Soviets to hand over to Castro their advanced weapons as the Cuban forces are trained to operate them, possibly including control over the surface-to-air missile (SAM) system. We are unable to estimate a date by which Cubans would acquire complete control of the SAM system, but we do not exclude that this could occur as early as the latter part of 1963. This would, in the Soviet view, involve some risk of Cuban attacks upon reconnaissance aircraft which could touch off a new major crisis, but they may regard this risk as preferable to the political cost of either withdrawing the system or trying to keep it indefinitely under their own command.

28. *The Underdeveloped Areas.*[3] The USSR's understanding of the "national liberation" movement identifies the emergence of new, independent nations as an important gain for the Soviet world position. The Soviets go on, however, to argue the necessity of a second stage, that of "national democracy," the hallmark of which is the participation of local Communists in a governing national front. This in turn creates the prerequisites for "completing" the revolution, with or without violence, by installing the Communist Party in power. Events of the last five years, however, have not followed this pattern. Cuba has reached approximately the predicted destination, but by an unpredicted route and in a manner which leaves the USSR with economic and military leverage but without full disciplinary control. The Indonesian Communist Party has successfully practiced the tactics of building political

[3] For a detailed discussion of Soviet policy in the Middle East, see the recent NIE 11-6-63, "The Soviet Role in the Arab World," dated 24 April 1963, SECRET. The USSR's approach to Africa is examined in NIE 11-12-62, "Trends in Soviet Policy Toward Sub-Saharan Africa," dated 5 December 1962, SECRET.

weight and respectability and shows some promise of leading its country into the phase of "national democracy." But the Cuban experience, and the Indonesian Party's behavior in the Sino-Soviet dispute, cannot give the Soviets much assurance that the Indonesian Party in power would follow Soviet guidance in a disciplined way either. Elsewhere, nationalist leaders have generally rebuffed or even repressed the Communists; in some cases, Soviet state relations with the new governments have not escaped damage.

29. One of the features of the general line of policy described in this paper will probably be an increased emphasis, in areas where this is feasible, on efforts to build subversive capabilities and tangible political assets within the underdeveloped countries. The challenge of the Chinese Communists, and in Latin America the competing appeal of Fidelismo, reinforce the reasons for a greater Soviet effort in this direction. Nevertheless, we do not expect any radical turn in Soviet policy stressing early Communist attempts to come to power. The Soviet leaders continue to give evidence that, in most cases, they regard such attempts as premature, more likely to set back rather than advance the fortunes of the local parties, and prejudicial to other Soviet interests. Meanwhile, they will continue to rely upon diplomacy and material assistance; even though stringencies in the domestic economy and their growing awareness of the limited political returns on aid programs may lead them to become more selective in assuming new economic commitments, they do not wish to abandon this field to the West.[4]

30. *Communist China.* At the present stage of the Sino-Soviet dispute, neither Moscow nor Peiping entertains much hope of pressuring or persuading the rival leadership to alter its stand. The stakes in the conflict are therefore the allegiance of other Communist parties and radical movements in the non-Communist world. Because China has made gradual but regular gains in this competition over the last two years, particularly in Asia, the Soviets have a strong interest in gaining some sort of respite, especially at a time when the accumulation of problems elsewhere has lowered their prestige. The clearest example of this interaction occurred last October when the Soviets, foreseeing the possibility of a retreat in the Cuban missile crisis, made a vain bid to forestall Chinese criticism by momentarily supporting Peiping in its border dispute with India. The same tendency is evident in Khrushchev's call for a truce in polemical warfare and efforts to arrange bilateral talks.

31. But while the Soviets can shelve an issue like Berlin simply by ceasing to agitate it, they have no means of unilaterally shutting off the Sino-Soviet dispute. The Chinese show no disposition to stop pressing their case, and Khrushchev is unwilling to make concessions important

[4] For an examination of Soviet aid to these countries, see NIE 10-63, "Bloc Economic and Military Assistance Programs," dated 10 January 1963, SECRET.

enough to allow the two to compose their differences for a time. The present attempts to convoke a meeting have been carried on in a remarkable public correspondence filled with uncompromising restatements of position and veiled threats and insults. We think that a conference, if it comes about, will at most result in a superficial compromise which would be highly vulnerable to the next turn of international events. Beyond these maneuvers, the general outlook is for a continuing and widening estrangement between the two powers in which both Soviet and Chinese nationalism will become increasingly prominent.

32. In southeast Asia, differences with China, which include differences over the tactics of "national liberation" struggle, have worked to complicate Soviet policy. Because of the important position of the North Vietnamese as the prime movers of Communist policy in both Laos and South Vietnam, the Soviets are probably increasingly reluctant to oppose North Vietnamese interests. The Soviets probably do not want to dissipate what influence they have in Hanoi by constant intervention over secondary questions of local tactics, particularly if in doing so they appear to be giving way to Western pressures. On the other hand, the Soviets have broader interests and problems which transcend those concerning Laos. Hence they would be loath to give the North Vietnamese or Chinese a free hand to decide Communist policy. On balance, even though the Soviets still probably prefer to maintain the Geneva settlement, we think that they will be unable to respond to US and British efforts to stabilize the Laotian situation unless US pressures induce the local Communists to seek Soviet support.

V. THE LONGER RUN

33. It is wholly uncertain how long Soviet policy will focus on the tasks of consolidation designed to prepare for a renewed offensive against the non-Communist world. This depends on a number of factors, such as the situation in the top leadership, the success of the USSR's efforts to improve its relative military position, and the opportunities for forward action opened up by developments abroad. An aggravation of divisions in Europe and between Europe and the US, for example, would encourage the Soviets to pursue more actively the exacerbation of differences in the Western camp. General policy, moreover, might be heavily influenced by the need to respond to some unexpected turn of events, such as a successful Communist revolution in Latin America, the flaring up of a new Cuban crisis, or an escalation of armed conflict in southeast Asia.

34. In our last estimate of the future course of Soviet foreign policy,[5] we examined the possibility of a gradual evolution in the Soviet world outlook which would diminish the importance of those conceptions of

[5] NIE 11-9-62, "Trends in Soviet Foreign Policy," dated 2 May 1962, SECRET.

hostility derived from Communist ideology. At that time, we judged it possible that, over a quite unpredictable period of time, certain factors might force the Soviet leaders to adopt a more "normal" approach to world politics, one giving greater weight to national interests and conventional modes of international behavior as these are understood in the West, and less to the effort to expand indefinitely the area of Moscow's control. In this section, we reconsider the nature and influence of these factors: the course of developments inside the USSR, changing relations within the Bloc and the Communist movement, and the movement of events in the East-West competition.

35. *Internal Developments.* A year ago, we concluded that there was some prospect of an evolutionary trend inside the USSR which, by allowing public opinion to acquire a larger influence, would have some moderating effect on the Soviet world outlook. We have seen no significant movement over the last year, however, in the direction of involving wider circles of opinion, presumably closer to the aspirations of the general population, in Soviet policymaking. The regime has laid new economic burdens on the consumer and, in Cuba, carried the country into a risky and remote adventure irrelevant to the concerns and desires of the people. These actions have probably cost the regime some of the popular confidence and loyalty which it seeks, and the relatively bleak outlook for the consumer in 1963 raises the possibility that demonstrations of discontent may recur on the considerable scale of 1962. But these reactions do not endanger the bases of regime control, and the recent reaffirmation of military priorities in the allocation of economic resources confirms that they remain only one factor, and evidently not a decisive one, in the leadership's choice of policies.

36. We attach considerable long-run importance, however, to the climate of opinion which, making use of the opportunities of de-Stalinization, has manifested itself among Soviet writers and artists. The recent works of the cultural intelligentsia, and their responses to critical attack, implicitly and sometimes even explicitly reject the legitimacy of party authority in the arts. More than this, in their strong affirmation of human values and their condemnation of the Stalinist past, they have formulated the hitherto unspoken question of the present leadership's responsibility for the crimes of the 1930's and 1940's and, consequently, its fitness to rule today. Implicit in their revolt is also a repudiation of the way in which the party defines its historic mission and its allegation that the Western world is inevitably hostile to the USSR.

37. The regime has shown a special sensitivity to the intellectuals' contention that the older generation does not deserve the respect of its sons. It senses in this not only a criticism of individuals, but a repudiation of the political achievements of the revolution to date. Current measures of repression reflect party fears that these attitudes are spreading to other groups, and there are signs that some students and scien-

tific-technical workers share the artists' outlook. In the face of the present crackdown and demands for recantation, many of the rebellious artists may not be able to sustain the collective insubordination which their current silence represents. We believe, however, that their alienation from the party leadership as presently constituted is profound, and that it will continue to find expression so long as the regime remains unwilling, as it appears to be at present, to resort to repressions which truly terrorize.

38. *Relations in the Communist World.* In the past year, events have forced the Soviet leadership to move considerably further away from the traditional Communist view of Moscow as the undisputed center and order-giver for the entire world movement. Even as they look beyond Mao Tse-tung to his successors, they have little hope of being able to restore unity of action with Communist China or to be relieved of the necessity to combat its independent influence in parties and movements which earlier were exclusive Soviet preserves. By force of various circumstances, they have had to extend a special status to Cuba in the socialist camp and to watch Albania, North Korea, North Vietnam, and the parties in non-Communist Asia move varying distances out of their sphere of influence. In pursuing a rapprochement with Tito, they have had to compromise their old demands of hegemony.

39. In all these ways the Soviets, responding to a pluralistic and contradictory world, are practicing a political give-and-take which has less and less relation to traditional techniques of Stalinist manipulation and to the blacks and whites of Stalinist thought. We believe that this process within the Communist movement has an eroding effect upon the basic Soviet view of world politics as essentially a bipolar struggle of camp against camp. The private discourse of Soviet citizens and officials frequently reflects a recognition that, in some matters, Soviet interests parallel those of the West rather than those of Communist China. It would be wrong, we think, to interpret this trend as leading in the direction of a common Soviet-Western front against China. But it is not unreasonable to expect that the loosening of relationships inside the Communist world will be a significant factor tending to diminish the ideological ingredient in the Soviet outlook upon the non-Communist world.

40. *The Course of East-West Competition.* In our last estimate, we singled out the success or failure which the USSR's foreign policy encounters as perhaps the most significant factor affecting the Soviet outlook on the outside world. Since that time, the record contains much more failure than success, but we do not perceive signs of any fundamental Soviet reappraisal of the validity of their key doctrines. We continue to believe, however, that the prolonged frustration of Soviet objectives, particularly the more ambitious aims having to do

with a world-wide conflict of systems, holds some promise over the long run of bringing the USSR around to a view which accepts the permanence of a pluralistic world. Conversely, it seems certain that successes in expanding Soviet influence, major weakenings in Western positions, and in particular any further advances of direct Communist rule will act to confirm the more far-reaching hopes and expectations of the Soviet leaders.

41. It is possible, however, that the experience of prolonged failure to advance toward Communist objectives would bring to the fore the more dogmatic elements in the Soviet outlook. But even if ideological hostility should diminish in the long run, this would not bring an end to international conflicts of interest or necessarily reduce the danger of general war. On the contrary, even in these circumstances the requirements of Soviet national security, prestige, and ambition, as seen by the Soviet leaders and people, would still bring the USSR into frequent collision with the interests of other states. The most that could be expected would be that some issues would become more tractable and negotiable, particularly those not deeply rooted in the national interests of the Soviet state, and that the occasional recognition of a measure of common interest with the West would not invariably be stifled by ideological hostility.

VI. THE QUESTION OF SUCCESSION

42. A key uncertainty surrounding future Soviet policy arises from the problem of the succession to Khrushchev. The style, skill, and conceptions of the top leader still play a major role in determining Soviet choices and in the effectiveness with which policies are prosecuted. We think, for example, that Khrushchev's personal views and attributes have been of major importance in shaping Soviet policies over the past decade, and that the USSR under a different leader might have posed significantly different problems to the US.

43. The Soviet Party appears to be no better equipped with an accepted mechanism for the designation of a successor and his orderly assumption of power than it was a decade ago. The most likely sequence of events, in our view, is a repetition of the post-Stalin experience, in which the late leader's senior associates conduct a struggle for supremacy behind a facade of collectivity. The main arena of conflict will be the leading party organs, but unless a single figure can gain control fairly soon, the contenders will probably try to bolster their strength by appealing to important interest groups outside the professional party apparatus. Of these groups, we believe that the economic administration, weakened by continuing reorganizations, will be an even less important political counter than when Malenkov tried to use it after 1953, and the police would probably become a significant factor

only in the event that a succession struggle was prolonged and was accompanied by popular unrest which enlarged the role of the security forces.

44. There is some reason to believe, however, that the military leadership will be a substantial factor in post-Khrushchev maneuvering for power. The special efforts to rehabilitate Stalin's military victims and military attempts to maximize their own credit for World War II victories point to a strong sense of corporate identity among the senior officers, although we also have evidence of conflicts among the marshals. More important, the military leadership in the last two years has increasingly asserted its own views, not always unanimous, on questions of military doctrine and strategy; at times it has seemed even to be giving its opinions a more general political import as well. We do not believe that the military aspires to an independent political role in Soviet politics, but if, as we expect, the military and economic choices facing the USSR become more acute, the senior officers will probably find themselves more deeply involved in matters of general policy. Indeed, there are some present indications of party alarm on this score, and it is possible that, before the succession question arises, steps will be taken to restrict the political role of leading military personalities.

45. We know little about the individual policy views of Khrushchev's colleagues. It is clear, however, that the leadership is frequently divided over policy issues, and the record of the succession struggles after Lenin and Stalin indicates that divergent views on policy are heavily involved in innerparty competition. So long as present trends continue in the economy, in the relationship of East-West military power, in Bloc relations, and in Soviet fortunes abroad, Khrushchev's heirs will confront a number of acute issues and decisions. His departure would make it easier to ditch some policies to which his personal prestige has been attached. But it would aggravate most problems by bringing about an inevitable temporary reduction of Soviet prestige, a loss of authority in the Communist movement, and a general uncertainty in the country.

46. In such circumstances, it is normal for Soviet politicians to subordinate their own views to expediency and to espouse those policies which seem most likely to serve their personal ambitions. At the same time, a powerful weapon in this competition is a comprehensive program which a leader can represent as promising solutions to a broad range of problems confronting the regime; to be without a program is a grave weakness. Thus contenders for power are under pressure to formulate competing proposals, designed to appeal to politically important groups, on a number of issues. Initially the tendency would probably be for more conservative elements to gain predominance, but the longer a succession struggle remains unresolved, the more tendency there would be for a wider range of alternative policies to be given active

consideration. This tendency creates the likelihood that, if the struggle was protracted, the circle of political participation would also widen as rivals reached out beyond the party elite for support.

47. Because of these factors, the period ushered in by Khrushchev's departure may present special opportunities and dangers to the US. Relations with the non-Communist world, and particularly with the leading rival power, are likely to be among the prime issues in any political competition, since these are intimately related to military problems, economic difficulties, and the key questions of China and Germany. We think it very unlikely that a "war party" will emerge in the Kremlin; there is no evidence that other leaders take a less sober view than Khrushchev of the consequences of nuclear war, and indeed some information indicates that the military regard the USSR as inadequately prepared at present to engage in one. But a faction may form which seeks to meet the problems of internal discontent and Chinese pressure by placing greater stress on factors of tension in East-West relations. It is also possible that a succession struggle would generate arguments for some accommodation with the West as a means of coping with these same problems. At any rate, the US will almost certainly be assailed with contrary indications, all of them difficult to interpret, and some of them suggesting that important changes are possible depending on the attitude adopted by the West. If Khrushchev's departure occurs at a time when existing policies are enjoying poor results, the succession period may in fact offer unusual chances for movement in Soviet policy.

FOREWORD

The significant developments in transportation in the Communist Far East in 1962 are discussed in this memorandum. The transportation situation in Communist China, North Korea, and North Vietnam is examined in the light of current economic and military developments, and some tentative predictions for the future are made. The information was derived mainly from official publications and announcements [redacted]

TRANSPORTATION IN THE COMMUNIST FAR EAST*
1962

Summary

The transportation system of Communist China during 1962 played an important role in the support of military operations. In May and June the railroad system performed very capably in the movement of additional troop reinforcements to the Fukien coastal area. In October and November, motor truck transport provided substantial support to the Chinese troops taking part in the attack on India. Water transport played a supporting role in the Fukien coastal troop movement, as it was able to carry some of the civilian traffic that could not move by rail because of floods and the military utilization of the rail system. In general, because of the low level of economic activity in the country as a whole, the transportation system supported the economy with much less difficulty than during the 1950's.

The transportation authorities of Communist China made little effort in 1962 to improve operating efficiency or to increase the size of the inventories of transportation equipment. The freight car park probably declined slightly, whereas the locomotive park may have been maintained at the level of the previous year. Because of the failure to allocate resources for producing or importing spare parts, it is believed that the size of the civilian motor truck park was reduced compared with the previous year. Only one vessel was added to the Chinese merchant fleet in 1962 compared with 9 ships added in 1961 and an average of 19 ships added during each of the 4 previous years.

The pace of new transportation construction activities in China did not increase appreciably in 1962. Little progress was made on the Trans-Sinkiang rail line or on other major lines under construction in the southern part of the country. The Chinese did devote considerable effort, however, to the construction of forestry and industrial railroads. Roadbuilding activities continued along the western and southern borders of the country and in some cases even extended across the border. On the inland waterways a rehabilitated 400-kilometer (km) section of the Grand Canal was placed in operation.

* The estimates and conclusions in this memorandum represent the best judgment of this Office as of 15 May 1963. For the estimated freight traffic performance of modern inland transport in the Communist Far East during 1957-62, see Table 1, Appendix, p. 15, below.

The transportation system of North Korea did not achieve the rate of growth in performance in 1962 necessary to meet the goals of the Seven Year Plan (1961-67), in spite of the fact that the railroad network was improved and the inventory of railroad rolling stock increased. The growth of the transport sector, however, kept pace with growth in other sectors of the economy because of a 5-percent underfulfillment of the over-all annual plan for the national economy. In North Vietnam the apparent stoppage of work on the new standard-gauge rail line from Hanoi to P'ing-hsiang in Communist China delayed the provision of added rail capacity for use in moving domestic and international military and economic traffic. In addition, little progress was noted on the restoration of the Ham Rong bridge over the Song Ma, a major Chinese aid project. New road construction in 1962 was concentrated in the rugged northwest section of the country and along the North Vietnam-Laos border in order to provide better support to the Communist elements in Laos and South Vietnam.

I. Communist China*

A. Railroads

Because of the low level of economic activity in Communist China in 1962, the railroad system supported the modern industrial economy with much less difficulty than during the 1950's. Although there have been no official announcements concerning railroad performance in 1962, it is probable that performance was somewhat below the level achieved in 1958 (see Table 2**). Lack of cargo was the reason most often given for the fact that existing rail facilities were not being used to capacity. [redacted]

1.5(c)
3.4(b)(1)

In spite of the fact that the railroad system was not fully utilized in 1962, the system experienced some difficulties in meeting all demands placed on it in some locations during certain time periods. Normal rail movements in southeast China, for example, were interrupted in May, June, and July by the usual seasonal floods and by what appeared to be the high-priority movement of additional troop reinforcements to the Fukien coastal area opposite the Chinese Nationalist stronghold on Taiwan. Although there were many reports of passengers being stranded and economic traffic being shunted aside, the railroad system apparently performed very capably in the purely military phases of the redeployment. Troop trains moved from various parts of the country and delivered the military units at their destinations with little interruption in a regularly scheduled sequence.

Available evidence indicates that the reduction in train speeds which was first observed in 1961 continued through 1962. Numerous press announcements related the addition of many small passenger and freight stations. These stations, which probably were not justified in terms of the volume of shipments, were ostensibly added to "support" agriculture. In terms of railroad operations, these additional stations undoubtedly resulted in a reduction in train speeds, increased turnaround time, higher costs, and generally less efficient operations. [redacted] freight cars arriving in Kowloon and numerous reports

1.5(c)
3.4(b)(1)

* See the map, Figure 1, inside back cover.
** Appendix, p. 16, below.

in the press indicate a level of maintenance somewhat lower than in previous years. It is possible, although not probable, that the freight car park may have deteriorated to the point that accidents and breakdowns may be interfering with operations. If the deterioration of the park [redacted] is allowed to continue and if production of freight cars is not resumed in the near future, the capacity of the railroad system may be reduced substantially below the peak level achieved in 1959-60. 1.5(c) 3.4(b)(1)

During 1962 the inventory of railroad freight cars in Communist China probably declined slightly to approximately 130,000 cars. [redacted] no freight cars have been produced in Communist China for internal use since mid-1961, although it is quite possible that at least some types of specialized cars were manufactured or imported. Information on the production or import of locomotives is not available, although it is possible that enough steam locomotives were completed to take care of normal replacements. In the absence of any evidence to the contrary, it seems likely that the Chinese locomotive park remained static during 1962. 1.5(c) 3.4(b)(1)

Little additional trackage was added to the main-line railroad network in 1962. Although more than enough time has elapsed for completion of the Trans-Sinkiang line to the Soviet border, about 500 kilometers (km) west of Urumchi, there is no evidence that this has occurred. Early in 1963, however, the line reportedly was open to traffic as far as Urumchi, about 60 km beyond Yen-hu, the point reached in 1959. Work possibly is proceeding on the roadbed and structures west of Urumchi so that the line can be opened to the petroleum refinery at Tu-shan-tzu, a distance of about 260 km from Urumchi. In the southwest, work on the Yunnan-Kweichow line probably has been suspended, whereas work on the Ch'eng-tu - K'un-ming line probably is continuing, although no announcements have been made concerning its progress. Reports of a planned rail line from Lan-chou to Lhasa continue, but confirmation of its alignment and firm plans for the initiation of its construction are lacking. The only announced completion of a rail line was a 40-km line in Shantung, which brought the total rail network to about 33,400 km at the end of 1962.

Although main-line railroad construction continued to be almost nonexistent in 1962, the Chinese Communists devoted considerable effort to the construction of forestry, industrial, and local railroads. On the basis of Chinese announcements it is estimated that more than 400 km of forestry railroads were completed in 1962. For the most part, these were light-duty (probably narrow-gauge) railroads located primarily in the mountainous forest regions of the provinces of Inner Mongolia and Heilungkiang. At the end of 1962, more than 1,000 km

of forestry railroads were in service in these two provinces alone. Other forestry railroads were in service in Fukien province and elsewhere. In addition to the forestry railroads, numerous industrial and local railroads were constructed. These varied from heavy-duty, standard-gauge spur lines serving major mines and industries to light, narrow-gauge lines serving communes or small industries. It is not possible to arrive at a total figure for the amount of this type of rail construction, but it may have been relatively substantial.

B. Motor Trucks

The most significant achievement in the performance of motor truck transport took place in connection with the Chinese Communist invasion of India in October and November.* This invasion required the supplying of about 103,000 troops in Tibet and along the Sino-Indian border from railheads in the rear over distances varying from 500 to 1,800 miles (800 to 2,900 km).** The total supply requirement for troops in combat and garrison units was estimated to be nearly 400 metric tons*** per day. The extreme length of the supply lines from the railheads to the areas of troop concentration on the Indian border caused both the amount of gasoline required and the number of trucks needed to be of significant proportions. [redacted] 1.5(c) 3.4(b)(1)

[redacted] Therefore, it appears that the amount of motor fuel required to move supplies for the troops during the invasion of India was relatively small compared with the total available. It is also possible that the Chinese had stockpiled considerable amounts of supplies during the summer in anticipation of their fall offensive against India, and the amount transported to Tibet during November therefore could have been considerably less than 400 tons per day. If, however, the fighting had continued at that level for any length of time, the requirement for road transport would eventually have reached the [redacted] level. 1.5(c) 3.4(b)(1)

* Unless otherwise indicated, figures in this paragraph are based on the situation as of 19 November 1962.

** See the map, Figure 2, following p. 6.

*** Unless otherwise indicated, tonnages are given in metric tons throughout this memorandum.

The performance of motor truck transport on a nationwide basis during 1962 appears to have been at about the level of 1961, primarily because of the activity connected with the invasion of India. Otherwise, it might have been slightly below performance in 1961 because of the low level of economic activity and the poor road conditions brought on by bad weather. Much of the road net seems to have been more affected by rain, floods, and snow than during 1961.

The Chinese Communists appear to have had some difficulty in 1962 in obtaining spare parts and tires to keep all their trucks in operating condition. There are indications that this may have been due to a distribution problem, however, rather than to any actual shortage of parts and tires. Regional and national conferences on this subject were held in an attempt to solve the distribution problem. Some success seems to have been achieved by an interchange of specific parts between regions with a surplus and those with a shortage. A serious effort was also made to reduce the need for spare parts by giving more attention to preventive maintenance. A similar effort was made to reduce tire requirements by getting all the mileage possible out of each tire. There also is evidence to indicate some difficulty in obtaining sufficient gasoline and oil to keep all trucks operating. This, again, may have been due to a distribution problem as much as to an actual shortage of these products.

Because of the failure to allocate resources for producing or importing spare parts, it is believed that the size of the civilian truck park was reduced compared with the previous year. It is probable, however, that production and imports of trucks and spare parts were sufficient to maintain the combined military and civilian park at approximately 200,000 vehicles, about equally divided between the two parks. The [redacted] trucks required to supply the troops involved in the invasion of India, therefore, would represent [redacted] It is believed that in November 1962 there were more military trucks available in Western China than the [redacted] required, and in addition there were several thousand civilian trucks in the area which could have been diverted to supply the troops had they been needed. 1.5(c) 3.4(b)(1)

The total length of the highway network of Communist China probably did not increase significantly during 1961. Road maintenance, rather than new road construction, continued to be the most important feature of highway activity throughout most of the country. From the Free World point of view, the most spectacular and significant activity took place along the western and southern borders of China. Roadbuilding in these areas since 1957 has continued at a relatively faster rate than in the rest of the country. In some cases this roadbuilding has been extended across the border, sometimes with and sometimes without

the consent of the other country involved. Construction in Yunnan continued in the areas bordering on Burma and Laos. Extensive roadbuilding continued in southern Tibet along the border near Nepal, Sikkim, and Bhutan and in some cases into areas claimed by India. The achievements of this roadbuilding program contributed substantially to the success of the Chinese Communist invasion of the Towang area in the Northeast Frontier Agency (NEFA) in 1962.

C. Water Transport

Performance by inland and coastal water transport in Communist China improved considerably during the last 6 months of 1962, possibly reflecting some improvement in the economic situation at least in sectors and areas that find the use of water transport advantageous. Total annual performance by coastal water transport (including performance by chartered foreign vessels), and possibly also by inland water transport, is estimated to have returned about to the 1959 level (see Table 2*). Although all modes of transportation were given the objective of supporting agriculture by the delivery of necessary supplies and consumer goods to rural areas, particular emphasis was placed on the use of water transport. In areas where both land and water transport were available, the authorities directed that preference be given to water transport.

The increasing use of water transport resulted in the return to service of most of the larger coastal ships and possibly some of the inland vessels that had been laid up during the previous year. Coastal ships once again began carrying goods directly between coastal ports and Yangtze River ports as far upstream as Wuhan. As a result of the improved harvest in Szechwan Province and all along the Yangtze River during the fall of 1962, the transport of agricultural products returned to the normal pattern of rice moving down the river rather than a major movement of food into Szechwan such as had occurred in the spring of 1962.

The upturn in coastal traffic began in May and June, when civilian transport by rail was curtailed because of floods and the military utilization of the rail system. Traffic in the ports between Shanghai and the Formosa Strait became unusually heavy as civilian traffic normally carried by the railroads was shifted to water transport. Although high water in the middle of the year and the unusually cold winter weather hampered water transport activities during some months, [redacted] the Chinese ships were very active during the rest of the year. The Shanghai Sea Transport Bureau announced that performance goals for 1962

1.5(c)
3.4(b)(1)

* Appendix, p. 16, below.

had been completed by mid-November and that the volume of goods transported in support of agriculture was much greater than in 1961. The major increase in traffic took place at the smaller coastal ports, particularly those in the major agricultural provinces just to the north and south of Shanghai. Foreign trade ports were congested occasionally during the year, reportedly as a result of poor coordination between the ports and rail transport involved in moving goods to and from the ports.

The use of chartered foreign ships in the Chinese coastal trade declined for the second straight year and reached a very low level. During 1959-60 the large number of foreign vessels involved in the coastal trade principally carried Hainan Island iron ore to the north coast, a movement in which Chinese ships do not participate, because the Chinese Nationalists have the ability to disrupt Chinese Communist shipping moving over this route. In 1961-62, movement of Hainan Island ore decreased considerably and probably took place principally on the railroads from South China ports. During mid-1962, when coastal traffic was unusually heavy in the Shanghai area, several chartered British ships were assigned especially to help move coal south from Shanghai.

Throughout the year, passenger traffic on both the inland and coastal waterways remained almost continuously at a high level. No explanation is available for this development except that the government was continuing to move workers who had arrived in the cities during the "leap forward" back to rural areas to help the agricultural sector.

Only 1 vessel, the Leap Forward (Yüeh-chin), was added to the Chinese merchant fleet in 1962 compared with 9 ships added in 1961 and an average of 19 ships added during each of the 4 previous years. At the end of 1962 the fleet included 157 ships totaling about 752,000 deadweight tons (DWT) (see Tables 3 and 4*). The Leap Forward, which was hastily constructed and launched at the height of the "leap forward" movement in late 1958, cost China an amount estimated to be at least $7.5 million. Many problems were encountered during 1958-62 while the ship was being fitted out at the Dairen shipyard. After the vessel was commissioned in October 1962, it was limited to the coastal run between Shanghai and Dairen until the start of its first international voyage on 30 April 1963. The following day the vessel ran aground and was lost in the East China Sea, probably because of faulty navigation.

During 1962 a rehabilitated 400-km section of the Grand Canal extending from the Yangtze River port of Yangchow northward nearly to

* Appendix, pp. 17 and 19, respectively, below.

the boundary of Shantung Province was put into operation. Although this section represents only about 30 percent of the full restoration which was planned to be completed by 1962, the new portion in operation should be an economic asset of considerable importance to the area. The reconstruction is reported to have improved the canal for the most part to a depth of about 4 meters (m) and a width of 60 m compared with a previous depth of 1 or 2 m and a width of 10 to 30 m. In addition to improving navigation on the canal, the reconstruction also was reported to have improved the means for flood control throughout the area.

D. Civil Aviation

The most significant events in civil aviation in Communist China in 1962 were the upgrading of the Civil Aviation Administration of China (CAAC) to a bureau directly subordinate to the State Council, and the reports of China's continued interest in the purchase of non-Bloc aircraft. In March 1962 it was reported that the State Council had adopted a resolution to change the status of the CAAC from a subordinate of the Ministry of Communications to a bureau directly under the State Council. This change, which restored the CAAC to its original status, may indicate that renewed attention will be given to civil aviation in the near future.

In spite of current economic difficulties the Chinese Communists have apparently been interested in purchasing additional non-Bloc aircraft ever since the Vickers Viscount sale contract was negotiated in 1961. During 1962, officials of Communist China reportedly inspected such aircraft as the De Haviland Comet and Sud-Aviation's Caravelle. In early 1963 it was reported that Chinese representatives had arrived in the UK to inspect 14 turboprop Bristol Britannia aircraft offered for sale by British Overseas Airways Corporation (BOAC). Apparently the Chinese are still dissatisfied with the three Soviet Il-18 turboprop aircraft first introduced into domestic service in 1960. These aircraft, which were withdrawn from regular service in 1961, are currently used only for weekly scheduled international flights to Irkutsk, USSR, and for special VIP or nonscheduled flights on domestic routes.

[redacted] 1.5(c) 3.4(b)(1)

[redacted] These aircraft will likely be used on domestic as well as on international routes.

Although little information concerning the performance of the civil air fleet is available, it is unlikely that civil air transport performed at a significantly higher rate in 1962 than in the previous year. In addition, there were no reports of extensive improvements

of air facilities and, as far as is known, the network of civil air routes was not expanded significantly. During 1962, Chinese Communist negotiations for air agreements were again confined to countries of the Far East. Negotiations with the "neutralist" government of Laos were concluded in January 1962, and an air agreement was signed providing for flights, scheduled or irregular, along agreed air routes. Although the Chinese also discussed air agreements with Cambodia and Indonesia in 1962, no agreements with these countries were announced, and it is unlikely that negotiations were successfully concluded.

II. North Korea

The North Korean transportation system failed to achieve during 1962 the rate of growth necessary to meet the goals of the Seven Year Plan (see Table 5*). In the case of the railroads, an increase of only 2.9 million tons was achieved compared with a planned increase for 1962 of 6.5 million tons. The distribution of tons carried among the various modes of transportation remained almost unchanged. Despite the failure of the transport sector to achieve planned rates of growth, the Central Statistical Board announced that "the rapidly growing transport requirements of all the branches of the national economy were satisfactorily fulfilled." This statement indicates that the growth of the transport sector kept pace with growth in other sectors of the economy and that transportation requirements proved to be smaller than expected because of a 5-percent underfulfillment of the over-all annual economic plan.

Announced increases of 8 percent in freight cars and 4 percent in locomotives indicate a park of about 11,660 freight cars and 374 locomotives at the end of 1962. Since it appears that only 14 locomotives were added to the park, the goal of producing 20 electric locomotives in 1962 apparently was not achieved. The truck park may have increased by as much as 4,000 units to a total of 27,000 units. Increases in performance in 1962 in both rail and highway transport probably were due primarily to increases in the number of freight cars, locomotives, and trucks available rather than to any significant improvements in operating efficiency.

In 1962 the North Koreans claimed that the railroad network was both expanded and improved. According to official announcements, a 42-km section of line from Kimch'aek to Tanch'on along the central section of the east coast was electrified. This achievement is substantially less than announced plans for electrification in 1962 and much less than the rate necessary to achieve the goal of the Seven Year Plan which calls for 1,500 km of main-line to be electrified. The regime also announced the conversion from narrow to standard gauge

* Appendix, p. 20, below.

of the line extending to Sinch'on in the southwest and claimed that construction of the 78-km line from Ch'ongjin to Najin along the northeast coast near the Soviet border was successfully carried out. There is some evidence, however, to indicate that the Ch'ongjin-Najin line was not in operation as of December 1962. There were no claims of expansion of the highway or water transport networks in 1962.

III. North Vietnam

In view of the general lack of information on transportation in North Vietnam in 1962 as well as a report that the transport sector was "encountering difficulties" as late as the end of October, it is probable that the sector did not achieve notable results during the year (see Table 6*). Aside from poor crop years in North Vietnam, the apparent slowdown in the rate of growth of transport performance during 1961-62 may have been due in some measure to the decline of economic activity in Communist China, since China-to-China rail traffic via North Vietnam and Chinese - North Vietnamese trade constitute a large percentage of North Vietnam's rail traffic.

Of considerable significance in the transportation picture in North Vietnam in 1962 was the apparent stoppage of work on the new standard-gauge rail line from Hanoi to P'ing-hsiang, China. Some sections of the new roadbed for this line, which was being reconstructed with Chinese Communist aid, reportedly have been turned over to agricultural purposes. In 1961 it was reported that at least 4,000 workers were employed on this project, which was due to be completed in 1964. Another Chinese aid project, the reconstruction of the Ham Rong bridge over the Song Ma south of Hanoi on the east coast, which reportedly was scheduled for completion in late 1961, has progressed slowly if at all since preliminary work was reported in 1961. Most new road construction and rehabilitation in 1962 was concentrated in the rugged northwest section of the country and along the North Vietnam - Laos border in order to provide better support to the Communist elements in Laos and South Vietnam. Nearly 2,000 km of narrow earth roads or tracks, usable mainly by carts, were constructed in the northwest. Along the Laotian border, road reconstruction reportedly was underway on routes 8 and 12 leading into central Laos. In addition, it is likely that some road construction or improvement was underway in North Vietnam in the area bordering the Sam Neua region and the Phong Saly province in northern Laos. In spite of considerable investment in network rehabilitation, the primary road system of North Vietnam remains of limited capacity and subject to deterioration during the wet season.

* Appendix, p. 21, below.

The main effort in transportation in 1963 reportedly will be the development of inland waterway transportation. In addition, the port of Haiphong, North Vietnam's most important port, will be improved with aid from the USSR. Soviet aid in the form of equipment and technical assistance probably will also be extended to improve civil air transport.

From domestic sources	4	11,408	13,617
From Bloc countries	2	22,488	21,635
From Free World countries	3	13,607	20,320

a. Data refer to vessels of 1,000 GRT or more (approximately 1,300 DWT or more).

Table 3

Communist China:
Growth of the Merchant Fleet
1957-62
(Continued)

	Number of Vessels	GRT	DWT
Fleet status, 31 December 1961	156	563,788	736,276
Acquisitions in 1962	2	19,160	25,790
From domestic sources	1	12,090	15,790
From Bloc countries	1	7,070	10,000
Transferred in 1962			
To Bloc country	1	7,070	10,000
Fleet status, 31 December 1962	157	575,878	752,066

Table 4

Communist China:
Type, Number, and Tonnage
of Vessels in the Merchant Fleet a/
1958-62

Year	Tankers b/			Dry Cargo and Passenger Vessels			Total		
	Number	Thousand GRT	Thousand DWT	Number	Thousand GRT	Thousand DWT	Number	Thousand GRT	Thousand DWT
1958	10	18.2	23.7	99	308.7	400.8	109	326.9	424.5
1959	10	18.2	23.7	118	407.5	529.2	128	425.7	552.9
1960	11	21.8	27.3	136	494.5	653.4	147	516.3	680.7
1961	13	40.0	55.0	143	523.8	681.3	156	563.8	736.3
1962	13	40.0	55.0	144	535.9	697.1	157	575.9	752.1

a. Data refer to vessels of 1,000 GRT or more (1,300 DWT or more).
b. In addition, the tanker fleet includes at least one and possibly two tankers of less than 1,000 GRT.

Table 5

North Korea:
Estimated Freight Traffic Performance
of Modern Inland Transport
1957-62

Mode of Transportation	1957	1958	1959	1960	1961	1962
	Billion Metric Ton-Kilometers					
Railroads	5.07	6.30	7.80	9.12	9.85	10.25
Motor trucks	0.19	0.21	0.30	0.33	0.34	0.38
Inland water and coastal fleets a/	0.04	0.07	0.10	0.14	0.16	0.20
Total b/	5.30	6.58	8.20	9.59	10.35	10.83
	Million Metric Tons Carried					
Railroads	21.46	28.20	35.13	38.64	41.00	43.90
Motor trucks	13.89	17.50	28.88	34.35	32.60	38.80
Inland water and coastal fleets a/	1.10	1.98	2.75	2.99	3.35	3.45
Total b/ c/	36.45	47.68	66.76	75.98	76.95	86.15

a. Data for performance by the inland water fleet in North Korea cannot be separated from performance by the coastal fleet. Performance by the inland water fleet, however, is only a small part of the total water transport performance.
b. Totals, as measured in both ton-kilometers and tons carried, include domestic, export, import, and transit traffic.
c. Totals reflect duplication of tonnage when traffic is carried by more than one mode of transportation.

Table 6

North Vietnam:
Estimated Freight Traffic Performance
of Modern Inland Transport
1957-62

Mode of Transportation	1957	1958	1959	1960	1961	1962
	Billion Metric Ton-Kilometers					
Railroads	0.14	0.29	0.52	0.70	0.71	0.72

FIELD REPORT NO.

THIS IS UNEVALUATED INFORMATION. SOURCE GRADINGS ARE DEFINITIVE. APPRAISAL OF CONTENT IS TENTATIVE.

SOURCE [redacted]

1. SUMMARY AND APPRAISAL OF CONTENT: ALTHOUGH THE CONCLUSIONS HEREIN ARE BY NO MEANS DEFINITIVE, THIS IS PROBABLY A VALID ASSESSMENT OF THE SITUATION BASED ON THE INFORMATION AVAILABLE AT THIS TIME. IT SHOULD BE KEPT IN MIND THAT PEASANT ATTITUDES ON THIS AND OTHER ISSUES ARE DIFFICULT TO ASSESS AS INFORMATION IS GENERALLY REFRACTED THROUGH SOUTH VIETNAMESE SOURCES WITH VARIOUS AXES TO GRIND. ALTHOUGH WE BELIEVE THAT THE BUDDHIST ISSUE TO DATE HAS HAD ONLY A MODEST IMPACT ON THE RURAL POPULATION IN SOUTH VIETNAM AND THAT THE PEASANTS HAVE NOT BEEN MARKEDLY AFFECTED, THE LONGER THE BUDDHIST/GOVERNMENT OF VIETNAM IMPASSE LASTS, THE MORE LIKELY IT IS THAT REPERCUSSIONS WILL RADIATE FROM URBAN AREAS, WHERE THE AFFAIR IS LARGELY CENTERED, INTO THE REMOTER RURAL AREAS. [redacted] COMMENT. THIS REPORT WILL BE SUPPLEMENTED AS ADDITIONAL INFORMATION AND VIEWS BECOME AVAILABLE.)

2. IN CENTRAL VIETNAM, THE UNREST AMONG THE PROVINCIAL POPULATION AS A RESULT OF THE BUDDHIST CRISIS IN AUGUST 1963 IS CENTERED IN COASTAL CITIES, AND THE BUDDHIST COMMUNICATION BREAKDOWN PREVENTS NEWS AND ORDERS FROM BEING SENT TO THE WESTERN PORTIONS OF THE PROVINCES. AS A RESULT, THE PEOPLE IN THE WESTERN PORTIONS ARE CONFUSED BY DISTORTED RUMORS OF INCIDENTS IN HUE, SAIGON, HOI AN, NHA TRANG, ETC., WHICH CONFLICT COMPLETELY WITH GOVERNMENT OF VIETNAM (GVN) RADIO REPORTS, PROVINCIAL STATEMENTS, AND PRESS COVERAGE OF THE SAME INCIDENTS. THE UNREST IS PROBABLY STRONGER IN CENTRAL VIETNAM AS A RESULT OF THE RECENT SUICIDES IN PHAN THIET, NHA TRANG AND HUE, AND THE RESULTANT GVN REACTION; BUT THE SERIOUSNESS OF THE SITUATION CANNOT BE JUDGED FROM JUST A FEW VISITS AND REPORTS. THE ARMY OF THE REPUBLIC OF VIETNAM (ARVN) EFFORT IN THE FIRST CORP AREA AGAINST THE VIETNAMESE COMMUNISTS (VC) HAS UNDOUBTEDLY BEEN CURTAILED AS MANY OF THE TROOPS ARE GARRISONED RATHER THAN DEPLOYED AGAINST THE VC AS USUAL, RESULTING IN A DEFINITELY LOWERED MORALE THAN PRIOR TO THE 8 MAY HUE INCIDENT. IT IS MORE DIFFICULT TO DETERMINE ANY CHANGE IN THE GENERAL POPULATION ATTITUDE; HOWEVER, A SMALL DEGREE OF UNREST DOES NOW PREVAIL THROUGHOUT THE PROVINCES OF NORTH CENTRAL VIETNAM. THIS PROBABLY POSES NO IMMEDIATE THREAT TO THE GVN, BUT IT WILL MAKE THE GVN'S TASK MORE DIFFICULT ON THE LONG RANGE BASIS AS IT HAS PROBABLY AFFECTED WHAT HAD BEEN AN ENCOURAGING TENDENCY, SMALL BUT PERCEPTIBLE, OF THE PEASANTRY TO RELY ON THE GVN AND MORE ACTIVELY TO OPPOSE THE VC. IT IS NOT UNREASONABLE TO ASSUME THAT MANY OF THESE PEOPLE WILL RETURN TO INDIFFERENCE TOWARDS THE VC.

3. COMMENTS ON SPECIFIC PROVINCES AND CITIES FOLLOW:

A. DA NANG. ALTHOUGH UNDER MARTIAL LAW FOLLOWING THE INCIDENTS ON 18 AUGUST, MAYOR (LIEUTENANT COLONEL) TRAN NGOC CHAU HAS DEMONSTRATED CONSIDERABLE ADROITNESS IN HANDLING THE BUDDHIST PROBLEM. BARRING ANY MAJOR INCIDENT OR COLLOSSAL GVN BLUNDER IN HUE OR SAIGON (OF THE CHAIN REACTION TYPE), CHAU WILL PROBABLY CONTINUE TO MAINTAIN CONTROL OF THE SITUATION.

B. QUANG NAM PROVINCE. THE HOI AN INCIDENT OF 31 JULY HAS PLACED THIS PROVINCE IN THE WORST SITUATION SINCE 8 MAY. THIS IS LARGELY THE RESULT OF THE INEPTITUDE OF THE PROVINCE CHIEF WHO IS PROBABLY AN EXCEPTIONAL ARMY G-2 OFFICER AND IS [illegible] AND MORALLY COURAGEOUS OFFICIAL, BUT IS NAIVE, INDECISIVE, AND UNSURE IN ADMINISTERING HIS PROVINCE. ALTHOUGH HE IS PROBABLY MORE ON GUARD AS A RESULT OF 31 JULY INCIDENT, HE CANNOT BE RELIED UPON TO PREVENT FUTURE OUTBREAKS FROM GETTING OUT OF HAND. THE SITUATION IS NOW RELATIVELY QUIET, BUT RESENTMENT IS STILL STRONG IN HOI AN AND IN THE IMMEDIATE ADJOINING VILLAGES.

C. QUANG TIN. THERE IS VERY LITTLE BUDDHIST ACTIVITY EVIDENT IN QUANG TIN, MAINLY BECAUSE THE PROVINCE HAS THE MOST SERIOUS SECURITY SITUATION OF ANY IN NORTH CENTRAL VIETNAM. THE VC HAVE JUST ABOUT PARALYZED VEHICLE TRAVEL WITHIN THE PROVINCE AND ARE OTHERWISE MAKING THEIR PRESENCE KNOWN THROUGHOUT THE PROVINCE. QUANG TIN IS ALSO BADLY HAMPERED BY EXTREMELY WEAK, AND QUITE OFTEN CORRUPT, OFFICIALS FROM THE PROVINCE CHIEF TO THE LOWEST LEVEL. THE ONLY BRIGHT SPOT IN THIS PROVINCE IS THAT FATHER HAO CONTINUES TO EXERT HIS INFLUENCE OVER THE COASTAL AREA AND HAS MADE A POINT OF NOT [illegible]NIZING THE BUDDHISTS IN ANY

WAY, THUS A BIG SOURCE OF FRICTION HAS BEEN REMOVED HERE.

D. QUANG NGAI. THE PROVINCE CHIEF HAS RULED WITH A STRONG AND RUTHLESS EFFICIENCY AND THEREBY PREVENTED ANY MAJOR [illegible]. THERE IS PROBABLY WIDE RESENTMENT AGAINST HIS AUTHORITARIAN METHODS, BUT THIS IS NOT CONSIDERED ANY IMMEDIATE THREAT TO THE GVN.

E. KONTUM. THIS PROVINCE IS VERY SPARSELY SETTLED AND THUS [illegible]LY LITTLE INTEREST IN THE BUDDHIST MOVEMENT HAS BEEN EVIDENCED HERE. THE PROVINCE CHIEF STATED ON 5 AUGUST THAT IF TROUBLE DID START HE WOULD TAKE HIS CUE FROM THE QUANG NGAI PROVINCE CHIEF AND BAN ANY GATHERING OF OVER THREE PEOPLE. HE DOUBTED VERY SERIOUSLY IF SUCH A BAN WOULD BE NECESSARY AS THERE IS VERY LITTLE BUDDHIST AGITATION EVIDENT.

F. HUE. HUE IS THE MAIN TROUBLE SPOT AND PROBABLY WILL CONTINUE TO BE. PAST REPORTING ON HUE ADEQUATELY COVERS THIS CITY.

G. QUANG TRI. THIS IS ANOTHER PROVINCE WITH A STRONG CHIEF. IN JUNE, QUANG TRI CITY HAD SIGNIFICANT UNREST, BUT TIGHT CONTROLS HAVE STOPPED IT, AND HAVE PREVENTED ITS RECURRENCE.

H. THUA THIEN. LITTLE UNREST IS APPARENT IN THUA THIEN PROVINCE EXCEPT IN THOSE VILLAGES ON THE OUTSKIRTS OF HUE, WHOSE INHABITANTS HAVE BEEN GOING INTO HUE TO DEMONSTRATE.

I. NHA TRANG. THE BONZESS SUICIDE CAUSED A BRIEF FLAREUP IN NHA TRANG. ALTHOUGH CURFEW IS STILL IN FORCE, THE SITUATION IS RETURNING TO NORMAL ACCORDING A SECURITY SERVICE REPRESENTATIVE. THE POPULATION IS GENERALLY APATHETIC TO THE

BUDDHIST ISSUE AND THEIR ROLE IN THE RECENT DEMONSTRATIONS WAS LARGELY THAT OF INTERESTED ONLOOKERS WITH NO NOTICEABLE APPEARANCE OF EMOTIONAL INVOLVEMENT. BECAUSE OF THE HEAVY AMERICAN EXPENDITURES IN THIS RESORT TOWN, THE LOCAL BUSINESSMEN ARE BELIEVED TO HAVE TOO MUCH AT STAKE IN A CONTINUED CALM THAN TO SUPPORT THE BUDDHISTS THROUGH SHOP CLOSINGS, ETC. ONE OF THE MAIN PROBLEMS IN NHA TRANG IS THE BANDS OF LATE TEEN-AGER "COWBOYS" WHO ENJOY HARASSING AND TAUNTING THE POLICE AND ARMY OF THE REPUBLIC OF VIETNAM (ARVN) SECURITY FORCES. GVN OFFICIALS IN NHA TRANG STATE THAT THE BUDDHIST LEADERSHIP IS WORKING HARD TO GENERATE VILLAGE-LEVEL SUPPORT IN THE RURAL AREAS OF THE PROVINCE, BUT THE OFFICIALS CLAIM THAT THEIR EFFORTS ARE BEARING LITTLE FRUIT. THE OFFICIALS INSIST THAT THIS IS STILL ALSO THE CASE IN OTHER PROVINCES IN THE SOUTH CENTRAL COASTAL AREA.

4. IN THE SOUTHEASTERN PROVINCES TO THE NORTH OF SAIGON, THERE HAS BEEN LITTLE PUBLIC MANIFESTATION OF SENTIMENT ABOUT THE BUDDHIST ISSUE, EITHER IN THE TOWNS OR IN RURAL AREAS. A REGIONAL SECURITY SERVICE OFFICIAL CLAIMS THAT HE AND HIS SECURITY SERVICE COLLEAGUES HAVE THE SITUATION WELL UNDER CONTROL, ARE IN DISCREET CONTACT WITH THE LOCAL BUDDHIST LEADERSHIP, AND DO NOT EXPECT ANY SERIOUS TROUBLE TO DEVELOP IN THEIR REGION.

5. IN THE DELTA AREA, THERE HAS LIKEWISE BEEN LITTLE OUTWARD EXPRESSION OF POPULAR SENTIMENT ON THE BUDDHIST ISSUE, WHICH IS TO BE EXPECTED IN VIEW OF THE FACT THAT BUDDHISM HAS NEVER BEEN AS ORGANIZATIONALLY STRONG OR AS DEEPLY FELT BY

THE POPULA[redacted]E AS IN CENTRAL VIETNAM.

6. [redacted] DISSEM. STATE CINCPAC ARPAC PACAF PACFLT.

Approved For Release
Date JAN 1998

FORM 1Ka OBSOLETE PREVIOUS EDITIONS.

(82) (15-30)

[redacted] THE PLAN EVOLVED ABOUT 10 AUGUST DURING A MEETING OF THE FOLLOWING: MAJOR GENERAL TRAN VAN DON, COMMANDER OF THE ARMED FORCES; BRIGADIER GENERAL TON THAT DINH, III CORPS COMMANDER; BRIGADIER GENERAL TRAN THIEN KHIEM, CHIEF OF STAFF, JOINT GENERAL STAFF; BRIGADIER GENERAL TRAN TU OAI, DIRECTOR OF PSYCHOLOGICAL WARFARE, WHO HANDLED THE PRINTING REQUIREMENTS; COLONEL LE QUANG TUNG, HEAD OF THE VIETNAMESE SPECIAL FORCES; NGUEYN VAN Y, DIRECTOR GENERAL OF NATIONAL POLICE; AND POSSIBLE ONE OR TWO OTHERS. AT THIS MEETING GENERAL DON WAS ASSURED THAT NO ONE WOULD BE HURT IN ACTIONS AIMED AT THE BUDDHISTS. DESPITE THIS ASSURANCE, 65 POLICE AND COMBAT POLICE WERE INJURED, SIX OF THEM CRITICALLY. BUDDHIST CASUALTIES WERE NOT KNOWN BUT APPROXIMATELY 1,400 BONZES AND LAY PERSONS WERE UNDER DETENTION BY 22 AUGUST; MOST OF THESE WERE TO BE RELEASED.

3. ON 22 AUGUST A PETITION INDICATING THAT THE SITUATION HAD DETRIORATED TO THE EXTENT THAT ACTION AGAINST THE BUDDHISTS AND THE ESTABLISHMENT OF MARTIAL LAW WERE BOTH NECESSARY, SUPPOSEDLY SIGNED BY ALL GENERAL OFFICERS AND PRESENTED TO PRESIDENT DIEM BEFORE THE ESTABLISHMENT OF MARTIAL LAW, WAS BEING CIRCULATED THROUGHOUT THE GENERAL STAFF FOR SIGNATURES BY THOSE WHO ACTUALLY HAD NOT SIGNED IT. MAJOR GENERAL DUONG VAN MINH, MILITARY ADVISOR TO THE PRESIDENT, SIGNED IT ON

22 AUGUST AND SEVERAL OTHER GENERALS OFFICERS HAD SIGNED IT AFTER THE MOVE WAS MADE AGAINST THE BUDDHISTS ON 20-21 AUGUST. [redacted] COMMENT. THIS WOULD SEEM TO IMPLY THAT THE PRESIDENT HAD NOT BEEN PRESENTED WITH A PETITION SIGNED BY A MAJORITY OF THE GENERALS.)

4. GENERAL DON EXPLAINED TO GENERALS DUONG VAN MINH, TR[illegible]N MINH, LE VAN NGHIEM, AND LE VAN KIM ON 22 AUGUST EVENTS THAT HAD TRANSPIRED SINCE 20 AUGUST STATING THAT ASSURANCES TO HIM THAT NONE WOULD BE HURT HAD NOT BEEN FULFILLED. HE TOLD THEM THAT THE SITUATION WAS GRAVE, THAT HE NEEDED THEIR HELP AND THAT HE WISHED TO MEET WITH THEM EVERY MORNING. HE SAID THAT THE ARMY COULD HANDLE ONE SERIOUS OUTBREAK BUT IF MULTIPLE MAJOR DISTURBANCES ERUPTED, (PORTION GARBLED, BEING SERVICED)*

SOURCE [redacted]

1. [redacted] THE OFFICER CORPS OF THE ARMY OF THE REPUBLIC OF VIETNAM (ARVN) WAS DISCOURAGED AND FRUSTRATED, THAT MANY OFFICERS WANTED CHANGES MADE BUT WERE AFRAID TO SUGGEST THEM TO AMERICANS BECAUSE OF FULL AMERICAN SUPPORT OF PRESIDENT DIEM, AND THAT MANY OFFICERS BELIEVED THAT CHANGES WERE NEEDED IN ORDER TO PROSECUTE THE WAR AGAINST THE VIET CONG SUCCESSFULLY. [redacted] ACCORDING TO RUMORS, THE AMERICANS PLANNED THE 21 AUGUST OPERATION AGAINST THE BUDDHISTS. [redacted]

CONFIDENTIAL CLASSIFICATION — DISSEMINATION CONTROLS [redacted]

(15-30)

[redacted]

2. [redacted] THE ATTITUDE PREVAILING WITHIN THE ARVN OFFICER CORPS, PRINCIPALLY BEFORE, BUT ALSO TO SOME EXTENT AFTER THE 21 AUGUST EVENTS.

A. THE OFFICERS ARE DISCOURAGED AND FRUSTRATED; THIS FEELING IS WIDESPREAD AND INTENSE, AND HAS BECOME WORSE SINCE THE ATTACK ON THE PAGODAS AND THE DECLARATION OF MARTIAL LAW.

B. THE WILL TO FIGHT THE VIET CONG (VC) HAS NOT DIMINISHED BUT MANY OFFICERS BELIEVE THAT IT IS NOT POSSIBLE TO WIN THE WAR AGAINST THE VC GIVEN THE PRESENT SITUATION IN SOUTH VIETNAM.

C. THE GENERAL OFFICERS SHARE THE ATTITUDE ON FRUSTRATION AND DISCOURAGEMENT. [redacted] BRIGADIER GENERAL TRAN THIEN KHIEM, CHIEF OF STAFF, JOINT GENERAL STAFF AS ONE OFFICER WHO BELIEVED THAT IF CHANGES WERE NOT MADE, THERE WOULD BE NO CHANCE OF WINNING THE WAR.

D. AS EXAMPLES OF DISCOURAGEMENT AMONG THE OFFICER CROPS, [redacted] MAJOR (FNU) PHU, COMMANDER OF THE VNSF 78TH (ALSO RCVD 77TH) GROUP, AN UNIDENTIFIED VNSF CAPTAIN SERVING UNDER MAJOR LE QUANG TRIEU, AND A MAJOR (FNU) MAU (PHONETIC), RECENTLY ASSIGNED AS CHIEF OF THUA THIEN PROVINCE. [redacted]

E. ONE ESPECIALLY DISCOURAGING FACTOR IS THAT BRIGADIER GENERAL TON THAT DINH, COMMANDER OF THE III CORPS, IS IN CHARGE OF THE SAIGON AREA. [redacted]

F. ANOTHER DISCOURAGING FACTOR IS THAT THE UNITED STATES GOVERNMENT SO FIRMLY SUPPORTS DIEM THAT THE MILITARY CANNOT MAKE NECESSARY CHANGES AND MANY OFFICERS ARE AFRAID OF GIVING FRANK OPINIONS TO AMERICANS.

G. [redacted] THERE IS A WIDESPREAD RUMOR THAT THE AMERICANS WERE RESPONSIBLE FOR PLANNING THE 21 AUGUST OPERATION. MANY BELIEVED THIS BECAUSE THE VIETNAMESE SPECIAL FORCES (VNSF), NOT THE ARMY, ATTACKED THE PAGODAS ON THE MORNING OF 21 AUGUST AND, AS EVERYONE KNOWS, THE AMERICANS SUPPORT THE VNSF.

H. [redacted] VNSF COMMANDER COLONEL LE QUANG TUNG KNOWS NOTHING ABOUT MILITARY AFFAIRS AND SOME OFFICERS ARE AFRAID THAT TUNG'S TROOPS WILL SHOOT THEM.

3. [redacted] THE IDEAL SOLUTION WOULD BE TO GET RID OF NGO DINH NHU AND MADAME NHU AND BRING NEW PEOPLE INTO THE GOVERNMENT. HE REALIZED THE AMERICANS WERE AFRAID OF A CHANGE BECAUSE OF WHAT THIS MIGHT MEAN TO THE WAR EFFORT AND, IN FACT, IT MIGHT LEAD TO THE LOSS OF CONTROL OF SEVERAL PROVINCES. NEVERTHELESS, [redacted] FAVORED A CHANGE SO THAT THERE WOULD AT LEAST

BE SOME CHANCE OF ULTIMATELY WINNING THE WAR.

4. [redacted] DISSEM: STATE ARMY NAVY AIR USMACV MAAG USOM USIS 2ND AIR DIV 9TH FLD STN CINCPAC PACAF ARPAC PACFLT.

NLK-94-43

CAST OF CHARACTERS IN SOUTH VIETNAM

Civilian Officials, Advisers, Security Heads

Ngo Dinh DIEM	President and Secretary of National Defense
Ngo Dinh NHU	Political Counselor to the President, Head of the Strategic Hamlet Program, Supreme Leader of the Republican Youth Movement. The President's brother and key thinker. Heads the semi-clandestine Can Lao party.
Mme. Ngo Dinh NHU	Nhu's wife, official hostess for the President, head of the Women's Solidarity Movement and Women's Paramilitary Youth Movement. Daughter of ex-Ambassador to US Tran Van CHUONG.
Ngo Dinh CAN	Brother of the President and boss of central Vietnam from Hue. Always a rival of Nhu, said to be on the decline since the crackdown.
Truong Cong CUU	Newly appointed Foreign Minister, also Coordinating Secretary of State for Social and Cultural Affairs. Former National Assembly President; apparently a loyal pro-regime, Can Lao member; possibly able, but chiefly political appointee.
Vo Van HAI	Diem's personal secretary. Probably loyal to Diem, but voiced extreme concern over events of 20 August which he blamed on Nhu.
Nguyen Van HAY	Special Police Assistant at Directorate General of National Police. Considered loyal to Diem regime.

DECLASSIFIED
E.O. 12356, Sec. 3.4
NLK-76/167 CIA (MFD 6/76)
By mmb NARA, Date 9/1/94

Duong Van HIEU	Chief of Special Police Bureau, Directorate General of National Police. Appointed early 1963 by Nhu and considered Nhu's man. Reported arrogant.
Ngo Trong HIEU	Civic Action Minister. Activist and apparently loyal to Ngos. Served as Nhu's man in Cambodia for anti-Sihanouk plotting.
Dang Duc KHOI	Able head of Press Service in Ministry of Information. Has been reported close to Tuyen and at times disaffected but appears to serve regime loyally. Was assigned by Nhu personally to assist Gen. Oai in press censorship function under martial law.
Bui Van LUONG	Interior Minister. Considered Nhu's man.
Ngo Dinh LUYEN	Diem's youngest brother, ambassador to UK and other European capitals.
Vu Van MAU	Foreign Minister who resigned on 22 August. Buddhist who now seems have considerable popular sympathy. Possibly under arrest although this is denied.
Nguyen Ngoc THO	Vice President. Buddhist. Generally kept on the outside by the Ngos, but headed Interministerial Committee for negotiating with Buddhists. Generally considered weak leader but not permitted key role.
Nguyen Dinh THUAN	Presidential secretary and Assistant Minister of Defense, also defense coordinator. Close to Ngo family and key contact man with US officials. Appears shaken by recent events, but still emotionally if not rationally committed to Ngos.

Ngo Dinh THUC	Diem's brother, Archbishop of Hué. Considered influential with Diem and now more so than Can.
Tran Kim Tuyen	Former head of presidential security service (SEPES), GVN's intelligence and dirty tricks outfit. Long considered extremely close to Ngos, especially Nhu, and possibly still is. Concerned in anti-Sihanouk ops. Recently reported in disfavor and removed from SEPES, but said to be a political adviser to presidency. Reported coup-plotting since early July, possibly in earnest or to provide a smokescreen.
Cao Xuan VY	Director of Youth and Sports. Loyal to Nhu.
Col. Nguyen Van Y	Director General of National Police and Commissioner of the Central Intelligence Organization. Believed disliked by the regime as too close to US and not a Ngo man. Recently has been under some veiled attack from within regime as alleged contact of VC.

Military

Brig. Gen. Huynh Van CAO	Commander IV Corps south of Saigon. Considered loyal to regime, regarded generally as able commander. Catholic, US C&GS trained.
Brig. Gen. Van Thanh CAO	Political general, not to be confused with IV Corps commander. Is Govt. Delegate for Southeast Provinces, identified as Nhu follower in past.
Brig. Gen. Pham Xuan CHIEU	Also appointed as assistant to Gen. Don for martial law after being on shelf in capacity of Inspector in Strategic Hamlet Program. Buddhist. Was CoS to JGS until '60 coup attempt, removed for suspected sympathies with rebels, although played no role. Was in US for C&GS until recently.
Lt. Col. Bui Dinh DAM	Cdr., 7th Inf. Div, My Tho (IV Corps) about 40 miles southwest of Saigon. Said to be close to some GVN officials and "Little Minh" but not known to be Nhu man.
Brig. Gen. Ton That DINH	Commander III Corps (north of Saigon) and military governor of Saigon. Nominal Catholic (apparently rice-bowl convert). Aggressive, arrogant officer, reported by some to be effective commander. Never known as strong critic of regime, but probably basic opportunist who was among key officers in plan to bring about martial law.
Maj. Gen. Tan Van DON	Now Acting Chief, Joint General Staff, ARVN, and supreme commander of military government under martial law. Also Army Commander. Buddhist. Don may be out of his

	depth in current role, but appears to have been one of key officers through whom military rule brought about on 20 August. Real loyalty uncertain and probably opportunist. Seems to be in all camps: reported close to French, to Nhu, impressive to many Americans, and close to chief military critics of GVN, but not fully trusted by them. Claims not informed about raid plans.
Col. Huynh Huu HIEN	Commander, Air Force. Buddhist. Hien was once Diem's personal pilot and considered loyal, but appeared somewhat shaken by GVN's early handling of Buddhist crisis. Considerable disaffection reported in air force.
Maj. Gen. Thai Quang HOANG	Commander, Command and General Staff School. Out of favor as possible pro-'60 rebel since he was captured by the paratroops.
Lt. Col. Nguyen Ngoc KHOI	Commander, Presidential Guard Brigade, Saigon, (est. strength 2,500). Picked for loyalty, although once rumored possibly disaffected along with some of his troops.
Brig. Gen. Nguyen KHANH	Commander, II Corps, north-central South Vietnam. Good aggressive troop commander. Buddhist. Apparently uninvolved in events leading to martial law. From Nov '60 to late '61 was Chief of Staff, JGS, a job given as a reward for helping rescue Diem in 1960. Reported disaffected during JGS tenure.
Lt. Col. Le Nguyen KHANG	Commander, Marines (subordinate to navy). Recently given award by GVN. Marines loyal in past, but recently reportedly some disaffection and Khang in late '61 claimed ARVN being hamstrung by politics.

Brig Gen. Tran Thien KHIEM	Chief of Staff to the JGS, ARVN. Buddhist. Current loyalties uncertain. Apparently one of few generals with advance knowledge of martial law plan, although probably unwitting about pagoda raid plans. One of key generals rescuing Diem in 1960 coup attempt, to which he owes his current job; also, however, reported disaffected since present appointment (late 1961). One of younger officers.
Brig Gen. Le Van KIM	Now serving as a martial law deputy to Gen. Don, who is his brother-in-law. Has been Inspector in Strategic Hamlet Program. Buddhist, close to "Big Minh." Considered one of SVN's most capable military officers, but long put on shelf because he is known critic of regime. One of those who has claimed army was "duped."
Brig Gen. Nguyen Van LA	CG, Saigon-Cholon Zone; now under Gen. Dinh. Believed loyal to regime. Ex-police chief, unfriendly to US.
Col. Duong Ngoe LAM	Commander of Civil Guard and Self-Defense Corps. Buddhist.
Brig. Gen. Nguyen Ngoc LE	Appointed deputy to Gen. Don for martial law, reported in charge of Veterans' Affairs until appointed by Nhu to role in Strategic Hamlet Program this summer. Reported pro-French.
Lt. Col. Do Khac MAI	Chief of Staff, Air Force. Recently given citation by GVN, probably to win loyalty. However, has been privately extremely critical of regime during entire Buddhist crisis.

Col. Do MAU	Director of Military Security Service, Defense Ministry. Probably loyal to regime. Was in some disfavor for allowing himself to be captured by rebels in 1960.
Col. Nguyen Van MAU	Director Military Justice, Gendarmerie, Ministry Defense.
Maj. Gen. Duong Van MINH	Military adviser to President. (Paper job only). Known as "Big Minh", is considered popular and capable officer who has frequently been critical of the regime. Has not been fully trusted by regime and has no command responsibility. Buddhist.
Maj. Gen. Tran Van MINH	Permanent Secretary General for National Defense. Known as "Little Minh." Close to "Big Minh" but loyalty to regime unknown. Respected but not highly dynamic general.
Brig. Gen. Le Van NGHIEM	Nominally in command of I Corps (northern SVN), but not effectively so. Buddhist, strongly disaffected in Buddhist crisis and probably actually on shelf. Probably not dynamic.
Col. Bui Huu NHON	Cdr, 21st Inf. Div at Can Tho, about 75 miles south of Saigon.
Capt. Nguyen Quang NGUYEN	Dep. Chief of Opns, Armor Command, who stated mid-July that command would not defend regime against a coup.
Brig. Gen. Tran Tu OAI	Director of Psychological Warfare, Ministry Defense. Initially appointed military censor under martial law and claims to have been one of few generals aware of the martial law plan in advance. Catholic and believed to be close to Nhu and Diem.

Lt. Col. Nguyen Huu PHUOC	Said to head Republican Youth Mvt in Saigon, but has been reported disaffected and replaced from a command at the palace.
Lt. Col. Nguyen Van PHUOC	Chief of Intelligence (J-2), ARVN.
Capt. Ho Tan QUYEN	Commander, Vietnamese Navy. Buddhist. Loyal in past to regime. One source claimed some disaffection in navy in July '63, but no past history of this.
Brig. Gen. Tran Ngoc TAM	Inspector in Strategic Hamlet Program, reported in past as close to Nhu.
Lt. Col. Pham Ngoc THAO	Assigned to Strategic Hamlet Program. Was chief of Kien Hoa Province but apparently reassigned as he began to be public figure in his own right. Said to be aggressive and dynamic, recently reported coup plotting in two camps. Was ex-Viet Minh (with a brother an official in DRV) but is not known to be pro-Viet Cong as alleged by some of his enemies.
Lt. Col. Nguyen Van THIEN	Chief, Armor Command (Armored Brigade). Loyalty unknown. He was awarded an honor by GVN in July. Considerable disaffection among armored troops was reported by Dep CoS for Opns in mid-July.
Col. Nguyen Van THIEU	Commander, 5th Inf. Div, Bien Hoa about 20 miles north of Saigon in III Corps. Reported to be Catholic and close to Nhu.
Brig. Gen. Do Cao TRI	Commander of 1st Division in I Corps and military governor in Hué. Also defacto commander of I Corps. Young, dynamic and capable, believed

	to be Catholic. Appears extremely ambitious; recently promoted from Colonel.
Col. Le Quang TUNG	Commander, Special Forces. Catholic loyal to Nhu. Reported generally disliked by most of army. Once alleged to be number-three man in GVN after Diem and Nhu.
Lt. Gen. Ly Van TY	Chief of Joint General staff of Vietnamese Armed Forces (ARVN), elderly and largely figurehead, currently in US for medical treatment. Buddhist.
Col. Cao Van VIEN	Commander, Airborne Brigade. (6 bns, 1 mortar bty). Appointed to post after paratroops attempted coup in '60 and deemed personally loyal to regime. Reported, however, to have indicated some sympathy recently with student demonstrators he was trying to discipline. Considerable disaffection alleged among paratroops.
Brig. Gen. Mai Huu XUAN	Commanding Officer, Quang Trung Mil Training Center north of Saigon. Buddhist. Has been reported close to Gen. Don.
Col. Nguyen Van Y	Director General National Police and Commissioner of Central Intelligence Organization.

Political Figures Outside Government

1. Buddhists

(Rev.) Thich Tinh KHIET	Supreme High Priest in General Association of Vietnamese Buddhists (GAVB). From Hué. National leader, but in his 80's. Prisoner of GVN and reported ill in hospital.
Thich Tinh MINH	Also from central Vietnam and leader in Hué. Identified with militant clergy. Reported arrested.
Thich Tri QUANG	Militant head of clergy in central Vietnam (Hué) who was instrumental in initial 8 May incident and increasingly prominent in direction of Buddhist campaign, possibly with some political motivation. Young and politically aware, but reported tubercular. Apparently eluded GVN capture.
Mai Tho TRUYEN	Head of lay organization of GAVB (Buddhist Studies Association) at Xa Loi Pagoda, Saigon. Official of World Fellowship of Buddhists. Believed to be moderate and respected leader. Relations with GVN in past not known, but not considered close to regime. Apparently played relatively minor role in Buddhist campaign after initial stages, but this uncertain.

2. Other Oppositionists, or Persons Outside Government

Tran Quoc BUU	President of General Confederation of Labor. Considered one of ablest Vietnamese leaders, intelligent and runs the only effective labor union. Can Lao member who has stayed on good terms with Nhu, but has frequently expressed criticism of the Diem regime and of Nhu.

Bui DIEM	Dai Viet member, purported force behind Dan Van Sung, has claimed to have ties with Buddhist Tri Quang.
Pham Huy CO	An exile in Paris since 1954 and once the representative abroad of oppositionist Dr. Pham Quang Dan. Has now proclaimed his own "Revolutionary Council" dedicated to regime's overthrow and claims support inside SVN where some leaflets apparently were work of his followers. A physician who has frequently sought US backing, believed relatively capable but not forceful and somewhat arrogant.
Pham Quang DAN	Physician, now imprisoned for active endorsement of '60 coup attempt which he attempted to take lead in after it began but was not in on plot. Known as head of opposition parties and as elected assemblyman not permitted to take his seat in 1959. One of better known public opposition figures, but another with arrogant and probably Mandarin-type tendencies.
Tran Van DO	Brother of recent Ambassador to US Chuong and uncle of Mme. Nhu. Was Diem's first Foreign Minister, but broke with regime in 1955 and formed largely discussion-type opposition group. Signed Caravelle petition and has variously been briefly arrested by GVN but exonerated in recent July trials. Respected opposition figure but not considered activist.
Lt. Col. Vuong Van DONG	Leader of paratroop coup in 1960 and exile in Cambodia until recently went to Paris; may now reside in Geneva. Politically somewhat navie, and recently joining forces with Co and Tran Van Huu, who pushes a neutralist line.

Tran Trung DUNG	Diem's Defense Minister until mid-1961 but a casualty of the '60 coup aftermath. Has long record of anti-French, nationalist activity, one-time Can Lao member backing Diem, but now on outs. Reported to be intelligent, able, and a figure of some prestige.
Nguyen Ton HOAN	Paris exile and leader of southern faction of Dai Viet who has frequently drummed for US support. Once served in Bao Dai cabinet, but became early disaffected. Believed to be fairly capable and to enjoy some support in SVN, but no organized backing on the scale claimed.
Tran Van HUU	Enjoys some following among Paris exiles as a former Prime Minister of Bao Dai's. However, is now playing footsy with several exiles believed to be working with DRV and is openly advocating neutralist solution.
Huynh Van LANG	Former close ties with regime as Can Lao finance chief and Head Foreign Exchange. Fired by Nhu after agitating against Cabinet Ministers, Luong and Thuan in lottery scandal. Now reported coup-plotting against crackdown on Buddhists with alleged ties in academic circles.
Phan Huy QUAT	Dai Viet (northern faction) and founder of Front for National Unity, opposition movement permitted to organize under GVN's eye (and control) in 1961 as attempt to indicate reforms in wake of '60 coup. Quat was signer of Caravelle petition and considered relatively moderate oppositionist who appears reasonably capable, also self-seeking, but probably not too dynamic.

Dan Van SUNG	Dai Viet leader who also organized an opposition movement, the Front for Democratization, in the wake of the '60 coup. Movement has not been active and appears have little real organized following. Physician.
Pham Khac SUU	Diem's first Agriculture Minister who soon split with the regime. Was only important oppositionist allowed to sit in National Assembly, but was imprisoned in wake of 1960 coup and still detained (sentence heaviest given civilian in SVN this July--8 years) although he apparently was totally uninvolved. Was a key figure behind Caravelle petition but did not sign. One of best-known opposition figures.
Hoang Co THUY	Now in exile in Switzerland where he fled after playing role of leading civilian adviser to paratroop coup group. Thuy was prominent Saigon oppositionist and lawyer for many oppositionists in trouble with Diem regime. Also was instrumental in many efforts to forge unified opposition movements. Not now reported politically active.

(15-30)

2. [redacted] ON 22 AUGUST THE NORTH VIETNAMESE EMBASSY IN VIENTIANE RECEIVED A WIRELESS MESSAGE FROM HANOI WHICH SAID THAT THE VIETNAMESE COMMUNIST (VC) BATTALION NOW STATIONED AT TCHEPONE HAS BEEN ORDERED TO PROCEED IMMEDIATELY INTO SOUTH VIETNAM TO HELP THE REVOLUTIONARY PARTY IN ITS GUERRILLA EFFORTS IN SOUTH VIETNAM. HANOI IS ACCELERATING ITS ARMED GUERRILLA ATTACKS IN SOUTH VIETNAM DISPITE THE RAINY SEASON AND THE CONSEQUENT TRANSPORATION DIFFICULITIES. HANOI ADVISED THAT MORE VC TROOPS WILL BE TRANSITING LAOS FOR EVENTUAL USE IN SOUTH VIETNAM AND THAT FRESH REPLACEMENTS FOR THE TCHEPONE BATTALION WILL BE FORTHCOMING SOONEST VIA THE HO CHI MINH TRAIL.

3. [redacted] THE NORTH VIETNAMESE ARE NOT NOW AIDING THE BUDDHISTS IN SOUTH VIETNAM OR TAKING ADVANTAGE OF THE BUDDHIST SITUATION TO GET THE PEOPLE TO RALLY AGAINST PRESIDENT NGO DINH DIEM AND HIS GOVERNMENT. HANOI PREFERS TO KEEP DIEM IN OFFICE BECAUSE HE PROVIDES MANY ISSUES WHICH HANOI CAN ATTACK AND USE AS A RALLYING POINT FOR THE REVOLUTIONARY PARTY.

✓ 4. [redacted] HANOI AND PEIPING FEAR THAT THE UNITED STATES MIGHT INTERFERE IN THE SOUTH VIETNAMESE POLITICAL SCENE AND TRY TO ATTEMPT A COUP TO ELIMINATE DIEM. HANOI AND PEIPING BELIEVE THAT THE UNITED STATES CAN NOW STAGE A COUP SUCCESSFULLY BECAUSE THE UNITED STATES HAS 13,000 TROOPS IN SOUTH VIETNAM AND IS

MORE FULLY INTEGRATED INTO THE SOUTH VIETNAMESE ARMY GENERAL STAFF THAN IN 1960 WHEN, [redacted] THE UNITED STATES UNSUCCESSFULLY TRIED TO GET RID OF DIEM BY A MILITARY COUP. THE ORDER TO MOVE THE TCHEPONE BATTALION WAS BASED ON A JOINT HANOI-PEIPING DECISION TO INCREASE MILITARY PRESSURE ON THE DIEM GOVERNMENT IN THE HOPE THAT THE PRESSURE WILL INDUCE THE UNITED STATES TO FEEL THAT IT MUST RETAIN DIEM WHILE SOUTH VIETNAM IS UNDER DIRECT FIRE FROM THE VC GUERRILLAS. [redacted] IF THE UNITED STATES SUCCEEDED IN DEPOSING DIEM, THE BUDDHIST AND OTHER ISSUES WOULD EVAPORATE. THIS WOULD REDUCE THE ATTRACTIVENESS OF THE REVOLUTIONARY PARTY, THEREBY REDUCING IMMEASURABLY THE MILITARY EFFECTIVENESS OF THE VC GUERRILLAS IN SOUTH VIETNAM AS WELL AS THE REVOLUTIONARY PARTY RECRUITMENT PROGRAM.

5. HANOI HAS POINTED OUT THAT SO LONGER DIEM REMAINS HEAD OF THE SOUTH VIETNAMESE GOVERNMENT, THE REVOLUTIONARY PARTY CHANCES OF ATTAINING ITS OBJECTIVES ARE GREATLY IMPROVED. HANOI HOPES THAT THE CONTINUANCE OF THE BUDDHIST ISSUE WILL INDUCE COMPLETE UNITS OF THE SOUTH VIETNAMESE ARMY TO DEFECT TO THE REVOLUTIONARY PARTY, THEREBY WEAKENING THE ARMY AND UNITED STATES MILITARY STRENGTH NOW FIGHTING THE GUERRILLAS.

CENTRAL INTELLIGENCE AGENCY

MEMORANDUM: The Possibility of a GVN Deal with North Vietnam

1. We have received a number of recent reports which raise the possibility of a GVN deal of some kind with North Vietnam:

a. Polish ICC Commissioner Manelli has reportedly presented a Ho Chi Minh proposal to Nhu for a de facto cease-fire by the Viet Cong; Nhu is allegedly studying this proposal, believing that it might become relevant in three to four months.

E0 12958 3.4(b)(1)>25Yrs
E0 12958 3.4(b)(6)>25Yrs
(S)

b. [redacted] has told Ambassador Lodge that Nhu has always thought of negotiating with the North and believes himself clever enough to bring it off.

E0 12958 3.4(b)(1)>25Yrs
E0 12958 3.4(b)(6)>25Yrs
(S)

c. [redacted] have warned American officials in Saigon of Manelli-Nhu conversations regarding a possible deal with North Vietnam.

d. Nhu has admitted to our Chief of Station, Saigon, that he has talked with Manelli, and that he (Nhu) has been in contact for some time with Viet Cong agents in South Vietnam, maintaining that his purpose is not to explore a deal with the North but to wean senior Viet Cong cadre in the South away from the Communist cause.

E0 12958 3.4(b)(1)>25Yrs
E0 12958 3.4(b)(6)>25Yrs
(S)

e. [redacted] appears to be at least prepared to serve--if he is not already doing so--as a Nhu-Ho communication link.

f. President de Gaulle's recent initiative concerning Vietnam reiterates long standing

~~SECRET~~
NO FOREIGN DISSEM

French interest in a possible "neutralized" solution there.

2. Although we do not feel that there is great danger of an imminent GVN arrangement of some form with the North, we do believe that there is enough of a possibility of such a deal, at some time in the near future, to warrant special US watchfulness and concern. In our view, the problem is not one of Diem or Nhu's "going over" to Ho or wittingly surrendering their country to Communist domination. Instead, the dangers lie in the fact that Diem and Nhu consider their own interests to be those of their country, and might feel that they could successfully manipulate political dealings with Hanoi. Thus, they might at some juncture seek to work out a modus vivendi with the North, out of belief that a deal with kindred peoples was better than submitting to foreign (US) pressures.

3. The chances that Diem and Nhu might indeed attempt to seek some negotiated solution with the North would probably rise if they felt that US pressures had become so intense that they were backed into a corner. If they felt their only other alternatives to be either the end of their own primacy, or humiliating acceptance of a much greater US voice in the political direction of South Vietnam, they might opt for an "opening to the North." Their success in effecting such a deal would in large measure depend on their method and timing. If it became known that Diem and Nhu seriously intended to seek an accommodation with the North, this might well precipitate a coup attempt by certain South Vietnamese military leaders. However, if Diem and Nhu were able to make it appear that their dealings with the North were intended to serve, and not endanger, South Vietnamese interests, they might then succeed. In any event, there might be considerable public acquiescence in a North-South "solution" in the event that the military and political situations had declined sharply from present levels.

(U)

SC No. 06489/63

16 September 1963

THE SITUATION IN SOUTH VIETNAM

(Information as of 1000 EDT)

SUMMARY

The lifting of martial law and other regime moves to demonstrate that the crisis is over have given an appearance of reduced tension to South Vietnam, but in fact there has been little relaxation of security measures. Censorship of news dispatches from Saigon appears to have been halted.

The Diem regime apparently intends to retain some military units in Saigon indefinitely on security assignments. Diem reportedly agreed only reluctantly to the recommendation of South Vietnamese generals that martial law be terminated.

EO 12958
3.4(b)(1)>25Yrs
(C)

Neither our field station nor the South Vietnamese Central Intelligence Organization is able to cite any hard evidence of significant Viet Cong control or penetration of the Buddhist or student movements. Both consider some Viet Cong influence probable, however. [redacted] Buddhist monk Tri Quang, now in asylum in the US Embassy, a pro-Communist and extremist, with devious political objectives going beyond the overthrow of the Diem regime.

There has been no significant military activity over the weekend. Reports that "75-calibre" artillery has been captured from the Viet Cong probably refer to a 75-mm. recoilless rifle. The Viet Cong recently have been making increased use of recoilless rifles and heavy mortars in engagements north and south of Saigon, and increased numbers of weapons of Bloc origin have been captured.

North Vietnamese has stepped up its propaganda effort to focus attention on the Buddhist problem in South Vietnam, and Pravda in Moscow has printed a supporting editorial. The editorial accuses US forces of waging war against the Vietnamese people.

EO 12958 6.1(c)>25Yrs
(U)

EO 12958 6.1(c)>25Yrs
(U)

I. GENERAL

1. The Diem regime is attempting to demonstrate that the political crisis is over by lifting martial law and rescheduling the postponed elections for the National Assembly, but there has in fact been little relaxation of security precautions.

2. A CBS correspondent today described his report as "uncensored." A government announcement said censorship had been lifted.

3. Security troops were still much in evidence in Saigon following the termination of martial law at noon today. Paratroopers were still mounting heavy guard near Saigon's central market, according to press reports, and marines were still stationed around high schools in the suburbs. General Khiem, chief of staff of the Joint General Staff, reportedly has stated that some military units will remain on security duty at Saigon schools.

II. THE REGIME

1. South Vietnamese Secretary of the Presidency Thuan reports that the Vietnamese generals recommended the lifting of martial law, and that Diem agreed with some reluctance.

2. The decree setting 27 September as the new date for national elections contains a provision that if elections cannot be held on this date in any electoral district because of "an insurmountable problem," the local authorities will hold elections as soon as possible thereafter. (Comment: This suggests that elections will not be attempted in some areas.)

3. The Diem government is reshuffling its secret police organization, known as SEPES, which has recently been criticized in the world press. SEPES has been undergoing changes for many months. Reports on the latest changes vary, but it appears that the organization has been placed under the command of Colonel Pham Thu Duong, chief of military cabinet to Ngo Dinh Nhu. (The former SEPES director, Dr. Tran Kim Tuyen, was another Nhu protege, but fell into disfavor and has been ordered to Cairo as consul general.)

Colonel Duong reportedly intends sweeping reforms to improve the poor performance record of

EO 12958 6.1(c)>25Yrs
(U)

EO 12958 6.1(c)>25Yrs
(U)

SEPES. The organization apparently will become a service with responsibility only for internal political activity. External operations, including those jointly run with the Chinese Nationalists, reportedly are to be transferred to the Central Intelligence Organization, which has hitherto concentrated on Viet Cong matters.

4. Professor Buu Hoi, South Vietnamese Ambassador to a number of African countries, is to head the Vietnamese UN delegation. He has asked to be heard if the General Assembly, convening Tuesday, decides to debate the treatment of Buddhists in South Vietnam. Buu Hoi is himself a Buddhist; his mother is a Buddhist nun and reportedly was considering burning herself to death in the series of self-immolations earlier this summer.

III. OPPOSITION

1. The CIA station in Saigon says there is no hard evidence of significant Viet Cong penetration or control of Buddhist or student movements in South Vietnam.

The station, however, believes it probable that a few Buddhist and student leaders may be Viet Cong, are accepting guidance or support from the Viet Cong, or are at least Viet Cong- or Hanoi-oriented. There are reports that the Viet Cong have been trying to exploit Buddhist and student unrest, and the station considers it likely that some opportunistic opposition leaders would accept any help obtainable.

EO 12958
3.4(b)(1)>25Yrs
(C)

A 17 August report to Diem [redacted] noted that "confiscated Viet Cong documents do not mention the role of the Viet Cong as instigator of any occurrences, but spoke only of their plans to take advantage of any opportunity when events caused by the US or opposition might occur."

EO 12958
3.4(b)(1)>25Yrs
(C)

On 15 September [redacted] admitted to a station officer that he still had no specific evidence of a Viet Cong hand in the disturbances, but commented defensively: "What is evidence? We know these people."

EO 12958 6.1(c)>25Yrs
(U)

EO 12958 6.1(c)>25Yrs
(U)

EO 12958 3.4(b)(1)>25Yrs
(C)

2. [redacted] believes that Tri Quang, the chief Buddhist critic of the Diem regime, currently in asylum in the US Embassy, is neutralist-oriented and probably pro-Communist. The source became convinced in the course of many talks with Tri Quang and other Buddhist leaders that Tri Quang was completely political in his purpose and was the acknowledged leader of extremist elements. The source considers Tri Quang's political objectives devious and not limited simply to overthrow of the Diem regime.

The station notes that the [redacted] report is an opinion rather than hard evidence, [redacted]

EO 12958
3.4(b)(1)>25Yrs
(C)

3. North Vietnam is trying to exploit the current world outcry over the situation of the Buddhists in South Vietnam. On 14 September, it broadcast a letter from South Vietnam's Liberation Front--the Viet Cong political arm--to the UN General Assembly, reiterating the Front's demands that the US withdraw from South Vietnam, and that the parties concerned in South Vietnam stop the war, settle their differences among themselves, and set up a neutral, coalition government. The same theme was contained in a note sent by North Vietnam to the fourteen countries sponsoring discussion of the South Vietnam question in the UN.

4. TASS, on 14 September, broadcast in English to Europe a Pravda editorial strongly associating the USSR with "the struggle of the South Vietnamese people against the repressive Diem regime." The article accuses the armed forces of the US of conducting active military operations against the South Vietnamese people. It also mentions the Liberation Front's demand for an immediate end to "foreign military aggression" in South Vietnam as prerequisite to a peaceful solution of the Vietnamese problem.

The Pravda editorial states that the Soviet people "cannot look with indifference upon the sufferings of the peace-loving peoples of South Vietnam," and quotes Ho Chi Minh on the inevitability of victory for the liberation movement in South Vietnam.

EO 12958 6.1(c)>25Yrs
(U)

EO 12958 6.1(c)>25Yrs
(U)

IV. MILITARY SITUATION

1. No significant military developments have been reported since the previous Vietnamese Situation Report at 1000 Saturday.

2. In recent engagements just north and to the south of Saigon, government forces have noted increased enemy use of recoilless rifles and mortars. They have also captured increased quantities of equipment of Bloc origin in this area, including infantry weapons, foodstuffs, and printed matter. (One Chinese Communist periodical found last week was dated June 1963.)

Secretary Thuan last week told Ambassador Lodge that the first ".75-calibre artillery piece," apparently introduced by raft from North Vietnam, has just been found in the delta. This is not confirmed by MACV, which instead reported the capture last week of at least one 75-mm. recoilless rifle. MACV has identified this as a weapon of Chinese manufacture.

Thuan's stress on the serious situation in the delta, which he considers the key to control of South Vietnam, appears to reflect his recent general pessimism. He pointed out that in the delta there is unlimited food and manpower. Thuan stated that the government had made very little progress in the delta, and that it was unlikely that it could.

V. OTHER DEVELOPMENTS

1. The Ceylon delegate at the UN claims that the 14 Afro-Asian nations sponsoring debate on the South Vietnamese question are determined to press for priority treatment during general debate in plenary, and will oppose allocation to committee. Ambassador Stevenson comments that allocation to plenary might make it easier to keep debate brief and perhaps less contentious.

2. The Cambodian Press Agency, on 14 September, reports an appeal by the Association of Vietnamese Buddhists in the US for Cambodia's assistance against the Saigon Government's repression of Buddhists.

FROM: CIA Saigon 24 September 1963
TO: CIA
NR: DA IN 108950
SUBJECT: TRAN KIM TUYEN PREDICTS DIRE PROSPECTS FOR THE DIEM REGIME IN SOUTH VIETNAM

1. Summary. Tran Kim Tuyen, exiled without his family to a consulate post in Cairo, claimed on 17 September 1963 that if the Diem Regime in South Vietnam continued for six more months, all would be lost; then not even a coup d'etat could save Vietnam. If a new Regime is installed fairly soon, however, it might have a fighting chance, but with Ngo Dinh Nhu's skillful divide and conquer tactics fragmenting the opposition, it is unlikely. Tuyen claimed that Nhu is now trying to delude American Ambassador Henry Cabot Lodge, Jr., into believing that the Regime plans real reforms and that its faults have been exaggerated by its enemies among the American officials in Saigon. Tuyen's friends, such as Lieutenant Colonel Pham Ngoc Thao, inspector of strategic hamlets attached to the Presidency, are in danger as suspected subversives. Pressure meanwhile is mounting among young Buddhists, students, and junior army officers; General Tran Van Don and several colleagues realize they played into Ngo Dinh Nhu's hands but are now helpless. As the situation deteriorates, extremists fearing the considerable risks of a coup attempt, will turn to assassination plots in desperation. This would lead to retaliation by loyalists against Americans and to hopeless civil war.

2. Up to the time of Dr. Tuyen's hurried departure on 12 September, the Government of Vietnam (GVN) was trying to restore appearances of normalcy and to portray itself as laboring under difficulty of Communist plots among students and Buddhists. Under Ngo Trong Hieu, known now among the Saigon populace as "The Pope of the False Bonzes", the GVN has placed docile Buddhist priests and monks in all pagodas. His talk of releasing arrested students and lifting martial law however impressed many Westerners. The lifting of martial law is purely nominal; many of the allegedly "Communist student plotters" manhandled and arrested were younger brothers and sons of prominent government officials and military officers; GVN repression and brutality has actually driven many embittered students who were not Communists to flee to the countryside to seek the Communists as the lesser of two evils; most Buddhists repudiate the GVN's bonzes, and attendance at pagodas has dwindled. With the closing of Tudo, ordinary Vietnamese no longer trust the press or radio Saigon; those who can do so listen to the Voice of America (VOA) broadcasts.

3. Nhu has decided to flatter Ambassador Lodge by making grudging concessions supposedly as a result of the Ambassador's negotiating pressure (sending Madame Nhu overseas, ostensible ending martial law, restoring schools and temples.) Nhu has tried to blame American-GVN difficulties on American CIA plots against the Regime, personal hatred of journalists and incumbent American officials of Nhu and the family, and American misunderstanding of the Communist and anti-regime subversive uses of the Buddhists and students. Nhu's charges of American plotting were set with derision by Vietnamese but Americans have lost much face with many sincere Nationalists because they take these accusations and yet are not guilty of blame when many Vietnamese wish they were.

4. The Vietnamese army has suffered most from the current stalemate, both in morale and in reputation. The generals who succumbed to Nhu's wily schemes for a sham military takeover are now helpless and discredited. General Tran Van Don, Commander in Chief, sarcastically related on two occasions recently his young son's derisive comment that Don is Commander in Chief of everything but can command nothing. Only Major General Doung Van Minh and Brigadier General Nguyen Khanh retain any

APPROVED FOR RELEASE
DATE: APR 2001

prestige; those hoping for a military-dictated change of policy as some stopgap salvation do not trust the army leaders any more. The VOA announcement that the army was not responsible for ordering the 21 August attacks on the pagodas temporarily saved the army's reputation but General Dinh's immediate denial squelched this. Fortunately for Nhu, Duong Van Minh however discontent still abides by his officer's oath of loyalty and shuns politics. He does so not out of stupidity, as Nhu often charged in denigrating him. (Field comment. Tuyen recalled bitterly his own past support of Nhu in publicizing this picture of Minh.) Nguyen Khanh, the man whom Tuyen considers next to himself as most able to plan a successful coup, is hampered as is Tuyen by distrust as a provocateur arising chiefly from vigorous support both gave the Regime in 1960. Nhu's agents have furthered this image of Khanh and Tuyen among other suspect malcontents to present any coalition against the regime.

5. The Regime has the ability to keep the army in line by threats of Communist advantage by constant surveillance of suspect elements and limitation of their command authority and by ruining the reputation of his enemies and of well-meaning compromisers like Don. There is nevertheless a strong current under the surface in the Armed Services, civilian bureaucracy, police, and professional classes, people less known than the top figures suspected by the GVN's spies under Le Quang Tung and Duong Van Hieu. These persons hope for a coup within the next few months as Vietnam's only salvation. Not all of them are willing to risk it, though they would welcome it; the big problem is unity and trust of each other in an atmosphere abounding with provocateurs and rumor mongers. If the stalemate continues another six months, the Regime will last as long as Vietnam does, but that will not be long since no one will have the will to fight. If a well-planned coup comes soon, it might succeed and under tremendous handicaps could still save Vietnam. Its survival otential decreases as time goes by. Nhu knows that his main strength is the reluctance of his patriotic opponents and of the Americans to give the VC a sudden advantage by precipitious action against the Regime which might evolve into a protracted conflict. He is skillfully playing against that and turning one enemy against another.

6. This policy may frustrate a coup. There is a growing number of junior officers, especially majors and captains, who will not count the cost of desperate action if their superiors do not move. Even they may turn away from the increasing high risks of a coup to the relatively simple desperation move of assassination. Nhu has already made it clear through the Saigon underground where provocateurs and plotters meet that the Regime is prepared to retaliate with counter assassinations of numerous personnel already earmarked by Colonel Tung for such a dire eventuality, including Americans, on whom any assassination plot will be blamed. The only further result would be a hopeless three-cornered civil war. Nhu thus hopes to forestall such attempts, but is increasingly worried even about the Presidential Guard and even some officers of Tung's special forces.

7. Tuyen stated that the only real hope, and even it is risky, would be firm American indication that it will help the Vietnamese people (with specific omission of mentioning the Regime) in their struggle, and American efforts by every gesture possible to help rebuild the army's reputation and to distinguish between it and the Regime.

8. Field disseminated.

POSSIBLY TO TCHEPONE. THE STATUS OF THE OTHER TWO IS NOT CLEAR.

2. A VILLAGER FROM THE BAN PALUNG (WD 7522) AREA VISITED BAN THO (WD 7528), ABOUT 35 KILOMETERS EAST OF MUONG PHINE, AND ATTENDED A MEETING CALLED BY KAI XIENG RY, THE RECENTLY PL-APPOINTED TASSENG. XIENG RY STATED THAT THE VC TROOPS BASED AT XD 1634, EIGHT KILOMETERS NORTHEAST OF MUONG PHINE, SHOT DOWN AN AMERICAN AIRCRAFT ON 5 SEPTEMBER AT XD 8939, ABOUT 14 KILOMETERS NORTHWEST OF MUONG PHINE. XIENG RY SAID TWO MEN BAILED OUT AT WD 9841, ABOUT 18 KILOMETERS NORTHWEST OF MUONG PHINE. THREE MEN WHO BAILED OUT WERE CAPTURED BY VILLAGERS AT BAN KHAMSAGI WD 9818 AND MOVED TO A VC POSITION AT XD 1636. [redacted] COMMENT. PRESUMABLY THIS IMPLIES THAT FIVE MEN BAILED OUT IN THE SAME GENERAL AREA AND THAT THREE OF THEM WERE CAPTURED. NOTE THAT PARA 3 BELOW STATES THAT THE PL CAPTURED FIVE MEN, BUT REPORTS THAT ONLY THREE CAPTURED MEN WERE MOVED ON 7 SEPTEMBER.)

3. TWO VILLAGERS WHO RETURNED TO BAN MOUNG KAO (XD 1365) ON 13 SEPTEMBER FROM THA KHOUNG REPORTED THE FOLLOWING:

A. A PLANE LOADED WITH RICE AND MEAT ENROUTE TO BAN HOUEI SANE WAS SHOT DOWN BY A MIXED PL/VC UNIT AT BAN HOUEI AKAI (XD 1637).

B. THE PLANE WAS HIT, A WING BROKE OFF, AND THE

[redacted] to White House

[redacted] 3 October 1963

1. On 2 Oct 63 Lt Colonel Conein accidentally encountered Major General Tran Van Don at Tan Son Nhut Airport. Don stated he had been attempting to make contact with Conein for sometime. Requested that Conein come to Nha Trang on night of 2 Oct for private discussion. Conein was noncommittal in his reply.

2. Col Conein's visiting Nha Trang to take with Don was approved by Truehart.

3. Trueheart's guidance to Conein was that he neither to encourage nor discourage any coup thinking or action to elicit information only and not to commit the USG to any action whatsoever.

4. Conein met with Don in Nha Trang on night of 2 Oct for approximately one hour. No other persons were present during the meeting. Don made the following points:

a. Doung Van Mink desires to see Conein for private conversation.

b. Meeting with Minh will take place at 0800 hours, 5 October at Joint General Staff Headquarters, Saigon.

EO 12958
3.4(b)(1)>25Yrs
(C)

c. At that hour Conein is to present himself in uniform at Don's office. Cover topic of conversation will be possible relocation of United States Special Forces headquarters. (Comment: This is a cover topic only suggested by Gen Don. [redacted]

d. Conein will speak to Minh alone.

e. Gen tone that Dinh has realized he was played for a fool during his tenure as military governor of Saigon. For this reason "may join our side."

f. Gen Tran Van Kim and Gen Phan Xuan Chieu have been given staff positions under Gen Don on the JGS.

g. The generals (specific personalities not identified) have requested President Diem to accord them positions of Minister of Defense and Minister of Interior, Minister of Education, Minister of Civic Action and the Prefector of the Police for Saigon/Cholon. In addition, generals asked President Diem to appoint a general officer Military Governor Saigon/Cholon to insure defense of area. Generals are convinced Diem has no repeat no intention of making these appointments.

5. Conein attempted to elicit additional details from Don who refused all attempts at elicitation with statement "you must talk to Minh." Don did volunteer, however, that generals know have a plan. Don was emphatic with respect to this last statement.

6. Don also stated that two days prior to Gen Dinh's first press conference (29 Aug) Vietnamese civilian, otherwise unidentified, visited Ngo Dinh Nhu stated that Americans were contacting various Vietnamese in order to encourage a coup. Thereupon Nhu had called in Don and Don was shown list of Americans engaged in such coup plots. Don stated Conein's name was not repeat not on this list.

7. Ambassador has approved Conein's contact with Don and Minh on 5 October.

SANITIZED COPY

SECRET

CIA

8 October 1963 DRAFT

At your Wednesday press conference you will undoubtedly be questioned about CIA's role in South Viet Nam. This as you know has been the subject of countless erroneous and misleading news articles and editorials, the most violent of which have been introduced into the Congressional Record with equally violent speeches condemning CIA as "irresponsible", and winding up with a demand for a Joint Watchdog Committee.

The principal accusations are:

1. CIA makes policy independent of State Department.

2. CIA's estimates and reports on South Viet Nam have been erroneous and many have been willfully withheld from our Ambassador and from U.S. policy makers.

3. CIA has undertaken activities beyond its area of competence, in secrecy and in contradiction of the desires of the Ambassador.

4. CIA is in violent disagreement with the Embassy, the military and other United States agencies in South Viet Nam.

As you know the facts contradict these and a variety of other equally irresponsible statements made in the press or on the Floor of the Congress, the details of which I will not burden you with.

SANITIZED
E.O. 12958, Sec. 3.6
NLC-92-219
By NARA, Date 5/14/97

30 JAN 1997

The facts are:

1. CIA does not make policy nor do we express ourselves on policy except to the extent that I do personally as a member of your Executive Committee.

2. CIA estimates and reports on South Viet Nam have been consistently correct. They have reflected the autocratic character of the Diem regime for the past 9 years. They have reflected the tarnishing of the regime's image in the eyes of the people of South Viet Nam and in world opinion for the past 18 months. They have reported on countless coup d'etat rumors and evaluated them as improbable of coming off because of a lack of unanimity among the military. They have reported favorable progress in the war, at the same time pointing out trouble spots such as the Delta.

In fact CIA's reporting supports the logic of your decisions reached following the McNamara-Taylor mission. I might add that [19 Spaces] who has been under such criticism recently has in my opinion been consistently right in his observations.

John Richardson (16 spaces)

3. CIA has undertaken no activities of any nature which have not been approved by the Ambassador and agreed to by the Country Team. Moreover CIA's activities, together with those of the military, USOM, AID, USIA, etc., are held under review by the Southeast Asian Task Force and the special Interdepartmental Counter Insurgency Group, hence there seems no foundation for the allegations that CIA operates without control.

4. Prior to about the first of September there had been no reports of conflicts between the CIA station in Saigon and the Embassy, the military or other agencies. Quite to the contrary, reports of a proper working relationship have been received by me from the Ambassador, from the innumerable missions which have gone to South Viet Nam, i.e. General Wheeler, Gen. Krulak, Mr. Forrestal, Adm. Felt and, indeed, my own observations on my visit there. Additionally a senior CIA officer and our Saigon Station Chief have attended every one of Secretary McNamara's Honolulu meetings and at those meetings the station's activities have been reviewed and approved subject to modifications agreed to at the meeting.

There is no doubt that the criticism which has found its way into hundreds of news articles and editorials is seriously eroding the spirit of this organization which I have now spent two years trying to rekindle. I suggest in view of this it might be timely for you to put the entire matter in focus at your press conference and, if you do so, I believe the problem will disappear.

OCI No. 3238/63

CENTRAL INTELLIGENCE AGENCY
Office of Current Intelligence
1 November 1963

CURRENT INTELLIGENCE AGENCY

SUBJECT: Progress of the Coup d'Etat in Saigon (As of 0800 EST)

1. At 1345 Saigon time today, General Don telephoned General Stilwell, MACV J-3, stating that all the Vietnamese generals were with him at Joint General Staff (JGS) Headquarters and that a coup was under way. Soon after that, reports were received that the coup forces had seized control of such key installations as the defense ministry, the central police station, the communications ministry and the radio station. Coup troops involved in these actions appeared principally to be marine, airborne, and armored elements. Conein reported from the JGS that General Ton That Dinh was the key to the generals' coup; when he agreed, the coup began.

2. The Presidential Guard barracks were occupied by the coup forces after some slight fighting. The Special Forces compound at Saigon airport was similarly occupied with some fighting. Special Forces Commander Tung was captured as were other pro-Diem figures such as Police Commissioner Tu, Air Force Commander Hien, Airborne Commander Col. Vien, and Marine Commander Khang.

3. Thereafter, seige was laid to the palace and the coup generals began contacting Diem and Nhu by phone, demanding their immediate resignation. The coup generals were seeking a yes or no answer from the president. On the first call to the palace in mid-afternoon Diem allegedly was not present, and General "Big" Minh spoke to Nhu. In order to show Nhu the strength of the coup movement, the various

participating generals spoke on the phone. The prisoners, including Colonel Tung, were forced at gun point to tell Nhu the situation. Nhu was then told by General Minh that if he and Diem did not surrender, the palace would receive massive bombardment.

4. General Minh called President Diem again at 1715 Saigon time, but Diem hung up without further comment. Minh at that time was reported to have given orders to bomb the palace. At about the same time there were reports that Diem was preparing to announce imminent surrender, but there has been no firm development on this point as yet. There was also a broadcast from the palace suggesting that Diem was trying to rally support.

5. Coup troops began attacking Gia Long Palace, and expected to take possession by 1900 hours Saigon time. At 1915 hours Saigon time, General Minh was reported to have given Diem one last chance to surrender or face being "blasted off the face of the earth." Commencing at 1900 hours four loud explosions were heard in the vicinity of the palace within a ten-minute period.

6. Earlier in the afternoon, Diem called Ambassador Lodge at 1630 hours Saigon time, asking what was the position of the US. Lodge took refuge in the confusion of the situation and expressed concern for Diem's physical safety. Lodge told Diem that he had heard that the coup leaders had offered Diem and Nhu safe conduct out of the country and he asked Diem about this. Diem's only comment was that he was the Chief of State, that he had tried to do his duty, and that he was trying to reestablish law and order.

7. General Minh says it is planned to have an entirely civilian government replace the present one. Vice President Nguyen Ngoc Tho and Pham Huy Quat, prominent Dai Viet opposition leader, have so far been designated for this new cabinet. Minh hoped to turn over the government to civilian hands in two or three days. The generals also hope for early recognition of their new government by the US and the Western powers.

8. The troop movements reported by the generals indicate that all major combat units adjacent to the capital are supporting the coup. Elements of the 5th division north of Saigon, including its headquarters at Bien Hoa, are activitely participating; the 7th division south of the city with headquarters at My Tho, reportedly is also supporting the coup. Two marine battalions from Bien Hoa, one airborne, and one infantry battalion from Vung Tau (Cap St. Jacques), and two airborne battalions from Binh Duong Province just north of Saigon have moved into the city to participate in the coup.

9. The II Corps command in central Vietnam is sympathetic to the coup as are major elements of the IV Corps in the delta; the status of I Corps in the far north is uncertain. The navy apparently was not sympathetic, but seems to have been neutralized. One report states that Navy Commander Quyen has been killed. Air Force elements are participating. Major pro-government forces, including the police, Special Forces, and the Presidential Guard Brigade appear largely to have been neutralized or suppressed except in the immediate palace area. Unless there is some wavering on the part of units participating in the coup, the generals appear to have the situation under control.

10. Careful planning by the coup group is further indicated by reports from several provincial cities that the military appear to be in charge; at Nha Trang leaflets signed by General Minh have already been distributed acclaiming the new government. There are also reports of popular jubilation in the provinces as well as in Saigon.

2 November 1963

THE SITUATION IN SOUTH VIETNAM
(Information as of 0700 EST)

1. Saigon is celebrating the success of the coup, with some retaliatory outbreaks against installations close to the Diem regime. Organized resistance has ended, and there are conflicting reports of the fate of Diem and Nhu after their reported surrender at Gia Long palace just before 0700 Saigon time (1800 EST 1 November in Washington.)

2. Diem telephoned General Don at the Joint General Staff at 0620, according to a reliable source at JGS, and offered to surrender "with honor." General "Big" Minh accepted, and was trying to arrange a ceasefire. Coup forces were even then reported to have entered Gia Long. Half an hour later, according to the source, Diem again called Don to surrender "unconditionally," and added that he had given the ceasefire order.

3. The coup generals had planned to bring Diem and Nhu to JGS headquarters and offer to fly them to the country of their choice. Saigon Radio announced at 1045, however, that Diem and Nhu had committed suicide while being taken to JGS. One source reported Vietnamese photographers had taken pictures of the bodies at JGS headquarters. Other rumors contend that they have escaped and are in hiding.

4. We have still detected no reaction--other than propaganda--from the Communists. Hanoi has labeled the coup a US move to substitute "one puppet for another."

5. The General's Council has announced a six-point program for the new regime: to fight the Communists, permit free function of political parties, release all non-Communist political prisoners, grant freedom of religion, permit a free press, and resume diplomatic relations with neighboring countries (i.e., Cambodia.) For the time being, however, martial law continues with censorship and curfews.

1.3(a)(4)
C

1.3(a)(4)
C

6. It still appears that the generals will not be able to create an all-civilian government as rapidly as they had hoped. Vice President Tho is to head a new cabinet as Prime Minister, but at least four of the key posts will be filled by military officers. Pledges of support are coming in from Vietnamese organizations, including the Republican Youth, a mass organization which was one of Nhu's vehicles. One of the principal labor leaders visited an American friend in jubilant mood.

7. A roundup is under way seeking some police officers and other officials of the former regime still at large. Early Saturday morning small arms fire was still heard occasionally, but some of this could be ammunition exploding in fires at the palace.

8. Troops are in only loose control over the celebrating population of Saigon. The headquarters of Madame Nhu's Women's Solidarity Movement and homes of several former government members have been burned. The police station at the central market and the offices of two pro-Diem newspapers, including the Times of Vietnam, have been sacked. The statue of the Trung Sisters, Madame Nhu's favorite symbol, has been pulled down.

9. There have been no reports of US casualties. There appear to have been up to a total of 100 casualties among coup troops and those defending Diem in the palace.

ABOUT THE COUP AND THE CHANGE OF REGIME, SINCE THE UNPOPULARITY OF THE DIEM REGIME WAS ONE OF THEIR GREATEST PROPAGANDA ASSETS./

2. ON THE EVENING [redacted] NOVEMBER, A VC CELL [redacted] HELD A MEETING PRESIDED OVER BY THE CELL LEADER. THE CELL MEMBERS WERE TOLD THAT THE COUP OF 1 NOVEMBER WAS AN AMERICAN INSTIGATED ACTION AND THAT THE ARMY OF VIETNAM /ARVN/ OFFICERS WHO STAGED IT WERE ONLY "LACKEYS" OF THE AMERICANS. THE CELL LEADER SAID THAT THE MILITARY GOVERNMENT WOULD BE TORN APART BY A STRUGGLE FOR SUPREME POWER AMONG ITS MEMBERS. HE SAID THAT THE NATIONAL FRONT FOR LIBERATION /NFL/ TOO, HAD LONG FORSEEN THIS COUP, SINCE THEY KNEW THAT THE AMERICANS WISHED TO "CHANGE HORSES." [redacted] COMMENT. BROADCASTS OF THE VC RADIO IN SOUTH VIETNAM /SVN/ ON THE NIGHT 1 NOVEMBER CALLED ON THE VIETNAMESE PEOPLE, THE FIGHTERS OF THE NFL AND ELEMENTS WITHIN THE ARVN TO TAKE ADVANTAGE OF THE COUP AND DESTROY STRATEGIC HAMLETS AND GUARD TOWERS, AND TO RISE UP UNDER THE BANNER OF THE NFL. HOWEVER, BECAUSE OF THE RAPIDITY WITH WHICH THE COUP WAS CARRIED OUT, THIS LINE OF ACTION PROVED IMPOSSIBLE./

3. THE CELL LEADER SAID FURTHER THAT THE COURSE OF THE VC WAS CLEAR- I.E. TO CONTINUE THE BATTLE, SO LONG AS THE AMERICANS REMAINED ON VIETNAMESE SOIL, UNTIL THE FINAL VICTORY WAS WON. HE SAID THAT ORDERS HAD BEEN GIVEN TO THE VC FORCES TO KILL OR CAPTURE AS MANY AMERICANS AS POSSIBLE, IN ORDER TO SHOW THE AMERICANS

THE CONSEQUENCES OF CONTIVING TO ''FORCE THIS FILTHY WAR'' UPON THE VIETNAMESE PEOPLE. HE SAID THAT THE VC MUST REDOUBLE THEIR EFFORTS TO CAUSE THE AMERICANS HEAVY LOSSES IN MEN AND MATERIAL.

Office of Current Intelligence
12 November 1963

CURRENT INTELLIGENCE MEMORANDUM

SUBJECT: Press Version of How Diem and Nhu Died

1. The latest "inside" press account of how Diem and Nhu met their end is that they were killed in the presence of the coup leaders at the Joint General Staff (JGS) after an angry exchange of words. This allegedly occurred sometime after 1000 hours, Saturday morning (2 November), shortly after their capture at a Cholon church. According to this version, Diem and Nhu had left Gia Long palace by car about 2000 hours on Friday and spent the night at the home of the Republican Youth Movement leader in Cholon.

2. We still have no hard information on the time or circumstances of Diem and Nhu's departure from the palace, or indeed whether they even left there alive. There have been numerous variations on the theme of a flight to Cholon and subsequent capture. Except for minor details, this latest press version resembles the most recent "official" account issued by the coup leaders, i.e., Diem and Nhu died from "accidental suicide" in a struggle in an armored car after their arrest at church Saturday morning.

3. There are several troublesome aspects to this particular story: If Diem and Nhu had left the palace Friday evening, how can we explain the two telephone calls of surrender made by Diem to the JGS at 0620 and 0650, Saturday? These calls were reported by [redacted] Also, General Harkins reported that at 0600 on 2 November a surrender plea by General Dinh, in charge of the assault forces on the palace, was stonily rebuffed by Diem.

SANITIZED
NLK-81-192
BY [illegible] NARS, DATE 6/85

17a

4. It would also seem strange that having successfully fled to Cholon, the two brothers would eschew further escape and instead calmly attend church in full public view.

5. Finally, the photographs of the bodies, seen by CIA personnel and judged apparently genuine, showed Diem and Nhu with their hands tied behind their backs. Yet this latest version says the fateful argument ensued after Diem had angrily thrown down a microphone proffered for his resignation statement.

6. The version of events on the afternoon of the coup, including the telephone conversation between Diem and Ambassador Lodge, comports with known facts, but this information already was in the public domain.

7. On the basis of available information, our best judgment is that Diem and Nhu may well have been killed by a junior officer or enlisted personnel acting unilaterally, possibly provoked by the captives' haughtiness. It is possible, however, that General Dinh or some other senior officer may have ordered their execution. In any case, it seems likely that Diem and Nhu never reached the JGS alive.

EO 12958 3.4(b)(1)>25Yrs
(C)

PREPARED BY: [redacted]

14 November 1963

SUBJECT : Recent MAC(V)/[redacted] Discussions Concerning the Transfer of Certain Programs

EO 12958
3.4(b)(1)>25Yrs
(C)

Summarized below are the discussions between MAC(V) and [redacted] regarding the possible transfer of [redacted] paramilitary and other programs to MAC(V) [redacted]

EO 12958 3.4(b)(1)>25Yrs
(C)

a. Border Surveillance

MAC(V) has agreed to assume responsibility for in-country border surveillance assets and programs to be effective on 26 October. As a result all in-country border surveillance assets would be transferred and absorbed into CIDG formations by 1 November.

U.S. Special Forces detachments at Khe Sanh, Kham Duc, Dak Pek and Dac To would revert to MAC(V) operational control on 1 November.

b. Mountain Scouts

The entire mountain scout program will be taken over by MAC(V) effective 31 October. All mountain scout units would be directed to report to the nearest CIDG formation in their localities.

EO 12958 3.4(b)(1)>25Yrs
(C)

c. Combat Intelligence (CI) Teams

A planning paper prepared by MAC(V) dated 23 August was discussed between MAC(V) [redacted] As of 31 October discussions concerning the transfer of CI teams were still underway. In the joint Embassy/MAC(V)/[redacted] message (Saigon 2441) sent to you today, it was stated that MAC(V) has the capability to absorb the CI teams (650 individuals operating in teams of approximately 18 men each) as a part of the CIDG strike forces and it was felt that this action would enhance U.S. management and control of these assets.

EO 12958 3.4(b)(1)>25Yrs
(C)

d. [redacted]

[redacted]

~~SECRET~~

E0 12958 3.4(b)(1)>25Yrs
(C)

[redacted]

E0 12958
3.4(b)(1)>25Yrs
(C)

e. Funding

Discussions have been held with [redacted] concerning the funding, during FY 1964, of the border surveillance program and the mountain scout program after transfer to MAC(V). It has been agreed that [redacted] should be earmarked for the border surveillance program and [redacted] should be earmarked for the mountain scout program, and that these funds would be added to Operation Switchback funds for use by MAC(V) during FY 1964. No agreement has yet been reached for the funding of the above programs or the funding for the combat intelligence teams for FY 1965. This presumably will be discussed at the 20 November Honolulu conference.

E0 12958
3.4(b)(1)>25Yrs
(C)

For your information, it is estimated that as of 31 October [redacted] had spent [redacted] for the border surveillance program and [redacted] for the mountain scouts. Thus, these latter amounts would be subtracted from the larger figures listed above which represent total figures for FY 1964.

2 January 1964

REVISED MEMORANDUM FOR THE DIRECTOR

SUBJECT: Probable Reactions to Various Courses of Action with Respect to North Vietnam

REFERENCE: MACV-[redacted] Op-Plan No. 34 A-64/TIGER, of 15 December 1963

1.5(c)
3.4(b)(1)

1. In response to General Krulak's request, we assess below the probable Communist and international reactions to 13 specific operations given us from among those of the referenced Op-Plan. With one exception, the given operations are small unit (South Vietnamese) airborne or maritime sabotage efforts against specific targets (bridges, railways, dumps, etc.) in various areas of North Vietnam. The one exception is a three company (plus) raid against a small island just north of the 17th parallel DMZ. All of the 13 operations are part of general Krulak's Phase I: i.e., to be mounted within about four months'time from the Op-Plan's activation. We note that except for the island raid

This memorandum has been prepared with the assistance of O/CI and DD/P.

~~TOP SECRET~~
~~SENSITIVE~~

GROUP 1
~~Excluded from automatic downgrading and declassification~~

APPROVED FOR RELEASE
9 JUL 1997

noted above and a few other of the 13, most of these operations [redacted] have already been approved. 1.5(c) 3.4(b)(1)

2. In sum, we believe that:

a. Communist reactions to most of these operations would be slight.

b. Communist reactions would be sharper in the cases of (1) Haiphong (No. 33, below); (2) Ile Du Tigre (No. 34); and (3) the railroads near the borders of China (Nos. 54 and 55). The reactions would be felt primarily in South Vietnam and Laos but would not be so extreme as to change the character of hostilities in those countries.

c. The operations under review would not be likely to lead to appreciably increased Chinese Communist involvement in the area. Neither would these operations -- with the possible exception of the Ile du Tigre raid -- lead the Soviets to believe that the US had made a significant change in its policies.

d. The 13 operations under review, taken by themselves, and even if all were successful, would not "convince the DRV leadership that their continued direction and support of insurgent activities

in the RVN (South Vietnam) and Laos should cease" -- this, according to the reference Op-Plan, being their stated goal.

e. It is possible, however, that the North Vietnamese Government might see these operations (especially if that against the Ile du Tigre were included) as representing a significant increase in the vigor of US policy, potentially dangerous to them. If so, they would probably wish to halt the new developments at an early date, and would therefore try to arouse international pressure for a conference to settle the problem of Vietnam before it expanded into a more general conflict in the Far East.

f. In general, such operations as the 13 here considered would probably be viewed with disfavor by most of our major allies. Taipei and Bangkok, of course, would probably support the US strongly. British officials in South Vietnam would probably see these operations' merit and consider them worth trying, but London's reaction -- particularly to any international political complaints engendered -- would be complicated by the UK's position as co-chairman of the Geneva Conference and hence (with the USSR) principal guarantor of the terms of the 1954 Geneva Accords, which such operations

would violate. France would almost certainly be opposed to any US/RVN attempt to carry the war to the North, and would probably cause the US the most difficulty. Canada would probably find it difficult to support the US in any North Vietnamese complaints formally submitted to the ICC. If such operations helped generate a Communist call for an international conference, this call would probably find much support elsewhere in the Free World.

g. The principal determinant of DRV prosecution of the war will not be damage suffered from such small-scale operations, but the course of the war in the South and the degree of risk Hanoi believes will be involved in its prosecution.

3. We assess the various operations below, under their designated Op-Plan categories of I, II, or III. We note, however, that these categories of increased expected <u>damage</u> to the DRV do not necessarily correspond to what we believe to be increased <u>reactions</u>. We believe, in general, that:

a. Those small unit airborne and maritime operations not far north of the 17th parallel (all, that is, except Nos. 33, 34, 54, and 55 below, and whether category I, II, or III) would probably provoke the least response.

b. The Haiphong channel operation (No. 33) and the large raid against the Ile du Tigre (No. 34) would provoke greater response.

c. The sabotage efforts against the Hanoi-Lang Son (No. 54) and Yen Bay-Lao Kay (No. 55) railroads would probably provoke little if any overt response at first, but if successfully continued would probably provoke the Chinese to more threatening outcries, increased offers of support to the DRV, and attempts to increase the Chinese presence in North Vietnam and northernmost Laos.

SPECIFIC RESPONSES BY CATEGORIES

CATEGORY I - HARASSING OPERATIONS

4. General Description. This category includes small, unspectacular demolition operations and small-scale intelligence collection actions, including tactical reconnaissance probes by small military units, temporary interdiction of lines of communication, and general low level harassment. These operations may be launched and effected by land, sea, and/or air.

5. Specific operations under consideration.*

a. (29) Interdiction of Route 7 about 50 miles from Lao border by airdropped 15-man team to exfiltrate through Laos.

b. (30) Interdiction of Route 8 southwest of Vinh by 8-man airdropped team.

c. (31) Interdiction of Route 12 by 15-man airdropped team.

d. (43) Amphibious raid by 4-man team on Ly Hoa Bridge across the Rao Da River near Badon.

e. (45) Amphibious raid by 13-man team on security post at mouth of Dong Hoi River.

6. In essence, operations of this category have been taking place since June 1963. Additional such operations will probably evoke reactions similar to those prompted by past operations: e.g., propaganda complaints and spy trials, but little more. We share the view expressed in the Op-Plan's Appendix 6 that Hanoi might

---

* For more details, see Annex. The operation numbers are those used in Appendix 3 to Annex C of Op-Plan 34 A-64/TIGER.

begin preparing a formal protest to the ICC. With the Op-Plan, we think it unlikely that non-Communist nations or the UN would become concerned with operations in this category, and Communist China's reaction would probably remain confined to denunciations of the US and its "puppets."

7. We believe, however, that operations launched from Laos against targets well north of the 17th parallel and/or operations involving the exfiltration of teams through Laotian territory -- i.e., operation No. 29 -- are not of the same order as the others in this category. Some such activity is already going on, of course, and if the level and success of present activity are not markedly increased, Hanoi's reaction is not likely to change in any major respect. On the other hand, should Laos-based or Laos-exfiltrating teams begin achieving some substantial success, the Communists would probably attempt strong local reaction and would try to seize -- or, at least, to destroy -- the bases from which such operations were being mounted, using whatever force was necessary. Should this force require additional introduction of North Vietnamese units into Laos, such units would probably be introduced. The chances of a general Communist offensive in Laos would increase, but this is probably not the course the North

Vietnamese would initially follow. Charges of new US intervention would almost certainly be made, especially if the US made extensive use of helicopters or STOL aircraft for infiltration or resupply. Such charges would probably create additional difficulties for Souvanna Phouma and might prompt certain of our European allies, especially the French, to assert that US actions were jeopardizing the LAOS settlements.

CATEGORY II -- ATTRITIONAL OPERATIONS

8. General description. These include small-scale resistance operations, airborne and seaborne raids by small forces on important military and civil installations, and demolition of important facilities.

9. Specific operations under consideration.

a. (32) Seaborne 12-man team strike on Vinh Son radar installation.

b. (34) 3-company amphibious raid on Ile du Tigre (north of 17th parallel about 20 miles off the NVN coast).

c. (42) 14-man team amphibious raid on security post and coastal defense battery north of Dong Hoi.

d. (44) 10-man team emphibious raid to sabotage bridge on Route 1 north of Dong Hoi.

e. (54) Airdropped 10-man long-term team for hit-and-run attacks on Lang Son-Hanoi railway.

f. (55) Airdropped long-term 5-man team to operate against Yen Bay-Lao Kay railway northwest of Yen Bay.

10. In accord with Appendix 6 of the Op-Plan, we believe successful Category II operations will evoke DRV propaganda and complaints to the ICC; but we do not agree with its judgment that the DRV would be likely to respond by requesting any appreciable increase in Chinese material assistance. Hanoi probably would increase the intensity of Communist activity in Laos, though probably not to the point of launching an all-out offensive. We would not anticipate any major new pressures in the south, since we believe Hanoi and the Viet Cong are already doing all they are capable of doing there without changing the nature of the war. However, the Communists might undertake some specific retaliatory measures: e.g., more intensive attacks upon South Vietnam's rail system, increased terrorism aimed particularly at Americans. etc.

11. We do not believe, however, that all of the operations in this category would produce similar degrees of Communist reaction. For example, operations against the Lang Son-Hanoi and the Yen Bay-Lao Kay railways -- if repeated and successful -- are much more likely to evoke a sharp Communist reaction than operations against objectives in the southern portion of North Vietnam. With respect to the Ile du Tigre, a three-company amphibious assault on a fortified island over 20 miles off the coast -- unlike the sabotage of a railroad bridge -- could not be plausibly represented as the work of indigenous dissidents. Whatever be the uniforms worn by the attacking troops, the Ile du Tigre raid would be construed by Hanoi, and the world, as a deliberate incursion into North Vietnamese territory by RVN regular forces -- an incursion made with US consent. Some traffic and memoranda relating to the Op-Plan suggest that the Ile du Tigre is part of the De-Militarized Zone (DMZ). If this were the case, international political reaction to a raid against it would be very sharp indeed. Even if attacking GVN forces could prove conclusively that the island had been fortified and was being used as an infiltration training and staging base -- in contravention of the Geneva Accords -- to the world, the GVN's guilt in launching a military attack against part of the supposedly sacrosanct DMZ

would probably be interpreted as greater than Hanoi's guilt in making improper use of this plot of ground. However, we are convinced [redacted] that the Ile du Tigre is clearly North Vietnamese territory and is not located within the DMZ.* 1.5(c) 3.4(b)(1)

---

* No specific mention of the Ile du Tigre is made in the 1954 Geneva Accords or any of the protocols, appendices and annexes to those Accords. The precise boundaries of the DMZ are spelled out in a Ruling issued on 15 September 1954 by the Joint Central Commission for Viet-Nam in accordance with Articles 1, 3, 5, 6, 7, 8, 9, and 32 of the Geneva Agreement, paragraph I of the Agreement's Annex, and a supplementary Ruling of 13 August. (The text of the applicable ruling is given in the Department of State's International Boundary Study No. 19, "Viet-Nam 'Demarcation Line'," 10 September 1962.) The Northern Boundary of the DMZ commences with "An East-West line running from the mouth of the /Sen Hai/ river (2.8 km north of Cua-Tung) (251-850) to the village of Yen-Giu-Bac...." Hence the point on the coast 2.8 km north of Cua-Tung may be taken as the northeasternmost point of the DMZ. The Ile du Tigre is 14.5 miles east and 9 miles north (or, on a direct line, about 17 miles northeast) of this point. The Geneva Agreement and its related amplifying documents make no mention of any seaward extension of the DMZ. However, even if the "territorial waters" of the DMZ were presumed to be covered by a three mile -- or even a twelve mile -- extension of its land boundaries, the Ile du Tigre would still not fall within its purview.

We understand that the GVN asserts that the island is within the DMZ. In the light of circumstances set forth above, this ascertion would seem to have no basis.

CATEGORY III - PUNITIVE OPERATIONS

12. General description. These are semicovert resistance/sabotage actions designed to damage and/or destroy facilities or installations critical to the economy, industrial development, and internal security of the DRV. These actions include raids by company or battalion size military or paramilitary forces, airborne or seaborne, sabotage by small teams of important targets, and the active organization, recruitment and employment of resistance movements within North Vietnam. Such actions are to be as covert as possible, but the duration of such operations and size of the forces required for their execution may result in their becoming basically overt attacks on the Hanoi regime.

13. Specific operations under consideration:

a. (33) 6-man seaborne team strike (by UDT) on dredges and buoy tender in Haiphong harbor channel.

b. (35) 4-6-man seaborne team strike on Ben Tuy POL dump (near Vinh) designed to destroy it by use of incendiary rockets.

14. The probably reaction to Category III operations must be assessed on a case-by-case basis. The attack on the channel of

Haiphong harbor (33) would probably evoke a vociferous response. For some time the Viet Cong have been building their strength in the Rung Sat area along the Saigon River (Saigon's outlet to the sea). As a retaliatory gesture, Hanoi might order the VC to harass shipping coming into Saigon. However, this is something the VC are likely to do anyway, if they acquire the ability. Hence a successful attack upon Haiphong would not in itself generate any new threat to Saigon, though in retaliation the VC would probably intensify their efforts in this area.

15. A successful ground attack against the Vinh POL storage depot (35) would probably produce a barrage of Hanoi, and Peiping, propaganda. Hanoi might try to launch a retaliatory Viet Cong attack in the south (e.g., an attack against the storage facilities at Nha Be near Saigon). The RVN operation might produce some neutralist grumbling and nervousness, but so long as the attacks were launched by RVN forces on the ground at the time of the attack (regardless of how they arrived in the target area), we doubt if there would be any Free World reaction likely to cause the US serious difficulty.

NORTH VIETNAM OPERATIONS PRESENTLY
UNDER ACTIVE CONSIDERATION

(Numbers keyed to Appendix 3 to Annex C to COMUS MACV/[redacted] OPLAN 34A-64)

1.5(c)
3.4(b)(1)

CATEGORY I

29. (Airops 1) Interdiction of Rte 7 by Abn Sp Fcs, 15-man team (App 25 to Anx E to OPLAN 34-64) and/or Air Opns #1, 15-man team.

Airdrop 15-man team for hit-and-run attack on Route 7 bridge (VG 486 276) southeast of Cua Rao. Team to exfiltrate into Laos.

Description of targets: bridge, 23' x 10', wood
bridge, 46' x 10', concrete

30. (Airops 6) Interdiction of Rte 8 by Abn Sp Fcs, 15-man team (App 24 to Anx E to OPLAN 34-64) and/or Air Ops #6, 8-man team.

Airdrop long term 8-man team to operate against bridges and traffic on Rte 8 between WF 3088 402 and 400 455.

Description of targets: Bridge, masonry, arch
Bridge, 20' x 7', masonry, arch
Bridge, 33' x 10', masonry, arch

31. Interdiction of Rte 12 by Abn Sp Fcs, 15-man team (App 23 to Anx E to OPLAN 34-64)

43. (Marops 4) *War Ops #4, Amphibious raid, 4-man team, bridges

Sabotage Ly Hoa bridge (XE 615 505). 4-man team

Description of target. An 8 span, deck type bridge, of steel and concrete construction, extending SE/NW across the Rao Da. The bridge is single lane, approximately 480 x 15 feet, with a central span approximately 19 feet wide.

Defense. A guard tower is located at the SE end of the Ly Hoa bridge and it should be noted that a Swatow Patrol Boat base is located near Badon in the Song Giang approximately 10 NM from the Rao Da.

45. (Marops 7) *War Ops #7, Amphibious raid, 12-man team on Security Post

Sneak attack on security post at mouth of Dong Hoi River (XE 732 338). 12-man team.

CATEGORY II

32. SEAL Team strike on Vinh Son, 12-man team (App 7 Anx E to OPLAN 34-64)

34. Amphibious raid Ile du Tigre by 2 Marine Cos, 1 Recn Co, UDT/SEAL, accompanied by mining of Quang Khe (App 1& 5a to Anx E OPLAN 34-64)

42. (Marops 3) *Mar Ops #3, Amphibious raid 10-man strike force, 4-man boat crew on Security Post.

Raid on security post (XE 593 552) and four coastal defense guns (XE 596 553). 10-man team

44. (Marops 5) *Mar Ops #5, Amphibious raid, 10-man team, bridges

Sabotage Route 1 bridge (XE 599 542).

Description of target: 44' x '3', deck type bridge

54. (Airops 2) *Air Ops #2, Abn drop 10-man team on RR.

Airdrop 10-man long-term team for hit-and-run attack on Lang Son-Hanoi railway (between XJ 505 825 and XJ 509 811). Team to remain in area for long-term operation.

Description of targets:
Bridge, 65'
Culvert (previous bridge, 23')
Culvert (previous bridge, 23')

55. (Airops 3)

*Air Ops #3, Abn drop 5-man team on RR

Airdrop long term 5-man team to operate against Yen Bay - Lao Kay railway northwest of Yen Bay. Exact area depends on drop area used.

Description of targets: Approximately 100 targets ranging from culverts t 3 track railroad siding

CATEGORY III

33. (Marops 15)

SEAL Team strike on dredges on buoy tender in Haiphong Channel (App 15 to Anx E to OPLAN 34-6 and/or Mar Ops #15, 6-man team.

Sneak attack to destroy channel buoys and navigational aids. Mining Haiphong harbor approaches. Sink dredge or ships. 4 UDT swimmers and 2-man boat crew.

Description of target: Two 300-ton, bucket type, barge loading dredges (approximately 25 x 160 feet) and numerous buoys and navigational lights.

Defenses: In addition to military and security activity in the area it has been reported that the harbor and channel are regularly patrolled by naval patrol craft.

35. (Marops 2)

SEAL Team strike on Ben Thuy by 4-man force (App 9a to Anx E to OPLAN 34-64) and/or Mar Ops #2 6-man team.

Incendiary rocket attack on Vinh Ben Thuy POL dump. (WF 761 648) 6-man team.

Description of target: Walled POL storage area contains 5 large and 6 small revetted vertical tanks, 2 semiburied tanks, 5 small horizontal tanks and 13 storage/support buildings. Petroleum pier observed on Song Ca River south of POL storage area.

Defense: There is likely to be a night patrol along the length of the river until reaching the port of Ben Thuy, which is above the target.

27 February 1964

MEMORANDUM FOR THE RECORD

SUBJECT: Discussion with the President at 1:00 o'clock, February 26th; No one was present

1. Briefly discussed the trip to South Vietnam. President indicated he expected that I would be with the McNamara/Taylor group. He did not specifically ask that I go nor did I ask him whether I should. It seemed a foregone conclusion in his mind that I was going and he was looking forward to an objective and independent judgment of the situation in South Vietnam from me.

2. He expects me to brief Eisenhower in the near future. He had so told Eisenhower. He did not wish me to make a special trip for this purpose but suggested that I meet with Eisenhower as soon as convenient. I explained that if McNamara's trip was timed, as I expected it would be, I could leave on Wednesday, March 4th, see Eisenhower for about one day, proceed commercially by plane to Honolulu and join the McNamara party there. The President thought this was a good plan . Otherwise he thought I should brief Eisenhower at the earliest convenient time.

3. I told the President we had completed an extended coverage of the Soviet Union involving the photographing of Soviet landmass. This gave me an opportunity to discuss the development. I said that the photography had not been completely studied but the evidences were that the Soviets were slowing up or stopping construction of soft ICBM sites and were emphasising the construction of hard sites. 1.5(c) 3.4(b)(1)

Khrushchev knew that through satellite photography we were learning the exact location of missile sites. He was not relocating them - what he was doing, he was hardening them, and this was costing them an enormous amount of money. The President expressed great interest in the subject of satellite photography and I asked for an hour's time to go over the program, the pictures and other details. He agreed. I suggested perhaps when he was flying some place I go with him and we could spend an hour or so together on this one subject. This he felt might be a good idea.

APPROVED FOR RELEASE
SEP 1999 0624996

ACTION: Remind me to follow this up and to make arrangements on a Presidential trip in the near future. 1.5(c) 3.4(b)(1)

4. I then [redacted] advised him that Chairman Vinson and Senator Russell felt that their Committees should be fully informed by them and they wished to do this in advance of the announcement and also stated that Mr. Cannon wished me to meet with his Subcommittee prior to the announcement and that George Mahon wished to inform his committee prior to the announcement. I recommended that this be done but it be timed so the Committees would be advised practically concurrently with the announcement so that the press would not get the news before the President announced it. I said that if, for instance, he was to make the announcement Saturday morning (which he did not confirm as the time), then all of the Congressional actions should be taken Saturday morning. Thus the Congressmen would know in advance but not so much in advance that the press would get hold of the story. The President was very much against this. He felt that if the announcement was made on Saturday, we could inform the Committees on Monday. I stated that this would cause the Committee Chairmen and the Committees a great deal of trouble. With this Johnson picked up the phone to call Senator Russell; however the call was not returned and I did not get a final decision.

ACTION: Later I mentioned the question to Bundy and he said that he would have to get to the President and get a decision. Until this decision is forthcoming we should take absolutely no action with respect to the Hill. Bundy and I discussed the problem several times during the day, including a brief discussion at Mrs. J. F. Kennedy's residence when the President was there. However, Bundy did not think it appropriate to discuss it with the President on the particular occasion at Mrs. Kennedy's residence. This should be followed up with Bundy today. 1.5(c) 3.4(b)(1)

5. I then referred to the [redacted] This item refers to the withdrawal of the Soviets from Cuba and the turning over of the SAM sites to them. I said there was a high probability that the SAM sites would be placed in the hands of the Cubans who would have absolute control over them. I said that other evidence convinced us there would be a continuing withdrawal of Soviets from Cuba, but not a total withdrawal; however we could not gauge the exact numbers. I said that this, in my opinion, represented probably the next important crisis that we would face because Castro in his rather amicable but long press conference had raised the question of our penetrating illegally Cuban air space. I therefore recommended that this subject be discussed with Secretaries of State and Defense; that they be ordered to prepare contingency plans for such a situation, otherwise we would be confronted with an emergency.

SECRET

all the lights in town would be on, and our course of action would have to evolve under an atmosphere of emergency. I pressed this point hard. The President asked if I had discussed it with McNamara and Rusk and I told him I had, on many occasions, but they seemed wholly preoccupied with the problem at hand and had never come to grips with this particular hypothetical but possible situation. The President gave me no satisfactory answer as to any action he would take. In fact, he seemed more preoccupied with the withdrawal of Soviets and the "numbers remaining" than he did with the issue I was confronting him with.

6. We were then joined by Secretary Rusk, Harriman, Edgar Kaiser and Mr. Calhoun and engaged in a long discussion on Ghana. Kaiser reported on his conversations with Nkrumah and his absolute and positive insistence that Nkrumah stop the anti-American actions in his country or else he, Kaiser, could not proceed with the work. Furthermore, under the climate that Nkrumah had developed Kaiser could not raise a single cent toward additional investments in Ghana. Nkrumah seemed to agree and said he was writing President Johnson.

[redacted] The President asked Kaiser what he wished to do. Kaiser stated that he had a contract that had not been broken by Ghana despite the exasperating situation and that he intended to fulfill his contract. He reviewed the situation about as follows: Volta Dam will cost about $200 million of which Ghana is putting up half and the other half is being put up by AID, the World Bank, the British, and the Export-Import Bank in varying amounts and for differing components or parts of the project. The aluminum plant will cost about $150 million, about $100 million has been put up by the Export-Import Bank and about $50 million by the Kaiser-Reynolds Syndicate (Kaiser, 90% - Reynolds, 10%) but all of this is guaranteed by the United States Government. The entire $350 million in the form of loans, there are no grants made. The power that Kaiser will take, representing half of the power generated at the dam, will pay for the entire project in 30 years. Kaiser stated that he could not forecast the permanence of his position in the project. It was entirely possible that Nkrumah would take it over. This was a risk and represented a very serious problem to him because he was proceeding with manufacturing outlets in Europe to utilize the raw aluminum produced. Despite this risk he was going forward. The President was noncommittal.

1.5(c)(d)
3.4(b)(1)(6)

7. Later Governor Harriman stated he wanted to get together with me to reach a conclusion on our policy concerning the Volta Project. He was in favor of proceeding -- there were many who wished to cut and run. He sensed that I would favor staying with the project. What he was seeking was a partner to support his position.

8. [redacted]

2 April 1964

MEMORANDUM FOR THE RECORD

SUBJECT: NSC Meeting

1. I briefed the NSC on the following items as per the attached briefing notes:

a. Soviet Space and Missile Developments
b. Sino-Soviet Dispute
c. South Vietnam
d. Brazil

2. I then asked Col. King to brief in further detail on developments in Brazil which he did, utilizing the teleconference report of 1500Z, April 2nd, between Secretary Ball and Ambassador Gordon. A copy of this telecon is in the file.

3. With respect to the Soviet VENUS shot, I called the President's particular attention to the security breach which appeared on March 31st in the NEW YORK TIMES' Finney article entitled "Soviet Fails in Two VENUS Probes", and a parallel article using practically the same text which appeared in the Washington Post. I stated that USIB were considering recommendations on an investigation and I would present such recommendations to the President. The President responded that I should go forward with any investigations I felt appropriate and he would approve any actions I desired to take.

NOTE: In a later conversation with Bundy and Alexis Johnson, they explained that both of them, together with Spurgeon Keeny, had considered releasing the substance of the Finney article but after talking with Dr. Wheelon had decided against doing so. All three were very much surprised that the article appeared in the paper and disclaimed any responsibility.

ACTION: Depending upon USIB's decision, I should instigate a USIB investigation or an FBI investigation. In the event of the latter, the subject should be discussed with the President. Also I agreed informally to review the USIB decision with Mr. Bundy prior to proceeding.

APPROVED FOR RELEASE
SEP 1999 0624996

~~SECRET~~

4. Secretary Rusk stated that Amb. Bohlen was meeting with de Gaulle today to discuss South Vietnam.

ACTION: We should be on the alert for Bohlen's report.

5. Rusk stated that it was his and the Department's opinion that CIA was in no way overstating the depth of the Sino-Soviet split, indicating that the Department was studying carefully any evidence of actions by one party of the controversy against the other. He said no physical actions were discernible as yet but Rusk raised the question of the possibility of the abrogation of the Soviet-ChiCom Mutual Defense Treaty.

ACTION: We should continue to study this problem in depth and confer from time to time with State. I should be kept informed for personal discussions with Rusk.

6. Rusk then brought up the question of the UAR relationship. He said that the Department believed that no benefits had as yet been derived from our attempts to reach an understanding with Nasser. Nasser had failed in his commitments in the Yemen; there were now more troops in the Yemen than ever before and furthermore he had taken overt action against Aden. Furthermore Nasser had stimulated Libya's efforts against the U.S. and British bases and was continuing to agitate this issue. Additionally Nasser had been uncooperative in our numerous efforts to bring the Middle East arms race under control. Rusk said he raised this question with, and informed the Consul, that U.S. policies towards the UAR and Nasser were under penetrating study by the Department.

ACTION: DDI should give this matter continuing consideration and should discuss the subject with appropriate people in the Department and also with me.

7. Rusk then reported on Panama, stating that status quo remained, that there was a possibility that today or tomorrow there would be a break which would permit us to move to the conference table. There was no change in our position.

NOTE: In a previous conversation with the President and others, it appeared that the Panamanians were moving away from their intransigent position and they themselves were creating a more favorable climate. In this conversation, which took place on April 1st, the President asked me personally if I thought we were acting correctly on this Panama issue. I replied that I felt his position was defendable and would not recommend any changes.

MILITARY SERVICE. THE VUNG TAU CONFERENCE ALSO TALKED OF POLI-
TICAL MATTERS. THE GROUP ENVISAGED KHANH RETURNING TO STRICTLY MILITARY
DUTIES ON 27 OCTOBER.
AT THIS TIME DUONG VAN MINH WOULD INHERIT
BY DEFAULT THE POSITION OF PRIME MINISTER. EVENTUALLY
THE GROUP ENVISAGED A REFERENDUM FOR
THE PURPOSE OF SELECTING A PRIME MINISTER, IF IN THE INTERVAL
MINH HAPPENED TO PERFORM WELL HE MIGHT EVEN BE THE CHOICE.
[redacted] SPOKE OF THE NEED FOR THE US TO SUPPORT KHANH.

1.5(c)
3.4(b)(1)

2. NO TOP LEVEL LEADERSHIP EXISTS TODAY IN VIETNAM. POWER
IS SO DIFFUSED WITHIN THE RULING TRIMVIRATE AND THERE IS SUCH
PREOCCUPATION WITH PERSONAL VENDETTAS AND SLANDER CAMPAIGNS THAT
NEITHER SINGLY NOR COLLECTIVELY CAN THE TRIMVIRATE RENDER DECISIONS
ON IMPORTANT ISSUES. NGUYEN KHANH IS THE BEST OF THE THREE, EVEN
THOUGH HE IS WAVERING AND INDECISIVE. HE DESERVES MORE TIME IN
WHICH TO ESTABLISH AND DISPLAY HIS GOVERNING POWER IN A DYNAMIC,
CONSISTENT MANNER. SUCH A DISPLAY WOULD SATISFY THE "YOUNG TURK"
MILITARY COMMANDERS, WHO ARE MOST IMPATIENT. BEFORE A MEETING WITH
KHANH ON 30 SEPTEMBER, SOME OF THE YOUNG TURKS WERE CALLING FOR
REMOVAL BY FORCE OF KHANH AND THE TRIUMVIRATE; A DISPLAY OF POWER
ON KHANH'S PART WOULD ALSO DIMINISH AND HOPEFULLY
STOP THE SLIDE OF THE COUNTRY INTO CHAOS.

3. ON 30 SEPTEMBER NGUYEN KHANH INVITED THE "YOUNG TURK" GROUP

TO VUNG TAU FOR DINNER AND A TWO HOUR DISCUSSION OF POLITICAL PROBLEMS BESETTING THE GVN. THE INVITATION WAS KHANH'S RESPONSE TO A REQUEST FOR A MEETING WHICH THE "YOUNG TURKS" HAD SENT KHANH. THE FOLLOWING WERE PRESENT: KHANH, AIR FORCE COMMANDER NGUYEN CAO KY, NAVY COMMANDER CHUNG TAN CANG, MARINE COMMANDER LE NGUYEN KHANG AND AIRBORNE COMMANDER COLONEL DU QUOC DONG.

4. NO ULTIMATUMS, OR ANYTHING RESEMBLING AN ULTIMATUM, WERE GIVEN KHANH. INSTEAD, VARIOUS VIEWS WERE EXCHANGED IN A RELAXED AND OBJECTIVE ATMOSPHERE. AMID THIS ATMOSPHERE, KHANH MADE THE FOLLOWING PROMISES:

A. GENERAL TRAN THIEN KHIEM WOULD BE SENT ABROAD WITHIN 48 HOURS ON A TEMPORARY MISSION FOR SEVERAL MONTHS TO CONVEY OFFICIAL GOVERNMENT OF VIETNAM (GVN) THANKS TO COUNTRIES ACTIVELY SUPPORTING THE FIGHT AGAINST THE VIET CONG.

B. THE FIVE DALAT GENERALS (TRAN VAN DON, TON THAT DINH, LE VAN KIM, MAI HUU XUAN AND NGUYEN VAN VY) WERE TO BE REMOVED FROM ACTIVE MILITARY SERVICE AND BE ASSIGNED UNSPECIFIED OFFICIAL CIVILIAN POSITIONS. AT KHANH'S INSISTENCE, TO PRESERVE "FACE" FOR THE GENERALS AND CONSEQUENTLY FOR THE ARMED FORCES HIGH COMMAND, NO IMMEDIATE ACTION ON THIS ISSUE WAS TO BE TAKEN AND THE EFFORT WAS TO BE SPACED GRADUALLY OVER A PERIOD OF TIME.

C. A TRIAL OF THOSE MILITARY OFFICERS RESPONSIBLE FOR THE

ABORTIVE 13 SEPTEMBER COUP EFFORT MUST BE ARRANGED.

5. BY THE END OF THE MEETING, KHANH APPEARED TO BE MUCH MORE RELAXED AND CONFIDENT THAN HE HAS BEEN IN RECENT WEEKS.

6. ALSO DISCUSSED AT VUNG TAU WAS A PLAN TO RETURN KHANH TO THE STRICTLY MILITARY ARENA AS COMMANDER IN CHIEF OF THE ARMED FORCES ON 27 OCTOBER, THE END OF THE 60 DAY PERIOD SET FOR THE TRIUMVIRATE RULE. UNDER THIS PLAN GENERAL DUONG VAN MINH WOULD BY THAT TIME BE MANEUVERED INTO THE POSITION OF PRIME MINISTER. THIS WOULD FORCE MINH TO ACCEPT THE RESPONSIBILITY OF GOVERNING THE COUNTRY, A RESPONSIBILITY HE HAS SO SKILLFULLY AVOIDED AS A MEMBER OF THE TRIUMVIRATE. THUS MINH WOULD BE FORCED TO DO AN EFFECTIVE JOB, ONE WHICH WOULD PLEASE EVERYONE, INCLUDING THE MILITARY AND THE YOUNG TURKS, OR MINH WOULD BE PLACED CLEARLY IN THE PUBLIC SPOTLIGHT AS AN INCOMPETENT WHO NO LONGER DESERVED BEING THE PUBLIC IDOL. IF THE LATTER WERE TO EVENTUATE, IT WOULD ELIMINATE ONE MORE OF THE TRIUMVIRATE AND PERMIT A CONSOLIDATION OF POWER. ANOTHER ASPECT OF THIS OVERALL PLAN IS TO HAVE EVENTUALLY A PUBLIC REFERENDUM WHEREIN THE PEOPLE WOULD SELECT A CIVILIAN LEADER.

7. WITH KHANH RETURNED TO MILITARY DUTIES, THE ARMED FORCES WOULD AGAIN BE UNITED AND REMOVED FROM DIRECT INVOLVEMENT IN THE POLITICAL SCENE AS AT PRESENT. KHANH AND THE YOUNG TURK LEADERSHIP WOULD, HOWEVER, BE IN AN EXCELLENT POSITION, SINCE

1.5(c)
3.4(b)(1)

IT IS THEY WHO ARE DOING THE FIGHTING AND SHEDDING OF BLOOD FOR THEIR COUNTRY. THEY COULD EXERT INDIRECT PRESSURE ON A CIVILIAN PRIME MINISTER TO INSURE AN HONEST AND EFFECTIVE GOVERNMENT. IN THIS FASHION THE FULL POTENTIAL OF THE VIETNAMESE MILITARY FORCES CAN ONCE AGAIN BE BROUGHT TO BEAR AGAINST THE VC. THE POTENTIAL CAN, IN FACT, BE STRENGTHENED BY VIRTUE OF RENEWED MILITARY CONFIDENCE IN THE FUTURE OF THE GOVERNMENT AND THE SUPPORT OF A POPULATION WON OVER BY A POLITICAL LEADERSHIP WHOSE PRIMARY AIM IS TO IMPROVE THE LOT OF THE PEOPLE.

8. THE US VIEW OF KHANH SHOULD BE TO CONTINUE TO SUPPORT HIM WHILE ATTEMPTING TO PERSUADE HIM HE CANNOT BE ALL THINGS TO ALL MEN WHILE SOLVING DIFFICULT PROBLEMS WHICH ARISE. HE MUST MOVE MORE DECISIVELY NOT ONLY TO SOLVE THE PROBLEMS BUT ALSO TO CONSOLIDATE ACTUAL GOVERNING POWER IN HIS HANDS.

9. FIELD DISSEM . STATE (AMB TAYLOR AND DEPUTY AMB JOHNSON) USMACV (GEN WESTMORELAND) CINCPAC (ADM SHARP).

PROBABLE COMMUNIST REACTIONS TO US OPTION C OR C-PRIME MEASURES

A. To Initial US Moves (as described in the sequential graduated actions, Nos. 3-b-(1) to (6), p. 9, of JCSM 982-64, of 23 November 1964)

1. We consider it highly unlikely that these moves would cause Communist China to react in any extreme fashion at this juncture.

2. We consider it unlikely that the DRV would react in any extreme fashion at this juncture.

3. We also consider it unlikely that the DRV would yield or take any significant steps in that direction.

4. The most likely DRV course would be to hold firm.

a. The DRV would attempt to defend DRV territory. Defensive action by aircraft from Phue Yen airfield would be possible but we consider it unlikely because of the nature of the contemplated US actions and the distance of these actions from the Phue Yen airbase. In Laos, PL/VM forces would attempt to counter US/GVN air attacks and cross-border operations; the DRV would probably raise its level of assistance to these PL/VM forces, though would probably not introduce any significant numbers of PAVN units.

JFK LIBRARY
MANDATORY REVIEW
CASE # NLK-99-35
DOCUMENT # 1

b. Hanoi would probably direct the VC to continue its pressures in the South but might make some moves toward negotiation or ostensible compliance. We doubt that the VC would launch any large-scale frontal assaults, but they probably would undertake reprisals on US personnel and facilities identified with US/GVN activities, and on other targets in South Vietnam.

c. Hanoi and Peiping would meanwhile almost certainly do their utmost to stimulate condemnation of the US attacks in world opinion, and, if negotiations began, would take tough initial positions.

d. Hanoi and Peiping would increase their threats to counterattacks and both would probably undertake force deployments designed to add to the credibility of these threats. Hanoi would certainly appeal for additional Chinese Communist defensive assistance -- radar, anti-aircraft, artillery, combat aircraft, patrol craft, and technical personnel -- which Peiping would probably supply. We doubt that Hanoi would request Chinese Communist ground troops at this juncture.

5. The USSR would make propaganda and political efforts on behalf of the DRV, and perhaps consent to furnish some military equipment, but would almost certainly take steps to insure that Hanoi and Peiping were kept aware of the limits of Soviet support.

B. To Higher-Scale US Option C or C-Prime Moves (as described in items (7) to (11), p. 9, of JCSM 982-64, of 23 November 1964)

We cannot make a confident judgment of enemy reactions in these situations, although we incline to these views:

6. To the first categories of such US moves (i.e., items (7) to (9): air strikes against selected targets in the DRV, aerial mining of certain DRV ports, and imposition of a naval quarantine blockade):

a. DRV reactions would probably be essentially defensive in character: that is, employing all available air defense, including aircraft, in defense of DRV territory. DRV forces would probably also attempt to harass naval blockade vessels. The DRV would probably not attempt any overt invasion of Laos or South Vietnam, although they might re-deploy some units to southern North Vietnam.

b. The DRV would probably make some moves toward apparent compliance, but would probably not be prepared to make any early significant concessions.

c. The DRV would nevertheless probably modulate VC pressures, feigning innocence, by turning VC pressures up or down,

depending on the prospects for negotiations, US punishment, and the course of the war in the South. Unless the collapse of GVN authority seemed imminent, we doubt that the DRV would direct the VC to attempt to administer a military coup de grâce.

d. The DRV, with Communist bloc support, would attempt to raise a hue and cry in the world against the US, including propaganda, diplomatic actions, and incitement of mob demonstrations. Hanoi and Peiping would probably consider that US mining and/or blockading of DRV ports would be especially susceptible to propaganda exploitation.

e. Extreme Chinese Communist reaction -- such as introduction of large-scale ground force combat units into North Vietnam -- would be possible at this juncture, though unlikely. Peiping would probably make its threats of intervention stronger and more specific. If it had not already done so, it would almost certainly deploy large forces to areas near Vietnam and Laos. It is possible that Chinese Communist air units, under the guise of "volunteers," would at this point be introduced into North Vietnam, for use from North Vietnamese airfields. It is also possible that Peiping would commit units of its air force based in China to defensive action over NorthhVietnam at this point, but

in view of the magnitude of US air and naval superiority we doubt that Peiping would do so.* There is a fair chance, however, that Peiping would introduce limited numbers of Chinese Communist ground forces as "volunteers," both to prepare for further escalation and to make clear Peiping's commitment to assist the North Vietnamese.

f. As the scale of operations increased, the USSR also would be strongly and publicly on the side of the DRV, would probably give it additional military and economic assistance, and might issue dire threats against the US. We believe nevertheless that the USSR would be careful to avoid an appreciable risk of becoming directly involved in military conflict, and would greatly prefer that the Indochina problem be settled by compromise. To this end the Soviets would seek to augment international pressures on the US to bring it to the conference table.

g. We do not believe that either Communist China or the USSR would stir up another major crisis threatening military confrontation elsewhere in the world while the proposed US actions in North Vietnam were underway.

* The Director of Intelligence and Research, Department of State, believes that the increasingly severe US air strikes contemplated against DRV targets north of the 19th parallel would probably evoke the employment over North Vietnam of Chinese air from Chinese bases. The Chinese decision to construct the new Ming Ming airstrip, carefully located just over the DRV border and operationally ready in early 1965, already strongly suggests Chinese preparation to test US adherence to the privileged sanctuary concept.

7. To the Upper Categories of Option C or C-Prime Moves (i.e., items (1) and (12), p. 10, of JCSM 932-64, of 23 November 1964: attacks on the balance of the 94-List Targets, and amphibious or airborne operations to seize coastal lodgments in the DRV):

a. In response to the moves in Item 10 Communist reactions would probably hinge in important measure on Peiping's decisions. We believe that Communist China would be very reluctant to become directly involved in the fighting in Indochina lest this be taken by the US as a cause for major retaliation against the Chinese mainland. Nevertheless, at this point Chinese Communist aircraft operating from Chinese bases would probably assist in defending North Vietnam against the US attacks. We still believe that there would not be high risk of the introduction of large-scale Chinese ground combat units into Vietnam. Nevertheless, there is always a chance that Peiping might so intervene either for reasons that seem irrational to us or because it miscalculated the objectives of US moves in the area. Communist China's capability for conducting a ground war in adjacent areas of Southeast Asia is formidable.

b. If the US actions proceeded to the moves in Item 11 and involved major US/GVN ground units occupying territory in northern Laos, the risk of introduction of large-scale Chinese Communist ground combat units into Vietnam would materially increase.

These risks would be similarly increased if the Chinese had committed their air forces from Chinese bases, and had subsequently suffered US attacks on these bases.

c. In the circumstances of Items 10 and 11, and if Peiping had refrained from extreme rescue measures, the DRV's leaders would probably intensify their efforts to negotiate. Here again their particular negotiating game would depend heavily on how the course of events had gone meanwhile in the South; if the GVN were getting along fairly successfully, Hanoi would probably seek to negotiate as good a settlement as it could, hoping to subvert it at a later date; if, however, non-Communist authority had about been caved in, Hanoi would probably stall, seeking to salvage a position of strength in the anomolous situation of US success in the North, DRV in the South.

d. In the event Hanoi felt assured of Chinese Communist rescue, it would probably fight on. In such a situation, there would be considerable risk of DRV invasion of South Vietnam or Laos, of Chinese Communist extreme action at various places in Southeast Asia, and of an entirely new war situation developing.*

* INR believes that the Chinese Communists, despite their reluctance to become involved in fighting the US, would feel it necessary to assure Hanoi of its support and to come to Hanoi's assistance as the situation required. INR believes, therefore, that there is a greater chance that the DRV would at this point respond as described in paragraph (d) than as described in paragraph (c).

PROBABLE COMMUNIST REACTIONS TO US OPTION B MEASURES

8. We are similarly unable to estimate confidently what Communist reactions would be to Option B measures. The quickness and severity of the US actions would doubtless shock the DRV and sharply lessen its capability to react in sudden extreme form. The risks of further escalation in Southeast Asia would be considerable. We are unable to make a confident estimate as to whether the risks of such escalation would be greater in the case of Option B, C, or C-Prime. All things considered, we incline to the view that although the DRV and Communist Chinese leaders might have attempted to increase the Communist military commitment substantially in the Vietnam area, in response to US Option B measures, they would in the end result react substantially as described in paragraph 7 above (reactions to C or C-Prime upper-level measures).*

* INR reserves its position on this paragraph.

NON-COMMUNIST REACTIONS

A. Reactions in South Vietnam

1. The initial reaction would probably be one of elation, in the belief that the US was at last bringing its great power to bear against the enemy. Such attitudes would persist in the event that VC activity noticeably diminished or if the DRV soon indicated a serious interest in a cease-fire and negotiations. The South Vietnamese would be given a great psychological boost, and we would probably see at least a spurt of much more effective GVN military and administrative performance.

2. Initial South Vietnamese elation and support would almost certainly quickly wane, however, if the war seemed to drag on despite the new US moves, and especially if the VC were able to increase their military and terrorist pressures. In such event, the belief would almost certainly rapidly spread that eventual DRV/VC victory was inevitable, that the US was unable or unwilling to save the situation, and that prudence dictated early accommodation. In such an atmosphere, VC exploitive efforts would bear considerable fruit.

3. VC Tactics and Capabilities. The general level of VC activity -- whether more, less, or about as at present -- would of course be the result of Hanoi's basic decision of the moment as to

how to respond to the US attacks. Involved in such decision would be Hanoi's estimate of the fragility of the political situation in the South and whether "victory" might be quickly attained by a short, sudden burst. Available intelligence data do not warrant a confident estimate of VC "burst" capabilities, but we incline to the view that the VC does have military capabilities it has not yet committed. This may also be the case with VC terrorism, subversion, and political action, though we feel that any "unused" capabilities in these fields are less than in the case of the military. In any event, the VC would be hesitant to commit large-scale VC forces for fear that the GVN, with US assistance, could chew up such military units much more effectively than it has small VC groups. The VC, accordingly, would probably not attempt to administer such a coup de grâce unless the demise of Saigon's authority appeared to be imminent.

B. Reactions Elsewhere in the World

4. The reactions of the non-aligned states, and even of some US Allies, to increased US military initiatives would tend to be adverse. The more severe the attacks were, and the longer they lasted, the greater and more articulate the adverse reaction would be. Such reactions would be mitigated considerably if the moves appeared to achieve US objectives, and in any case some governments would be privately more sympathetic to the US than would appear in their public stance or in public opinion media.

5. The most important non-Communist reactions would be those of the Asian states and of France and the UK.

a. In the Republic of Korea, the Republic of China, the Philippines, and Thailand there would be considerable elation that the US had adopted a tough new line which might check or cut back Communist expansion. These Allies could probably be counted upon to lend some active support, use of bases, etc., to the US effort, but to balk at any US efforts to enlist their support for a negotiated settlement. The Japanese Government, and conservative opinion in Japan, would be pleased by US action against the DRV that was both successful and limited. The Japanese Government would probably attempt to avoid any direct involvement which would be likely to provoke strong adverse domestic pressures and complicate relations with Communist China. To this end, it would probably seek to minimize the direct use of US bases in Japan in support of such an operation.

b. The Indian Government, and considereble informed opinion in India, would probably be quietly pleased by the US toughness, but the official Indian line would doubtless be one pressing for a quick end to hostilities and for US entry into negotiations. Prince Sihanouk would probably be the most troublesome neutralist, but his position would largely depend on his estimate of

which was the stronger side. Sukarno can be confidently expected to lend at least verbal support to the Communist cause.

c. In the event US actions against the DRV were accompanied by an apparent US willingness to negotiate, the UK would probably give us strong private support and would probably avoid taking any public stance which would tend to undermine the US position. The French would be likely to criticize US military action and would reassert their long-standing proposal for reconvening the Geneva conference.

6. Longer-term world reactions would be influenced by the success of the US sanctions: if they halted Communist expansion in Indochina and led to an easing of tensions, US firmness would be retrospectively admired, as in the Chinese offshore islands and Cuba missile showdowns.

7. The US would probably find itself progressively isolated in the event the US sanctions did not soon achieve either a Communist reduction of pressures in South Vietnam or some progress toward meaningful negotiations, and would almost certainly find itself substantially alone in the event that the crisis developed to the point where a US-Communist Chinese war seemed imminent. The GRC would probably back the US wholeheartedly and wish to participate.

Such Allies as the Philippines and Thailand would probably go along with the US, seeing no acceptable alternative open to them. Reactions of other US Allies would depend in part upon the manner in which the situation had developed.

APPROVED FOR RELEASE
DATE: OCT 2008

Dear Bus:

I want to let you know of my concern over indications we have been seeing of a considerable and probably increasing Chinese Communist military presence in North Vietnam. We are, of course, watching all these signs closely and will keep you informed.

I am enclosing here a recent intelligence memorandum on the question of the Chinese presence in North Vietnam. I am also enclosing a copy of this week's Watch Report of the United States Intelligence Board.

Sincerely,

W. F. Raborn
Director

INTELLIGENCE MEMORANDUM

The Situation in Northeast Thailand

1. The nine provinces of northeast Thailand have long been a problem to the Bangkok government. Economic backwardness, geographic isolation, cultural and ethnic ties to Laos, and Bangkok's historically weak authority in the region, have provided fertile ground for Communist subversion.

2. Communist activity in the northeast has been noted since the end of World War II. It has been confined largely to recruitment, training and propaganda, and conducted on a relatively modest scale. An increase in the tempo of activity coincident with Communist gains in Laos, was noted in 1961, but stepped up government countermeasures, including widespread arrests, helped to keep it in check.

3. In the past few months, however, there have been indications pointing to the possibility of an increase in Communist subversion. These include the appearance of relatively sophisticated propaganda material, the surfacing of a new Communist front organization called the Thai Independence Movement, and an apparent increase in terrorism.

4. Communist propaganda and recruitment in the northeast is targeted at ethnic minorities including the Vietnamese community of some 40,000 and various tribal groups with close ties to Laos. Propaganda has sought to exploit the population's traditional animosity toward the central government and local functionaries, particularly the police. It has played upon latent separatist sentiment, holding out the prospect of reunification with Laos.

NND 941536 --- 406

5. The principal Communist propaganda effort has been through the clandestine radio Voice of the Thai People. Since early 1962 the Voice has been broadcasting five daily programs from transmitters located along the Laos-North Vietnam border. The basic theme is anti-American. The "US-Thanom" clique is blamed for the northeast's poverty and for the corruption of local officials.

6. On 8 December 1964 the Voice announced the formation of the Thai Independence Movement. A manifesto of the new movement, calling for the withdrawal of US forces in Thailand, the overthrow of the Thanom government and the establishment of a neutralist regime, was carried by Communist China's New China News Agency (NCNA) five days later. Hanoi radio also took note of the new front.

7. The formation of a Communist front is not in itself unusual. There have been at least 15 front organizations reported operating in the country since 1960. Some of these have had apparently little more than paper substance. Some, such as the short-lived Thai Neutralist Movement, have put out propaganda remarkably similar to the "manifesto" of the new Thai Independence Movement. There is no evidence that the new movement has any organization in place in Thailand.

8. The attention Peiping and Hanoi have given to the latest front is unusual, however. The reason for this is not known. It may be part of an effort to unite the various fronts under one banner in anticipation of the promulgation of a new Thai constitution scheduled for later this year, which might provide for early elections. It may signal, however, a new Communist subversion effort.

9. The formation of the Thai Independence Movement coincides with a reported step-up in Communist activity in the Northeast. Three apparently politically inspired assassinations in late 1964 punctuated a Communist campaign against government civic action programs.

10. The recrudescence of Communist activity appears to be largely limited to Nakhon Phanom Province, across from Thakhek in Laos. This province has lo

NND 941536 --- 406

been a center of antigovernment sentiment and activity. Unconfirmed reports indicate that there are as many as 200 guerrillas located in the hills of the province. Most of the guerrillas are reported to be members of the Soh tribe, a Lao ethnic group with a long history of disaffection. Government sweeps have failed to flush out any of the guerrillas and so far the dissidents have refrained from overt insurgent activity. A Mobile Development Unit has made scant progress in winning the loyalty of the disaffected population.

12. In the final analysis, the tempo and direction of subversion depends on Communist intentions. So far, the Communists have kept the northeast on the back burner, while husbanding their resources and building for the future. Any change in Communist strategy will almost certainly be related to the developing situation in the primary target areas of today, South Vietnam and Laos.

ANNEX IX

THE COMMUNIST VIEW AND APPLICATION OF LESSONS LEARNED IN FIGHTING THE FRENCH

The attitude of the North Vietnamese leadership toward the current military situation in South Vietnam is shaped to a considerable extent both strategically and tactically by their experience in fighting the French. Drawing heavily upon this experience, they have carefully plotted their actions in the current war to duplicate as far as possible their successes against the French and to avoid mistakes committed in the earlier war.

I. The Three Phased War

Their experiences in the Franco-Viet Minh war doubtless convinced the Communists that the predictions on the course of this conflict made in 1947 by the then Party Secretary General Truong Chinh had proved valid, and could probably be applied in the planned takeover of South Vietnam. In essence, Truong Chinh's blueprint for victory called for a protracted struggle through three stages which would enable the small and weak forces of the Viet Minh to defeat the more numerous and better-equipped French forces.

According to Truong Chinh, the first phase of the war would see the French in control of the cities using primarily "conventional" tactics. In this period the French would be on the "offensive." The Viet Minh, on the other hand, were small, poorly armed forces and therefore had to fight a "defensive" type of war. The chief strategy for the Viet Minh during this period, argued Truong Chinh, should be to attack the enemy using guerrilla tactics, i.e., ambushes, sabotage, and small-scale attacks on French units of smaller size than the local Viet Minh unit. The Viet Minh during this period, he said must avoid pitched battles with the enemy and must build its strength.

Truong Chinh took the position that, although the Viet Minh would be strategically on the defensive, tactically they should always be on the offensive. Since the French would be strategically on the offensive, they would overextend themselves, thus giving the Viet Minh opportunities

for attacking isolated and small units. During this first stage of the "people's war," he said, the Viet Minh must also concentrate on gaining the support of the peasants. Political efforts, Chinh held, were in some respects even more important than military efforts, because without the support of the people there could be no military effort.

At some point, Truong Chinh asserted, the enemy would extend his position as far as he could. At that time, the harassing action of the guerrillas would combine with the enemy's inherent weaknesses to create an equilibrium. During this stage of the war, the enemy would concentrate on consolidating his overextended positions with particular emphasis on his lines of communications and supply. He would continue to launch attacks on the Viet Minh strongholds. In the political sphere, the enemy would concentrate on setting up "puppet" local adminstrations, infiltrating the Communist zones with spies, and repressing the Viet Minh political movement.

The Viet Minh, during this period, should employ to the maximum the tactic of guerrilla warfare to harass the enemy day and night. This would be designed to force the enemy to disperse his forces, to overextend his area of operations further, and to use up his manpower and resources. The key tactic during this period would be a combination of guerrilla and mobile warfare, with the guerrilla taking the lead at first, followed by later and stronger efforts at mobile warfare. The tactic of positional war was given only a limited role at this stage, since the enemy would still be able to bring superior force to bear on static defensive positions.

During the second phase of the struggle, the Viet Minh forces would swing from a defensive strategy to an offensive one. This stage should see not only military defeat of the enemy but also a collapse of morale on his home front, i.e., in metropolitan France. Economic and morale problems at home would have a decisive effect on France's will to fight. On the battle front, the French would be forced to withdraw from their advanced positions in order to defend their major bases. The Viet Minh would depend primarily on mobile warfare tactics supported by guerrilla activities. Finally, in the third phase near the end, mobile warfare would often be transformed into positional warfare for the decisive battles.

Truong Chinh's analysis proved an amazingly accurate prediction of the actual course of the war with the French. Chinh's assessment of the weaknesses of the French was unerring and his program for the development of both tactics and strategy for the Viet Minh proved effective. His views permeated the outlook of the Viet Minh leadership and particularly that of General Vo Nguyen Giap. It was largely Giap's responsibility as commander of the Viet Minh army to put into practice Truong Chinh's military concepts. He did just that and led the Viet Minh to final victory at the famous battle of Dien Bien Phu.

The extent to which the Vietnamese Communists still rely on this basic design for victory is evidenced in the writings of their leaders. On several occasions in the last two years Giap, in his articles, has applied Truong Chinh's concepts of military analysis to the situation in the South. In remarkably similar terms, Giap has stressed the need for a prolonged war, emphasized that the US would become overextended in its ability to supply its troops in the field, and predicted that popular dissatisfaction with the war in the United States would undermine the determination of the administration to continue the war. Giap has claimed that the tendency of both French and US strategists to fix short deadlines for accomplishing major goals is proof of their inability to outlast the Communists.

According to Truong Chinh's criteria, the Viet Cong presumably would have reached the point of equilibrium with the ARVN in 1964 or early 1965 and would have gone over to the offensive relying more and more on mobile rather than guerrilla tactics. However, the use of US forces in a combat role has since then probably removed any notion from the Communists' minds that they have managed to move into an advanced part of Truong Chinh's second phase, one in which the opponent is forced to withdraw from his advanced positions to defend his bases. This is evidenced in their discussions of the large and successful US/ARVN offensive raids into Viet Cong base areas this year.

Apparently the Hanoi high command believes that its forces in the South, at least in the northern half of South Vietnam, are in the first part of Truong Chinh's phase two, that is to say, that the US and ARVN are now overextended and are concentrating on keeping open lines of communication to their exposed outer posts. To some

extent, of course, this is true. What is new in the situation, however, is the fact that with its improved intelligence, extreme mobility, heavy firepower, and tremendous air-support capability, the US can also attack Viet Cong strongholds and thus by spoiling actions throw Communist tactical planning and movements off balance.

Moreover, there has now developed a serious challenge to what the Communists regard as one of the keys to their ultimate victory, their own rear base. In the war with France, this safe rear was first in China, then in the highlands of North Vietnam. In the current war, the Communists have made it clear that they regard North Vietnam as the rear area for the war. Since February 1965, however, this base for the movement of men and supplies to the Viet Cong has come under heavy aerial attack by the US. While these air strikes have as yet not prevented North Vietnam from continuing to send men and material to the South, they have made the process much more costly and time consuming.

II. Tactical Military Lessons

The lessons learned in fighting the French are being applied in a myriad of practical steps by the Vietnamese Communists in the current war. The reliance on the tactic of ambush, for example, results in large measure from the successful development of this technique against the French. The Viet Cong have frequently set up ambushes against the South Vietnamese and US forces on almost exactly the same spots where French elements were ambushed nearly twenty years ago.

Another lesson, learned the hard way against the French, is the need to avoid precipitous military action against superior forces. In 1951 and 1952, Vo Nguyen Giap launched several major attacks on French forces only to have his units shattered by superior French firepower. Giap drew back, reformed, re-equipped, and retrained his units, and from then on faithfully followed the advice of Truong Chinh who urged that such actions be undertaken only when the Communists positively enjoyed the superior position. Giap's dedication to this formula led ultimately to Dien Bien Phu, where his forces had the superior position. That the Vietnamese Communist High Command learned its lesson is evident in Communist tactics in the present war. The Viet Cong/PAVN forces rarely venture out on an attack now unless they

are virtually certain that they will have the advantage. The Communists instead, attempt to draw friendly forces into remote areas where terrain, transportation, and weather tend to neutralize the superior firepower and mobility of the allied side.

The success of the North Vietnamese in keeping their transportation routes open is also due in some measure to their experience in the Franco - Viet Minh war. In addition, they appear to have drawn heavily upon Chinese and North Korean experiences in the Korean War. The extensive use of coolie labor for bomb-damage repair is not something uniquely Vietnamese, but the Hanoi leadership has had great experience, due to the war with France, in forming and operating coolie labor units. The mobilization of rudimentary forms of transportation is also a technique learned well in the war against France.

III. Political Lessons

Experiences gained in the political sphere in the war against the French are also being used by the Communists in the present conflict. They continue to put heavy emphasis on the "political struggle" and to express confidence that enemy military superiority cannot in the long run prevail in a "people's war." To the extent that it is more than propaganda, this line partly reflects adherence to Marxist dialectic principles that "contradictions" in the opposing forces (referring here to "contradictions" between the Americans and their "puppets" as well as to conflicts among the South Vietnamese themselves as evidenced by the recent succession of internal coups) will inevitably work in the Communists' favor. The Communists are mindful of the fact that in the earlier war the lack of positive support by the majority of non-Communist Vietnamese for the French was a major factor contributing to the ultimate defeat of France.

On the practical level, the Communists have in their current "struggle" sought to apply their political view of the war through methods which parallel those used earlier by the Viet Minh. In addition to propaganda which seeks to foster South Vietnamese hatred for the Americans as the true "aggressors," the Communists set out to repeat the combined tactics of terror and benevolence used successfully by the Viet Minh. Thus they have revived the terrorist bombings in Saigon and conducted terrorist reprisals

against supporters of the Saigon government at all levels throughout the countryside, while at the same time they have tried to ingratiate themselves with the general populace by various good works--helping with the harvest, improving sanitation, conducting educational programs, etc. Land reform, a technique used with some success by the Viet Minh through simply granting ownership outside the colonial administration, became a platform of Viet Cong's Liberation Front.

The Hanoi leadership also learned in part from the Franco-Viet Minh war to proceed cautiously on the matter of negotiations, even while not rejecting the idea of talks at an appropriate point. Premier Pham Van Dong was the primary agent for the Vietnamese Communists in the series of negotiations with the French between 1945 and 1954. He stated in 1965 that the Vietnamese Communists had learned from their negotiations with the French that the "imperialists" merely use discussions as a technique to gain a pause in the shooting so that they can prepare for further fighting. Dong went on to state that they do not intend to make the same mistake with the Americans. Instead, they intend to wear the US down to the point of accepting the bulk of their terms for a settlement through the tactic of protracted war.

The Vietnamese Communists do have some reason to feel that the various negotiated agreements reached with the French were used to the disadvantage of the Viet Minh. The French moved against Ho's self-proclaimed Democratic Republic of Vietnam in 1946 despite an agreement signed with representatives of his government recognizing its autonomy. The aftermath of the Fountainbleau conference in 1946 at which a cease-fire agreement was reached, showed the French moving to escalate the war. The final proof of Western perfidy, in the eyes of the Vietnamese Communists, was the failure of the Western powers to implement the 1954 Geneva Agreements on Indochina, agreements which the Hanoi leaders felt would assure their peaceful takeover of all Vietnam.

Although chary of actually entering into negotiations with the US from a position of relative weakness, the Vietnamese Communists also realize that the tactic of "talk, fight, talk," was in some respects used effectively by both sides in the Franco - Viet Minh war. Thus they have been

reluctant to close the door completely to possible negotiations with the US; a talk stage in the "struggle" could prove attractive to Hanoi itself at some point to gain a respite from allied military pressure.

This is probably in part why the North Vietnamese have continued to receive a fairly steady flow of visitors from Western and nonaligned countries with various ideas for getting talks started between Hanoi and Washington. North Vietnam probably has at least two aims in accepting these visitors. One aim is to encourage the notion that the Communists are reasonable, although firm, in their attitude toward what it would take to reach a settlement of the war. The second, and probably more important purpose, has been to put increased pressure on the US to cease its bombings of the North. A number of foreign visitors have come away from Hanoi believing that they had received intimations that if the bombings ceased, talks could begin.

ANNEX III

THE EFFECTS OF SOVIET AND CHINESE INVOLVEMENT IN THE WAR ON THE VIETNAMESE COMMUNISTS

[redacted]

ANNEX II

THE EFFECTS OF SOVIET AND CHINESE INVOLVEMENT IN THE WAR ON THE VIETNAMESE COMMUNISTS

I. Introduction

There is substantial evidence that the political positions of the Soviet Union and Communist China on the war, and the amount of their material assistance to the war effort, are highly significant influences on Vietnamese Communist policy. The importance of Soviet and Chinese support and assistance has been readily admitted by the Vietnamese. In his April 1965 speech setting forth the situation and tasks facing the Vietnamese after the US began bombing the North, Premier Pham Van Dong said simply that the "more" the Vietnamese are "supported and assisted in all fields by the socialist camp, the more they will be able to struggle vigorously and resolutely" against the enemy in Vietnam. In April of 1966, Dong re-emphasized the significance of bloc backing in a declaration that the "victories" of the Vietnamese people are not only the results of their own efforts, but are also the "result of the infinitely valuable sympathy, support and assistance by the fraternal socialist countries."

The Vietnamese view bloc support as valuable in sustaining and, in some ways, increasing the military pressure the Communists can bring to bear in South Vietnam. They also see it as a protective umbrella which partially inhibits direct allied military pressure on the DRV and helps to negate the effects of the bombing of the North. Firm Soviet and Chinese backing also helps complete the ideological equation in the conflict so important to the Communists, i. e., this is a "war of liberation" and it is the duty of all Communists to support and encourage such wars.

II. The Significance of Economic and Military Aid

A. General Level of Aid

In an apparent response to the allied air offensive, military and economic assistance provided by the

USSR and Communist China increased sharply in 1965. Although the total amounts of aid extended during 1965 are not known, reasonably firm evidence enables us to estimate that military aid amounting to about $250 million and economic aid of about $100 million was probably delivered in 1965. The Communist allies have undoubtedly undertaken commitments to provide additional assistance but we are unable to make any meaningful estimates of the total value of these commitments. There is reliable evidence that the USSR in 1965 did commit itself to extend additional assistance of at least $160 million. We do not know if this extension is for military or economic programs. The weight of available evidence suggests that it is not for weapons but is probably intended as assistance in the rebuilding of bomb damaged facilities or for defense related activities.

The immediate significance of the military and economic aid provided by other Communist countries is that it provides North Vietnam the material means to carry out its aggressive programs. North Vietnam is significant militarily as a logistic base for the transmission of military supplies to South Vietnam, as a source of manpower, and as the center for control of the insurgency. As a primitive economy it has a capability to produce only minor items of military equipment and relies on other Communist countries for all of its heavy military equipment and most of its small arms and ammunition. Material assistance to North Vietnam is also significant as an apparent commitment of other Communist countries to underwrite the material costs of the war and to assist in the reconstruction of North Vietnam's economy. These assurances undoubtedly underlie North Vietnam's apparent willingness to lose its economic facilities to air attack and to persist in its pursuit of the war in South Vietnam. This attitude is undoubtedly strengthened by the knowledge that even more assistance will be forthcoming in 1966. Preliminary data on shipping to North Vietnam show that imports continue to rise above 1965 levels. At the same time exports are continuing to decline so that the growing import surplus can only be financed by additional assistance from Communist countries.

B. Economic Aid

Known economic credits and grants extended by Communist countries through 1962 amounted to more than $956

million. (See Table II-1). About 40 percent of the total was in the form of grants. By the end of 1964 from $550-800 million or 60-80 percent of the extension had been drawn. The USSR accounted for $370 million (40 percent) of total extensions and Communist China provided $457 million (48 percent). The remaining $130 million was supplied by the European Communist countries and token amounts were provided by Albania, North Korea, and Mongolia.

After an apparent hiatus of two years the Soviet program for economic assistance to North Vietnam was revived in February 1965 when Premier Kosygin visited Hanoi. As the war expanded substantial new extensions of economic aid were made in mid-1965. The only public statements about the value and composition of the aid has come from Hungary which is reported to have granted a modest $5.5 million for trucks, telecommunications equipment, medical supplies, and machine tools. Rumania is also reported [redacted] to have extended a credit of $4.4 million.

In December 1965 and January 1966 new aid agreements were signed with all Communist countries, suggesting that the mid-1965 agreements were small. Since then other Communist countries have promised increased assistance for North Vietnam. In May 1966, Moscow reported an agreement to provide technical assistance; additional Chinese aid for agriculture was announced in July. All the Warsaw Pact members also pledged increased economic aid to North Vietnam in July 1966.

We estimate that deliveries of economic aid in 1965 were in the order of $100 million or from 20-40 percent above the average annual level in 1955-1964. In the last nine months, however, an unusually large number of new Soviet industrial aid contracts with North Vietnam were noticed [redacted] In June 1966 Soviet specialists were reported in North Vietnam to determine equipment needs for constructing new enterprises and rebuilding those destroyed by US air attacks.

All of these developments foreshadow a substantially increased aid in 1966 and 1967, a trend already confirmed by our intelligence on the volume and composition of North Vietnamese imports.

Table II - 1

Communist Economic Aid Extended to North Vietnam a/
1955-64

Million US $

	1955	1956	1957	1958	1959	1960	1961	1962	1963-64	1955-64
Communist China	200	b/	b/	b/	100	b/	157	b/	b/	457

Total	350	16	19	21	128	200	223	N.A.	b/	956

a. This is the minimum of economic aid extended by the Soviet Bloc and Communist China. In addition, insignificant amounts of aid have been extended by Albania, Mongolia, and North Korea. Because of rounding, components may not add to the totals shown.
b. No extensions are known to exist, although some may have taken place.

TOP SECRET [redacted]
TOP SECRET [redacted]

C. Military Aid

Military aid to North Vietnam which had previously been on a relatively small scale reached [redacted] in 1965.* About three-fourths of this aid, by value, was provided by the USSR as the supplier of North Vietnam's modern air defenses, particularly its SAM system and jet interceptors. The approximately [redacted] provided by Communist China was limited principally to conventional arms.

1. Soviet Military Aid

By the end of 1965 Soviet military aid to North Vietnam approached $450 million. The sequence and value of Soviet arms aid to North Vietnam was as follows (in million US $):**

1953-63	222
1964	[redacted]
1965	
Total	

Military aid extended after August 1964 and in early 1965 probably was completely delivered by the end of 1965. Major deliveries included equipment for [redacted] surface-to-air missile firing battalions, [redacted] IL-28 light jet bombers, [redacted] MIG-21 jet fighters, [redacted] MIG-15/16 jet fighters, [redacted] AA guns ranging from 37-100 mm., and hundreds of vehicles. (See Table II-2).

The USSR has also provided military technicians to instruct the North Vietnamese in the operation of the SAM system. In addition the North Vietnamese have received pilot training in Soviet jet fighters both in North Vietnam and the USSR. We estimate that the number of military technicians may have been as high as 1,500 in mid-1965, but diminished when the North Vietnamese began to

*The value of military aid is expressed in Soviet foreign trade prices.

**Values, reported in rubles, have been converted to dollars at the official exchange rate: 1 ruble = US $1.11.

TOP SECRET

TOP SECRET

assume operational control of the SAM system. The cost of this technical assistance was probably less than $10 million.

Following North Vietnam's active confrontation with the US in the Tonkin Gulf incidents of August 1964, the Soviets extended Hanoi the reported [redacted] grant listed above for antiaircraft and including [redacted] for surface-to-air missile systems and missile and flight training for North Vietnamese crews. Shortly after Kosygin's visit to Hanoi in February 1965, another [redacted] was reportedly granted for aircraft and additional antiaircraft and SAM equipment.

An indication of continued military aid in 1966 is contained in reports on the "Gratuitous Aid and Technical Assistance Agreement" signed in Moscow in December 1965. Reportedly, the USSR agreed to provide large quantities of 130-mm antiaircraft guns, other ground equipment, and possibly [redacted] additional MIG-21 jet fighters. Although not enough is known on types and quantities of equipment to permit an estimate of the value of the arms portion of the agreement, the cost of the antiaircraft guns and jet fighters alone will exceed $80 million.

2. Chinese Military Aid

There is little information on Chinese military aid to North Vietnam, but we estimate that total aid by the end of 1965 was on the order of $125 million of which [redacted] was delivered in 1965. Although the North Vietnamese armed forces are structured basically on Chinese rather than Soviet lines, until 1960-61 they were equipped largely with weapons from the USSR. From 1960 to the Gulf of Tonkin incidents in August 1964 Chinese arms aid to Hanoi probably increased to a point where it equalled--if it did not exceed--Soviet arms aid. Following the Gulf of Tonkin incidents, the Chinese continued to provide some weapons, including [redacted] MIG-15/17 jet fighters and [redacted] Shanghai-class fast patrol boats, but fell far behind the USSR as the major arms supplier. The major Chinese contribution to Hanoi's war effort has been as a provider of military construction units and materials and, possibly, operational antiaircraft elements.

Some elements of Chinese military units are positioned in Northeast and Northwest near the main railroad

lines leading to Yunnan and Kwangsi. Elements of two railway engineer divisions of the Peoples Liberation Army (PLA) and an antiaircraft division are known to be in these areas. Although little is known regarding the size of this force, it is estimated that from 25,000 to 45,000 Chinese may be involved.

Aside from these operational units, Chinese military technicians in North Vietnam may exceed 1,000. Unconfirmed reports state that 200 North Vietnamese pilots and ground crews trained in China in 1961-64. Although little is known on the numbers of Chinese technicians advising North Vietnam in the period 1961-64, they are believed not to have been so large as to move the cost of this military technical assistance above the $10 million spent by the USSR.

3. Other Communist Military Aid

Military aid supplied to North Vietnam by the Communist countries of Eastern Europe before 1965 was negligible. The major items of military and emergency reconstruction aid extended or delivered by these countries since then may be summarized as follows:

Donor Country	Nature of Aid
Czechoslovakia	Small Arms, Ammunition
East Germany	10 Field Hospitals
Hungary	Medicines, Hospital
Poland	Barges, Trucks, Hsopital
Rumania	Vehicles, Trucks

East European aid primarily is of a quasimilitary, defense support nature (even the Czechoslovakian small arms were mainly sporting rifles for training purposes). This aid has gained impetus in 1966 and may be expected to increase substantially in the future.

D. Bloc Aid as a Critical Factor in Continuing the War

Although Soviet and Chinese military and economic aid has been small in terms of their capabilities, it is absolutely vital to North Vietnam's ability to adequately

defend its territory and to support the insurgency in South Vietnam. A cessation of bloc military aid would, in fact, almost certainly make it impossible for the Vietnamese to sustain the war in South Vietnam at its present level of intensity.

North Vietnam has no productive capability to produce heavy military equipment or the new family of weapons with which the VC Main Forces are being equipped. The NVA and VC Main Forces are totally dependent on outside sources for the 7.62 family of weapons and the heavier weapons being introduced into South Vietnam. If these sources were denied, the VC/NVA forces would be deprived of their major offensive capabilities, and once stockpiles were exhausted these forces would be compelled to revert to a much lower level of military activity.

Since the available evidence points not only to a continuation, but to a probable increase in bloc aid during the last half of 1966, it does not appear likely that the Vietnamese Communists will be faced with devising any substitutes for it or of altering their policy to take account of its cessation during the foreseeable future. Moreover, so long as Soviet and Chinese support continues at least at its present levels, it does not appear that the Vietnamese Communists would view it as a critical factor in any basic determination they might make on whether to continue the fighting. Vietnamese Communist assertions that, in the final analysis, they must rely mainly on their own resources to prosecute the revolution appear to reflect a genuine and deeply held belief. The theme of "self-reliance" has been a persistent one in Vietnamese Communist statements, and has not at all been abandoned or dampened down in the face of the increasing allied military pressure on the Viet Cong and on the DRV.

In March of 1966, for example, DRV party spokesman Truong Chinh declared that the "strategic line" of the revolution was still to rely "mainly on our own forces" while fighting a protracted war. In April, Ho Chi Minh told a Cairo newsman that the Vietnamese people, while "highly appreciating" the assistance of the socialist countries would "basically depend on their own forces." In May, another North Vietnamese politburo spokesman, Pham Hung, reiterated that, even while employing assistance from the bloc, "our dictum is to rely principally on our own strength."

III. The Rationale For Chinese Support

There appear to be several important considerations in the Vietnamese view which tend to reinforce their "do it yourself" attitude. They apparently believe, for one thing, that there are distinct limits to the amount of political and materiel support which can be counted upon from Peking and Moscow. Vietnamese documents and statements indicate that they believe Peking is willing to make a considerable contribution of military, economic, and political assistance to keep the fighting going along its present lines--a protracted struggle by proxy, fought if necessary to the last Vietnamese. Hanoi is also well aware that the conflict provides a test case of Mao's theory that "wars of liberation" can be fought without provoking a US nuclear response against either the local Communists or their sponsors. This war, moreover, is taking place in an area close to China and in a region which the Chinese believe to be their rightful sphere of influence.

However, the Vietnamese also appear to believe that there are limits to the price Peking is willing to pay to keep the conflict going. This is implicit, in part, in the DRV's handling and comment on public Chinese pledges of assistance. For example, a 28 December 1965 editorial in the DRV party daily, which dealt with Chinese assistance, was formulated in a manner which made it clear that the latest pledges of Chinese support were not as strong as those earlier issued by Peking, prior to the escalation of the air war against North Vietnam. The editorial also treated the question of Chinese volunteers for Vietnam in a fashion which suggested some doubt in Hanoi over the ultimate willingness of Peking to bring in combat troops should the situation deteriorate to the point where they might be needed. The editorial followed a new aid pact between the Chinese and the North Vietnamese signed in early December. The pact was treated in the press of both countries with caution and without the usual fanfare. The aid, moreover, was in the form of a loan and not a grant. This, in itself, suggested limitations on the Chinese interest in supporting the Vietnamese.

Peking's caution is not, however, entirely a negative factor in Hanoi's view. The Vietnamese themselves wish to prevent the introduction of such massive Chinese assistance as would undercut Vietnamese Communist control

and direction of the insurgency, unless it was required to prevent the extinction of the Communist regime in the DRV. This was underscored by DRV politburo member, Le Duc Tho, in an article published in the North Vietnamese party journal in February 1966. The "lines, strategy, and methods" of the revolution, wrote Tho, are a "responsibility which our party must assume, as we ourselves and alone can realize most clearly the problems concerning the revolution in our country."

Tho was doubtless addressing both Peking and Moscow in his remarks, but he probably had mainly in mind the persistent Chinese political pressure on Hanoi designed to keep the Vietnamese steadfast in the war and block any possible move toward negotiations. One prime example of this occurred in June when the Chinese lashed out at a Soviet-sponsored World Peace Council proposal on negotiations to end the war. Although the proposal closely echoed the DRV's own four points, the Chinese maintained that because it did not insist on the "immediate and total withdrawal of US troops from South Vietnam," it had left out the key element in a Vietnam settlement. Hanoi itself has never insisted on immediate withdrawal as a condition for negotiations and did not make any comment on the proposal by the council. Peking, however, was clearly anxious to make it appear that the Asian Communist position on ending the war was tougher than indicated in the Council proposal to which the North Vietnamese had been a party. Peking's quick attack denied Hanoi the opportunity to voice any approval of the proposal lest it indicate an open difference of opinion with the Chinese.

Even given the Chinese willingness to pressure Hanoi, however, it is probable that the pressure would not be sufficient to force the Vietnamese to stay in the war if they decide on their own volition to end the fighting. The Vietnamese Communists probably estimate that, in view of the limitations on the Chinese commitment, Peking would do little more than complain if the conflict were terminated short of an insurgent victory. The Chinese, in fact, seem to recognize this, for they have repeatedly left themselves an out by emphasizing that all decisions on the war are "strictly" up to the Vietnamese.

IV. Vietnamese View of Soviet Support

The Vietnamese Communists probably judge, on the basis of Moscow's assistance so far, that the Soviet commitment

in the war is considerably more restrained than that of the Chinese. This can be seen, in part, in North Vietnamese statements dealing with Soviet assistance. Although Hanoi has, in the main, carefully attempted to express equal gratitude for the help of both bloc powers, some remarks implicitly critical of Moscow have occasionally come forth. In mid-1965, for example, at a time when the North Vietnamese signed aid pacts with both Peking and Moscow, DRV spokesmen were much warmer in their description of Chinese assistance than of Soviet. Peking's support was termed at the time the "firmest, the most powerful, and the most effective," while China was hailed as the "most enthusiastic and resolute comrade in arms of all nations fighting against the imperialists."

Hanoi is fully aware that Moscow, like Peking, has also displayed an overriding concern in its actions on the war to avoid steps which might lead to a direct Soviet-US military confrontation. For example, Moscow has throughout the conflict avoided sea delivery to Haiphong of sensitive military shipments. Moreover, important Soviet officials have gone out of their way in private to disavow the significance for Soviet-US relations of the presence of Soviet military-technical personnel in the DRV.

It is doubtless clear to the Vietnamese that the Soviets would like an early end to the war. Evidence suggests that the Soviets did cautiously advise Hanoi to move toward a political settlement of the conflict in early 1965. Following Kosygin's visit to the DRV in February, the Chinese charged that Moscow had sent a formal proposal to Hanoi and Peking suggesting a reconvention of an international conference on Indochina. During the bombing pause early this year, party secretary Shelepin apparently took further soundings on Hanoi's attitude toward possible political alternatives to the conflict. In recent months, in view of the continuing hard-line stand of the Vietnamese, the Russians appear to have avoided applying most of the pressures they could exert on the DRV, probably judging them to be marginal at best. Soviet party chief Brezhnev displayed this cautious attitude during recent talks with De Gaulle. He told the French president that Moscow would be ready to attend a conference only "if and when Hanoi agrees."

Despite the limitations on Soviet assistance and support, it is probable that Soviet backing has, on balance, the effect of buttressing the Vietnamese Communist will to

persist in the conflict. The Vietnamese probably judge that they can continue to count indefinitely on Moscow's assistance along present lines so long as the war continues in its present context. They probably believe, in fact, that the Soviets are now locked into the struggle in view of the pretensions Moscow still holds to leadership of the Communist camp, and that it cannot afford to step completely aside.

AREAS UNDER ATTACK WERE IN THE VICINITY OF SJ 9038, 65 KILOMETERS NORTHEAST OF NAM THA TOWN, AND IN THE VICINITY OF QD 9323, 41 KILOMETERS EAST OF NAM THA. THE ENEMY HAD OVERRUN THE POSITIONS OF AT LEAST FOUR ADC COMPANIES AND HAD EITHER DISPERSED OR CAPTURED THE ADC TROOPS. BY 12 APRIL BOTH ADC AREAS WERE UNDER HEAVY ENEMY PRESSURE.)

2. AN INFORMANT WITH ACCESS TO MUONG SING (QD 2445) GAVE THE FOLLOWING INFORMATION ON THE ENEMY TO MEMBERS OF A FRIENDLY UNIT:

A. ON 18 MARCH ABOUT 250 ENEMY TROOPS MOVED FROM MUONG SING TO NAM THA (QD 5118) THESE TROOPS WERE DRESSED IN GREEN UNIFORMS AND WERE ARMED WITH THREE UNIDENTIFIED HEAVY WEAPONS. (FIELD COMMENT: THESE MAY HAVE BEEN TROOPS OF THE 408TH PL BATTALION WITH NORTH VIETNAMESE (NVN) ATTACHED WHICH WAS LISTED IN THE 1 APRIL ENEMY ORDER OF BATTLE ESTIMATE FOR LAOS AS BEING HEADQUARTERED IN MUONG SING.)

B. ON 28 MARCH THERE WERE ABOUT 109 ENEMY TROOPS, INCLUDING POLICE, IN MUONG SING. ALL HEAVY WEAPONS EMPLACEMENTS HAD BEEN FILLED WITH DIRT.

C. THE ENEMY PROPAGANDIZED THAT THEY WERE BEGINNING A MAJOR OFFENSIVE AGAINST FRIENDLY TROOPS.

3. A VILLAGER WHO HAD ACCESS TO NAM THA TOWN TOLD A LAO ARMED FORCES (FAR) SERGEANT THAT ON 28 MARCH 120 PAVN/ETHNIC BLACK THAI TROOPS MOVED EAST FROM NAM THA TOWN. THESE TROOPS WERE ARMED WITH ONE 81MM MORTAR AND FOUR RECOILLESS RIFLES. FIFTY COOLIES CARRIED AMMUNITION AND SUPPLIES FOR THIS UNIT. (FIELD COMMENT: ALTHOUGH THE INFORMANT IDENTIFIED SOME OF THESE TROOPS AS PAVN, IT IS POSSIBLE THEY WERE

1.5(c)
3.4(b)(1)

PART OF THE FORCE REFERRED TO IN PARA 2 A OR WERE FROM THE 5TH PL BATTALION, LISTED IN THE 1 APRIL ENEMY ORDER OF BATTLE ESTIMATE FOR LAOS AS BEING HEADQUARTERED IN NAM THA TOWN.)

4. THE COMMANDER OF AN ADC UNIT AT QD 9323, 41 KMS EAST OF NAM THA TOWN, REPORTED THE FOLLOWING INFORMATION ON THE ENEMY:

A. ON 31 MARCH ABOUT 300 PL/PAVN TROOPS ATTACKED AND CAPTURED AN ADC COMPANY POSITION AT QD 9019, 39 KILOMETERS EAST OF NAM THA TOWN. EIGHT ADC SOLDIERS WERE KILLED OR WOUNDED. THE ENEMY TROOPS SHOUTED IN VIETNAMESE DURING THE ATTACK.

B. ON 4 APRIL AN ENEMY FORCE OF UNDETERMINED SIZE ATTACKED AND CAPTURED AN ADC COMPANY POSITION AT QD 9228, 40 KILOMETERS EAST OF NAM THA. TWO ADC SOLDIERS WERE KILLED. THE ADC COMAPNY RETREATED TO QD 9331, THREE KILOMETERS TO THE NORTH.

C. ON 5 APRIL AT 1920 HOURS ABOUT 200 ENEMY TROOPS ATTACKED AND OVERRAN AN ADC COMPANY'S POSITION AT QD 9334, 45 KILOMETERS NORTHEAST OF NAM THA. THE ADC SOLDIERS WERE DISPERSED AND ONLY 18 ARRIVED AT THEIR HEADQUARTERS AT QD 9323.

D. ON 8 APRIL AT 20000 HOURS ABOUT 300 ENEMY TROOPS WITH 400 LOCAL VILLAGERS AS COOLIES ATTACKED AND OVERRAN AN ADC COMPANY AT QD 9339, 48 KILOMETERS NORTHEAST OF NAM THA. THE ENEMY CAPTURED THE ENTIRE COMPANY AND FORCED IT TO CARRY SUPPLIES.

E. ON 9 APRIL THE ADC HEADQUARTERS AT QD 9323 MOVED TO RD 0121, 11 KILOMETERS TO THE EAST.

F. ON 10 APRIL THERE WERE APPROXIMATELY 400 CHINESE COMMUNIST

1.5(c)
3.4(b)(1)

AND PAVN TROOPS AT QD 9331. (FIELD COMMENT: FURTHER EVIDENCE ON THE PRESENCE OF REGULAR CHINESE COMMUNIST TROOPS AT QD 9331 WITH THE PATHET LAO IS LACKING AND THIS IDENTIFICATION OF THE UNIT AS A REGULAR UNIT FROM CHINA SHOULD BE CONSIDERED WITH RESERVE AT THIS TIME.)

5. THE ADC BATTALION COMMANDER AT DOI SANG (SJ 9038) HAD THE FOLLOWING INFORMATION ON THE ENEMY:

A. ON AN UNREPORTED DATE A TOTAL OF 779 ENEMY TROOPS ARMED WITH ONE 12½MM MORTAR, TWO 75MM HOWITZERS, THREE 82MM RECOILLESS GUNS AND THREE 57MM RECOILLESS RIFLES ATTACKED AND ROUTED ADC TROOPS IN THE VICINITY OF QD 9431. (FIELD COMMENT: THIS IS PROBABLY THE ACTION REPORTED IN PARA 4 C.)

B. ON 7 APRIL AN ENEMY FORCE OF UNREPORTED SIZE WAS MOVING TO SURROUND DOI SANG.

6. THE ADC COMMANDER FOR THE NORTHERN LUANG PRABANG AREA REPORTED THE FOLLOWING INFORMATION:-

A. AN ADC COMPANY IN THE VICINITY OF RD 0239, 64 KILOMETERS NORTHEAST OF NAM THA TOWN, WAS ATTACKED AND DISPERSED ON AN UNREPORTED DATE IN THE SECOND WEEK OF AFRIL. ONLY THREE MEN FROM THE COMPANY REACHED ADC TROOPS IN THE VICINITY OF RD 1138.

B. ONE ADC COMPANY AND A LARGE NUMBER OF CIVILIAN REFUGEES WERE AT QD 9525, 35 KILOMETERS NORTHEAST OF NAM THA, WERE ALMOST CUT OFF FROM ADC FORCES TO THE EAST ON 12 APRIL.

C. ON 12 APRIL ENEMY CONTROL EXTENDED TO A LINE RUNNING FROM TJ 0527, 78 KILOMETERS EAST OF NAM THA TOWN, SOUTHWEST TO MUONG LA

(TJ Ø111) TO MUONG SAI (RC 129Ø), 67 KILOMETERS SOUTHEAST OF NAM THA. (FIELD COMMENT: [redacted]) REPORTED A PROBABLE ENEMY ATTEMPT TO CUT OFF THE ADC HEADQUARTERS AT DOI SANG FROM ADC UNITS TO THE SOUTH.) 1.5(c) 3.4(b)(1)

D. BY 12 APRIL ABOUT 8ØØ ENEMY TROOPS WERE IN THE QD 9331 AREA, 43 KILOMETERS NORTHEAST OF NAM THA TOWN. THE SUPPLY LINE FOR THESE TROOPS RAN FROM BATENE (QD 7744), 36 KILOMETERS NORTHEAST OF NAM THA.

E. AN ESTIMATED 2ØØ REGULAR CHINESE COMMUNIST TROOPS TOOK PART IN THESE ATTACKS. ACCORDING TO THE ADC COMMANDER, THE CHINESE TROOPS WERE IDENTIFIED BY THEIR UNIFORMS AND THEIR LANGUAGE. ADC TROOPS INVOLVED IN CLOSE QUARTERS COMBAT SAID THAT THE CHINESE WORE UNIFORMS WITH FOUR INCH LONG RED STRIPES ON THE RIGHT EPAULET AND GREEN OR BLUE BERETS. THE ADC SOLDIERS CLAIMED THEY HEARD SHOUTS IN CHINESE. (FIELD COMMENT: ADC TROOPS IN THIS AREA HAVE PREVIOUSLY REPORTED HEARING CHINESE WHEN THE LANGUAGE INVOLVED WAS UNFAMILIAR TO THEM. FURTHER EVIDENCE ON THE PARTICIPATION OF REGULAR CHINESE COMMUNIST TROOPS IN ATTACKS IS LACKING AND THE INFORMATION SHOULD BE TREATED WITH RESERVE UNTIL VERIFICATION IS POSSIBLE.)

7. ACCORDING TO A VILLAGER WITH ACCESS TO THE AREA DESCRIBED, ON AN UNREPORTED DATE ONE BATTALION OF CHINESE TROOPS MOVED FROM SHANG-YUNG (QD 8Ø58) IN CHINA, 49 KILOMETERS NORTHEAST OF NAM THA TOWN, TO VANG NA TOUI (QD 7631) IN LAOS, 28 KILOMETERS NORTHEAST OF NAM THA TOWN AND JOINED WITH TWO PL COMPANIES WHICH ATTACKED FRIENDLY TROOPS IN THE QD 9323 AREA.

(FIELD COMMENT: FURTHER EVIDENCE ON THE PARTICIPATION OF REGUALR CHINESE COMMUNIST TROOPS IN ATTACKS WITH THE PATHET LAO IS LACKING AND THE INFORMATION SHOULD BE TREATED WITH RESERVE UNTIL VERIFICATION IS POSSIBLE.) 1.5(c) 3.4(b)(1)

THE WEEK IN PERSPECTIVE

Last week's naval mutiny in Saigon, which led to the provisional replacement of naval commander Admiral Cang, has had unsettling effects on both the military and political equilibrium. It has set a possible precedent for junior officers to take matters into their own hands. In addition, the suspension of both Cang and of Saigon area commander General Dong, accused of encouraging gambling, has raised Catholic fears of a Buddhist-inspired military purge. Cang is Catholic and Dong reacted firmly to Buddhist street agitation against the former Huong government.

Premier Quat, who considers Dong a troublemaker, and probably encouraged his suspension, now hopes to carry out a major command reorganization to bring the military under tighter civilian control. Quat's proposals, which would leave only one Catholic officer in a top command post, could risk a serious Catholic reaction if not the eventual opposition of the military in general. Although it is possible that the views of the Buddhist hierarchy have influenced Quat's thinking, the Buddhist clergy continues to refrain from open political activity except for the further promotion of anti-Communist themes among their followers.

The Viet Cong, despite recent government military successes which may have caused a temporary disruption of enemy plans in some areas, retain the capability of striking in force at times and places of their choosing and of maintaining a high rate of violence throughout the nation. The reported buildup of Communist forces and the advent of the rainy season, which favors the Viet Cong, indicates that a major effort can still be expected. The Viet Cong probably consider that successes are now required to offset both recent reverses and increased US participation in the war.

I. THE SITUATION WITHIN SOUTH VIETNAM

A. POLITICAL SITUATION

1. A mutiny, staged on 8 April by a group of fleet commanders against navy chief Rear Admiral Chung Tan Cang, resulted in the latter's suspension by Armed Forces commander General Minh. The incident may well have further repercussions within the military establishment and within the currently delicate political alignment.

2. The complaints against Cang concerned primarily his involvement in kickbacks from coastal shipping contracts under his control. Opportunism among his subordinates, taking advantage of his apparent loyalty to ousted General Khanh, was also a factor. A three-man military board of inquiry is now looking into the charges of corruption against Cang, as well as into charges of irregularities by General Pham Van Dong, who was simultaneously suspended from the position of Saigon area commander at the behest of Premier Quat. Meanwhile, Marine Brigade commander General Khang has been named acting naval commander and Dong has been replaced temporarily by his somewhat controversial deputy, Colonel Lam Son.

3. The mutiny and subsequent investigations have created further uneasiness in two areas. The danger of setting a precedent for future action by junior officers--many of whom have been reported restless over the political opportunism of their superiors--has not been lost on the generals, some of whom otherwise favored Cang's ouster. In addition, some circles view the episode as one step in a broader power struggle, particularly on the part of Air Vice Marshal Ky and I Corps commander General Thi. Ky has publicly referred to the presence of "bad elements" in the Armed Forces Council.

4. Premier Quat, long concerned over the problem of military infighting, has indicated that he now hopes to take measures to exert greater

COPY
Lyndon Baines Johnson Libr

control over the armed forces. He envisages a reorganization of the command structure to eliminate the positions of commander in chief and chief of staff. This would be primarily a device to "dispose" of Generals "Little" Minh and Huynh Van Cao, whom he considers uninspiring. They would be replaced with a single chief of the Joint General Staff, for whom Quat has no definite candidate. At the same time, Quat hopes to increase the responsibilities of Vice Premier and Armed Forces Minister General Thieu, whom he regards as a capable officer. Eventually, Quat hopes to dissolve the Armed Forces Council, now a potential rival authority.

5. Quat's proposals, in conjunction with the suspension of Admiral Cang and General Dong--a Catholic and Catholic sympathizer respectively--would have the effect of removing Catholic influence from the top military echelons, except for the presence of General Thieu. Although he has publicly stressed that the suspensions have no religious connotations, Quat is clearly running some risk of a Catholic reaction. His ultimate goal of extending his control over the military could lead to conflict with the generals as a group.

6. Catholic fear of a Buddhist hand in recent events is reflected by a reported appeal to Quat by the Catholic hierarchy in Saigon to prevent a general purge of Catholic military officers. General Dong, whom Quat suspects of stirring up Catholic circles, has privately described the charges against himself as trumped up, implying that they represent a Buddhist - Viet Cong conspiracy to seize control. The possibility of a Catholic-instigated coup attempt cannot be fully disregarded in view of the contacts maintained by militant Catholic refugee circles with ringleaders of the abortive 19 February coup, who are still at large in the Saigon area.

7. Although the possibility exists that Buddhist influence was exerted, either indirectly upon Quat or through sympathetic officers, in the

COPY
Lyndon Baines Johnson Libr

suspension of Cang and Dong, the Buddhist hierarchy continues to refrain from overt political involvement. Buddhist efforts to develop a more openly anti-Communist posture remained evident during the week. Criticism of Viet Cong oppressive tactics was voiced by monks, laymen, and students alike at a 10 April reception by the Saigon University Buddhist Student Association. A speech by Thich Tam Chau, head of the Buddhist Institute, exhorted Buddhist worshipers to tighten their ranks against the Communist threat. Chau's speech, however, also contained some references to the continued presence of "Diemist remnants" and warned that, if these elements sought revenge against Buddhism, they would be combated along with the Communists. A lay Buddhist member of the National Legislative Council also recently implied that the Catholics were opposing land reform, and stressing instead less urgent political reforms. The source, however, did express support for the government's decision to hold elections on 30 May for municipal and provincial elections. Quat's cabinet has also recently taken some economic decisions calculated to increase support from organized labor.

8. South Vietnamese officials, and the Saigon press in general, have welcomed President Johnson's Baltimore speech as a reaffirmation of a firm US commitment to the country's defense. The US Embassy observes that the speech has provided a further lift to morale. Although there were some expressions of uneasiness in the Catholic press, and in statements attributed to Foreign Minister Tran Van Do, over the offer to entertain "unconditional discussions," Premier Quat's public statements have softened the effect. He stressed the US pledge of support and noted that the US merely attached no conditions to discussions which could lead to peace, as opposed to a peace settlement. Quat further hailed the US proposal of cooperative aid to Southeast Asia as a means of "stemming the Red tide." In contrast, some other Saigon comments have indicated concern over any inclusion of North Vietnam in the project.

COPY
Lyndon Baines Johnson Libr

9. A military tribunal on 9 April sentenced to death Nguyen Van Hai, the terrorist captured in the recent bombing of the US Embassy. A death sentence was also meted to another terrorist, captured earlier with explosives, and a possible accomplice of Hai received five years at hard labor. Despite normal procedure, in which the death sentence is carried out within 48 hours, no date was set for Hai's execution. Premier Quat had indicated his full sympathy with the need to delay the execution in view of the Viet Cong threat to retaliate against a US civilian official in their hands. Clemency can be authorized by Chief of State Suu, or Hai may possibly be held temporarily for further questioning, as was done with a terrorist similarly sentenced in Da Nang. Meanwhile, evidence has accumulated that another US civilian, a USOM provincial representative captured by the Viet Cong last August, was shot and killed by the Viet Cong in January when he was discovered trying to escape.

Economic Situation

10. Initial work on the dredging of Da Nang's harbor channel was completed last week. A channel 35 meters wide was opened; dredging will continue until the channel, which was severely silted during last fall's floods, is 90 meters wide. The GVN also signed contracts for two transportation surveys. One calls for a comprehensive technical and economic study of transport facilities, including rail, road, and port requirements. The second contract provides for study of port facilities and shipping for the major coastal ports, including Saigon, and some inland ports.

There has been no improvement in the urban rice situation: rice deliveries to Saigon remain unseasonally low, and the price rose again. The implementation and effectiveness of planned military sweeps to provide security for rice shipments remains unknown.

COPY
Lyndon Baines Johnson Libra

B. MILITARY SITUATION

1. Although there was a moderate rise in Viet Cong activities last week, Communist military successes were limited. Two of the three reported large-scale Viet Cong attacks were turned into significant Communist defeats. Despite some indications that the Viet Cong are suffering from effective US-GVN assaults, they remain capable of intensifying the war when and where they choose.

Communist-initiated activity increased in I and IV Corps but remained at the low level of the previous week in II and III Corps. Two company-size attacks were reported from I Corps: On 7 April a Viet Cong company simultaneously attacked two New Rural Life hamlets in Quang Tin Province and on 8 April, in Quang Ngai Province, a Viet Cong company-size attack force suffered greater losses than the Popular Forces platoon it ambushed. A determined Viet Cong battalion-size attack against a South Vietnamese marine battalion bivouacked along Route 1 was turned into a significant Communist defeat. The marines combined a strong defense with an aggressive counterattack to kill 205 Viet Cong while losing only four killed and 22 wounded. Almost all of the Viet Cong were killed by well-disciplined small arms fire in this purely infantry engagement. Enemy activity in the delta picked up noticeably but consisted mostly of small-scale activities. In Kien Giang, a Viet Cong force overran and completely leveled an outpost manned by 55 paramilitary forces. Only four in the garrison escaped and the others, along with their weapons, are missing. Despite the overall increase in Communist-initiated activity last week, the pattern remained unchanged.

There are some indications that the Viet Cong are feeling the effects of the long war. The number of Viet Cong military personnel returning to government control under the Chieu Hoi Program, while still modest, has reached its highest level since COMUSMACV started recording this statistic in January 1964. Recent ARVN operations have uncovered large caches of food, particularly in and around Viet Cong War Zone D, a factor which could disrupt the Communist timetable for future offensive operations. For the fourth time in a month, the Viet

Cong have failed to react militarily to the substantial losses of foodstuffs. The recent discoveries of large caches of weapons and the partial compromise of the sea infiltration system along the northern coastal provinces probably represents some additional logistical loss to the Viet Cong.

There is also some evidence that the Viet Cong now being encountered are being given minimum training before their employment in main force front line units. Viet Cong recently captured in Binh Dinh after their encounter with the South Vietnamese marines indicated that they had received only 15 days basic military training. Five of the 10 captives were newly infiltrated and on initial interrogation displayed little basic military knowledge. Viet Cong prisoners taken after the government victory in Chuong Thien Province last week stated that their units had not been active in the southern reaches of the delta because they had withdrawn to the U-Minh Forest for training. The prisoners said that Viet Cong morale in these units is low and that some were experiencing difficulty recruiting to offset a high desertion rate. Two-thirds of the Viet Cong 303d battalion, located in Chuong Thien Province, were said to be new recruits, many of them young boys of 16-17 forcibly drafted from hamlets. Additionally, the expanded application of combat air power within South Vietnam is increasing the number of Viet Cong killed in all operations, according to COMUSMACV.

There have been numerous low-level reports of the withdrawal or disarming of Viet Cong units; few of these reports, however, were obtained by penetration agents and they are essentially hearsay statements of enemy intentions. COMUSMACV points out that the number and geographical spread of these reports appears to indicate a centrally-directed Communist campaign to create the impression of a Viet Cong withdrawal. They could also reflect a general regrouping in preparation for renewed attacks. Recent contacts with enemy units and the locale of current Viet Cong activity indicate that

COPY
Lyndon Baines Johnson Libr.

Communist forces remain in place ready to intensify the war when and where they choose. In particular, COMUSMACV reports that the enemy has been building up a strong force in War Zone D, possibly in preparation for a major operation along the periphery of the Hop Tac Zone.

In sum, despite recent government successes and despite evidence that the Viet Cong are feeling the effects of stepped-up US-GVN assaults and of attrition generally, the Communist force in South Vietnam currently remains capable of significantly intensifying the war beyond present proportions.

2. Government military forces maintained the high tempo of effective offensive operations during the past week resulting in a number of significant victories over the Viet Cong. Another favorable indicator bearing on military operations was the report that the estimated personnel gains for March exceeded 10,000, two-thirds of whom were volunteers.

In Chuong Thien Province, a large operation launched on 4 April under the control of the 21st Division in the delta, forced a major engagement with two Viet Cong main force battalions in the approaches to the U-Minh Forest. While the government forces were moving into the objective area, a Viet Cong battalion ambushed a river assault force. After three days of intense fighting, involving river, air, and ground elements, ARVN successfully broke off the engagement when their advance units were in danger of over-extending their supply lines and the troops were nearing the limit of their physical endurance. Eventually a government victory was achieved. The final results heavily favored the government forces: 278 Viet Cong were killed (body count), 7 captured in battle and 12 other suspects taken later who turned out to be Viet Cong, and considerable material losses. Friendly casualties amounted to 22 killed (including 6 US), 85 wounded plus three aircraft lost.

COPY
Lyndon Baines Johnson Libr

A sector-controlled operation in Binh Dinh Province on 4 April, resulted in the virtual destruction of a Viet Cong company. Rapid response and flexibility in changing the scheme of maneuver after contact was made enabled the government force to envelope the Viet Cong flank. Extremely effective air strikes completed the victory. Final results show 42 Viet Cong were killed, compared to government losses of 10 killed and 15 wounded.

The significant government military achievements over the past several weeks could act as a tonic for ARVN and enable it to continue the aggressive offensive against enemy main force units in order to exploit, as much as possible, recent Viet Cong reverses.

3. Communist casualties and weapon losses reflect the intensified government offensive last week, and for the first time both enemy casualties and weapon losses greatly surpass those of the government. Viet Cong personnel losses dropped to 777 (643 KIA) from 875 (795 KIA) from the previous week. Government casualties declined to 666 (155 KIA from 685 (189 KIA) last week. The Viet Cong lost 238 weapons compared to the 198 lost last week, while the government lost only 115 weapons this week compared to the 241 lost one week ago.

C. RURAL RECONSTRUCTION

1. There was little significant progress in the nationwide rural reconstruction effort during the past week. The main problem in Central Vietnam continues to be the disposition of refugees. The high priority Hop Tac program reported only slight gains.

In the I Corps zone, emphasis continued to be centered on the refugee problem. The three provinces of the 2nd Division tactical zone (Quang Nam, Quang Tin, and Quang Ngai)--where most of the

COPY
Lyndon Baines Johnson Libr

refugees are now concentrated--have formulated plans for their disposition. Six refugee centers have been established in Quang Ngai and appear to be operating effectively.

3. In Binh Dinh Province, Route 1 has been opened to the Quang Ngai border following repair of more than 50 miles of the road north of Qui Nhon. Although commercial traffic has not yet started to use this portion of the road, refugees have started to move back into a town about 50 miles north of Qui Nhon.

4. Progress in the rural reconstruction effort in the Hop Tac area is slow. There was a net gain of three hamlets added to the list of hamlets meeting the six-point criteria. The total of "completed" hamlets in the Hop Tac zone is now 359--six less than reported by MACV two weeks ago.

Recruiting for the Popular Forces showed some improvement during the past week. Four hundred personnel were recruited for the Popular Forces, mainly in Gia Dinh and Bien Hoa provinces.

Rural reconstruction budgets have been prepared by the joint GVN-US rural reconstruction budget team for all of the Hop Tac provinces except Gia Dinh and Bien Hoa.

II. THIRD COUNTRY DEVELOPMENTS

A. Reactions to President Johnson's April 7 Speech on Vietnam.

World reaction to President Johnson's speech was generally very favorable. United Nations Secretary General U Thant wrote the President welcoming the speech as "positive, forward-looking, and generous." Thant met with Ambassador Adlai Stevenson and Eugene Black, former President of the World Bank, to discuss President Johnson's proposals for Southeast Asia economic development. British Prime Minister Wilson issued a statement praising the speech. Canadian Prime Minister Martin stated in the Canadian House of Commons that Canada was prepared to participate fully in the Southeast Asia economic development program and that he hoped other industrial countries including USSR and eventually Communist China would participate. The French press expressed general approval of the speech saying it was what de Gaulle had long recommended; adding however that US should not exclude negotiations with the Viet Cong "Liberation Front."

Non-Communist Asian comment was favorable for the most part, with the exception of that originating in Djakarta. The semi-official Indonesian Herald criticized the speech as "calculated to deceive." Japanese told Ambassador Reischauer he strongly welcomed the President's clear exposition of US objectives in Vietnam and expressed the willingness of Japan to participate in the Southeast Asian economic development plan.

told our Ambassador Porter that he felt speech was very constructive and leaves the United States in a strong position. Algeria may aspire to play a mediating role in the Vietnam situation through its contacts with Communist China; there is little evidence, however, that the Chinese have any interest in Algerian mediation.

B. Cambodia.

The Cambodian official news service reported on 12 April that a Cambodian was killed by GVN forces on

COPY
Lyndon Baines Johnson Libr

Cambodian territory. No further details are available, though the incident is presumed to have occurred on the same day. This is the first reported Cambodian fatality on the border since Prince Sihanouk's most recent threat on 24 March to break relations with the United States if a single Cambodian life were lost in a border incident. Sihanouk has made similar threats in the past without following through.

III. Developments in the Bloc

A. Communist Reaction to President Johnson's Johns Hopkins speech.

Hanoi, Peiping, and Moscow have all commented negatively on President Johnson's 7 April speech. In essence, they have denounced the offer for unconditional talks as an attempt by the US to justify its "aggression in Vietnam."

1. Hanoi on 11 April published a commentary in Nhan Dan, attacking President Johnson personally and labeling the speech a "deception" full of "all the tricks of the most wicked sorcerers." The Hanoi commentary characterized the call for unconditional talks as "hypocrisy," designed to secure the US goal "that is recognition of US aggression." The article attacked the US offer of aid to Southeast Asia as an attempt to "buy the peoples" of the area and asserted that the "Southeast Asians decidedly will never take ten dollars each for selling out their country to the US imperialists." Anti-American remarks by Sihanouk and Sukarno were quoted as proof that Southeast Asians will not be swayed by offers of aid. Despite US attempts to divide "our nation," the article concluded, and despite the fact that the US "feverishly" seeks to split "our international solidarity bloc," the Indochinese peoples "will always unite with us in a rocklike bloc."

DRV language was even stronger in a 14 April Nhan Dan commentary in which the speech was characterized as a spiteful hoax and the President described as "lecturing on peace while brandishing his gun." On the subject of a conference, the commentary said "without the participation of the Front, it is impossible to settle the South Vietnamese question."

2. The first Liberation Front comment on the President's speech came from its representative in Prague who characterized the President's proposals as "untrue and deceptive." This was followed by an 11 April Liberation radiobroadcast which accused the President of pretending to be "eager for peace," at

COPY
Lyndon Baines Johnson Libr

the same time that he sends "aircraft to attack the DRV and Hainan Island." The broadcast demanded US troop withdrawal and threatened that if the US continues the war it will be disastrously defeated. However, the commentary added, "there is still time for...(President Johnson)...to think it over."

3. Peiping's most authoritative reaction to the speech, contained in an article by "observer" in People's Daily on 11 April, sought to emphasize the unswerving unity of purpose among the various Vietnamese Communist elements as well as its own determination to continue to support the Vietnamese Communist cause. The "observer" dismissed the call for unconditional talks as a "big swindle" and a "hoax" requiring the unconditional surrender of the South Vietnamese people to the "US imperialists."

The article focused attention on President Johnson's remarks about the "deepening shadow of Communist China" looming over the South Vietnam war, and alleged that the President's repeated mentioning of Communist China was meant to "carry out war threats" and "make the Chinese people stop supporting the revolutionary struggles" of the Vietnamese and other peoples. This idea was rejected as "sheer day-dreaming." "Observer" went on to declare that the "Chinese people are definitely not the kind...who tremble before the war blackmail and provocations of imperialism."

4. Soviet propaganda reaction to the President's address was highlighted by a 10 April Pravda article which attempted to dismiss the speech as a mere propaganda exercise reflecting no real change in US policy. Pravda claimed that the President's reference to unconditional negotiations had no substantive meaning, because in the US reply to the 17 nonaligned nations' appeal, the US had made it clear that an "indispensable condition" for stopping US military action in Southeast Asia "could be only the discontinuance of the national liberation struggle of the Vietnamese people."

COPY
Lyndon Baines Johnson Libr

B. Communist Reaction to Third Party offers of Mediation.

In contrast to President Johnson's response to the 17 nonaligned nations' conference proposal, Communist China, North Vietnam, and the Liberation Front have rejected the appeal out of hand. China was reportedly very cool to the nations who delivered the proposal and on 4 April. North Vietnamese Premier Pham Van Dong dismissed the appeal as "inoperative" in a conversation with the French representative in Hanoi. The Front representative in Prague said the proposal was unacceptable because it did not denounce "US aggression" or demand an immediate cessation of US attacks against North Vietnam. To date, Moscow's treatment has been confined to a 1 April TASS item merely noting that Soviet Premier Kosygin had received the appeal.

Peiping has also refused U Thant's good offices. In a 12 April editorial, Peiping declared that the UN should be barred from any role in reaching a settlement of the problem. Referring to press reports that U Thant desired to visit China and the DRV, the editorial asserted that U Thant was "knocking at the wrong door." Peiping and Hanoi also refused to allow Patrick Gordon-Walker to visit their countries.

C. Communist Attitudes on the Vietnamese Situation

1. North Vietnam.

Hanoi has addressed itself to the subject of a conference on Vietnam several times this week at the highest official levels. The effect of all these statements is to indicate that North Vietnam has not changed its terms for an overall settlement of the war. DRV party and state Chief Ho Chi Minh reiterated the standard regime formulation for settling the Vietnamese situation, and for the first time put the formula in the context of preconditions for a conference. Ho's remarks were contained in an interview with a Japanese Communist journalist published by Hanoi on 9 April. The timing of the publication of the interviews suggests that it was intended as an oblique reply to President Johnson's 7 April call for unconditional negotiations, although the President's speech was not mentioned..

COPY
Lyndon Baines Johnson Libr.

Ho stated that the US must "first of all" withdraw from South Vietnam. It must also stop its "provocative attacks" against the DRV, and let the "South Vietnamese people decide their own affairs." The carrying out of these basic points, according to Ho, will "bring about favorable conditions for a conference along the pattern of the 1954 Geneva conference."

These same conditions have been restated as the official DRV Government position in the course of the National Assembly session which met from 8 to 10 April. The National Assembly is a legislative body comparable to the Chinese National Peoples' Congress and is a vehicle for disseminating regime decisions to the mass of the population. Ho Chi Minh, Premier Pham Van Dong, and Standing Committee Chairman Truong Chinh all addressed the assembly. Hanoi propaganda on the session indicates continuing regime concern with sustaining morale and with making sure that party policy is followed at all echelons in the government apparatus as the US military pressure on the DRV continues. Deputies at the session were tasked with convincing the people of the government's determination to further mobilize everyone to defend the DRV, step up domestic production, and "actively support" the insurgency in South Vietnam.

In this context Ho Chi Minh spoke at length on the determination of the Vietnamese to refuse to bow to US attempts by "force" to bring "our people to terms." Ho also repeated in essence the demands for "settling" the Vietnam war set forth in his interview broadcast on 9 April. He admitted that the assembly was meeting in "a very tense atmosphere," but claimed that it was also convened in "high spirits and with the utmost confidence." Vietnamese terms for a settlement were repeated by Premier Pham Van Dong and incorporated into the National Assembly's final resolution.

2. Communist China

Chinese views on negotiations were indicated this week in the course of Chinese Premier Chou En-lai's visit to Algiers from 30 March to 1 April. Chou reportedly told the Algerians that the Chinese will not intervene in the Vietnam conflict and will refuse to take part in

COPY
Lyndon Baines Johnson Libra

negotiations on Vietnam. Chou predicted that a coalition government would soon be formed in Saigon which would ask the US to leave Vietnam and would negotiate with the Viet Cong.

Although Chou's reported comments were probably intended to convey the impression of a "reasonable" China, the remarks are consistent with the established Chinese public position that the "Vietnamese people" are the only ones able to settle the Vietnam problem.

3. USSR

The Soviet Union's attitude toward negotiations continues to reflect the conflicting pressures of Moscow's support for Hanoi's position and the USSR's regard for the future direction of Soviet-US relations. During a talk with Ambassador Kohler on 8 April, Soviet Deputy Premier Polyansky vigorously countered the ambassador's remark that the USSR had rejected negotiations out of hand. Polyansky said Soviet policy was "the peaceful negotiation of all international disputes, including Vietnam." The Soviets have not retreated from their position that even preliminary discussions to arrange negotiations are impossible as long as US raids on North Vietnam continue.

D. Military Developments in North Vietnam

1. The US-GVN air strikes on 3 and 4 April against the Thanh Hoa and Dong Phong Thuong road and railroad bridges evoked the first intervention by enemy aircraft. The bridges are only about 80 miles south of Hanoi, and the Phuc Yen - based MIGs reacted on both days. On the 4th, two MIGs came with little warning, jumped two US F105s from behind while carrying their full bomb load, and downed both of them. Since then no North Vietnamese MIGs have reacted to the subsequent strikes. However, they can be expected to react in areas within cheer range when US aircraft are striking targets they consider critical.

2. On 5 April aerial photography revealed a surface-to-air missile site under construction about 15 miles southeast of Hanoi. No missiles or other weapons equipment have been noted at the site, but the construction is about three-quarters finished. The last clear

COPY
Lyndon Baines Johnson Libr

photography of this area, on 21 February, showed only an antiaircraft battery site there.

The equipment for the missile site is probably coming from the Soviet Union. The Chinese Communists probably would not supply it. Whereas, a week ago the Soviets were circulating reports that the Chinese Communists were obstructing Soviet attempts to ship military equipment overland to North Vietnam, in the past week the Soviets have floated new reports that Moscow and Peiping have reached agreement on such shipments, and that the equipment is flowing to Hanoi. To date no new Soviet equipment has been detected arriving in North Vietnam. Soviet ships continue to arrive in North Vietnam, but we have had no grounds to believe that any of them have brought specific military cargo. There is one 12,000-ton ship with a light load of just over 3,000 tons now under way, just past Suez, which shows all the signs of being an arms carrier. This ship could be heading for India, Indonesia, or North Vietnam.

THE SINO-VIETNAMESE EFFORT TO LIMIT AMERICAN ACTIONS IN THE VIETNAM WAR

This is a working paper of the DD/I Research Staff. It deals with one aspect of Peiping's relations with Hanoi in the context of the war in Vietnam and is a follow-up to an earlier Staff memorandum (RSS No. 0006/65, 2 April 1965) on differences between Chinese and Vietnamese views on strategy for the prosecution of the war.

The writer of this paper, [redacted] has found useful material in the published weekly analysis of the Foreign Broadcast Information Service. The DDI/RS would welcome comment addressed to the writer [redacted]

THE SINO-VIETNAMESE EFFORT TO LIMIT AMERICAN ACTIONS IN THE VIETNAM WAR

Summary

When the Viet Cong was re-activated in 1958-59, neither Peiping nor Hanoi seemed to estimate that the American commitment to Saigon would develop to the point at which territory in the North would be subjected to air strikes. In their discussion of the war in 1960-62, they emphasized that the American effort in the South was "special warfare," i.e., of a very limited character. As American military support of South Vietnam increased, the Chinese became increasingly concerned, and by 1964 they underscored a Sino-Vietnamese community of interest in trying to deter Washington from making air strikes against the North. However, they were at pains to ensure that Washington would not calculate that PLA forces were poised to enter Vietnam or Laos (and, therefore, would not feel impelled to strike by air at the China mainland). The U.S. air strikes on North Vietnam in August 1964 almost certainly took the Chinese and Vietnamese leaders by surprise. By February-March 1965, their failure to prevent strikes against the North forced them to recognize that Mao was wrong in thinking that small wars could be fought with only slight risks to the base areas and to the security of other bloc countries.

Once the concept of sanctuary for the North had been invalidated, the Chinese were apparently stimulated to add a new dimension to their encouragement of Hanoi. That is, in addition to encouraging the North Vietnamese to move the fighting in the South from primarily guerrilla warfare (with occasional big battles of annihilation) to primarily conventional warfare (with many big battles of annihilation), the Chinese apparently began urging the North Vietnamese to infiltrate PAVN forces into the South on a larger scale. Hanoi, evidently reluctant to comply to the extent advocated by Peiping in early 1965, may now be somewhat more willing to do so, in the sense of being willing to infiltrate a few more PAVN units. However, the Chinese seem to be sustaining their pressure for large-scale infiltration or even direct attacks across

the 17th parallel. The Chinese almost certainly would increase their pressure on Hanoi if American air strikes were to hit targets north of the 20th parallel and were to include more economic installations.

Considerably increased awareness of the threat to the China mainland apparently has impelled the Chinese leaders to state publicly the conditions under which they would use the PLA to intervene. There seem to be two conditions for definite intervention. PLA ground forces will enter the fighting if (a) the United States moves large forces of its own ground troops across the 17th parallel and (b) the North Vietnamese prove unable to handle the matter and request Chinese assistance. Were the United States to strike by air at bases in China but not move its troops on the ground into the North, PLA ground forces might be committed to Vietnam. This last part of the Chinese position contains a large element of ambiguity, particularly on the matter of what constitutes an American "attack" against the mainland. The Chinese have declared "If we are attacked, we will certainly counterattack," but they have been equivocal on the matter of whether air strikes against the mainland would spur them to counterattack with the PLA on the ground, or whether air strikes against the mainland would meet merely with a counter air strike (or air defense action).

The Chinese certainly prefer to prevent such American air strikes against their bases. Their options, however, are limited because of their (Mao's) pugnacity and refusal to concede that the small war will not work in Vietnam. They seem to believe that it will still work--that is, that, accepting a larger risk to the North Vietnamese base area and to China than originally foreseen, Communist forces can still pursue the war effectively in South Vietnam, probably without provoking the U.S. into (a) moving its ground forces into North Vietnam on a large scale, or (b) making air attacks on China. Therefore, the Chinese will not desist from encouraging Hanoi and the Viet Cong from continuing the war. They seem to be willing to risk, if necessary, even the destruction of their bases in South China to sustain the war.

THE SINO-VIETNAMESE EFFORT TO LIMIT AMERICAN ACTIONS IN THE VIETNAM WAR

Introduction

As early as 1958, at the time of the Taiwan Strait crisis, the Chinese leaders were apparently aware that the Soviet nuclear umbrella was credible only for the defense of the USSR, not for a Chinese or North Vietnamese military effort. By 1960, intensification of the Sino-Soviet dispute made this awareness even clearer. Nevertheless, the Chinese and North Vietnamese leaders probably viewed the removal of the Soviet nuclear umbrella --in an earlier period a credible restraint on American military action in the Far East--as a development which would not, and should not, prevent the guerrilla war in the South from moving ahead. They seemed to agree that some other deterrent to American action against North Vietnam could be found, and their view centered on PAVN and PLA forces as constituting an adequate (or credible) deterrent.

The Chinese leaders have hinted at the conditions in which they would feel impelled to commit PLA forces to fight in Vietnam. This paper examines the record of Chinese hints and direct statements on this matter in the context of Peiping's and Hanoi's effort to deter the United States from (a) increasing advisory and material military aid to Saigon, (b) striking by air at the North, and (c) striking even at China.

Ambiguity in a statement of deterrence sustains political maneuverability, but reduces credibility. A deterrent statement can be both ambiguous and strong only when military dispositions indicate a real threat. That is, the degree of seriousness of the threat cannot be measured by the content of verbal warnings alone.

Nevertheless, verbal warnings can provide indicators of intentions even without hard information on military dispositions. In our view, a deterrent statement acquires strength from the degree of precision used in (a) committing a country to take direct military actions and (b) closing off avenues of retreat after the specific public commitment is made. Adjectives do not make a deterrent statement strong or weak, nor do analogies with earlier clashes.

In the following analysis, all of the underlining of words and passages has been supplied.

1. To Deter the United States from Increasing Military Aid

In 1960 and 1961, the Chinese leaders avoided making any public statements indicating direct PLA support for the future defense of the North, but hinted, imprecisely, at Peiping's concern in the matter. Typical of the locutions they used were those contained in Chou En-lai's remarks to the North Vietnamese delegation in Peiping: the Chinese government and people "cannot be indifferent" to the grave situation created by American actions in the South, and the Chinese and Vietnamese governments have always been "in close cooperation and supported each other" in building socialism and opposing the United States (statements made on 12 June 1961). Later, in alluding publicly to American "plans to send troops" to the South, Peiping did not go beyond committing "the heroic people of South Vietnam" to react to this new challenge (broadcast of 12 October 1961). Privately, the Chinese made threats which hinted at PLA action but were vague. They were reported to have told the Indian government on 2 November 1961 that Peiping reserved the right to take "direct action" at any time in the interest of its own security. At the same time (i.e., on 2 November), the Chinese press attache in Geneva told a Western journalist that it would be "a terrible thing" if American troops were sent to the South because it is much easier to commit troops in such a situation "than to withdraw them later."

Even when the Chinese leaders implied the possible use of the PLA in a joint military effort with Hanoi, it was to be a joint action to defend "separate" (ko-tzu) countries. That is, it was vague on the matter of PLA use in Vietnam: the Chinese people and "the PLA...will make joint efforts with you to defend the security of our separate countries" (Marshal Lin Piao's message to Hanoi on 21 December 1961). And when this unprecedented (and not repeated) statement of joint defense and other efforts proved to be inadequate to prevent the establishment of the American military command in the South (in February 1962), the Chinese avoided references to any PLA involvement in defense of the North. They were not explicit on their course of action when they warned that the American military command posed "a serious threat to the security of the DRV and China" and that Washington intended to move first against the North and "from there against China" (People's Daily editorial of 25 February).*

2. To Deter the United States from Air Strikes Against the North

Peiping and Hanoi probably estimated in 1962 and 1963 that the establishment of the American military command would not lead to American air attacks on the

*In this editorial, the Chinese repeated what they had said in their government statement of 24 February for the first time--e.g., American action in the South "seriously affects the security of China." The North Vietnamese had established the line earlier and for the first time in their government statement of 18 February that American action was "a direct threat to the security of the DRV." The Chinese government statement ducked the matter of PLA involvement and made a careful distinction between the "direct" threat to the DRV and the "indirect" threat to China.

North.* They seemed to believe that the United States would restrict its military assistance to support below the 17th parallel and were probably confirmed in this view by Washington's references to the limited nature of its action and the need to fight guerrilla wars with (a) "special warfare" rather than with the more extensive (b) "local" warfare or even (c) nuclear warfare.**

However, by early 1964, the Chinese and North Vietnamese leaders displayed real concern about the prospects of American air strikes. In February, NCNA carried American press references to discussions in Washington of air attacks which might be directed against the North, and Hanoi stepped up its deterrent statements. Defense Minister Giap called for the improvement of "combat cohesion of the armed forces of socialist countries" (Soviet Red Star article of 23 February 1964), and the North Vietnamese army paper warned the United States--which "is planning" to increase "provocations" against the North--that the

*A suggestion of Hanoi's thinking on this point was reported by a recent defector from North Vietnam. In late 1963, the Vietnamese Workers Party central committee issued a confidential foreign policy directive which, among other things, stated that the United States was incapable of attacking the North; during a discussion of the directive, cadres were told that the Americans were deterred by the strength of international Communist forces.

**These terms are not precise but seem consistently in Chinese usage to indicate an ascending order. They refer, in order, to a small operation like the U.S. effort in South Vietnam, a larger one such as the Korean war, and a world war. The Russians have a comparable usage. The People's Daily editorial of 25 February 1962 mentioned all three types in connection with American strategic military thought and stressed Washington's use of (a) in Vietnam. Other Chinese and North Vietnamese articles discussed (a) as the prevailing type of American-supported warfare in the South. (Only on 10 May 1965 did a Chinese leader--Lo Jui-ching--state explicitly that the U.S. was moving in the direction of the more extensive "local" war.)

PAVN is stronger than ever and "together with the strength of the peoples and armed forces of the friendly countries in the socialist camp--which support us closely--our strength is second to none" (Quan Doi Nhan Dan article of 3 March). (The 3 March article strongly suggested that only "friendly" China, rather than the USSR, was willing to support the DRV "closely.") Hanoi's concern was also reflected in private contacts; for the first time, diplomatic channels were used to warn Washington. A North Vietnamese official told [redacted] in mid-February 1964 that if the United States were to introduce more forces and equipment into the South, the Communist side could easily match such increases. He went on to say that Hanoi was prepared to deal with the possibility that Washington might carry the war to the North (apparently a reference to air strikes). Also in mid-February, the North Vietnamese increased military and civilian defense preparations against anticipated American air attacks.

EO 12958
3.4(b)(1)>25Yrs
EO 12958
3.4(b)(6)>25Yrs
(S)

At the same time, the Chinese were careful to avoid identifying Peiping in any direct military sense with Hanoi's defense effort. For example, when Hanoi discussed a hypothetical "invasion" of the North by American ground forces and then referred to the consequence--viz., that the United States "would have to cope not only with North Vietnam, but also with China" (Hoc Tap article of January 1964)--the Chinese omitted this key passage in their reprint. Reflecting Chinese uncertainty of the extent of prospective American action, Peiping's statement of deterrence in early March was so cautious as to be tantamount to a mere repetition of Hanoi's mild warning that "any infringement on the DRV" would be the "responsibility" of the United States (People's Daily editorial of 4 March). While the Chinese were short on specific commitments regarding PLA action, they were long on encouragement. A Chinese "peace" statement of early March declared that "American clamors to extend the war to the North can only frighten those who have lost their nerve," i.e., the Russian leaders.

Hanoi's concern about prospective American air strikes on the North continued through the spring of 1964. On 9

May, General Giap, in an interview with the Communist newsman W. Burchett, the content of which was intended for Western leaders, reflected some anxiety on the part of the leadership when he warned that "any act of aggression against the DRV by the United States...would be suicide." Under Chinese and North Vietnamese criticism at a press conference in Hanoi, Soviet Ambassador Tovmasyan revealed on 15 May that: "A cadre of the DRV's Ministry of Foreign Affairs told me that the Vietnamese people do not see the danger of a direct attack by the United States." (Tovmasyan's apparent point was that if the real North Vietnamese estimate minimized the prospect of an air strike, why should Vietnamese newsmen demand to know if there would be a strong reaction on the part of the socialist camp (i.e., the USSR) were the North to be attacked?) By mid-May, when the United States significantly increased its air-strike capability in the South, the North Vietnamese prepared to absorb bombing attacks. At the time, Hanoi's first major statement indicated awareness that "the Skyraiders introduced into the South are likely to be used in provocations against North Vietnam" and suggested the limited nature of the Communists' retaliatory capability by threatening the Americans only with the punishment "of history" (Nhan Dan editorial of 21 May). Widespread construction of infantry-type defense ditches in the central part of Hanoi was noted by a visitor to the city in early May, suggesting that the Vietnamese were preparing to absorb air strikes even against their capital. Hanoi's second major statement at the time (issued by the DRV Foreign Ministry on 4 June) indicated that countermoves would include primarily a step-up of Viet Cong operations.

The Chinese did not in any way associate themselves publicly with the defense of the North. They spoke only of "friendship" of the PLA and the PAVN and referred vaguely to PLA "support for the Vietnamese people's struggle for reunification" (Lt. General Liu Chih-chien in his speech of 8 June). They apparently were not clear about Washington's intentions. Air strikes in Laos (against Khang Khay) increased their anxiety, which was partly reflected by Chou En-lai's reference to the "dangerous situation in Indochina" and his urgent appeal

for the "speedy calling" of a Geneva conference on Laos (speech of 11 June). The meeting of American officials in Honolulu in June and the air strikes in Laos may well have led the Chinese leaders to conclude that Washington, by "entering upon a new phase of direct and open" support of anti-Communist forces in Laos (People's Daily editorial of 15 June), was hinting at an intention to strike next at North Vietnam if Pathet Lao and Viet Cong operations did not cease. They kept their deterrent statements imprecise as they met in mid-June in a "work conference of the CCP Central Committee": if Washington wants its "own way, it will find itself woefully unwise in its choice" (Ta Kung Pao editorial of 15 June) and "we want to solemnly warn American imperialism to stop playing with fire at once or it will burn itself" (Ta Kung Pao editorial of 18 June).

The Chinese leaders' effort to deter the United States at the time included (a) a revision of Chou En-lai's appeal for a conference, which was elaborated by Chen Yi to be a conference to seek "first of all" a settlement on Laos and (b) warnings that the appeal was not "a sign of weakness" and that China "absolutely will not sit idly by" while the Geneva accords are torn up and "the flames of war are spread to its side" (speech of 24 June). Chen was careful to sustain Peiping's ambiguity on what it would do to protect North Vietnam from prospective air strikes and what it would do if American marines were sent to Laos. Privately, the Chinese were bolder. By late June they seem to have convinced the Laotian ambassador in Peiping that they would act "as we had in Korea" if the United States were to put a division of marines into Laos. They also indicated to him that they preferred to "solve" the Laotian issue by convening a 14-nation Geneva-type conference, at which they would raise the entire Indochina question.

While attempting by this maneuver to impede further American commitments to Vientiane and Saigon, they apparently decided--probably during their "work conference" in June--to further encourage Hanoi and the Viet Cong. They declared that Peiping's support for the Communist effort in Laos and Vietnam "will remain unshakable"

(Kuang-ming Daily article of 20 June). That they continued to view any Soviet statement of deterrence as not essential (and, in the context of the Sino-Soviet dispute, as not desirable) was suggested by an article in the Hong Kong Communist newspaper, Wen Wei Pao, on 23 June. Referring to an article in Pravda on 21 June, which had warned that the USSR would not necessarily support China in the event of an enlarged war, the newspaper declared that this warning would only stimulate the Chinese to support the struggle in Laos and Vietnam in "a more resolute way." Khrushchev may have attempted, during the "work conference" discussions among the Chinese leaders, to deter Peiping from further encouraging Hanoi, implicitly warning the Chinese that they would have no Soviet military or political support in the event of any escalation of the war. This was a costly tactical blunder, as it provided the Chinese with a means to "prove" to the North Vietnamese leaders that Khrushchev was a traitor on the matter of support for the revolutionary struggle of a fraternal country.*

Regarding any expectation by Hanoi of support from Peiping in terms of commitment of PLA troops to the North, such a commitment was not anticipated and was not considered necessary. North Vietnamese statements reflected this situation of non-commitment. For example, Hanoi's first major statement at the time of probable Peiping-Hanoi consultations in late June warned vaguely that if the Americans "directly encroach on the security of the DRV," they will "encounter a proper rebuff," but it did not state who would administer the rebuff or how it would be carried out (DRV note to the Geneva Co-chairmen of 25 June). The definitive North Vietnamese statement of

*Khrushchev's non-support of Hanoi had made it relatively easy for the Chinese to disparage Moscow by stressing, for example, that Peiping always maintained that "it is an unshirkable proletarian internationalist duty to safeguard the peace and security of the entire socialist camp, to protect all its members from imperialist aggression." (People's Daily editorial of 9 July)

purposes. The word, "any," was repeated when the People's Daily editorial of 9 July reprinted Chen's remarks,* but later in July the Chinese leaders apparently perceived that the word was dangerously inclusive, committing them to some form of action whether an American attack was launched on the ground or in the air. Thus they dropped the word, "any," by the end of July

By late July, the Chinese were acting somewhat bolder than they had in early June--that is, bolder than during the days immediately following the Honolulu conference of American officials. For the first time, they issued a government statement which hinted at the use of the PLA:

> Despite the fact that the United States has introduced tens of thousands of its military personnel into southern Vietnam and Laos, China has not sent a single soldier to Indochina. However, there is a limit to everything. (Government Statement of 19 July)**

*The editorial of 9 July made the strongest statement of deterrence up to that time: "Should American imperialism attack the DRV, thereby posing a threat to China's peace and security, the Chinese people naturally cannot be expected to look on with folded arms." Nevertheless, it did not say what the Chinese would do when they unfolded their arms.

**The deterrent aspect of the Chinese government statement of 19 July was suggested by the People's Daily editorial of the 20th, which warned Washington to note the new threat and that "we mean what we say." They also pointed to the new threat as "showing that China has made up its mind, formulated its counter measures, as well as looked into every possible future development." (Hong Kong Wen Wei Pao commentator article of 20 July) This reference to contingency planning probably refers to the mid-June "work conference" of the Chinese leadership and further suggests that the decision to sustain and increase support of Hanoi and the Viet Cong was affirmed at the conference.

At the same time, they took care to indicate to Washington that only an attack on North Vietnam (apparently a ground attack was meant)--and not action in South Vietnam--would impel Peiping to commit the PLA in Vietnam:

> We do not want to wage a war in southeast Asia. This is absolutely clear to the State Department in Washington. This position of ours is very accurately known in the State Department. They know that we do not want to wage war. We would feel threatened only if, perhaps, the United States would send their "special warfare" toward the North, if they attack North Vietnam. That is, if the other side were to attack. This would directly endanger the stability of our border and of the neighboring Chinese provinces. In such a case, we would intervene....
>
> Yet, being encircled by aggressive people on the other side, we have to maintain this army. It would intervene if the war in Indochina should be carried to the North....If they want a small war, then a small war it will be. If they want a big war, then it will be a big war. It all depends on the Americans. (Chen Yi interview in late July with Austrian newsman)

This was the first time that a Chinese leader had publicly discussed the specific conditions which would impel the PLA to "intervene." Peiping probably believed, at that time, that the United States would not strike at the North either on the ground or in the air. An indication of such a belief, as of late July, appeared in the broadcast of a Peiping radio commentator on 27 July: he told listeners in Japan that "China considers" American threats to invade the DRV as merely intended to scare China, inasmuch as the United States "would not be able" to invade. The Soviet leaders also may have believed in mid-July that American attacks on the North were improbable; at the

time, Soviet officials reportedly downplayed the risks of escalation on the grounds that President Johnson would not let the fighting expand into a local war.

When, in early August, American planes hit North Vietnamese targets following the incident in the Gulf of Tonkin, the Chinese seem to have been taken by surprise. After a 24-hour delay, the Chinese issued their government statement in which they threatened to help but avoided saying that the PLA now had the right to intervene. The statement fell back upon the distinction made by Premier Pham Van Dong on 27 June:

> In the surprise attack on the DRV...United States imperialism went over the 'brink of war' and made the first step in extending the war in Indochina....Since the United States has taken this action, the DRV has gained the right of action to fight against aggression, and all the countries upholding the Geneva agreements have gained the right of action to assist the DRV in its fight against aggression...no socialist country can sit idly by without lending a helping hand....
>
> Aggression by the United States against the DRV means aggression against China. The Chinese people will absolutely not sit idly by without lending a helping hand. The American government must stop immediately its armed provocations against the DRV and its armed encroachments on the latter's sacred territory, airspace, and territorial waters. (CPR Government Statement of 6 August)

Thus Pham Van Dong's distinction between those who would "fight" and those who would merely "assist" was clearly and deliberately stressed in the statement and the Chinese made no threat to intervene, demanding only that the United States stop bombing (after, in fact, it had stopped). They tried to conceal their decision not to retaliate by

shifting this burden to others. For example, they insisted that "The question now is not one of the United States bringing up a 'complaint' against the DRV, but one of the people throughout the world bringing the American imperialist pirates to trial" (People's Daily editorial of 8 August), and asked (in a People's Daily editorial of 9 August) "Will the people of various countries look on with folded arms while American imperialism plays with fire? Absolutely not." In a conversation on 13 August with a non-Communist Asian diplomat, a Chinese Foreign Ministry official contrasted China's reaction with Moscow's as one of "totally opposing" American air strikes, but he did not say how Peiping intended to oppose the strikes, merely pointing to the "strong opposition of all the peace-loving peoples of the world." At the same time that the Chinese warned, "Don't think that you can get away with your surprise attack on the DRV" (People's Daily editorial of 9 August), they specified only that the Vietnamese would reply: "if the American aggressors dare to expand the war... the Vietnamese people, who are noted for their glorious combat traditions, will most assuredly be able to annihilate the United States bandits on their soil" (Liao Cheng-chih in a speech of 9 August).*

*Privately, the Chinese were anxious to convey to Washington an impression of restraint, almost certainly to deter the United States from considering strikes against the mainland. Vice Premier Li Hsien-nien in mid-August told a Pakistani official that Peiping intended to "recoup the losses by acting on the diplomatic front." Although warning that Chinese threats to intervene should be taken seriously in Washington, he underscored China's "patient and moderate" response to the 5 August strikes. Publicly, Chen Yi later committed only the Vietnamese, not the Chinese, to give a "resolute rebuff" to the United States in the event of more air strikes (statement of 7 September).

Following the second incident in the Gulf of Tonkin on 18 September, the Chinese again employed a variety of statements which were intended as deterrents, but which avoided indicating any course of retaliatory action in the event of sustained air strikes. Speaking in the language of an interested observer rather than an active participant, PLA Army Chief-of-Staff Lo Jui-ching, stated:

> The Chinese people know how to deal with war maniacs. We are closely watching every action of American imperialism to see to what degree it intends to worsen the situation. (Speech of 19 September)

After the crisis of September subsided, the Chinese deterrent statements remained vague, particularly on the matter of a new possible development which the Chinese seemed to see as probable--viz., gradual and phased escalation.

> One should realize that if aggression is enlarged regardless under what label--limited or not very limited--this still constitutes an act of war and a brazen attack on the DRV....All big aggressive wars in the world were begun with a limited label....Once an aggressive neck has been stuck out...it must be chopped off. (People's Daily editorial of 29 November)

This line was careful to sustain Peiping's ambiguity on whether the PAVN would be assisted by the PLA in actual combat in the event of any degree of escalation. This ambiguity was not really clarified in the unusual assertion of Liu Ning-yi (speech at solidarity conference in Hanoi given on 27 November) that the Chinese people will always "fight" with the Vietnamese people. This formulation did not make clear whether "fight" was to mean joint military operations (combat) or merely joint political struggle.

Hanoi was clearly aware of this carefully cultivated ambiguity in the Chinese position. Regarding Chinese

behavior following the August 1964 American air strikes, a North Vietnamese official told a Westerner in early November that "When the Americans attacked the DRV, the Soviets did nothing and the Chinese only talked."* In a published interview in December, Ho Chi Minh suggested that North Vietnam would have to fight alone in the event of escalation. He was careful to say that if the war were expanded to the North, "the CPR will support us and the socialist countries will support us" (reported by Vietnam News Agency on 23 December). At the same time, the Chinese continued to make their usual distinction between supporting North Vietnam and fighting with it. Peiping declared that if South Korean troops were sent to South Vietnam, this would provide all Geneva accords countries the full right "to support" the South Vietnamese (People's Daily editorial of 14 January 1965). Mao Tse-tung himself spoke even more cautiously of the conditions which would compel the Chinese to engage in military operations in Vietnam. He told Edgar Snow on 9 January that "Only if the United States attacked China would the Chinese fight....The Vietnamese can cope with their own situation."

Hanoi put limits on its own reaction. The North Vietnamese reaction to the air strikes of 7 and 8 February 1965 was marked by an apparent anxiety to dispel the notion in the North and elsewhere that Hanoi was obliged to hit back with the full force of the PAVN across the 17th parallel. The DRV government statement of 8 February

*In the fall of 1964, the North Vietnamese began to speak less optimistically about a victory in the South within a few years, and to foresee a longer period. In September, a North Vietnamese trade official told a Japanese businessman that although it may take "generations," we are confident we'll win the war "so long as we have rice and salt." In mid-December, Ho personally told the Cambodian Foreign Minister that "10 to 15 years" would be required for the advent of Communist power in the South.

declared that the enemy had been "appropriately punished," and it made no mention of the need to retaliate in reprisal for damage inflicted by the strikes on the North. The 7 February appeal of the Liberation Front presidium for forces in the South to "strike strongly, really strongly, and really lastingly, in order to protect the North and to liberate the South" suggested that Hanoi's policy was to react by retaliating on a large scale with its military assets in the South rather than preparing for a major PAVN offensive. Hanoi depicted the air strikes as part of an established pattern rather than making a new pattern. By implication, therefore, no major new counteraction directly from the North was required. "Well-deserved" retaliation from the North took the form of bringing down American strike aircraft (Nhan Dan editorial of 13 February). Hanoi declared only that the "South Vietnamese people have the right to strike back." (PAVN regional military commander to NCNA on 11 February)

Peiping, however, seems to have been anxious to go beyond the question of the right of the Viet Cong to that of the DRV itself--i.e., to that of the use of the PAVN.

> ...the DRV has secured the right to take the initiative in dealing counterblows to the South Vietnamese puppets. The United States government should be reminded that it is the United States which has invaded South Vietnam in violation of the Geneva agreements and which has now further taken the lead in breaking up the line of demarcation between southern and northern Vietnam. Do you seriously think that you alone are allowed to do so while others are not? (CPR government statement of 13 February)

This new language suggests that in February 1965 the Chinese leaders were urging Hanoi to increase drastically the number of regular PAVN units in the South, apparently by a large-scale attack across the 17th parallel. Hanoi's propaganda media carried the text of this Chinese government statement, but the Vietnam News Agency summary omitted the theme of initiating counterblows, and the

DRV government statement of 14 February did not mention any DRV right to take such action. By contrast, the People's Daily and Ta Kung Pao editorials of 14 February repeated the theme, as did the People's Daily editorial published on the 19th. The Chinese position was probably intended also to keep the burden of retaliation on the North Vietnamese--that is, on Hanoi's side of the Sino-Vietnamese border; at the same time, the Chinese tried to avoid the appearance of an inactive partner and stated--to the United States--that "We are waiting for you in battle array" (People's Daily editorial of 9 February). This statement did not quite focus on the situation at the time, as the United States was striking North Vietnam, not China, and was doing so in the air, not on the ground.

The Chinese leaders tried to dispel the impression in various countries that Peiping feared the consequences of a direct military confrontation with United States forces. They and their followers tried to justify their inability to deter air strikes against the North and their unwillingness to act militarily. One line taken was that Peiping refused to be lured into fighting at a disadvantage. An editorial in the Cambodian paper, La Depeche (a daily which strongly supports Chinese positions), replying on 9 February to "those who say that the Chinese are contented with giving only verbal support," argued that Peiping "must not commit itself," but must prepare for a confrontation "under the best of all possible conditions." The Chinese leaders themselves revived the formulation of 6 August 1964 that Geneva signatories had gained the right to "assist" the DRV and again resorted to meticulous ambiguity: "as to how this right will be exercised, it is our own affair" (CPR government statement of 9 February). They avoided the question of what the PLA would be ordered to do in response to the early February strikes: "If American imperialism is bent on spreading the war flames and imposing war on us, then we shall have no alternative but to go along with it to the very end. In that event, the whole of southeast Asia, the whole of Asia, would be aflame with the revolutionary fire in which you will be so burnt to death that not even your ashes would be traceable" (People's Daily editorial

of 10 February). This statement was vague precisely at points where precision was easy to employ. That is, it referred to "imposing war on us" and then failed to make clear whether "us" referred to China only or to China and North Vietnam together. At the same time, it dodged the real issue: a commitment to act militarily to counter air strikes against the North. Further, to state that "an invasion of the DRV is an invasion of the CPR" and then to make the entire matter conditional--e.g., "If you insist on imposing war on us, heavy rebuffs are in store for you" (People's Daily editorial of 9 February)--was to make no commitment to use the PLA in defense of the North against air strikes. Peiping seemed to be saying something else: that an American ground attack against the North, if large enough to threaten the PAVN with defeat (as the North Koreans had been threatened in autumn 1950), would lead the PLA to intervene. (It was not necessarily saying that the PLA would intervene in Vietnam if the U.S. were to make air strikes on China.) But a U.S. ground attack on the North was hardly a real possibility; it was a hypothetical situation regarding which Chinese statements could be made to sound bold. "You will become utterly helpless when people resisting aggression, instead of being afraid of you, dare to fight, defy difficulties, and advance wave on wave. You have been taught a lesson on this score in the Korean War. Do you want to have the lesson repeated in Indochina?" (CPR government statement of 13 February)

In short, the Chinese commitment--or hedged promise--was most nearly explicit on the development least likely to occur--a major American ground attack against the North (or China). Regarding the real military situation in February, the Chinese in effect conceded that the air strike strategy against the North could not be halted by their prolonged verbal deterrent effort. They also implicitly conceded that the strikes were a significant American initiative which deprived the North Vietnamese of sanctuary. Reflecting a considerable degree of sensitivity to their inability and unwillingness to try to stop the air strikes, the Chinese declared: "How far will you go? That's your own lookout. But you are grossly mistaken to think that the war can be made to

develop as you wish" (People's Daily editorial of 19 February). Explicitly disparaging American air strike capability based on carrier strength in the Gulf of Tonkin and implicitly underscoring PAVN ground strength, the Chinese pointed to the "airdromes on the sea" and asked "What can they do since the outcome of the war has to be decided on terra firma?" (People's Daily editorial of 19 February). That is, the Chinese were compelled to fall back to the position that the PAVN would not permit the "outcome" of the war to be defeat on the ground for Hanoi; but this did not alter the fact that the North was being subjected to bombing. Privately, the Chinese were bolder. Two statements made on 15 February--one in Paris and one in Rangoon--carried a behind-the-scenes threat from Peiping that China would "intervene" or send "volunteers" if the bombings continued.

The Chinese leaders' reaction to the air strikes of 2 March seemed intended partly to encourage again the North Vietnamese to send more PAVN units to the South and partly to deter further attacks. Regarding encouragement of Hanoi, Peiping stressed explicitly the line that the United States had again "stepped over the boundary" of the 17th parallel and spoke of retaliation in terms of a strike back, apparently from the North (People's Daily editorial of 3 March). The North Vietnamese, however, stressed the theme that the DRV anti-aircraft artillery had given the Americans an "appropriate answer" and that the Viet Cong, too, had "answered" and would answer them with more military victories in the South (Nhan Dan editorial of 5 March). Although their 3 and 5 March editorials mentioned "punishing" the Americans, they did not do so in the context of widening the conflict. Yet this is precisely the context in which the Chinese discussed striking back, downplaying Hanoi's theme of punishment by anti-aircraft artillery in the North:

> Having flagrantly resorted to the war move of bombing the DRV again and again, the Johnson administration said in its statement that the United States 'wishes to avoid widening the conflict.' What does

> this mean? It means in fact that the United States is free to bomb any place at will while others should never strike back; otherwise, they would be 'widening the conflict.' What nonsense! What gangsters' logic! 'It is discourteous not to give after receiving,' a Chinese saying goes. Since American imperialism has forced the war upon others, it cannot expect to escape the punishment it deserves. (People's Daily editorial of 3 March)

This line of argument, which gratuitously provided the North Vietnamese leaders with a basis for PAVN retaliation, seemed to be intended to urge Hanoi to act on a larger scale as well as to accelerate the overall Viet Cong effort. That the Chinese were urging a course of large-scale PAVN entry into the fighting was further suggested by the line of argument carried earlier in a Red Flag article dealing with the war in Vietnam:

> The American imperialists have extended the war to the DRV. The DRV, therefore, is fully allowed to use every possible means to deal telling blows to them and their lackeys. (Red Flag "Commentator" article of 27 February)

This article was not intended merely as justification of the war to neutral and other non-Communist leaders. It was broadcast in Vietnamese, and only in Vietnamese, to Vietnam six times on 2 March, strongly suggesting the Chinese leaders' intention to impel Hanoi--"the DRV is fully allowed"--to make a significantly greater military commitment and to accelerate the effort in the South.

At the same time, the Chinese offered support for such an accelerated effort. Politburo member Peng Chen declared that the Chinese people "have made every preparation and resolutely support the Vietnamese people in launching counterattacks for self-defense in various ways against the American aggressors" (speech of 5 March).

3. To Deter the United States from Air Strikes Against China

Following the early February air strikes, the Chinese leaders apparently became more aware of a real danger of strikes against their own bases than they had been since August 1964. Cutting directly across the bold talk of preparation to take "real action" was the not so bold move to disarm a pre-emptive American air strike on bases in south China by privately indicating (to Washington through a third party) that PLA ground forces were not massed on the southern border. Immediately following the air strikes of 7-11 February on the North, Peiping's Foreign Ministry arranged a visit to the Sino-Vietnamese border area by the China-based correspondent of AFP; he was told by a Chinese official in Kunming that the visit was intended to demonstrate that Peiping was not preparing for direct intervention. Apparently as intended, the correspondent reported to American officials that he saw no military activity in the area. Although insisting publicly on 12 March that American threats ("no sanctuary" and "hot pursuit") to bomb China could not frighten Peiping, the Chinese leaders in effect admitted their inability to prevent the bombings of North Vietnam from extending throughout the DRV and eventually to south China. They implicitly conceded that the United States had unlimited capability to bomb, but downplayed the military significance of bombing:

> Anyhow, you have only so much armed strength at your disposal, and for all your clamoring, the means you can resort to are /only/ that many.

The Chinese also insisted that the North Vietnamese should by no means maneuver for negotiations as a means of gaining a suspension of air attacks. Particularly in the wake of Kosygin's visit to Hanoi, the Chinese declared--in the context of possible "peace talks"--that "We shall never succumb to the American imperialists' blackmail. No socialist country should" (People's Daily editorial of 1 March); that the United States is trying "to gain at the negotiating table what it is unable to gain on the battlefield" (Red Flag article of 27 February, broadcast in Vietnamese to Vietnam on 2 March); and that "Vietnam will not agree, nor will all countries which truly uphold the Geneva agreements" (CPR government statement of 2 March). By contrast, Hanoi was more equivocal on the matter of negotiations in early March, did not directly attack the idea, and deleted the phrase, "Vietnam will not agree," from the Vietnam News Agency account of Peiping's statement.

Regarding Peiping's deterrent effort in early March, the boldest Chinese statements were made privately or quasi-privately. And even these statements contained elements of ambiguity. For example, an "important" Chinese official told a Japanese correspondent in Peiping on 2 March that

> I do not think the United States will be able to carry out bombings on a larger scale, but if it should take a chance, China would strike the United States with real action. (Tokyo Nihon Keizai, 3 March)

Ambiguity was apparent when, after refusing to answer the correspondent's question, "By 'bombings on a larger scale,' do you mean the bombing of Hanoi?", the Chinese official retreated into the following locutions: "Preparations are complete. Troops can be mobilized at any time." These locutions begged the question of when and under what conditions Peiping would use the PLA to assist North Vietnam.

> You may act in your way and we will act in our way. (CPR government statement of 12 March)*

The Chinese leaders were also impelled to downplay the military significance of the landing of American marines at Da Nang. By arguing in their statement of 12 March that the marines' presence would "educate" the South Vietnamese by "negative example" and that "no village, town, forest or road in the whole of southern Vietnam is safe," the Chinese introduced another line of justification for limiting their response to support, falling short of use of the PLA in Vietnam. The apparent logic was: if American force-increases do not basically change Viet Cong capabilities and prospects, Chinese military intervention is not required. "How can 3,500 men save the aggressors from defeat in war?" (CPR government statement of 12 March) The argument was also intended, of course, to buoy up North Vietnamese and Viet Cong morale.

By warning, in the context of non-intervention, that the United States had "embarked on the path of a Korean-type war" (CPR government statement of 12 March), the Chinese further reduced the deterrent value of the Korean War analogy. And by using the analogy in another context--namely, in deploying South Korean troops to Vietnam, the United States "has gone farther down the path of fighting a Korean-type war" (People's Daily article of 18 March)--while threatening no countermeasures,

*Later, in May, the Chinese explicitly contrasted American air and naval power with Communist capability on the ground, declaring that "American naval and air superiority" is no match for "revolutionary war" on the ground and "That is why we say, the enemy may fight in the way it chooses, but we fight in our way." (People's Daily editorial of 7 May This was an indirect admission that Hanoi and Peiping did not have the capability to prevent the air strikes.

Peiping further weakened it.* Actually, in the apparent Chinese view, the PLA would be used to act on the analogy only if American ground forces moved across the 17th parallel, defeating PAVN units and continuing to advance northward. On this point, Edgar Snow in April reported the "thinking of the Chinese leaders" as follows: "Only after repeated warnings were Chinese volunteers sent into the Korean War. They did not intervene until the transportation and communications networks across the Yalu River began to be bombed." Snow's distortion on the matter of bombed networks across the Yalu--if the distortion came from the Chinese--would weaken the analogy to the point of implying that China in this case would not intervene unless China itself were attacked. While it seems doubtful that the Chinese were trying to encourage this impression (as they were taking a different line in other interviews in the same period), Snow seemed to be saying, at the least, that Peiping would not consider air strikes against North Vietnam a sufficient reason for PLA intervention. (His views were set forth in an article in the Tokyo Sekai, #4, April 1965.)**

Regarding the matter of "volunteers," in the context of air attacks on the North, Chinese pledges to send them had political-psychological value--primarily for Chinese prestige, pressure on neutrals, and popular morale in the North--but had no military meaning. Although

*This weakening process had been accelerated by use of the analogy in Chinese statements published on 13 February and 4 March following the early February and early March air strikes on the North.

**The sufficient reason for PLA intervention was asserted privately in the same month by Chou En-lai: an American ground force attack on the North (talks with Ne Win in Rangoon on 3 and 4 April). Chou also told Sihanouk in mid-April that Peiping would send no troops to North Vietnam as long as South Vietnamese or American troops did not invade above the 17th parallel.

the early and mid-March air strikes spurred Hanoi to publicize offers of the Russians, Chinese, Cubans, and others to send volunteers "to fight beside their Vietnamese comrades" (Nhan Dan editorial of 17 March), the North Vietnamese leaders almost certainly viewed these publicized offers as having no real deterrent value. In mid-March, Chou En-lai in effect admitted this, ruling out PLA intervention by alluding to DRV self-reliance. Replying to a French correspondent's question regarding air bombardment of the North Vietnamese, Chou said: "In the first place, they can defend themselves." Hanoi itself declared self-reliance the real Vietnamese Communist policy on military manpower, and voluntary enlistment of Vietnamese was depicted in the 14 and 17 March Nhan Dan editorials as providing the necessary fighting and reserve force for the PAVN. When, therefore, Hanoi's Council of Ministers' meeting on 4 April stressed self-reliance in fighting, it was merely formalizing the fact that Vietnamese Communists were fighting and would fight alone in the war's then-current phase.

Regarding the matter of large-scale PAVN troop movements into the South--a policy Peiping apparently preferred--Hanoi tried to dispel the impression abroad that it would retaliate against the mid-March strikes by taking such radical military action. The North Vietnamese leaders probably believed at the time that a large-scale--rather than piecemeal--PAVN movement across the 17th parallel would spur the United States into launching massive air strikes against all targets in the North. When Hanoi broadcast the 22 March Liberation Front statement, which appealed for support from the North, it changed the key sentence to a more restrained and contingent warning--i.e., from "we will call" to "we will have to call in case of need" on those southerners sent North in 1954. Similarly, when it had called a few days earlier on PAVN forces to defend the country "in coordination with the liberation forces" in the South (Nhan Dan editorial of 16 March), the context had suggested

that the PAVN would defend the North and the Viet Cong would "defend" the South.* By stressing North-South "coordination," Hanoi in these statements seemed to be sidestepping the major issue--that is, whether to launch a large-scale retaliatory attack southward--and insisting instead that Viet Cong operations in the South (such as the bombing of the American embassy in Saigon) was a coordinated and appropriate response to air strikes against the North.

Peiping's prestige was damaged by the March air strikes. These strikes destroyed the concept of a sanctuary and forced them to recognize that Mao was wrong in thinking that small wars could be fought with only slight risks to the base areas and to the security of other bloc countries. The Chinese were compelled to fall back on the argument that the United States would not win the final victory. They were also compelled to screen their military inaction behind a cloud of words, which included the unprecedented pledge to send men to fight in the South. This pledge was made in response to the Liberation Front's 22 March appeal with an eye to (a) recouping setbacks in Peiping's prestige, (b) competing with Moscow on the matter of willingness to send volunteers, and (c) preventing further increases

*The sentence made the North-South distinction in the following way: "Fighting in coordination with the liberation forces and people in the South, let our armed forces and people in the North always stand ready, uphold the spirit of daring to fight and to win, and deal the American pirates still heavier blows to defend the life and property of our people and the airspace, territorial waters, and territory of our country."

of American (or anti-Communist) ground forces in the South.* However, the pledge was hedged. China is "ready to send our men, whenever the South Vietnamese people want them, to fight together with the South Vietnamese people to annihilate the American aggressors" (People's Daily editorial of 25 March). Chen Yi and Chou En-lai used the same hedge--i.e., whenever wanted--on 28 and 29 March respectively. In the 25 March editorial, Peiping was careful to distinguish between the fact that the Viet Cong had already called for "aid, including arms and all other war materials" (and were in fact receiving such aid) and the fact that they had not yet called for fighting men. That is, the Chinese in effect told Washington that their real position was not to commit PLA forces to fight in Vietnam at that time.**

The Chinese leaders hoped to deter the United States from striking by air at China by making it easy for

*Sensitivity to Peiping's inaction and setbacks in prestige was also reflected in (a) a pro-Communist newspaper's appeal to readers in Hong Kong to send letters to the editor to refute local Chinese Nationalist claims that Chinese, not Americans, are the real "paper tigers" (Wen Wei Pao editorial of 14 April) and (b) Peng Chen's use of a hard adjective--e.g., China is "willing to take emergency action" to force the Americans out of Vietnam (speech of 18 April). But Peng was ambiguous on the precise nature of that "emergency action." His remark, made at a time when the delegation led by Le Duan was in Moscow, was primarily intended to regain some ground lost to Moscow as the Soviet pressed their post-Khrushchev effort to increase influence with the North Vietnamese leaders.

**Regarding the matter of negotiations, the 25 March editorial suggested that the Chinese also intended their position to serve as a means of applying more pressure on Hanoi to adopt a stand--against negotiations--similar in degree of harshness to that of the Front and Peiping.

Washington to read the hedge in their position on the matter of sending volunteers. That they were anxious to make this clear to Washington is suggested by (a) Chen Yi's 15 March statement--reported by a Western diplomat in Peiping--that China did not intend to intervene militarily in Vietnam so long as Hanoi did not request China to do so and (b) the story given to a Japanese correspondent in Peiping on 25 March--that is, on the same day that Peiping published its bold-appearing but substantively-weak editorial on volunteers. The correspondent reported that "informed circles" (apparently several Chinese officials) in Peiping believed the time not yet ripe for sending PLA forces to North Vietnam or to the South, that Viet Cong forces would first be strengthened by regrouped southerners, that after Hanoi and Haiphong had been bombed and the North had suffered considerable damage, PAVN forces might cross the demarcation line and strike at American bases in the South, and that only if, at some future time, there were fear that American ground forces would sweep the whole of Vietnam (including the North), China would intervene with PLA units. These signals to Washington from Peiping that the PLA would not be used in Vietnam except in a remote contingency were published at a time when the Chinese seemed intent primarily on deterring further American strikes against North Vietnam. They thus contradicted the ostensible intent. It is probable, therefore, that Peiping was more concerned at the time with deterring the United States from striking at bases in China--and was implicitly arguing to this end that since the PLA is not building up, a pre-emptive American air strike is unnecessary.

This increased concern about possible strikes against Chinese bases was expressed in various ways. For example, a Peiping government statement of 12 March declared that American threats to bomb China would not frighten Peiping; the Chinese ambassador in Paris on 27 March told an Asian diplomat that "some American leaders have even threatened to bomb China, we are quite prepared for this;" a People's Daily editorial of 29 March stated that after attacking South and North Vietnam, Washington's "next step will be aggression against China;" Chen Yi told Nepalese officials on 31 March that an attack on China might come at any time,

and that China was preparing its defenses; and in late March, Chou En-lai reportedly told Ben Bella that "We are convinced that the United States will bomb China and we have already taken all measures to face this aggression." The 9 April attack of Chinese Communist MIG aircraft on American Navy aircraft southwest of Hainan probably was intended as a warning to Washington and further reflected Peiping's real concern that the mainland, or at least Hainan, might be hit by American (or Chinese Nationalist) air and naval strikes.

The shift to increased concern occurred roughly at the time when, in March, the Chinese leaders were made clearly aware that their effort to deter strikes against the North had failed. They believed that these strikes would be sustained and even expanded. Central Committee member, Liao Cheng-chih, for example, was quoted on the air strikes by the Japanese correspondent in Peiping:

> In order to accomplish a revolution, they must bear even their own country's being ruined. (Tokyo Shimbun of 26 March, based on a telephone conversation between the paper's main office and its correspondent in Peiping on 25 March)

On 31 March, the Chinese again hinted at their view that the deterrence effort had failed and they could not prevent further American air attacks on the North. They declared that the Viet Cong would punish the United States "no matter how many bombs it may dump on North Vietnam" (People's Daily "Commentator" article of 31 March published following the bombing of the American embassy in Saigon). At a time when North Vietnamese targets were subjected to air attacks and when the Chinese leaders in effect were telling the North Vietnamese leaders that these strikes must be absorbed, the Chinese cast about for a plausible line to justify their encouragement of Hanoi to face even national destruction. Partly to justify the sacrifical course they were urging upon the Vietnamese and partly in response to Secretary Rusk's 3 May remark on the possibility of suspending bombing, the Chinese leaders discussed more openly than before the

prospect of American strikes against the mainland. Publicly, they pressed forward along the line that Peiping would support the war in Vietnam even if China, too, were to be bombed. The Chinese in this way hoped to add weight to their argument that Hanoi should not accept negotiations in return for a suspension of bombing.

Further, the Chinese leaders hoped to indicate to Washington the futility of any future course which envisaged various degrees of bombing the mainland of China. Marshal Ho Lung declared that Peiping would support the war in the South "no matter how great the cost and sacrifice" (speech of 7 May at the East German embassy); Lo Jui-ching wrote that Peiping would help the Vietnamese "to the limit of our capabilities" even if the United States "enlarges the war" (Red Flag article of 10 May); and "Observer" wrote that support would continue "whether you bomb China or not....We have taken into full account every war venture you may possibly launch and made adequate preparations to meet it" (People's Daily article of 12 May). The latter statement about preparations strongly suggested air defense precautions.

As they prepared for the prospect of air strikes against the mainland (adopting the strategy of expecting the worst development),* they also indicated that they

*Lo Jui-ching wrote that "preparations must envisage the use by imperialists of nuclear weapons as well as conventional weapons" and went on to claim that the United States was converting the war into "a local war of the Korean type" (Red Flag article of 10 May). The People's Daily editorial of 14 May also claimed that special war was being expanded into regional war. This emphasis conflicts with the CCP doctrinal position that small wars can be confined and contrasts with that of 1961-62, when Chinese materials stressed the small-scale, "special warfare" nature of the fighting (see footnote on page 4). The change in Peiping's appraisal of the extent of the war reflects their awareness that not only North Vietnam, but also China has been denied the "right" of indefinite sanctuary.

preferred not to initiate a Sino-American clash. Lo Jui-ching laid it down that "Our principle is: We will not attack unless we are attacked. If we are attacked, we will certainly counterattack." (Red Flag article of 10 May, in which Lo suggests that the Vietnamese can handle the fighting alone) On 12 May, a Chinese official responsible for liaison with the Japanese trade office in Tokyo told a Japanese businessman that "If the United States continues to move toward escalation of the war, China will not sit idly by. Even then, China's position would be to return the punch after being hit first."

Regarding the strategy of the war in the South, the Chinese apparently continued to press Hanoi to accelerate the introduction of regular PAVN units into the fighting. The Chinese seem to have responded to the air strikes of early February and March by encouraging Hanoi to move PAVN forces on a large-scale across the 17th parallel. In early June, they again urged Hanoi:

> All the Vietnamese people, including the people of North Vietnam, have acquired the right to exert their utmost to hit back...the 17th parallel provisional military demarcation line ceases to exist and the people in North Vietnam cease to be restricted in giving support to their fellow countrymen in the South. (People's Daily "Observer" article of 1 June)

Unlike its February reaction, Hanoi did not delete this passage from the domestic broadcasts of the "Observer" article which were beamed on 3 June. This suggests that the North Vietnamese leaders may be willing to infiltrate a few more PAVN units to fight in the South. However, as for PLA action, "Observer" treated the matter with caution. "The Chinese people have the right to do all in their power to aid the Vietnamese people in counter-attacking." Further, on 29 May, Chen Yi had been quoted in People's Daily as telling a French correspondent that the Vietnamese "are perfectly capable of driving the American aggressors out of their country by relying on their own forces." This is obviously the Chinese leaders' preferred course in Vietnam.

FOLLOWING IS CAS VIENTIANE 8408 RECEIVED IN WASHINGTON AS IN 11109.
REF: JCS 5221, 062143Z

FOLLOWING ARE AMB SULLIVAN'S COMMENTS ON REF, CONCURRED IN BY CAS VETN:

I BELIEVE IT PERTINENT TO CORRECT CERTAIN APPARENT MISUNDERSTANDINGS RE CAS GUERRILLA EXPANSIONS ALREADY APPROVED IN THE DIRECTION OF THE DRV-LAO BORDER IN THE PROVINCES OF SAM NEUA AND LUANG PRABANG. THESE APPROVALS WERE GRANTED BY ME AND CONCURRED IN BY THE DEPARTMENT OF STATE FOR EXPANSIONS INTO THE DRV AS STATED IN PARA 3A REF. BY THE TERM "EXPANSION" AS USED IN THESE DISCUSSIONS I REFER TO THE ARMING OF ABLE-BODIED TRIBAL ELEMENTS IN THEIR HOME AREAS AND RECLAIMING THESE AREAS FROM PL CONTROL, BRINGING THEM WITHIN U.S. MISSION'S REFUGEE PROGRAM AND SUPPORTING THEM WITH RICE, MEDICAL CARE, EDUCATION, ETC. IT IS WELL BEYOND OUR CAPABILITY AND OF QUESTIONABLE DESIRABILITY AT THIS TIME TO PLAN SUCH EXPANSIONS INTO TERRITORY CONTROLLED BY THE DRV. I HAVE LIMITED BY APPROVALS FOR OPERATIONS INSIDE THE DRV FROM LAOS TO SMALL SCALE INTELLIGENCE PROBES TO DETERMINE POPULAR ATTITUDES AND THE RECRUITMENT OF INDIGENOUS ASSETS TO PROVIDE INTELLIGENCE AND SUPPORT TO TEAMS SENT IN FROM LAOS. I HAVE AUTHORIZED COMMITMENTS TO INDIVIDUALS ONLY AND NOT TO VILLAGE POPULATIONS OR TRIBAL GROUPS AS SUCH.

MY OWN ATTITUDE TOWARD OPERATIONS INTO THE DRV FROM LAOS IS FAMILIAR TO THE DEPARTMENT AND, I BELIEVE, TO CAS HQS. I FEEL THAT ORIGINAL PURPOSE OF OPLAN 34A IS NOW BEING ACCOMPLISHED IN EFFECT BY ROLLING THUNDER AND IT IS NO LONGER NECESSARY TO CONDUCT GROUND OPERATIONS TO ACCOMPLISH 34A OBJECTIVES SUCH AS TO "INTERDICT ROUTE 7" IN NORTH VIETNAM.

WITH RESPECT TO "THE BROADER OBJECTIVE OF A FULL SCALE RESISTANCE EFFORT", I ASSUME THAT THERE WILL BE FURTHER DISCUSSION ON THE POLICY ASPECTS OF THIS CONCEPT AND I WOULD HOPE TO BE CONSULTED AT LEAST WITH RESPECT TO THE LAUNCHING AND SUPPORT OF SUCH OPERATIONS FROM LAOS.

Mandatory Review
Case # NLJ 95-292
Document # 39

Dear Mac:

I transmit herewith our most recent Special National Intelligence Estimate 10-9-65 which estimates foreign reactions, particularly those of the DRV, China, and the USSR, to certain US military courses of action in Vietnam. These courses are set forth in appropriate detail on the first and second pages of the document under the heading "Assumptions."

I invite your special attention to item (c) on page two: "...we might either continue present policy with regard to air strikes or extend these strikes in North Vietnam to include attacks on land (but not sea) communications from South China...."

This effort to interrupt the flow of military supplies from China to North Vietnam and the southern areas of combat recalls similar efforts and their concomitant difficulties in other theatres of operations and in other time frames. It is my feeling that a close study of our efforts to isolate battlefields in World War II (especially the campaign in Italy) and in the Korean War through the interdiction of land communications by air attacks contain many valuable lessons. Matters such as the rationale of initial target selection; the handling capacity of relevant routes and the proportion of this capacity needed for purely military traffic; the recuperability of targets once damaged; the enemy's use of lash-up repairs, detours, and alternate routes; the relationship between the interdiction of a given route or routes and the level of the enemy's combat effectiveness, and so on, may be greatly illuminated by my suggested reference to history.

APPROVED FOR RELEASE
DEC 1999

We should bear two things in mind: first, whereas these lessons of the past will be useful, I am sure that they will not be strictly applicable to the much more difficult problem of interdicting overland supply in the Indochina area (ordinary levels of combat expenditure are comparatively small, manpower for repair and portage service is almost certainly not in short supply, and route capacities are probably much larger than those necessary for strictly military requirements); second, these lessons will obviously not be applicable to sea-borne traffic which -- if not right now of major importance to the DRV/VC -- would become so as soon as the squeeze on overland movement began to be felt.

Sincerely,

"Red"

W. F. Raborn

INTELLIGENCE MEMORANDUM

Probable Effects in China and Taiwan of a GRC Attack on the Mainland

Without massive US support for the GRC across the board, including direct military participation in the operation itself, Chiang Kai-shek's proposal to land on the South China coast, cut the main lines of communication between China and North Vietnam, and seize Kwangtung Province has very little chance of success.

A Kwangtung Expeditionary Force (KEF) launched from Taiwan and relying on unaided GRC capabilities would be small. Within a radius of approximately 250 miles the Nationalists are believed capable of putting four divisions ashore--about 50,000 troops--and supporting them for perhaps 30 days. At any greater distance from Taiwan GRC capabilities would be sharply reduced. The GRC task force would have to overcome determined opposition by Communist motor torpedo boats and light patrol craft--of the type that sank two Nationalist ships off the coast south of Kinmen on 6 August.

The GRC air force could provide only marginal air cover for assault elements landing on the northern coast of Kwangtung and probably only intermittent support south of Swatow (see map showing GRC air force radius of action). Once on the beach, GRC troops would be face to face with vastly superior Communist ground forces.

In the Canton Military Region alone the Chinese Communists have more than 300,000 regular troops--infantry, artillery, and armor--grouped in five armies. In addition the Communists have six border defense divisions in this area. These units, and the bulk of the more heavily armed regular troops, are deployed on or near the coast where they would be immediately available to oppose GRC landings. Communist troops would have air support from fighter and bomber units which, although probably inferior to GRC air force in quality, would have the advantage of fighting from nearby bases and would have numerical superiority. (see map)

Unless one assumes that major Chinese Communist military units would immediately defect and join forces with the GRC invaders--something we consider extremely unlikely--a successful hit-and-run commando raid in strength is the best result that could be hoped for. Even this would be a chancy operation which could easily turn into a debacle involving the destruction or capture of the greater part of the attacking force. The repeated failure of small-scale (about 30-man) butcher and bolt raids by GRC commando teams between late 1962 and mid-1964 points up the risks of attempting coastal landings.

The net effect of these raids, of which there were 33 in 1963 and 25 during the following year, appears to have been to improve Chinese Communist detection capabilities. The teams encountered only the first line of Communist coastal defense, local militia and Public Security units. These forces displayed no inclination to cooperate with the raiding teams, which were killed, taken prisoner, or driven off in a matter of hours. We have no reason to believe that the end result of a larger operation by unsupported GRC troops would be substantially different, although it might take more time.

If the GRC succeeded in putting a sizable force ashore, local defense units would probably resist to the best of their ability in an effort to buy time for the deployment of regular troops. These would

be quickly concentrated and committed to contain and ultimately to destroy the invaders. There is little doubt that Communist troops would be able to achieve this objective. The PLA is an effective combat force, well trained and heavily indoctrinated. It performed creditably in Korea, demonstrated its ability to fight and win during the 1960 campaign against GRC irregular formations--stiffened by Special Forces units sent from Taiwan--operating in Burma near the Chinese frontier, and more recently in the 1962 border war with India.

The private GRC estimate of the chances for success in an operation lacking US support is probably not very different from our own, and it seems clear that Chiang Kai-shek has a more ambitious scenario in mind. At a minimum he probably envisions massive US backing for the operation up to the beach, with the expectation that if things do not go well once his troops are ashore the US will enlarge its commitment by direct participation (at least in the air) in the campaign on the mainland.

With US naval and air support up to the water's edge the prospects for a GRC landing in force would be considerably better, but the outlook for success in the ultimate objective of seizing and holding all or most of Kwangtung Province is dim at best. Even the largest expeditionary force the GRC could muster and put ashore with US assistance would be heavily outnumbered by the reinforcements the Communists could quickly deploy from the strategic reserve to back up their forces already in place in South China.

During 1963 the GRC worked out a detailed plan for an amphibious attack against Kwangtung. The operation involved 538,000 men--army, navy, and air force--the bulk of the entire Nationalist military establishment. Only a skeleton garrison force of regular troops, strengthened by a call-up of reserves, would be left behind to defend Taiwan and the Offshore Islands. The plan was carefully reviewed by a top level Sino-American committee which included Admiral Alan Kirk--then US Ambassador in Taipei--and COMUSTDC Vice Admiral Charles Melson.

Examination of the proposed operation revealed serious deficiencies in many key areas. The GRC did not have enough amphibious lift for the operation or trained crews to man additional landing ships if these were provided by the US. The Nationalist navy lacked sufficient ships for beach preparation and fire support missions. They did not have enough tactical aircraft with the range required for interdiction and close support missions, nor an adequate pool of trained pilots to replace combat losses. All the armed services were found to be short of trained specialists, especially key technicians for logistics units required to support sustained operations. The total GRC deficit in all categories of supply needed for the operation amounted to approximately a million and a half tons.

Admiral Melson commented that if these deficiencies were eliminated the GRC expeditionary force could probably seize a beachhead and take over the port of Swatow but would be unable to break out of their initial lodgement without assistance from US troops. It is questionable how long GRC troop morale would hold up if the expeditionary force remained bottled up inside a Swatow perimeter. The senior officers and NCO's in the GRC armed forces are mainlanders and would probably remain strongly motivated. The majority of the rank and file, however--approximately 85 percent of the riflemen in the line--are Taiwan-born, have no stake in reconquering mainland China, and might lose heart quickly under continuous heavy pressure.

The Communists would react swiftly to cope with an invasion. The PLA, a land army of some 2.3 million men, is the backbone of Peiping's military strength. Nearly one third of this force is already deployed along the China coast from Shanghai to the DRV border--a total of approximately 634,000 men. These troops include 30 regular infantry divisions, nine artillery divisions, one armored division, and 12 border defense divisions. Forces in the area of the GRC landing would be committed at once to blunt the initial thrust and contain the invasion until reinforcements in overwhelming strength could be deployed from the strategic reserve in north and northeast China.

The Communist troop build-up in the Taiwan Straits area during June 1962 provides some indication of the speed with which additional forces could be brought in. Apparently in response to what Peiping interpreted as a possible threat of US-supported action by the Nationalists, the Communists moved six infantry divisions and one artillery division into Fukien Province in about one week's time, raising the order of battle strength there from 194,000 to 311,000. (see map)

Additional air support for defending Communist forces in Kwangtung could probably be marshalled with equal speed. During the 1962 build-up four fighter regiments were deployed to backup fields in a matter of days. Chinese Communist air strength now within operational range of the Kwangtung coast includes 390 jet fighters and 25 jet light bombers. This force could be augmented in short order. Peiping has a total of 1,700 jet fighters and 275 jet light bombers and there are at least seven unoccupied but usable airfields in South China to which additional air regiments could be deployed. Much of the Chinese Communist air force is obsolete by Western standards, but would nonetheless be effective against invading troops lacking local superiority.

The GRC belief that a large-scale invasion would trigger mass desertions from the ranks of the PLA appears to have little basis. The armed forces have always received preferential treatment and continuous, high pressure political indoctrination. Even during 1960-62, the years of greatest popular unrest on the mainland during and just after the "leap forward" economic disaster there was no evidence of significant disaffection in the PLA. Apart from about 14,000 Chinese prisoners of war captured in Korea--many of whom were one-time Nationalist soldiers--who elected to go to Taiwan rather than return to Communist control in early 1954, there have been only a handful of low level defectors from the armed forces. Moreover, soldiers are seldom tempted to abandon a victorious standard, and unless the Nationalists were able to inflict a series of surprise defeats on Communist forces from the outset of the invasion a mass turnover of major Communist units appears very unlikely.

GRC hopes for a popular uprising which would hamper the Communist defenders and aid the Nationalist cause also appear illusory. All our evidence concerning the state of popular attitudes in coastal areas of southern China indicates that a large-scale invasion would not spark a revolt at the present time.

The degree of popular disaffection that exists in the mainland population is sometimes exaggerated by observers outside China. There was considerable unrest in 1960-62 when several successive crop failures created semi-starvation conditions in many areas. Recent travelers and refugees from southern coastal areas, however, consistently report that the food situation there has improved substantially.

Communist instruments of control--the police and public security forces--probably are basically loyal to the regime. Low-level party officials bear the brunt of public censure for regime failures and have been subjected to a harsh new "purification" campaign during the past year. Their morale has probably dropped but extremely few have defected, suggesting that their situation has not yet destroyed basic loyalty in this key group.

Southerners in general have always resented governments of any kind imposed on them from the north, and probably see little to choose between the Communists and the Nationalists. They have many reasons to dislike the present regime, with its stifling political controls and record of economic failure, but by all the evidence the Chinese Nationalists still remain deeply discredited in their eyes.

The GRC could, therefore, probably expect little or no help from the civilian population. At best the majority of the people would remain neutral while the issue was in doubt, waiting to throw in their lot with the winning side. At worst, the population might be convinced by Communist propaganda that the landing was a foreign invasion by "imperialist" forces and rally patriotically behind the regime.

Communist military reaction would probably not be limited to simply repelling the GRC invasion in Kwangtung. The Offshore Islands would almost certainly come under military pressure. Heavy artillery attacks would probably be the first step, followed by an attempt to seize some or all of the islands if the Communists concluded that a quick victory over reduced garrison forces was possible. Large-scale amphibious attacks on Taiwan itself would probably not be attempted but commando raids might be launched from the mainland against military installations clearly associated with the GRC attack. GRC naval installations in the Penghu (Pescadores) Islands and at Tsoying, and port facilities in Kaohsiung might be targets for such operations. The Communists might also attempt to bomb airbases in southern Taiwan used by the GRC air force to support the invasion forces. In any such attacks, however, the Communists would probably try to avoid actions which would increase the enmity of the Taiwanese population.

One of Peiping's major objectives would probably be to turn the Taiwanese against the Nationalist government and if possible to promote a "patriotic" revolt against the GRC and its "imperialist masters" in the US. Communist propaganda would portray the GRC invasion as a ruthless exploitation of Taiwanese "comrades" to serve the interests of foreigners.

The Taiwanese population holds little love for mainland Chinese of any political coloration and has no sympathy for Communism. For this reason, Peiping's calls for a rising to "reunite" Taiwan with the mainland would probably have little appeal. It seems likely, however, that the combination of military reverses which would discredit the GRC leadership and mounting casualties--largely Taiwanese--would increase dissidence among the population to a point which would gravely threaten the stability of the Nationalist government. Morale of the ruling mainlander elite, sustained in part by the dream of eventual return to the mainland as conquerors, would almost certainly plummet.

Peiping would exploit the invasion attempt domestically to strengthen its position by appeals

to Chinese patriotism, seeking to re-awaken enthusiasm for regime programs across the board as part of a National effort to repel foreign aggression. Victories over the attacking forces would be played up as evidence of Communist power, and new proof that Mao's dictum "all imperialists are paper tigers" is correct. Abroad, Chinese Communist propaganda would seize on an unsuccessful US-supported GRC attack to bolster the idea that Chinese hegemony in East Asia is the "wave of the future." At the same time, Peiping's propaganda would underscore the threat to world peace created by "US aggression" in order to discredit the US and stimulate deterrent pressure on Washington from US allies and neutral nations.

The Chinese Communists could be expected to back up menacing propaganda statements charging that the US was starting an "Asian war" by troop movements and other threatening military demonstrations designed to show that Peiping was capable of enlarging the conflict at any point along an arc extending from Korea to the Indian Border. It is probable, however, that Peiping would hold off on any such escalation and concentrate on destroying the GRC landing force or driving it into the sea.

INTELLIGENCE MEMORANDUM

Communist Activity in the Laos Panhandle

1. The Communists appear to be establishing a major base area in the mountainous region straddling the border between southeastern Laos and northern South Vietnam.

2. Intelligence reports received over the past several months have indicated that there has been considerable southbound troop movement into the area from farther north in Laos. In addition, photoanalysis has revealed that the Communists are making steady progress in their efforts to link up North Vietnam with this border area using a network of new and improved motorable roads. On the South Vietnamese side of the border, Viet Cong operations during the recent rainy monsoon season appear to have been designed to consolidate their control over these strategic border areas.

Troop Movements Into the Panhandle of Laos

3. Since the beginning of the rainy season last May, there has been no vehicular traffic moving south on the key supply route which leads south from North Vietnam through the Mu Gia Pass to the Muong Phine - Tchepone area of Laos (see map). In spite of the rains, however, there has been a continuing movement of troops to south Laos. [redacted] have reported a steady flow of southbound troops--mostly Pathet Lao, often in company-size groups. The net (southbound less northbound) movement since June appears to be in the neighborhood of 5,000 troops.

1.5(c)
3.4(b)(1)

~~NO FOREIGN DISSEM~~
~~SECRET~~

4. The June 1965 order-of-battle figures for the southern provinces of Laos (those south of Route 12) reported 7,200 Pathet Lao and 800 North Vietnamese in the area. The movement south, therefore, of some 5,000 men would represent about a 50-percent build-up, a significant increase over the number of troops assigned to this area in previous years.

Roadbuilding in the Panhandle of Laos

5. Although through vehicular traffic from North Vietnam to the southern provinces has been stopped by ground softening and high water, particularly along portions of Route 23 north of Ban Phone Mouang, road repair and construction has continued throughout the summer.

6. Perhaps the main undertaking has been the construction of a new road (designated Route 911) leading to Tchepone from the Mu Gia Pass area. This route, which will serve as an alternate to Route 23, branches off Route 23 at a point about 20 miles south of Mu Gia Pass. It then snakes through the hills southward toward Tchepone. This road is as yet unfinished, with about 15 miles remaining to be constructed. When completed, Route 911 will reduce by about a third the distance for trucks moving from Mu Gia Pass to Tchepone. By providing an alternative truck route, it will also make the aerial interdiction task considerably more difficult.

7. The selection of Tchepone as the southern terminus of this new road suggests that during the coming dry season there will be an increase in the volume of southbound traffic moving to the eastern border regions rather than west along Route 9 to the Muong Phalane area. Supplies moving to support the Pathet forces east of Muong Phalane would normally move on the shorter--and already established--route leading through Ban Phone Mouang.

8. Farther south, the Communists have continued their roadbuilding activity in the southeastern border regions. Recent photography indicates that Route 92 south of Ban Dong is trafficable in the dry season to a point a few miles south of Ban Bac. Two spurs lead east from Route 92 toward South Vietnam. One, Route 922, is truckable and apparently is in present use to within five miles of the South Vietnamese border, where the southeastern portion of Savannakhet Province abuts South Vietnam's Thua Thien Province. The second spur originates about 30 miles to the south on Route 92. However, this road (designated Route 923) swings south after a few miles and may be designed to connect with Pathet Lao roads located farther south or to serve as a feeder road to Pathet Lao positions in the mountain fastness rather than as a direct supply route to the border. It is still too early to make any sure prediction of its path, however.

9. There have been other signs that the Communists are developing a road net in the region to the east of Ban Phone. Recent photography indicates that an old French road (Route 165) leading east from Ban Phone toward the borders of Quang Nam, Quang Tin, and Kontum provinces in South Vietnam is probably open to light vehicular traffic. There has also been some photography indicating vehicular activity in eastern Attopeu Province.

10. Photography has indicated that these roads are serving numerous Pathet Lao defensive installations in southeastern Laos. Over the past six months, photoanalysis has uncovered what appears to be extensive trenchwork, numerous AAA emplacements, and many training, storage, and regroupment areas. Some of these installations are connected to areas of Viet Cong insurgency across the border by trails suitable for cart traffic.

SOUTHEASTERN LAOS

SECRET

1.5(c)
3.4(b)(1)

Consolidation of Control Over the Corridor

11. This increased emphasis on the southern Laos border region probably reflects the high priority that Hanoi places on the continued control of the corridor --in effect an extension of North Vietnamese territory --linking North Vietnam with the Communist strongholds in the South Vietnamese highlands. Recent Viet Cong setbacks in South Vietnam probably have reinforced Hanoi's view on the necessity of retaining this key artery.

12. The Communists probably feel that this control which has been reasonably secure in the past, might be jeopardized by the increased commitment of the US in its campaign against the Viet Cong. They may also suspect that the US is planning cross-border operations into Laos designed to cut off the supply routes leading south from North Vietnam. Chinese propaganda has in recent months charged the US with planning to "seal off" southern Laos below the 17th parallel.

INTELLIGENCE MEMORANDUM

SUBJECT: Chinese Communist Military Presence in North Vietnam*

SUMMARY

1. The Chinese Communists in June 1965 began deploying a limited number of military support units into North Vietnam (DRV). This marked the first time that Chinese troop units had been stationed outside China since 1958, when Peking withdrew the last of its troops from North Korea. Unlike the Chinese troops in Korea however, the units detected in North Vietnam thus far have been restricted to a few logistic support units and probably some local security forces, including antiaircraft artillery.

2. These Chinese forces for the most part have been moved from adjacent areas of south China into the northeast region of the DRV [redacted] E0 12958 3.4(b)(1)>25Yrs [redacted] On the basis of tentative information, however, we estimate that there may be 15,000 to 20,000 Chinese military personnel now in North Vietnam.

3. Recent aerial photography has revealed some activity in the northeast DRV that is probably related to the presence of Chinese support units. The northern sector of the Hanoi-Pinghsiang rail line is being improved and several new truck parks have been set up in the border area, probably to facilitate the increased flow of supplies into North Vietnam. E0 12958 3.4(b)(1)>25Yrs [redacted]

* This memorandum has the concurrence of the Director, DIA.

4. Although there is no firm evidence that any additional Chinese military units have deployed into North Vietnam since August, there are signs that several units, probably railway engineer and/or conventional engineer units, may be preparing to do so in the near future. These units, which began to appear near the Vietnam border in mid-September, are either newly formed or taken from areas of China other than the immediate border area. At least one railway engineer unit has moved to a position where it can deploy rapidly into the northwest DRV, where the Hanoi-Kunming rail line has been subjected to frequent bombing since mid-July.

5. There is no evidence that the deployment of logistic support units to the DRV has been accompanied by a buildup of Chinese combat forces in the Sino-DRV border area. Such a buildup would probably precede any major deployment of Chinese combat units into North Vietnam. There are however, tentative signs [redacted] that contingency plans, [redacted] have been made for the introduction of a force of considerable size into the border area. Thus available intelligence suggests that the Chinese are taking some of the necessary steps to move more units rapidly into Vietnam should the war escalate. On the basis of their practice to date, we expect to receive some early warning [redacted] if the Chinese military involvement in North Vietnam is significantly expanded.

EO 12958 3.4(b)(1)>25Yrs

EO 12958 3.4(b)(1)>25Yrs

EO 12958 3.4(b)(1)>25Yrs

[redacted]

E0 12958 3.4(b)(1)>25Yrs

[redacted]

Chinese Military Units in Northeastern North Vietnam

9. The first Chinese unit detected in North Vietnam appeared in the northeast coastal area of Tien Yen in mid-June. E0 12958 3.4(b)(1)>25Yrs [redacted] This same organization controls a number of small Chinese military vessels which, in addition to supporting Chinese security forces, may be providing some type of military logistic support for the North Vietnamese. E0 12958 3.4(b)(1)>25Yrs [redacted]

10. [redacted] E0 12958 3.4(b)(1)>25Yrs

EO 12958 3.4(b)(1)>25Yrs

11. [redacted]

12. Chinese railway engineer units are highly specialized units with a proven capability for rapid construction and repair of rail lines. By 17 August, photography revealed some new construction work on the northern part of the Hanoi-Pinghsiang railroad, [redacted] The new construction appears to involve efforts to improve the capacity and efficiency of this important narrow gauge line, by eliminating sharp curves and steep gradients. These improvements are apparently being accomplished in such a manner as to minimize the disruption of rail traffic between China and the DRV.

EO 12958 3.4(b)(1)>25Yrs

EO 12958 3.4(b)(1)>25Yrs

13. [redacted]

[redacted] photography [redacted] showed a high level of truck activity among several apparently newly established vehicle storage areas stretching from Pinghsiang, China, to Langson in North Vietnam. [redacted]

EO 12958 3.4(b)(1)>25Yrs

EO 12958 3.4(b)(1)>25Yrs

EO 12958 3.4(b)(1)>25Yrs

14. [redacted]

15. The Chinese may have decided to deploy AAA along the Hanoi-Pinghsiang rail line when it became clear in mid-July that the US was going to bomb rail lines north of Hanoi. [redacted] US pilots reported after the strike that they had encountered unusually heavy flak; two US aircraft were downed by ground fire.

EO 12958 3.4(b)(1)>2

Chinese Units in Northwestern DRV

EO 12958 3.4(b)(1)>25Yrs

16. [redacted]

17. [redacted]

18. To sum up, at least five, and possibly one or two more, Chinese military units have now been detected moving into North Vietnam. These units appear to include a possible AAA division, a suspect border/coastal security defense division, elements of a railway engineer division, a motor transport regiment, and another possible security unit of at least regimental size. At normal organizational strengths, this would amount to about 19,000 troops in all. There are probably also some headquarters and service personnel.

New Chinese Construction Units Near DRV Border

19. Although no Chinese military units have been detected moving into North Vietnam since August, there are indications that several new Chinese construction units may be assembling near the DRV border for possible deployment into the country. These units were first noted in the Kwangsi area of the Canton MR in mid-September. [redacted] E0 12958 3.4(b)(1)>25Yrs

[redacted]

20. [redacted] E0 12958 3.4(b)(1)>25Yrs

[redacted]

21. [redacted]

EO 12958 3.4(b)(1)>25Yrs

22. If the units [redacted] prove to be railway engineer divisions, their deployment into North Vietnam could raise the estimated number of Chinese troops in that country as high as 35,000 to 40,000. In the wake of continued US bombing attacks on North Vietnamese lines of communications, it seems likely that additional Chinese engineer units will be sent to assist the Hanoi regime in keeping its road and rail net operative.

Possible Chinese Contingency Plans

EO 12958 3.4(b)(1)>25Yrs

23. [redacted]

24. [redacted]

25. [redacted]

E0 12958 3.4(b)(1)>25Yrs

26. [redacted] It is at least clear that the Chinese have taken steps to secure the lines of communications from China to the DRV. Thus, should the war in Vietnam escalate into a major confrontation involving the Chinese, they would not have to start from scratch.

No. 3097/65

9 December 1965

CENTRAL INTELLIGENCE AGENCY
MEMORANDUM

SUMMARY

The Communists have made a substantial effort over the past year to expand and improve their supply routes in the Laotian panhandle. This effort is clear evidence of Hanoi's determination to backstop the Communist military campaign in South Vietnam. It increases the Communist capability to support an even greater level of fighting there. It also raises the prospect of stepped-up military activity inside Laos, which might look attractive to Hanoi as a means of distracting our attention from South Vietnam.

The program, which has involved upgrading existing roads and trails and building new ones, is now ready to show results. With the recent advent of the dry season, [redacted] a key section of the supply network, is already reporting trucks moving south in numbers comparable to last season. The Communists should be able to do better this season. By building a number of alternates and bypasses they have also reduced the vulnerability of the supply system to interdiction by air action.

1.5(c)
3.4(b)(1)

COMMUNIST ROAD DEVELOPMENT IN LAOS

1. The Laotian panhandle for several years has provided Hanoi with a primary avenue for supporting the war effort in South Vietnam. The sequence of roads, rivers, trails, supply dumps, and base areas runs through parts of Laos which have been in Communist hands for some four years or even longer.

2. Over the last year, and especially in the past several months, the Communists have been hard at work building additional truckable roads which lead ultimately to the South Vietnamese border. The effort quite obviously carries a high priority tag. One measure of this is that Hanoi, despite a crying need at home, has sent mechanical earth-moving equipment to the panhandle road program--a first in this remote part of Laos.

3. The program, pushed intensively right through the summer monsoon, is now ready to show results. The North Vietnamese can now send trucks 100 miles farther south than they could before, all the way to the South Vietnam border southwest of Da Nang. They have also made the system less susceptible to outages in wet weather.

4. Moreover, by building a number of alternates and bypasses, the Communists have reduced the vulnerability of their supply system to air action. Aerial photography shows they have built an elaborate vine-covered trellis over exposed parts of at least one section of new road. Also, convoys now move almost exclusively at night.

5. [redacted] southbound truck convoys began moving about a month ago, a month earlier than last year. In the past ten days an average of some 17 trucks per day have moved past this single observation point. Last year the Communists averaged the same figure over the six-month dry season. Recent evidence that the Communists are using fuel tanker trucks for the first time indicates that they intend to do better this dry season.

1.5(c)
3.4(b)(1)

6. We estimate that the Communists could theoretically deliver some 300 tons per day to South Vietnam during the six-month dry season, if they used the road network to its maximum. To do so, however, the Communists will have to move seven times as many trucks on the roads as they did during the last season, a development which would increase their exposure to air interdiction.

7. A force of at least 8,000 Pathet Lao and North Vietnamese is ranged along the road net. Additional troops may have been transferred into this area recently. These forces, like Communist forces elsewhere in Laos, are in position to launch attacks on government positions at any time with little advance warning. At present, the prime task of these forces is to prevent Souvanna's troops from moving eastward and interfering with the movement of North Vietnamese troops and supplies over the road and trail network to South Vietnam, where they are pressing the guerrilla campaign against American and South Vietnamese forces.

ANNEX IV

THE GROUND WAR IN SOUTH VIETNAM

ANNEX IV

THE GROUND WAR IN SOUTH VIETNAM

I. The Build-Up of Forces

The course of the ground war in South Vietnam is marked by the extent to which, in the conventional military sense, it has become increasingly a confrontation between third country forces. This situation reflects the already heavy commitment of indigenous manpower resources to the war effort. The heavy casualties sustained by local Communist forces (VC) are putting an increasing strain on their ability to mobilize additional military manpower. The GVN has committed substantial manpower resources to pacification programs and internal security and police programs. Over half of the GVN military forces are committed to these counter-insurgency programs. The GVN potential for expansion of its military forces, which would be limited under the best of circumstances, is restrained further by the political unrest in the GVN and the high desertion rate in the ARVN.

Since mid-1965, NVA troops in South Vietnam have increased by nearly 37,000. They now total 38,000 of about 38 percent of the total VC/NVA main force. By the end of 1966, an estimated 60,000 NVA troops will account for nearly half of the VC/NVA main force. By mid-1967 an estimated 75,000 NVA troops will account for 55 percent of main force strength. US/Third Nation* forces at the end of 1964 totaled only 25,000 troops or 9 percent of Allied regular troop strength. In mid-1966 there were 300,000 US/Third Nation troops or 49 percent of total strength. Projected deployments indicate that US/Third Nation forces will account for 470,000 troops or 59 percent of the regular Allied Army strength in South Vietnam by mid-1967.

Regular Free World forces now outnumber the total estimated Communist force by 5 to 1, and hold a 6 to 1 margin

*Here and throughout the remainder of the text, South Korean, Australian and New Zealand Forces are referred to as "Third Nation" Forces.

over the VC/NVA main force units. Overwhelming air and artillery support, coupled with considerable troop mobility and naval participation also add significantly to the preponderance of Allied military strength.

There is a sharp distinction between Communist and Allied forces in the number of support troops needed to back up tactical combat troops. Only about one-fifth of the total Allied Army and Marine Corps troops are committed to engaging and destroying the enemy in offensive operations. Thus of a force in June 1966 totaling slightly over 218,000 Army and Marine Corps ground forces only 44,200 represented troops in maneuver battalions. Over 157,000 troops were involved in indirect combat, logistics, construction engineering, security and other support tasks and some 16,400 troops are in artillery battalions. The Communist forces, on the other hand, have to commit only 18,000 troops or a little over 15 percent of their regular forces to combat support, compared to over 80 percent for the Allied forces.

When the relative build up of opposing forces is looked at in this manner the troop strength ratios change dramatically. The troop strength ratio of Allied maneuver battalions becomes nearly 1:1 rather than 6:1. In the II and IV Corps area the ratio is in the favor of the Communists. The projections of estimated Communist main force strength and Allied troop strength in maneuver battalions in mid-1967 indicate a troop strength ratio which gives the over-all strength advantage to the Communists. The advantage is offset, of course, by the air, artillery and naval support of the Allied forces and their highly developed mobility. Nevertheless, the Communist build up, particularly of NVA forces, shows a determination to commit whatever forces are necessary to match the Allied build up and to extend the war as long as possible. Even if the Communists admit that they cannot win a conventional military victory in South Vietnam they may still calculate that a long extended war with increasing US casualties may eventually break down US will and determination to persevere.

II. Casualties

The toll in human lives is, however, presenting an increasingly high cost to the Communist forces. The heavy casualties sustained by VC forces has already stabilized the extent to which they can commit troops and has forced

them to rely more heavily on NVA replacements. Total Communist losses--killed in action, captured, seriously wounded and deserters--ranged from an estimated 80,000 - 90,000 during 1965. During 1966 we estimate that these losses may range from 105,000 - 120,000 and from 65,000 - 75,000 for the first six months of 1967 if the current rates of combat are maintained and projected troop strengths are realized. We estimate that some 25,000 - 30,000 of the losses during 1966 will be North Vietnamese; an additional 25,000 - 30,000 North Vietnamese will be lost during the first half of 1967. The bulk of these losses will result from battle deaths and serious wounds. Local Communists will sustain estimated losses of from 80,000 - 90,000 during 1966 and an additional 40,000 - 45,000 during the first half of 1967. About two-thirds of local Communist losses will result from battle deaths and serious wounds. The remainder will be accounted for by captives and deserters.

In terms of the number killed in action on the battlefield, the Allied forces will continue to maintain an advantage. We estimate that about 48,000 Communists will be killed during 1966 and an additional 30,000 during the first six months of 1967 compared to 16,000 Free World soldiers estimated to be killed during 1966 (6,000 US and Third Nation, 10,000 ARVN) and an additional 9,000 that will probably be killed during the first six months of 1967.

Reports on battle fatalities among Communist forces indicate they have increased from slightly under 2,000 a month during the first six months of 1965 to about 3,900 each month during the second half of the year and 4,000 a month during January-May 1966.

On the basis of very limited data we estimate that the number of Communist troops seriously wounded and hence effectively lost has increased from about 1,600 - 2,500 a month in 1965 to from 2,000 - 3,200 a month in 1966. Our estimates indicate that the numbers of Communist personnel captured during 1965 and 1966 do not vary much, ranging from 6,300 in 1965 to an estimated 7,000 in 1966.

The Allied forces have achieved better than a 3 to 1 kill ratio over the enemy. Our data on VC/NVA forces killed in action show a sharp change in the relative shares accounted for by GVN forces and US/Third Nation forces. In the last

six months of 1965, US/Third Nation forces accounted for 23 percent of total Communists killed in action. In the first five months of 1966, however, US/Third Nation forces accounted for 56 percent of total Communists killed in action.

The rising casualty rates among Communist forces have had no detectable influence on North Vietnam's desire to continue the war in the South. The enemy continues to buildup his forces in the South, and the Communist forces are performing in battle as well today as they were in 1964 and 1965. The manpower drain on North Vietnam, in numbers alone, has not yet reached a burdensome level. Although the VC units have borne most of the casualties to date and are squeezed for manpower, Hanoi seems willing to increase its commitment. The drain on manpower could, however, become more critical as the casualty rates in the South and the competing demands for more manpower in the North increase. An increase in casualty rates in the South substantially higher than those already estimated through mid-1967 would require an Allied commitment of maneuver battalions substantially greater than that indicated in current deployment programs.

APPENDIX A

THE GROUND WAR IN SOUTH VIETNAM

I. General Troop Strength

A. U.S. and Third Nation

1. Forces - General

The U.S. military commitment in South Vietnam, along with that of South Korea, Australia, and New Zealand, has grown from some 25,000 troops at the end of 1964 to approximately 300,000 troops at the end of June 1966. Projected troop strengths indicate that approximately 470,000 U.S./Third Nation forces will be stationed in South Vietnam by mid-1967. (See Table IV-1)

In both an absolute and relative sense U.S./Third Nation troop strength in South Vietnam has grown more rapidly since 1964, than has the corresponding buildup in the South Vietnamese regular forces (See Table IV-2). U.S./Third Nation forces represented 9 percent of total Allied regular troop strength in 1964, 41 percent in 1965, and 49 percent in mid-1966. They will account for 59 percent of the planned regular Allied forces in South Vietnam by June 1967.

2. Deployment

U.S./Third Nation ground forces in South Vietnam are predominantly deployed in the I, II, and III Corps areas, with South Vietnamese troops, as of August 1966, maintaining complete military responsibility in the Capital Military Region (Saigon) and IV Corps areas. United States Marines are stationed at Da Nang, Chu Lai and Phu Bai in the I Corps area. Field Force I, with headquarters at Nha Trang (II Corps area), contains the 1st Calvary Division, elements of the 25th Infantry and 101 Airborne Division. ROK forces, and the 5th Special Group. Field Force II, with headquarters at Cu Chi (III Corps area), contains the 1st Infantry Division, elements of the 25th Division, 173 Airborne Brigade, and Australian and New Zealand Units (See Figure IV-1).

B. South Vietnam

1. Forces - General

At the end of June 1966, the Republic of South Vietnam had some 700,000 people under arms (See Table IV-3).

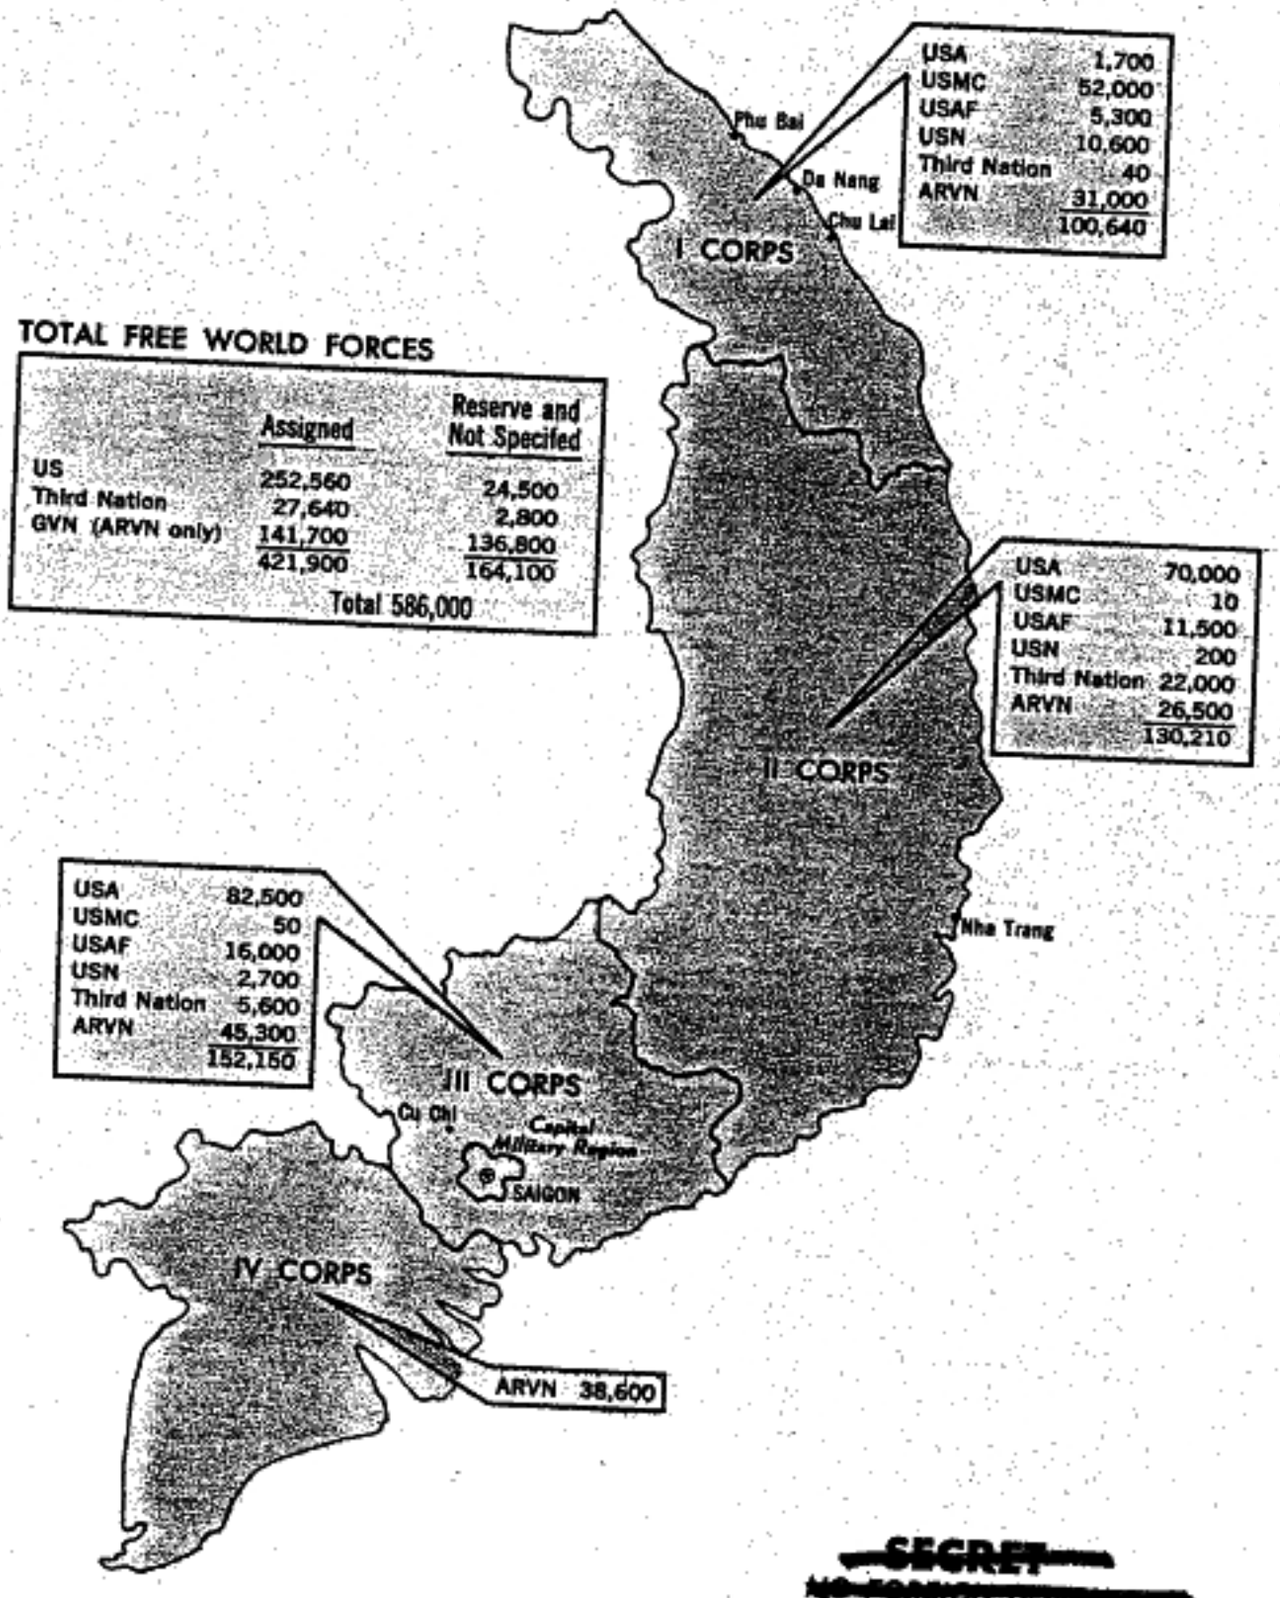
Figure IV-1

SOUTH VIETNAM: MAJOR ALLIED DEPLOYMENTS OF REGULAR TROOPS, BY CORPS, MID-1966



~~SECRET~~
~~NO FOREIGN DISSEM~~

This figure, however, does not accurately reflect the regular South Vietnamese military strength. Only about 45 percent of the total South Vietnamese armed strength is committed to conventional military operations.

The South Vietnamese have responsibility for the bulk of the pacification program and measures to eliminate or neutralize the Viet Cong infrastructure. These programs require the commitment of some 350,000 men in quasi-military, self-defense and national police units. The South Vietnamese regular military force consists of 275,000 army troops, 15,000 air force and 20,000 navy/marine forces.

Since 1964, the regular South Vietnamese military force has increased by some 60,000 men or by about 25 percent. Projected deployments indicate that the regular forces are to be increased by some 10,000-15,000 men, bringing total strength up to 320,000-325,000 men by June 1967.

2. Major Deployments

The mid-1966 South Vietnamese Army Order of Battle is presented in Table IV-4 below:

Table IV-4

Major South Vietnamese Ground Force Deployments by Corps Area, Mid-1966

Combat Units	Assigned Strength
I Corps	31,000
II Corps	26,500
III Corps	43,000
IV Corps	38,500
Capital Military Region	2,000
General Reserve	8,500
Support Units and Miscellaneous	128,000
Total	277,500*

*Includes five GVN Marine Battalions with a total strength of 4,000 men. Approximately 21 percent of the combat strength is allocated to I Corps, 18 percent to II Corps, 29 percent to III Corps, 25 percent to IV Corps and 7 percent to reserves and the Capital Military Region.

SECRET

war in South Vietnam is rapidly developing into a confrontation between the United States and North Vietnam with South Vietnamese forces on both sides playing relatively reduced roles. In spite of rapidly growing Allied troop strength and resulting heavy enemy losses, North Vietnam continues to send regular troops south in increasing numbers. The Vietnamese Communists apparently recognize the impossibility of a classic military solution, but may hope to attain their objectives by unconventional means and apparently intend to extend the war as long as possible in the hope of wearing down US will to see the war through.

An early and successful conclusion to the military struggle rests, therefore, with the ability of Allied forces to hunt down and destroy the enemy on his own ground. It is in this context that the numerical superiority in the ratios of Allied to Communist strength became less impressive. More meaningful relationships and trends in analyzing the present and future course of the ground war depend on the actual number of Allied troops theoretically capable of engaging and destroying the enemy in offensive operations.

B. Critical Troop Ratios

1. Assumptions

Total Allied troop strength in South Vietnam presently stands at some 610,000 men. Current NVA/VC main force strength is estimated to be about 100,000 troops.* At first glance it would appear that Allied regular forces presently enjoy a 6:1 numerical superiority over the NVA/VC main force. In a practical sense, however, this is not the case. Western troops and their South Korean and Vietnamese Allies require considerable numbers of support troops to maintain offensive combat units in the field. Since the scale of combat in South Vietnam at the present time is largely dependent on the level of Allied initiated offensive operations, it seems logical to exclude Allied support

*Irregular forces, political cadres and combat support forces are excluded from Communist troop strength in this analysis because of their limited role in conventional warfare.

troops in deriving meaningful ratios of actual Communist/Allied battlefield strength. The combat strength of the NVA/VC main force is taken at current estimated full strength--about 100,000 men. Allied combat strength is defined to include the number of troops assigned to maneuver battalions--those troops who initiate offensive ground actions and conceptually come into direct contact with the enemy. The critical troop ratio is defined as NVA/VC main force/Allied maneuver battalion strength.

2. Offensive Combat Strength

a. U. S./Third Nation

For purposes of this analysis only ground troops are considered--nearly 60,000 men in the Air Force and Navy are excluded from the analysis. (See Table IV-7). Approximately 20 percent of the total U. S. Army and Marine Corps strength in South Vietnam is committed to maneuver battalions. (See Figure IV-5). An additional 7 percent is assigned to artillery battalions that primarily provide combat support to the maneuver battalions.* The remaining 73 percent of the Army and Marine Corps personnel perform supply, construction, engineering, security, and related support tasks. The percent of maneuver battalion strength to total Third Nation troop strength is considerably higher because these troops are largely supported by US service units. The deployment by Corps area and service of US/Third Nation maneuver battalions is presented in Table IV-8. As of June 1966, 31 percent of US/Third Nation maneuver battalion strength was located in I Corps, 41 percent in II Corps, and 28 percent in III Corps. Projected deployments for June 1967 indicate that some 78,600 US/Third Nation troops in maneuver battalions will be distributed in the following manner: I Corps 23 percent, II Corps 49 percent, and III Corps 28 Percent.

b. South Vietnam

In the analysis of the critical troop ratios only the South Vietnamese Army is given consideration--some

*Artillery battalions are excluded from the critical ratio due to the manner in which they are employed in combat.

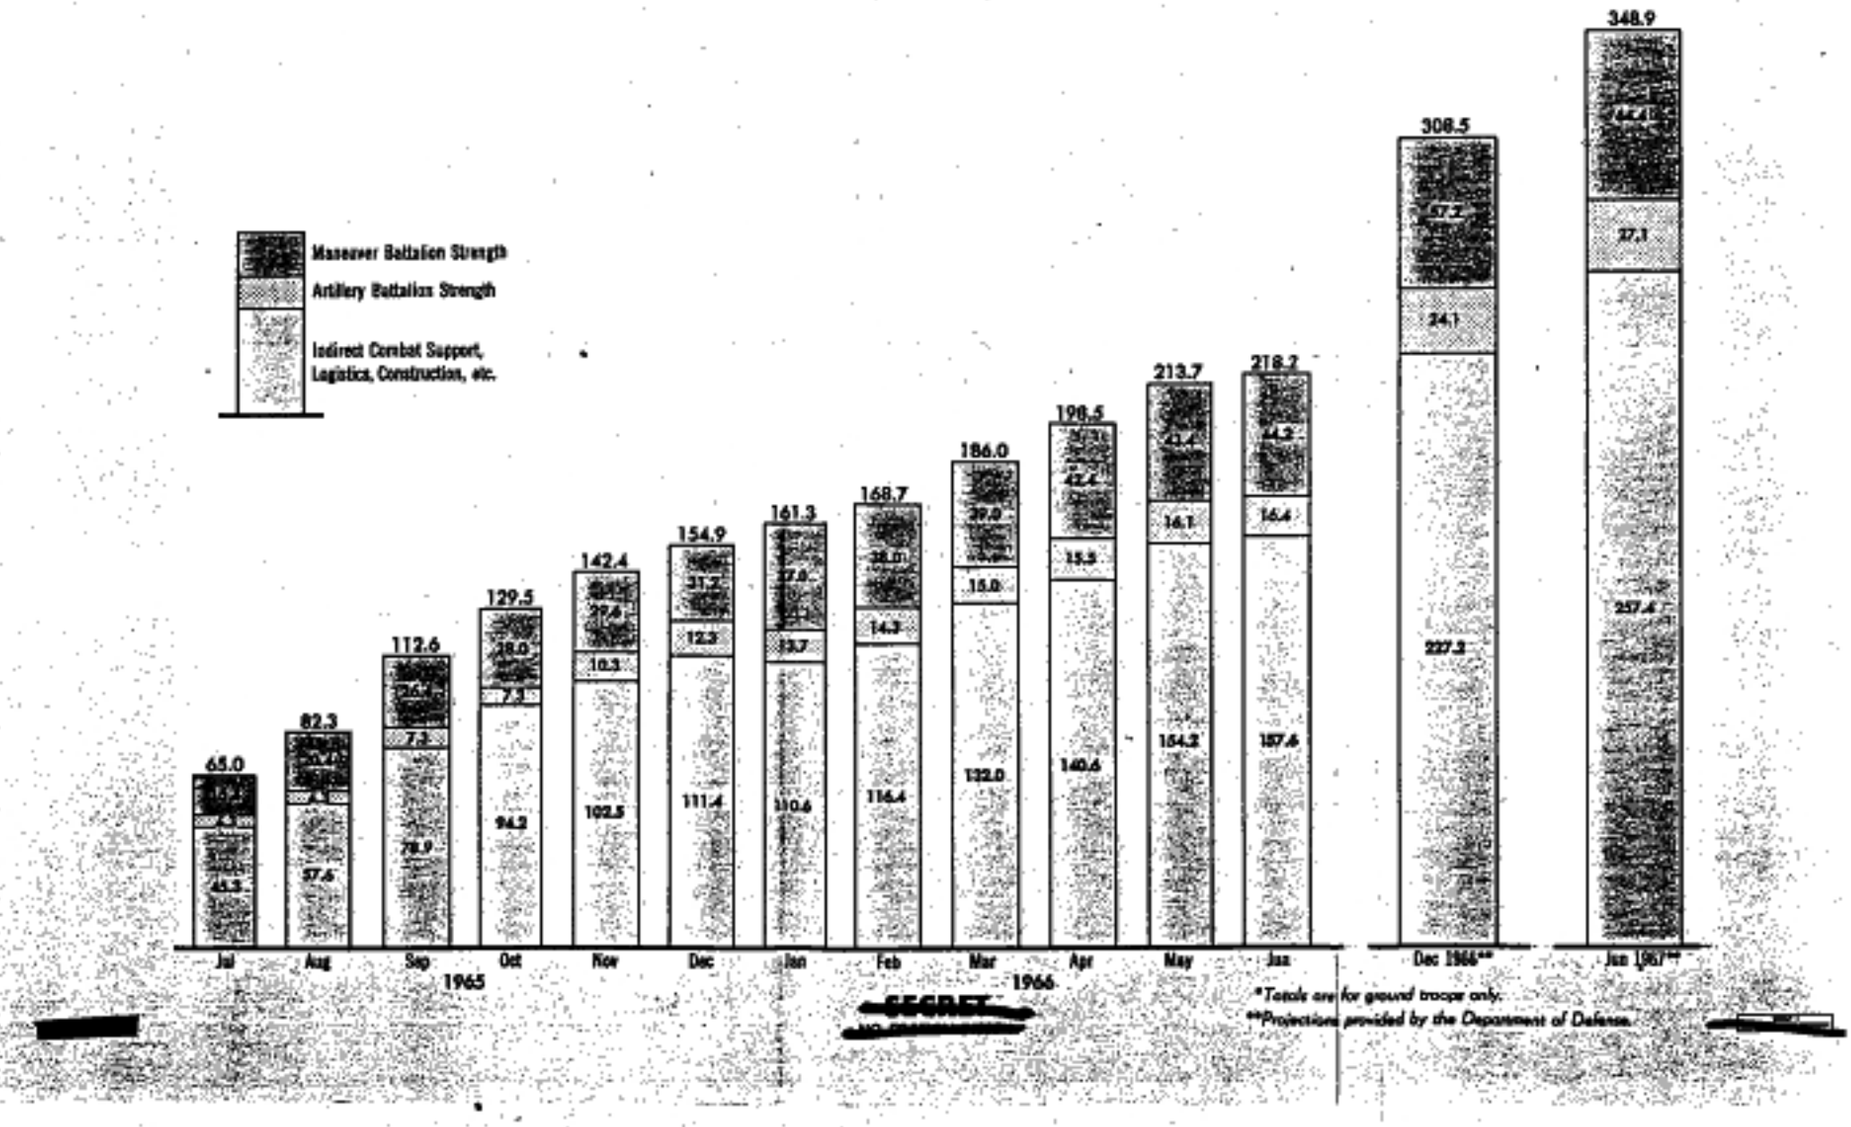
(Thousands)



35,000 men in the Air Force, Navy and Marines are excluded. Approximately 16 percent of the total South Vietnamese Army strength is committed to maneuver battalions. (See Figure IV-6). As of June 1966, 21 percent of ARVN maneuver battalion strength was located in I Corps, 21 percent in II Corps, 30 percent in III Corps and Capital Military Region, and 28 percent in IV Corps. Projected deployments for June 1967 reflect no change in present troop size of deployment. (See Table IV-9).

c. NVA/VC Main Force

For purposes of this analysis regular enemy combat strength is considered to include all NVA/VC main force troops. Although it is recognized that not all of the troops in this classification are performing combat tasks, there are several justifications for making such an assumption. These regular enemy troops must be hunted down and destroyed or eliminated regardless of their operational functions. It is also recognized that the NVA/VC main force requirements in terms of endogenous support troops are but a small fraction of similar requirements needed by Western troops.

The estimated strength of NVA/VC main force Corps areas as of June 1966 indicates that approximately 17 percent of NVA/VC main force strength is located in I Corps area, 38 percent in II Corps, 27 percent in III Corps, and 18 percent in IV Corps. (See Figure IV-7). North Vietnamese Army troops are predominantly deployed in the two Northern Corps while VC main force units are largely located in the two Southern Corps areas. Currently there are no known North Vietnamese Army units in the IV Corps.

3. Analysis of Critical Troop Ratios

a. Aggregate Field Strength Ratios

It should first be pointed out that in the field, Allied forces as defined, do not have a distinct numerical manpower advantage over the regular enemy forces. In fact, Communist forces in certain Corps areas possess superior numbers. Strong objections could be raised to this observation. The high degree of Allied troop mobility, and essentially unlimited air and ground support

probably help to make the ratio of friendly to enemy field forces less critical than it appears in Table IV-10. The ratio of friendly to enemy field forces has increased slightly in favor of the Communists during the July 1965-June 1966 period. A friendly to enemy field force ratio of 1:.8 was observed in mid-1965 and a ratio of 1:.9 observed in mid-1966. Projections of enemy and Allied field strengths indicate that the Communists may achieve a 1 to 1 ratio with opposing field forces in December 1966 and a 1.1 to 1 ratio by mid-1967.

b. Qualitative Aspects of Increases in Field Force Strength

The contribution of South Vietnam to both the Allied and local Communist field troop strength has stabilized in the past year. In July 1965, GVN troops accounted for 73 percent of Allied field strength. In June 1966 GVN troops made up 48 percent of Allied field strength. In July 1965, South Vietnamese Communists accounted for 98 percent of the enemy field forces. By June 1966, local Communists accounted for 62 percent of the enemy field forces. United States/Third Nation field forces have increased by some 38,000 during the July 1965 - June 1966 period. Regular South Vietnamese Army field forces have increased by about 7,000 in the same period. Regular North Vietnamese Army force increased by some 37,000 troops in the July 1965 - June 1966 period. The endogenous Communist contribution to VC main force increased strength by an estimated 11,000 during the same period.

c. Corps Area Field Strengths

The critical ratio of opposing field forces in South Vietnam by Corps area as of mid-1966 indicates that Allied strength varies considerably from one area to another (See Table IV-11). The Allied field forces enjoy an estimated 1:.68 and 1:.92 manpower superiority in I and III Corps areas respectively. In II and IV Corps areas the Communists enjoy an estimate 1:1.1 and 1:1.3 manpower superiority in the field. Consequently, it is observed that while Allied forces enjoy an aggregate manpower superiority of 1:.96 in mid-1966, such an advantage is not held equally at each Corps level.

US/TN	17,000	22,000	15,200	--
GVN	10,800	10,500	15,000	14,200
Total	27,800	32,500	30,200	14,200
Ratio Friendly to Enemy $\frac{\text{NVA/VC}}{\text{(US/TN + GVN)}}$	1:.68	1:1.1	1:.92	1:1.29

C. Projected Critical Troop Ratios

We estimate that by the end of 1966 Communist field strength in South Vietnam will be about 125,000 and 140,000 by mid-1967 (See Table IV-12). North Vietnamese Army units will account for 54 percent of the total. Projected Allied deployments for the end of 1966 and mid-1967 show that approximately 122,300 and 129,500 troops respectively, will be allocated to maneuver battalions. About 58 percent of the projected Allied field strength will be accounted for by US/Third Nation forces. The projected increases in both forces

will come largely from US/Third Nation troops and the North Vietnamese Army.

Table IV-12

South Vietnam: Projected Critical Troop Ratios:
Allied Maneuver Battalion Strength to
Estimated NVA and VC Main Force Strengths

(In thousands

	June 1966	December 1966	June 1967
NVA	38.0	60.0	75.0
VCMF	63.0	65.0	65.0
TOTAL	101.0	125.0	140.0
US/TN	54.2	71.4	78.6
GVN (ARVN)	50.9	50.9	50.9
TOTAL	105.1	122.3	129.5
Ratio Friendly to Enemy (NVA/VC / US/TN + GVN)	1:.96	1:1.02	1:1.08

The ratio of NVA forces to US/Third Nation forces has grown from approximately 1 to .1 in July 1965, to 1: to .7 in mid-1966. Projections indicate that this ratio may increase to 1 to .8 in December 1966 and nearly 1 to 1 by mid-1967. The North Vietnamese apparently plan to match the buildup in US/Third Nation maneuver battalions. (See Figure IV-8). Thus, during the next 12 months Allied forces in South Vietnam will in a relative sense, face a larger enemy force than they have in the past.

III. Operations

A. Assumptions and Methodology

The statistics used to evaluate the intensity and course of the ground war in South Vietnam take on added meaning in a war without fronts. Several of the factors employed to assess the war in South Vietnam are subject to considerable margins of error, and as such require discussion. The number of Communist troops reported killed in action is both the most important and least reliable statistical measure used to assess the progress of the military aspects of the struggle. The figure is subject to error because of duplications, omissions, possibly inflated body counts, and the inability to identify non-military casualties. On the other hand, it is well known that Communist forces exert considerable effort to remove both their dead and wounded from the battlefields of South Vietnam. At present there appears to be no rational method for adjusting enemy body count figures. Consequently, the statistics on enemy dead are taken as received, subject to non-quantifiable reservations on their accuracy.

The allocation of the reported enemy dead to the respective inflicting forces also presents a problem. Combined US/Third Nation and GVN operations are conducted in such a manner that an accurate accounting of enemy casualties by an inflicting force is difficult to achieve. A similar problem exists in trying to determine whether artillery, air support or ground forces inflicted the casualties. Statistical problems also exist in allocating casualties to large and small scale operations.

To allocate the number of reported enemy killed in each engagement to the respective inflicting force, the number of Allied soldiers killed in each combined operation were weighted by their aggregate kill ratios. The number of Allied and enemy killed in action were also rounded in an effort to make the data consistent. It was observed that the majority of US/Third Nation inflicted and sustained casualties were results of maneuver battalion sized operations or greater. A similar assumption with far less certainty was made with respect to GVN forces. South Vietnamese casualties, both inflicted and sustained, were allocated to their

by them during the 11 month period, 26 percent were accounted for by US Marines in I Corps, 51 percent by US Army/Third Nation forces in III Corps. (See Figure IV-12). As a general rule US/Third Nation maneuver battalion kill ratios have been highest in I and II Corps areas and lowest in III Corps.

3. GVN

During the July 1965 - May 1966 period the South Vietnamese Army participation in ground operations decreased. From July-December 1965, GVN forces accounted for 7 percent of the 23,600 enemy troops reported killed in action, or approximately 3,000 enemy killed per month. (See Figure IV-13). High desertion rates, heavy casualties, and political instability have adversely affected the battlefield contributions of South Vietnamese military units.

South Vietnamese forces achieved a 2.7 to 1 kill ratio over Communist forces during the July 1965 - May 1966 period. Approximately 35 percent of these kills were recorded in I and II Corps, 25 percent in III Corps and 40 percent in IV Corps.

C. Communist Performance in Battle

The question of Communist troop morale is discussed in detail in Annex VII. Communist troop performance indicates that the enemy troops are not yet experiencing morale problems that adversely affect their behavior on the battlefield. However, the number of captured Communist weapons, personnel, and desertions have increased considerably since 1964. (See Table IV-13). These losses can be explained by the increasing scale of combat and do not necessarily reflect a decline in Communist battlefield performance.

~~SECRET~~

Figure IV-13

RELATIONSHIP OF COMMUNIST AND GVN KIA TO BUILD-UP OF GVN MANEUVER BATTALIONS

~~NO FOREIGN DISSEM~~

Table IV-13

South Vietnam: Absolute Indicators of Communist Performance in Battle

	1964	1965	1966*
Communist "Chieu Hoi" Military Desertions**	1,900	9,500	12,000
Captured	4,200	6,300	7,000
Communist Weapons Captured	5,900	11,800	N. A.

*Estimate for entire year.
**GVN amnesty program for Communist deserters.

By relating the selected indicators to the scale of combat (the number of enemy reported KIA and captured) it is possible to illustrate that in a relative sense Communist forces are essentially performing as well as in battle today as they were in 1964 and 1965.

Table IV-14

Relative Indicators of Communist Motivations in Battle Expressed in Terms of the Scale of Combat, 1964-66

	1964	1965	1966*
Captured - as a Percent of KIA	.24/1	.19/1	.14/1
Weapons Loss - as a Percent of KIA and Captured**	.29/1	.30/1	.32/1
"Chieu Hoi" Desertions - as a Percent of KIA	.11/1	.27/1	.26/1

*Ratios calculated on January-June data.
**Also includes weapons captured on junks and other infiltration craft, consequently this ratio overstates the true battlefield weapons loss.

It is observed that Communist battlefield performance has not changed in spite of the growing scale of combat and increased US/Third Nation participation. At present, the magnitude of Communist morale problems in terms of influencing battlefield performance, seems to be a minor hindrance to enemy operations in South Vietnam.

D. An Approximate Allocation of NVA/VC Battle Fatalities January-May 1966

1. Methodology

One of the most difficult intelligence problems faced in South Vietnam is that of allocating enemy casualties to their respective fighting units. The characteristics of guerrilla warfare make it impossible to distinguish between civilians, irregulars, VC main force and PAVN troops killed in action. Lack of uniforms and unit insignias are some of the basic problems encountered. The time alloted to body identification of the battlefield is influenced by the pressures of combat and undoubtedly is far too short to allow for accurate body counts, let alone extensive investigations of enemy unit identification. The importance of allocating enemy casualties to their respective units is crucial in assessing the present and probable course of the war in South Vietnam. The extent to which the Communists must rely on internal recruitment and North Vietnamese regulars can best be determined by arriving at an approximate allocation of enemy casualties.

It was initially assumed that all enemy reported killed in action were members of the Communist military establishment. Such an assumption obviously overstates enemy losses since it includes civilians inadvertently killed in and around the battlefields and counted as enemy dead. The inclusion of considerable numbers of South Vietnamese Communist irregulars and combat support troops helps to relax this assumption to a certain degree. However, the lack of any definitive study on such civilian casualties makes it impossible to adjust enemy casualties with any degree of precision. Consequently the killed in action figures are taken as given.

In order to allocate enemy battlefield fatalities to NVA/VC units, it was assumed that enemy casualties

were sustained in proportion to their respective troop strength in the various Corps areas as of mid-1966. In the case of irregular and combat support troops it was assumed that these forces were half as likely to engage in major combat operations as were the NVA and VC regular forces. Reported enemy battlefield fatalities were allocated on a corps basis during the January-May 1966 period. Enemy losses and respective strength by corps area were then compared. Since there were no known NVA troops stationed in IV Corps during January-May 1966 it was concluded that all of the reported battle fatalities were sustained by local Communists. NVA strength in III Corps during the relevant period accounted for a small portion of the enemy main force strength - 15 percent in III Corps by mid-1966. The preponderance of enemy casualties in III Corps during the relevant period were assumed, therefore, to be sustained by local Communists. The bulk of the NVA strength in South Vietnam is stationed in II and I Corps respectively. Communist losses during the January-May 1966 period in the two upper Corps were allocated to NVA/VC on the basis of regular enemy troop strength as of mid-1966. By employing this methodology it was deduced that at a maximum 25-30 percent of Communist battlefield fatalities were inflicted on NVA troops during January-May 1966. Projected enemy troop strengths indicate that about 40 percent of the enemy battlefield fatalities during the next year will be sustained by NVA forces.*

The use of Communist regular troop strength as of mid-1966 weights the casualties heavily toward NVA forces during the January-May 1966 period. NVA troop strength has rapidly increased in recent months, thus overstating probable NVA losses during the early months of 1966. Such a bias should counter arguments that NVA forces are employed more intensively in combat than are local Communist forces. The use of total South Vietnamese Communist

*It is not possible at this time to refine the allocation of fatalities by considering the actual frequency with which VC NVA units engage in combat.

troop strength may also overstate local enemy casualties since it implicitly assumes that local forces have and will be engaged as often as North Vietnamese troops.

2. Analysis

This distribution provides some insights into probable future trends in the growth and composition of enemy forces in South Vietnam. It is estimated that Communist battlefield fatalities averaged approximately 4,000 a month during January-May 1966. Average monthly North Vietnamese and VC battlefield fatalities were 1,600 and 2,400 respectively. Accepted aaverage monthly Communist infiltration during the same period was 4,200. Combined accepted and reported NVA infiltration averaged 7,000 a month.

It is obvious that during January-May 1966 North Vietnamese troop strength grew at a more rapid rate than did direct sustained battlefield fatalities. Considerable increases in estimated North Vietnamese Army strength in South Vietnam during the same period confirm this trend. The relatively stable size of the VC main force during the period probably indicates that the local Communists have been able to offset battlefield deaths by recruitments from the irregular forces and the populace.

IV. Communist Losses

A. Total Communist Losses

During 1965, it is estimated that some 79,300 to 90,300 Communists (See Table IV-15) were effectively put out of action. Projections indicate that from 105,000-120,000 enemy forces will be effectively lost in 1966 and from 65,000-75,000 will be lost during the first half of 1967. Battle fatalities account for approximately 40 percent of the losses, seriously wounded, estimated on the basis of captured documents, account for 32 percent, and captured and deserters the remaining 28 percent.

Table IV-15

South Vietnam: Estimate of Communist Losses
1965 - June 1967

	1965	1966	Jan-June 1967
KIA	35,000	48,000	30,000
Captured	6,300	7,000	4,300
("Chieu Hoi" Returnees)	9,500	13,000	8,000
SUB TOTAL	50,800	68,000	42,300
Seriously Wounded	19,000-30,000	24,000-39,000	15,000-24,000
Deserters	9,500	13,000	8,000
TOTAL	79,300-90,300	105,000-120,000	65,300-74,300

1. Killed in Action

Average monthly reported Communist battle fatalities increased from less than 2,000 during the first 6 months of 1965 to approximately 3,900 each month in the second half of the year. During January-May 1966, Communist battle fatalities averaged 4,000 per month. Some 35,000 Communist troops were killed in action in 1965. Approximately 20,000 enemy troops were reported killed in action during January-May of this year, and current estimates indicate that approximately 48,000 Communists will probably be killed in action by the end of 1966.

2. Wounded in Action

a. Methodology

Few if any official figures are released that give an indication of the total number of Communist soldiers wounded in action. The primary reason for the lack of such information is that the enemy remove a considerable number of their dead and wounded from the battlefield in an effort to conceal their losses and prevent the capture of additional personnel.

Three basic components went into derivation of an estimate of NVA/VC wounded in action. Consideration was given to historical factors such as: (1) US, ANZAC, and Japanese experience in Burma, Malaya, and the Pacific Islands in World War II; (2) the experience of South Vietnamese, and US/TN forces in Vietnam; and (3) Communist prisoner interrogation reports mentioning casualties and captured enemy documents such as medical reports and unit combat records. The observed ratios of wounded to killed during World War II and in Vietnam are summarized in Table IV-16 below.

Table IV-16

Selected Wounded to Killed Ratios

World War II	Wounded to Killed
Papuan Campaign (Australian)	2.04/1
Papuan Campaign (US)	2.79/1
Philippines (US)	3.52/1
Okinawa (US)	4.31/1
Burma 1949 (Japan)	2.47/1
Burma 1943 (Japan)	3.23/1
Vietnam	
South Vietnam, 1963-65, (GVN)	2.17/1
US/Third Nation, 1965	4.1/1

Prisoner interrogation reports and captured enemy documents provided 15 quantifiable observations on the relationship between Communist troops killed and wounded in action. Enemy casualties ranged from some 700 in large unit actions to 20 casualties or less in small group actions. All of these losses were sustained while fighting against South Vietnamese forces during 1964 and 1965. The observed ratios of wounded to killed in action ranged from 1.07:1 to 2.4:1, with a weighted average ratio of 1.62:1. Since these figures are not biased by enemy removal of dead troops from the battlefield they may better reflect the distribution of enemy killed to wounded than those ratios which employ Allied body counts as a base figure.

An enemy document captured by the 1st Cavalry Division on 17 March 1966, in central Binh Dinh Province, revealed regimental data on Communist troops wounded in action during 9 April 1965 - 1 March 1966. The 2nd VC, 18th NVA, and Quyet Ram regiments which were estimated to be the major enemy elements stationed in Binh Dinh were listed in the document. The security of Binh Dinh is predominantly maintained by US and ROK forces. Consequently, a comparison between Communist troops killed in action (US/ROK body count) and enemy accounts of those wounded in action in Binh Dinh during the relevant period provides some indication of an enemy $\left(\frac{\text{WIA}}{\text{KIA}}\right)$ relationship between US/Third nation forces and the enemy.

US/ROK forces killed 628 Communists in Binh Dinh during the relevant period according to body counts. Enemy documents indicate that 1,135 troops were wounded. Some 85 Communists wounded in action were captured by US/ROK forces. It is assumed that: (1) US/ROK forces did most of the fighting in Binh Dinh Province; and (2) that the above mentioned Communist regiments comprise most of the enemy strength in Binh Dinh. The resulting ratio is $\frac{\text{WIA}}{\text{KIA}} = \frac{1,135 + 85}{628} = 1.94$ for Communist forces engaging US/Third Nation forces in South Vietnam. The US/ROK body count probably understates the number of enemy killed and consequently results in higher wounded to killed ratio than was probably experienced.

A general relationship between the number of troops killed in action and those wounded in action was

observed in the samples examined. Troops with high kill ratios $\frac{\text{(Enemy killed)}}{\text{(Friendly killed)}}$ also experienced high wounded to killed ratios $\frac{\text{(Friendly wounded)}}{\text{(Friendly killed)}}$. Conversely, troops with relatively low kill ratios tended to have low wounded to killed ratios. Troops (such as NVA/VC) with low kill ratios probably sustain a large number killed and a relatively smaller number wounded, while troops (such as US/Third Nation forces) with high kill ratios sustain a smaller number killed and a relatively larger number wounded. This relationship can be rationalized by the fact that better trained and organized troops with superior support fire from artillery and aircraft sustain fewer fatalities in obtaining or defending an objective than do forces that lack such support fire.

Captured enemy documents further indicate that approximately 50 percent of the wounded received serious injuries--broken bones and damage to internal organs that required immediate surgery. About 30 percent of the wounds were classified as light, and most of these cases were immediately returned to the battlefield. The remaining 20 percent suffered slight wounds that required little medical attention and were also immediately returned to the field.

It is difficult to estimate the number of seriously wounded Communist troops who die or cease to be effective fighting men. However, most of the seriously wounded are moved considerable distances by primitive means of transportation to surgical centers where, undoubtedly, the facilities and the quality of the medical personnel are far below Western standards. These factors coupled with the consideration that many Communist troops are already affected by debilitating tropical diseases suggest that the majority of the seriously wounded troops are out of action for considerable lengths of time or indefinitely.

b. Estimate

Some 19,000 to 30,000 Communist troops were seriously wounded in 1965. End of year estimates indicate that from 24,000-39,000 enemy troops will be seriously wounded in 1966.

3. Captured

Some 6,300 Communist military personnel were captured in action during 1965. Given the current scale of operations it is estimated that approximately 7,000 enemy troops will be captured in 1966.

4. "Chieu Hoi" Returnees and Deserters

Some 9,500 Communist soldiers defected under the GVN "Chieu Hoi" program during 1965. Current estimates indicate that about 13,000 enemy military personnel are expected to defect under the "Chieu Hoi" program this year. No information exists on the number of enemy personnel who simply desert and return to their villages. We estimate that unrecorded enemy desertions are at least equal to the number of defectors under the "Chieu Hoi" program. This is admittedly a conservative approach and the actual numbers of deserters could be significantly higher than the estimates used in this annex.

B. Allocations of Present and Future Communist Military Losses in South Vietnam

It is estimated that a maximum of some 25,000 to 30,000 North Vietnamese troops will be effectively put out of action in South Vietnam during 1966. An additional 25,000 to 30,000 will be lost in the first half of 1967 if current rates of combat are maintained and projected troop strengths are realized. The bulk of the North Vietnamese losses will result from troops killed and seriously wounded in action. Relatively few North Vietnamese losses will be accounted for by captures, desertions, or defections.

Local Communists (including main forces, irregulars and combat support troops) will at a maximum sustain some 80,000 to 90,000 effective losses in action during 1966. An additional 40,000 to 45,000 will be lost in the first half of 1967. Approximately two-thirds of the local Communist losses will result from battle deaths and serious wounds. The remainder will be accounted for by captures and desertions. The relative shift in casualties from local to North Vietnamese Communist forces in 1967 reflects the expected increase in the role of PAVN troops in the South Vietnamese war. In terms of comparative battlefield losses the Allied

forces have a distinct advantage over the Communists. It is estimated that some 16,000 Free World soldiers will be killed in action during 1966, (6,000 US/TN, 10,000 GVN), compared to 48,000 Communists. An additional 9,000 Allied soldiers will probably be killed by mid-1967, reflecting the same loss composition, compared to some 30,000 Communists.

In a country with an abundant population, where some 270,000 natural deaths and 20,000 accidents occur each year, the loss of some 40,000-60,000 youths annually for the sake of "National Liberation" does not, in an oriental sense, seem too high. The increased North Vietnamese commitment in South Vietnam is not, however, entirely based on patriotism. VC units have borne the brunt of enemy casualties to date and appear pressed to maintain their current strength in face of growing Allied strength. The squeeze on VC manpower is becoming more apparent, and the necessity of outside help more acute if the war is to be waged at the present level. North Vietnam appears both willing and able to take on this task in the hope that a protracted struggle will give them ultimate victory. It may, however, find this commitment to be increasingly burdensome particularly as it required increasing numbers of the country's limited resources of skilled manpower and leadership cadres.

Political

Prime Minister Ky reportedly has responded to criticism leveled at him by Gen Thi, commander of 1st Corps, who implied that Ky's national program lacked positive action. Ky accused Thi of undermining the government by allowing students and other groups to demonstrate in central Vietnam.

A serious morale problem, caused by poor leadership, exists in the junior and field grade officer ranks according to Gen Khang, commander of the Capital Military District, and if not corrected could result in more serious trouble. Khang stressed that the war itself had little to do with the lowered morale and that there still exists a considerable reservoir of will and determination to carry on the struggle against the Viet Cong.

Some Viet Cong reportedly expect an armistice and negotiations next year. Vietnamese intelligence and security services say that the Communists' Kien Hoa Provincial Committee has instructed its district committees to prepare for an armistice in 1966 by selecting cadres for a training course in the Cambodian border area on how to operate as "legal" residents. They are to be responsible, after the cease fire, for organizing another "proletarian revolution." Intellectuals are also to be recruited and organized to begin the revolution in urban areas. In Phu Yen and Binh Dinh Provinces, the Viet Cong as of mid-November were said to be planning large-scale military campaigns with the intention of seizing all of Phu Yen to improve their bargaining position in negotiations with the US, which they claimed would take place in Geneva next year.

Minister of Foreign Affairs Tran Van Do believes that it would be difficult to maintain South Vietnamese fighting morale if the Communists should decide to negotiate. The people would at once conclude that the war was over, and the Communists would take advantage of the discussions to solidify their position. His statements are in line with those of other leaders, many of whom are apprehensive about negotiations. The continuation of Viet Cong "subversive insurgency" during

SECRET (Continued)

APPROVED FOR RELEASE
4/21/98

and after an armistice would be logical. Moreover the period immediately preceding an armistice will probably be a violent one as participants seek to bargain from a position of strength.

The Viet Cong "Christmas cease-fire" offer has stimulated speculation in some quarters that it is a step toward "peace" through an extended truce and negotiations. The Communists have, however, used past holiday lulls to regroup for attacks. This year's Viet Cong-proclaimed truce during TET (31 January to 6 February) was followed by the assault on Pleiku.

Buddhist officials in Da Nang have accused US troops of desecrating the Khue Bac Pagoda, and a protest was reportedly sent to Ambassador Lodge on 8 December following the assembly of about 500 persons to demand reparations. The pagoda was supposedly damaged on 29 October by US troops firing at a sniper. Subsequent incidents -- as alleged by a Unified Buddhist Association (UBA) representative -- involved the destruction of a statue of Buddha and confiscation of food during searches. Some local officials believe the latter offenses could have been committed by hoodlums or Viet Cong. The situation acquires added importance because of the imminence of the UBA Congress; Thich Giac Ngo, the principal bonze of the damaged pagoda, is said to have threatened public suicide. VIET CONG ACTIVITY - 25 JANUARY

1. THERE HAVE BEEN NO REPORTS OF SIGNIFICANT VIET CONG ACTIVITY DURING THE PAST 24 HOURS, NOR OF ANY INCREASE IN THE NUMBER OF INCIDENTS INITIATED BY THE VIET CONG SINCE THE TET CEASE-FIRE.

2. THIS AFTERNOON, THE US MILITARY ASSISTANCE COMMAND IN SAIGON REPORTED THAT 46 INCIDENTS WERE INITIATED BY THE VIET CONG DURING THE 48 HOUR PERIOD FROM 1800 23 JANUARY TO SHORTLY AFTER 1800 25 JANUARY (SAIGON TIME). ON A QUANTITATIVE BASIS, THIS REPRESENTS NO INCREASE IN ENEMY ACTIVITY SINCE THE HOLIDAY CEASE-FIRE. ALTHOUGH THE REASON FOR THE ABSENCE TO DATE OF AN ANTICIPATED POST-TET VIET CONG UPSURGE IS NOT FULLY DETERMINED, THERE CONTINUE TO BE INDICATIONS OF LARGE TROOP CONCENTRATIONS IN SEVERAL AREAS.

3. THE VIET CONG MORTAR BOMBARDMENT OF US AND SOUTH VIETNAMESE INSTALLATIONS IN DA NANG YESTERDAY WAS MORE EXTENSIVE THAN INITIALLY REPORTED, AND RESULTED IN A TOTAL OF 29 US AND SOUTH VIETNAMESE CASUALTIES. HOWEVER, THERE WAS NO ENEMY ATTEMPT TO PENETRATE THOSE INSTALLATIONS WHICH WERE UNDER FIRE.

COUNTRY SOUTH VIETNAM

[redacted]

DATE OF INFO. 3 FEBRUARY 1966

DISTR. 5 FEBRUARY 1966

SUBJECT

[redacted] COMMENTS AND OBSERVATIONS CONCERNING THE 3 FEBRUARY DIRECTORATE MEETING

EO 12958 3.4(b)(1)>25Yrs (C)

PLACE & DATE ACQ. VIETNAM, SAIGON (3 FEBRUARY 1966)

REF IN 49172

FIELD REPORT NO. [redacted]

SOURCE AND APPRAISAL: [redacted]

EO 12958 3.4(b)(1)>25Yrs (C)

APPROVED FOR RELEASE
DATE: FEB 2001

1. THE FOLLOWING TOPICS WERE DESCUSSED AT A MEETING OF THE NATIONAL DIRECTORATE ON 3 FEBRUARY:

A. IN ORDER TO KEEP CORPS COMMANDERS ADEQUATELY INFORMED ON POLITICAL, ECONOMIC, MILITARY, AND DIPLOMATIC DEVELOPMENTS THE DIRECTORATE GAVE CONSIDERATION TO PUBLICATION OF A WEEKLY BULLETIN. PUTTING OUT THIS BULLETIN WOULD BE THE RESPONSIBILITY OF A POLITICAL BUREAU YET TO BE FORMED. PRIME MINISTER NGUYEN CAO KY AND DIRECTORATE SECRETARY GENERAL PHAM XUAN CHIEU WILL CONSULT WITH DEPUTY

This material contains information affecting the National Defense of the United States within the meaning of the Espionage Laws, Title 18, U.S.C. Secs. 793 and 794, the transmission or revelation of which in any manner to an unauthorized person is prohibited by law.

GROUP 1
Excluded from automatic downgrading and declassification

CHIEF OF STAFF FOR POLITICAL WARFARE. GENERAL HUYNH VAN CAO ABOUT FORMING THE BUREAU.

B. KY DISCUSSED A PROGRAM WHICH HE WOULD LIKE TO HAVE CARRIED OUT IN THE PROVINCES FOR THE PURPOSE OF WINNING STRONGER SUPPORT FOR THE WAR EFFORT. HE WANTS DEMONSTRATIONS ORGANIZED IN THE PROVINCES IN WHICH THE PEOPLE WOULD BE ENCOURAGED TO GIVE VOICE TO THE EXHORTATION TO "PRESS ON WITH THE WAR." HE WANTS THIS PROGRAM TO BEGIN BY 2Ø FEBRUARY. ([redacted] COMMENT: IT WILL BE DIFFICULT TO ORGANIZE SUCH A PROGRAM BY 2Ø FEBRUARY AND IT VERY WELL MAY BACKFIRE SINCE THE GENERALS MAY FIND THAT THE PEOPLE REALLY WANT PEACE AND NOT WAR.) EO 12958 3.4(b)(1)>25Yrs (C)

C. DIRECTORATE CHAIRMAN NGUYEN VAN THIEU AND SECRETARY GENERAL CHIEU WERE PLACED IN CHARGE OF INVESTIGATING THE ACTIVITIES OF RETIRED GENERAL TRAN VAN DON AND HIS FOLLOWERS. PRESENT PLANS ARE ONLY TO TALK TO THEM PERSONALLY IN AN EFFORT TO UNDERSTAND BETTER THEIR POINT OF VIEW AND REASONS FOR THEIR DISSATISFACTION. PERTINENT TO THIS, PRIME MINISTER KY OBSERVED IN PASSING THAT THE GENERALS WOULD PROBABLY HAVE TO KILL BAO KIM. ([redacted] COMMENT: BAO KIM IS IDENTICAL WITH NGUYEN BAU KIM, NGUYEN BAU KIEM AND NGUYEN BAO KIM, WHO WAS RECENTLY REPORTED TO HAVE BEEN INVOLVED IN PLANS FOR A COUP TO HAVE TAKEN PLACE 15 JANUARY. SEE FVS-12,522.) ([redacted]). EO 12958 3.4(b)(1)>25Yrs (C)

D. DEPUTY PRIME MINISTER NGUYEN HUU CO ASSERTED THAT HE THOUGHT THE AMERICANS WERE OPPOSED TO GENERAL VINH LOC REMAINING

AS II CORPS COMMANDER. BOTH KY AND CO REMARKED THAT VINH LOC SHOULD REMAIN AS II CORPS COMMANDER. KY, CO, AND LOC EXPRESSED ANNOYANCE AT AMERICAN ATTEMPTS TO INFLUENCE DECISIONS IN SOLVING PROBLEMS CONCERNING THE MONTAGNARDS AND THE UNITED FRONT FOR THE STRUGGLE OF THE OPPRESSED RACES (FULRO). DURING THIS DISCUSSION DIRECTORATE SECRETARY GENERAL CHIEU WAS A MODERATING INFLUENCE ON THE OTHERS WHO WERE CRITICIZING THE AMERICANS. E0 12958 3.4(b)(1)> [C]

E. THE LIST OF CANDIDATES FOR THE FORTHCOMING ADVISORY COUNCIL FOR BUILDING DEMOCRACY WAS SUBMITTED FOR CONSIDERATION. ([redacted] COMMENT: IT WILL BE A LONG TIME BEFORE PREPARATIONS FOR FORMING THIS COUNCIL ARE COMPLETE.) E0 12958 3.4(b)(1)>25Yrs [C]

F. I CORPS COMMANDER GENERAL NGUYEN CHANH THI CRITICIZED PRIME MINISTER KY ON THE SUBJECT OF RAISING THE FARES OF AIR VIETNAM. GENERAL THI POINTED OUT THAT THE POOR PEOPLE IN I CORPS AREA WOULD SUFFER THE MOST SINCE BOAT AND BUS TRANSPORTATION IS FOR THE MOST PART UNAVAILABLE TO THEM.

G. THE DIRECTORATE MEMBERS DECIDED TO POSTPONE INDEFINITELY EFFORTS TO CREATE A POLITICAL PARTY SPONSORED BY THE MILITARY GOVERNMENT. TENTATIVE PLANS FOR SUCH A PARTY HAVE BEEN UNDER CONSIDERATION FOR SEVERAL MONTHS.

H. GENERAL THI AND CHIEF OF THE JOINT GENERAL STAFF GENERAL CAO VAN VIEN OPENLY ACCUSED DEPUTY PRIME MINISTER CO AND GENERAL BUI HUU NHON, JGS DEPUTY CHIEF OF STAFF FOR LOGISTICS, OF SEEKING WAYS TO OBTAIN MONEY FOR SPECULATIVE PURPOSES AND ALSO

OF MISAPPROPRIATING FUNDS AVAILABLE TO THEM, SUCH AS A SUM OF SEVEN HUNDRED MILLION PIASTERS SET ASIDE FOR MILITARY HOUSING CONSTRUCTION. E0 12958 3.4(b)(1)>25Yrs (C)

1. PRIME MINISTER KY SAID HE WOULD LIKE TO HAVE THE DIRECTORATE FOR MONTAGNARD AFFAIRS MADE A SECRETARIAT AND PLACED UNDER GENERAL VINH LOC WITH HEADQUARTERS IN II CORPS AREA. NO ONE RESPONDED TO THIS RECOMMENDATION. ONE OF THE GENERALS LATER COMMENTED THAT HE INTERPRETED THIS AS A STRONG SHOW OF SUPPORT FOR VINH LOC ON THE PART OF KY.

2. THE FOLLOWING ARE CONFIDENTIAL REMARKS THE GENERALS MADE TO FRIENDS DURING RECESSES IN THE MEETING: E0 12958 3.4(b)(1)>25Yrs (C)

A. [redacted] CONFIDED THAT HE WAS SYMPATHETIC TO RETIRED GENERAL TRAN VAN DON AND HIS FOLLOWERS.

B. [redacted] MADE A PROPOSAL IN STRICTIST CONFIDENCE TO ONE OF THE GENERALS WHOM HE TRUSTS THAT HE THOUGHT IT WOULD BE A GOOD IDEA TO ORGANIZE A POLITICAL FORCE WITH REPRESENTATIVES FROM ALL THE FAITHS AND GEORAPHICAL AREAS OF VIETNAM. [redacted] COMMENTED THAT HE WAS CERTAIN THEY COULD ORGANIZE A FORCE FOUR TIMES THAT OF RETIRED GENERAL TRAN VAN DON'S ASSOCIATION OF SOUTHERN SCHOOL INTELLECTUALS (HOI LIEN TRUONG). [redacted] DOES NOT LIKE DON OR GENERAL DUONG VAN DUC WHO IS PRESENTLY UNASSIGNED. [redacted] EXPLAINED THAT HIS GROUP WOULD BE TERMED A "BROTHERS' SCHOOL MOVEMENT." THE GROUP WOULD BE BROADER IN SCOPE THAN DON'S WHICH IS ENTIRELY MADE E0 12958 3.4(b)(1)>25Yrs (C)

EO 12958 3.4(b)(1)
(C)

UP OF SOUTHERN CATHOLICS, BUDDHISTS, CAO DAI, AND HOA HAO.

[redacted] COMMENT: [redacted] DID NOT REVEAL FOR OR AGAINST WHOM THE FORCE WOULD BE OR DESCRIBE HOW THE GROUP WOULD BE UTILIZED ON THE POLITICAL SCENE.)

EO 12958 3.4(b)(1)
(C)

3. ONE OF THE GENERALS OBSERVED THAT NO MATTER HOW POLITE THE MEMBERS OF THE DIRECTORATE ARE WITH EACH OTHER DURING THESE MEETINGS AND NO MATTER HOW ACCEPTABLE THEIR RELATIONSHIP WITH EACH OTHER MAY SEEM TO THE PUBLIC EYE, THERE IS NO UNITY AMONG THEM.

4. FIELD DISSEM: STATE USMACV USIS USAID 2ND AIR DIV 9TH FLD STA CINCPAC ARPAC PACFLT PACAF.

(The Weekly Report on the Situation in South Vietnam is based on contributions from CIA, DIA, and INR; it is edited and published by CIA without final coordination.)

THE WEEK IN PERSPECTIVE

The pace of Communist military activity has increased, both in terms of initiated actions and of resistance in force to allied ground operations. Most of the action in recent days has been focused in the five northernmost provinces of I Corps, where the Communists have suffered heavily from government counteroperations, but the Viet Cong have also been active in the provinces east of Saigon and in the delta.

The Ky government has sought to keep up the momentum of the Honolulu conference and its own cabinet reshuffle by staging further rallies in the provinces, and by moving ahead both with plans to set up the national advisory council and to hold provincial council elections this spring. However, there are new signs of disenchantment on the part of Buddhists, as a result of the cabinet reshuffle, and on the part of intellectual circles over the anticipated slow pace of political and economic reforms.

I. THE SITUATION IN SOUTH VIETNAM

A. POLITICAL SITUATION

1. Despite the Ky government's efforts to sustain the momentum generated in the wake of the Honolulu conference, there have been further indications of a hardening attitude in some circles toward the character and performance of the military regime. These signs were particularly evident during the past week in Buddhist circles, which have reacted negatively to Ky's cabinet reorganization, and among certain political and intellectual circles which appear skeptical of the government's willingness and ability to carry out reforms in the political, economic, and social fields.

2. The US Embassy reported that reactions to Ky's cabinet reshuffle were slow to develop, but tended to follow anticipated lines. Although "die-hard" southerners continue to view the government as northern-dominated, the appointment of four additional southerners to new government positions has mollified the bulk of moderate southerners. The appointment of a Catholic lay leader as secretary of youth has pleased most Catholic circles, althouth some Catholics are reported uneasy over the alleged Marxist background of the new economy minister. Businessmen, on the other hand, tend to expect stronger economic leadership from the cabinet revision. Buddhist leaders clearly resent the replacement of a prominent sympathizer, Ngo Trong Anh, as public works secretary and the increase of Catholic representation in the cabinet; however, the only public comment, appearing in a Saigon newspaper which reflects the views of monk Tri Quang, somewhat backhandedly praised the smooth manner in which Ky effected his governmental changes. Other Saigon papers have devoted minimal comment to the reorganization, but one observed that the changes do not affect the country's basic need for leaders with the "courage to carry out policies they have outlined."

3. [redacted] E0 12958 3.4(b)(1)>25Yrs (C)

[redacted]

E0 12958 3.4(b)(1)>
(C)

4. A Buddhist ceremony held in Hué on 27 February to honor Buddhist martyrs also contained overtones of political dissatisfaction, including a hint of possible future Buddhist attacks on the government's pacification teams. One of the speakers, considered close to Tri Quang, claimed that three Buddhist youth leaders had recently been killed--one by the Viet Cong, one by government Popular Forces, and the third by a government political action team (PAT). He urged youths to protest if similar incidents occur. Earlier this year, some Buddhists and politicians in northernmost Quang Tri Province had accused the local province chief of misusing the PATs as one argument in forcing his ouster.

E0 12958 3.4(b)(1)>25Yrs
(C)

[redacted]

5. Buddhist leaders, however, give no indication that they are presently considering any serious effort to topple the government. The Buddhists continue to be plagued by internal dissensions, stemming partly from rivalry between Tam Chau and Tri Quang, and perhaps increasingly from conflicts between the clergy and lay leaders over the exercise of political influence. Recently, a group of laymen who are in the process of organizing a Buddhist political party appears to have antagonized Tam Chau by failing, in a mid-February meeting, to elect any

of Chau's supporters to the party's interim leadership. This could cost the embryonic party considerable help from the Buddhist Institute's grass roots organization.

6. In addition to the Buddhist leadership, there are indications of restiveness in some intellectual and political circles partially sympathetic to the Buddhists. A prominent Vietnamese writer and composer has claimed that Saigon intellectuals were furious with Premier Ky's sarcastic response to a Saigon professor who voiced public doubts over the government's good faith in promising political and social reforms. According to a fairly reliable journalist, a group of prominent Saigon politicians, including former deputy premier Tran Van Tuyen and possibly current Foreign Minister Tran Van Do, are working on plans for a new government with support from unidentified young Saigon intellectuals. Tuyen is alleged to have told the group recently that he expected peace and the neutralization of South Vietnam in about six months.

7. Under the aegis of Directorate Secretary General Pham Xuan Chieu, the government is continuing to proceed with its plans to establish a "democracy-building" advisory council by approximately mid-March. Chieu, in consulting various groups about the composition of the 80-member council, reportedly has received some acceptable recommendations from the southern Dai Viet political party, Buddhist leader Tam Chau, and retired General Tran Van Don of the former Minh government. One of Chieu's current major headaches is reported to be a demand by Father Hoang Quynh, an acknowledged leader among militant Catholics, that a list of some 60 to 65 persons be accepted in toto, or none of them would participate. Defense Minister General Co is also reported to have proposed three council members personally associated with him in commercial ventures.

8. General Chieu is reliably reported to have made one concession which may appease some of the current criticism of the government's plan to hand-pick the advisory council membership. He has agreed to permit some prominent persons already serving on provincial or municipal councils--currently the only popularly elected groups in the country--to serve on

the advisory council. At the same time, the government has now authorized the holding of new elections for the provincial and municipal councils this spring, rather than postponing the elections and extending the terms of the present councilmen as earlier contemplated. This decision, reached after prodding by US officials, may also help to dispel doubts of the government's good faith in promising a gradual development toward representative institutions. The provincial councils have only advisory powers, and their influence varies by province, depending upon the calibre of their members and of individual province chiefs. On balance, however, the councils appear to have been more useful and more responsible than expected when they were first elected under the Quat government in May 1965.

Economic Situation

9. The new Economic Minister, Au Truong Thanh, has indicated to the US mission that he is reluctant to initiate any dramatic moves that would endanger his position in the government. He was also unwilling to give final decisions on certain economic policy actions discussed in Honolulu even though it was made clear to him the GVN and US had reached agreement on these matters and it was now a matter of implementing them.

10. For political reasons, Thanh is against imposing new taxes at this time. He has proposed that the high prices of rice in the areas north of Saigon be lowered by subsidizing rice sales using counterpart funds; the USAID Director has given general approval to this proposal. Finally, Thanh believes that the port situation is the number one problem. He said that Prime Minister Ky had signed a decree on 26 February giving the port director full authority to control all port operations including the police and customs officials.

11. Thanh's plan is to initiate key limited actions without undertaking any bold measures which might develop hostility among powerful economic interests during the early phase of his tenure of office. Thanh first wants to get public acceptance of his position and he would then move slowly toward large economic measures. The US Mission strongly

questions this approach because of the serious economic situation.

12. The stocks of rice in Saigon rose from 79,000 MT at the end of January to 87,000 MT on 21 February. The increase resulted totally from imports. Rice deliveries from the delta to Saigon have remained low in February, averaging barely over 1000 MT per day. Meanwhile, wholesale and retail prices of rice are rising.

13. Retail prices in Saigon rose in the week ending 21 February primarily by small amounts. The most significant increases were in rice, charcoal, and firewood. According to the USAID Index, the general level of retail prices remained three percent below a month ago.

14. The prices of $10 bills and $10 MPC (scrip) in the Saigon free market were unchanged at 169 and 177 piasters per dollar, respectively. The price of gold rose by one piaster per dollar to 223. In Hong Kong the piaster-dollar cross rate remained at 159.

B. MILITARY SITUATION

1. The over-all level of Communist-initiated activity for the week ending 26 February rose substantially.

2. During the period there were 939 Communist-initiated incidents compared with the preceding week's 757--or about 200 more than the weekly average for the last half of 1965 and 100 more than the 1966 weekly average. There were 26 attacks and 574 incidents of terrorism compared to 16 and 454 respectively for the previous week. Both of the large-scale attacks occurred on 21 and 22 February in Binh Thuan Province. The kill ratio this reporting period favored free world forces 2.2 to 1, down from 4.6 to 1. Viet Cong casualties were 1,122 killed and 92 captured. Totals the week before were 1,357 killed and 122 captured. South Vietnamese casualties for the reporting period were 379 killed, 826 wounded and 183 captured or missing--a total of 1,388 compared to preceding period's 694. Total US casualties rose to 887 from the 454 of the previous week; total other free world casualties also rose--from 30 to 58. The South Vietnamese lost 392 weapons and captured 264 from the Communists; enemy losses included 20 crew-served weapons, while friendly forces lost seven.

GVN/Allied Activities

3. Friendly activity continued at a high level for the third week with emphasis on search-and-destroy operations. Although there were fewer small-unit actions and no increase in battalion-size operations, there were more contacts with the enemy during this period and the level of fighting showed a marked increase.

4. Over 50 percent of ARVN weekly casualties occurred in I Corps area. On 25 and 26 February during the 1st Division (ARVN) multibattalion search-and-destroy operation in Quang Tri Province, five battalions (ARVN) became heavily engaged with an estimated two VC battalions. In the two-day battle friendly losses were 12 killed, 104 (2 US) wounded, and 6 missing. Viet Cong losses were 220 killed, 4

captured, and 25 weapons seized. In Thua Thien Province on 25 February, a Regional Forces company engaged an estimated VC battalion, and was immediately reinforced by available 1st Division (ARVN) forces. Friendly losses were 8 killed, 22 wounded and three weapons. The VC lost 49 killed, 19 captured and 14 weapons. The combined USMC/ARVN Operation DOUBLE EAGLE II/LIEN KET 24, in southern I Corps area continued with daily contacts. Friendly losses thus far are 8 killed (4 USMC, 4 ARVN) and 133 wounded (102 USMC, 31 ARVN). Enemy losses are 70 killed, 23 captured, 44 individual weapons and three crew-served weapons seized. In Quang Ngai Province, another significant operation was conducted by the 2nd Division (ARVN) to support the local pacification program. On 23 February, contact with a VC force of unknown size resulted in friendly losses of 43 killed, 33 wounded, 28 missing and over 100 weapons lost. Viet Cong losses were 10 killed and six weapons seized.

5. In II Corps area, US forces conducted battalion-size search-and-clear operations. ARVN forces initiated pacification activities along the east side of Route 1 north of Bong Son, and ROK forces continued to secure Route 1. Cumulative friendly losses from this month-long operation now are 366 killed (239 US, 4 ROK, 123 RVN), 1,206 wounded (828 US, 20 ROK, 358 ARVN) and 6 US missing. Enemy losses were 1,742 killed, 430 captured, over 2,000 suspects detained, 302 individual weapons and 63 crew-served weapons seized. Operation VAN BUREN, conducted by the 1st Brigade, US 101st Airborne Division and the Korean Marine Brigade in the rice harvest area southwest of Tuy Hoa, terminated on 21 February with over 30,000 tons of rice harvested. Friendly losses from this 32-day operation were 98 killed (54 US, 44 ROK), 309 wounded (194 US, 115 ROK) and 2 ROK missing. Viet Cong losses were 670 killed, 49 captured and 153 weapons seized.

6. During Operation ROLLING STONE this week in III Corps area, the VC lost 122 killed and 11 captured when they attempted to penetrate the perimeter of the 1st Brigade, US 1st Infantry Division with a force estimated to be three battalions. Friendly losses were 11 killed, 74 wounded and three M-48 tanks and five M-113 APC's damaged. Operation MASTIFF continued without major contact and on

25 February the 2nd Brigade, US 1st Infantry Division was relocated to Dau Tieng.

7. The most significant friendly activity in IV Corps area this week was the multibattalion, 21st Division (ARVN) operation in Chuong Thien Province during which armed helicopters accounted for 35 of the 41 VC killed. In addition, 35 VC with five weapons were captured, while friendly losses were one killed.

8. Free world forces conducted 88 battalion - or larger-size operations during the week ending 26 February, 44 of them achieving contact--33 RVN, two ROK, and nine US. There were 21,986 small-unit operations, including 3,313 conducted by US forces. Of the 187 which achieved contact with the enemy, 132 were conducted by US units. Sea, river, and coastal forces searched 4,116 junks and 16,728 people compared to 4,632 junks and 18,325 people respectively for last week. None of the 198 persons detained was confirmed as VC.

9. There were seven B-52 Stratofortress raids during the week ending 27 February. During the period 18-24 February there were 3,256 tactical air strikes and armed reconnaissance sorties flown by the US Air Force, Navy, Marine and Vietnamese aircraft. These strikes, in addition to supporting ground activities, produced the following results: 1,706 structures destroyed, 1,330 damaged; 80 sampans destroyed, 65 damaged; three gun emplacements destroyed; two trucks destroyed, one damaged; eight roads cut or cratered and one bridge approach cratered. In addition, 139 VC were reported probable KBA with four confirmed KBA (killed by aircraft).

Communist Activity

10. In I Corps area, the level of Communist activity doubled from that of the previous week. In Quang Tri Province on 22 February, a Popular Forces platoon and a Regional Forces company operating separately, but in close proximity to each other were attacked simultaneously. The platoon lost 20 killed, 14 wounded, seven missing and 20 individual weapons. The Regional Force company losses have not

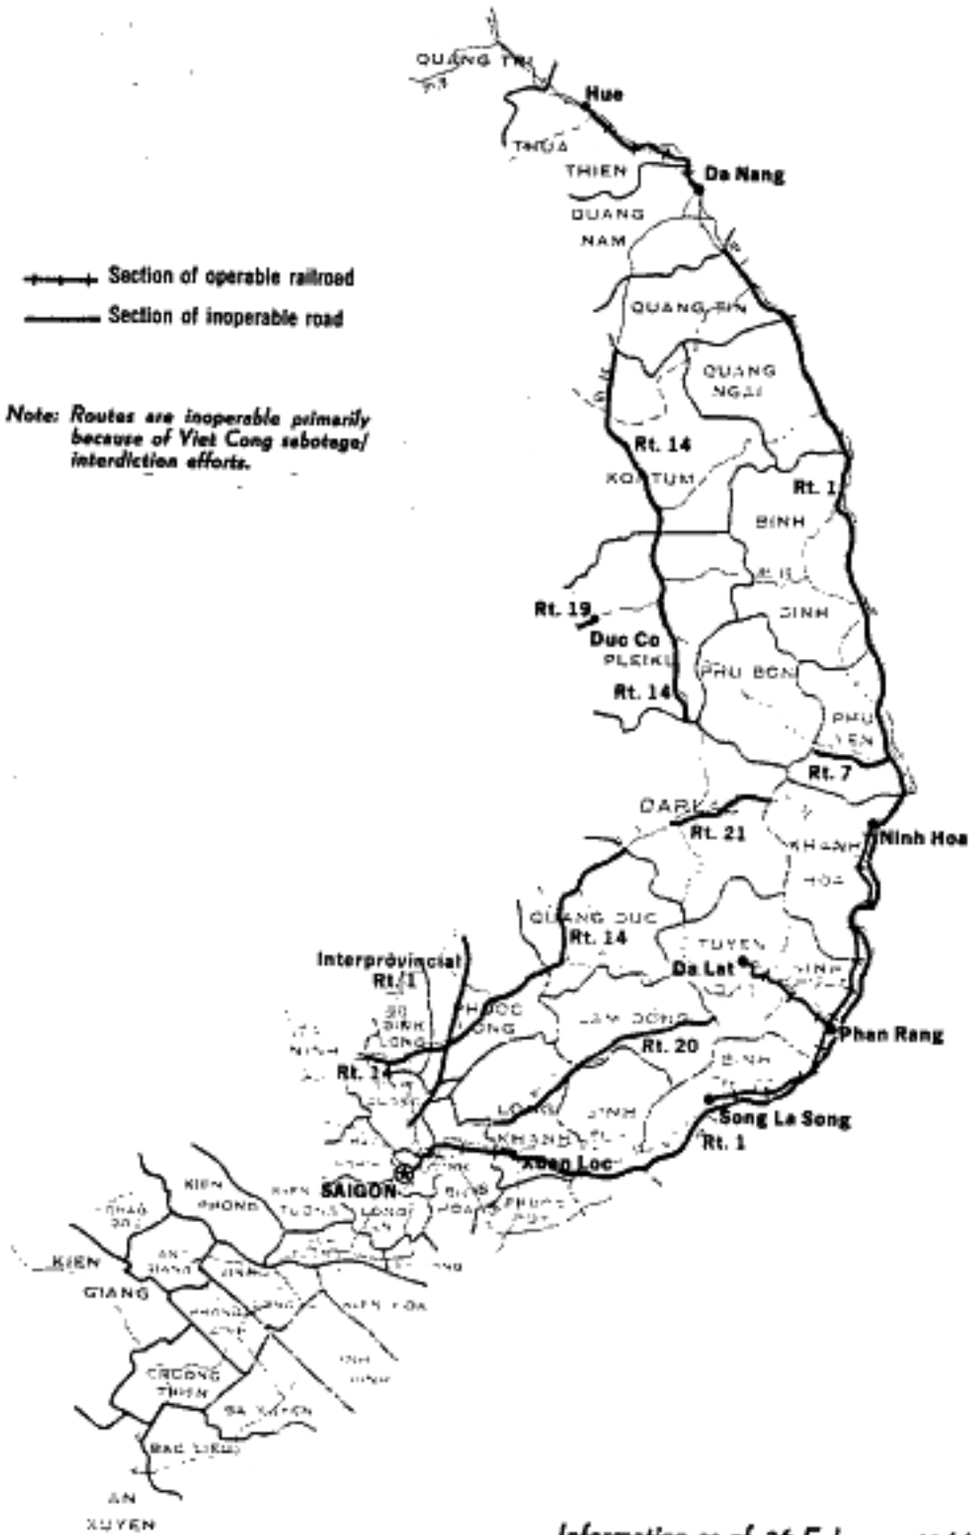
yet been confirmed. The attacking force was identified as an element of the 808th VC Main Force Battalion. Also on 22 February, an estimated two VC companies attacked a government security force in Quang Nam Province. A reaction force of two Ranger companies engaged an estimated VC battalion, and the subsequent heavy contact resulted in friendly casualties of 18 killed, 46 wounded, and 10 missing. Enemy losses were 114 killed. On 22 February, a US Marine Corps aircraft flying at 16,000 feet in western Quang Tri Province received fire from a suspected antiaircraft gun.

11. In II Corps area, enemy activity remained at about the same level as the preceding week but there were more armed attacks. On 21 February, an ARVN battalion in convoy was ambushed by an estimated VC battalion in Binh Thuan Province, and on the same day an unknown number of VC attacked and overran an outpost in Quang Duc Province. On 22 February, an estimated VC battalion attacked the district town of Thien Giao in Binh Thuan Province. Friendly losses were 26 killed, including the district chief, while VC losses were 57 killed and one captured. Documents captured in Darlac Province identified the 966th Battalion, 32nd Regiment in an area northeast of Ban Me Thuot; this unit was previously located in western Pleiku Province.

12. In III Corps area there was a slight decline in enemy activity. On 18 February, an unidentified force attacked an outpost in southern Long An Province. At the same time two district towns and six other outposts in the same area came under attack or harassment. Friendly losses were 10 killed and eight wounded; while VC losses were 28 killed.

13. There was a slight increase in the number of Communist-initiated incidents during the week in IV Corps area. The Binh Thuy Airfield was harassed on 20 February by small arms and mortar fire, resulting in 10 wounded, two trucks damaged and a U-10 aircraft damaged. On 23 February, two outposts in the vicinity of Can Tho and Binh Thuy airfields were attacked by an estimated two VC companies. MACV believes these incidents may be the beginning of a VC effort in Phong Dinh Province to isolate Can Tho from the rice area of An Giang and Chau Doc provinces.

CURRENT OPERATIONAL STATUS OF MAJOR TRANSPORTATION ROUTES AND COASTAL RAILROAD



Information as of 26 February 1966

~~SECRET~~

61308

14. National Route 1 is closed in Quang Tin, Quang Ngai, Binh Dinh, Phu Yen, Khanh Hoa, Ninh Thuan, Binh Thuan, Binh Tuy, and Long Khanh provinces. Route 14 is closed in Kontum, Pleiku, Quang Duc, Phuoc Long, and Binh Long provinces. Route 19 is closed west of Duc Co, Pleiku Province. Route 7 is closed in Phu Yen Province. Route 20 is closed in Lam Dong and Long Khanh provinces. Route 21 is closed in Darlac Province. Interprovincial Route 1 is closed in Binh Duong and Phuoc Long provinces.

15. The National Railroad is operating between Saigon and Xuan Loc, Long Khanh Province; between Song La Song, Binh Thuan Province, and Ninh Hoa, Khanh Hoa Province; between Dalat, Tuyen Duc Province, and Phan Rang, Ninh Thuan Province; and between Da Nang and Hué.

C. RURAL CONSTRUCTION

1. To express better the spirit of the government's pacification effort, the US mission in Saigon has settled on the term "revolutionary development" as the translation of the Vietnamese expression for what was formerly called rural construction. Deputy Ambassador Porter has taken charge of all aspects of the US community's support of the program.

2. On 21 February, 4,500 persons entered the Vung Tau National Cadre Training Center in the first class to receive a new program of instruction designed specifically for revolutionary development cadre. Each province is represented by at least one 59-man team, while the four national priority areas (Da Nang - Hoi An, Qui Nhon -Phu Cat - Binh Khe, the area surrounding Saigon, and An Giang Province have larger representation.

3. In an attempt to utilize the country's administrative assets more effectively, Premier Ky issued a decree ordering trainees in the National Institute of Administration (NIA) to participate in the revolutionary development program. A year of full-time work in the program will follow the NIA student's first year of training at the NIA. The student returns to the NIA for the third year, after which he spends six months of supervised probationary work in a government agency. He then graduates as a "field administrator."

4. General Nguyen Duc Thang, minister of revolutionary development, plans a series of trips to all the provinces to visit cadres, confer with members of the provincial councils, and generally to check on the progress of development programs. During the week of 20-26 February he visited the IV Corps area.

5. The refugee population continues to grow. The latest figures showing 833,875 as of 20 February, an increase of 31,934 since 11 February. The following table compares the increase in the various categories of refugees for the two reporting periods:

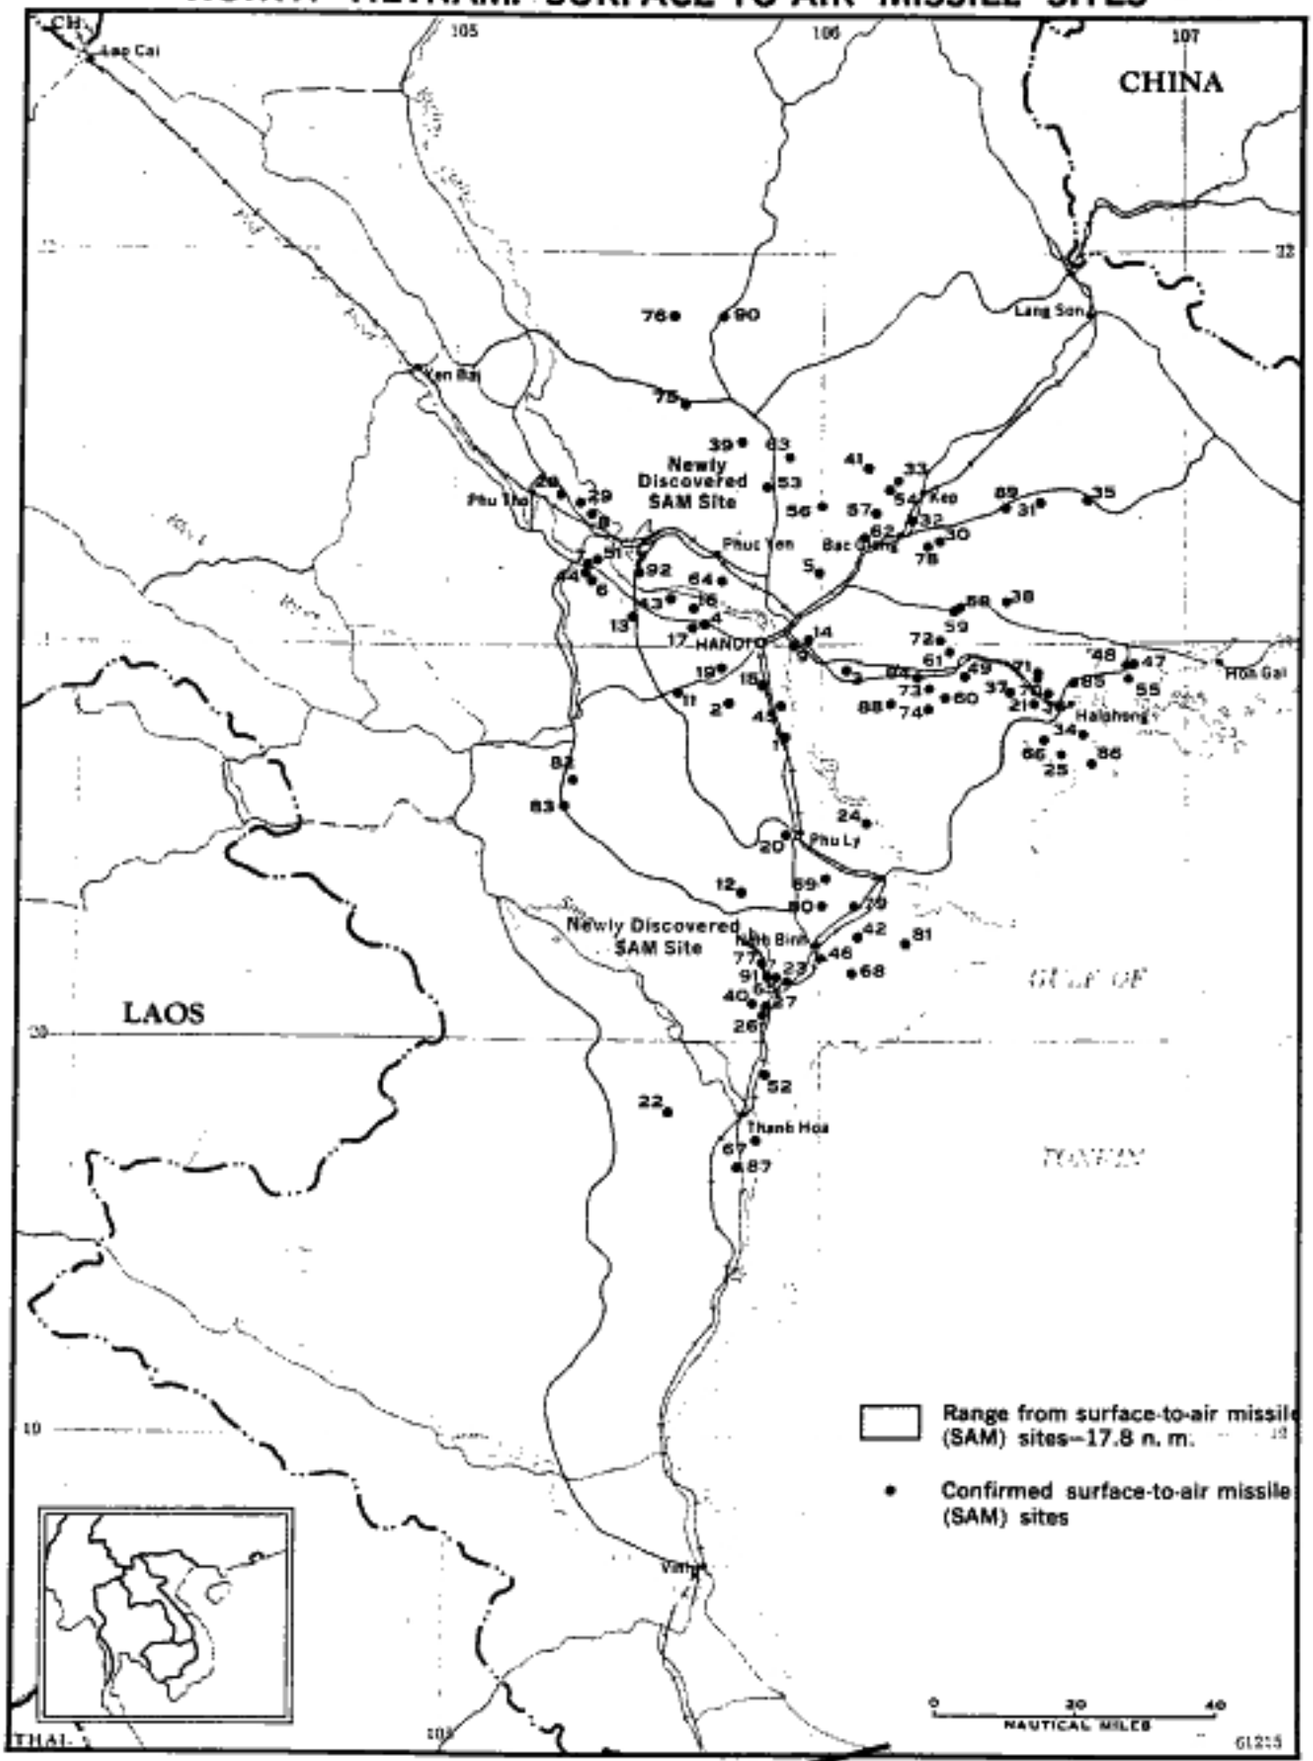
	Total	In Temporary Shelters	Resettled	Returned to Native Villages
11 Feb	801,941	450,033	279,873	72,035
20 Feb	833,875	444,549	294,902	94,424

6. An encouraging trend is the number of refugees in temporary shelters. Also encouraging is the increse in the number of refugees returning to their native villages. This latter condition, if it persists, will be an indication that the government is extending its influence in the countryside.

7. According to US officials in Saigon, the newly appointed refugee commissioner, Dr. Nguyen Phuc Que, shows promise in his energetic and serious approach to the job. He has already been able to arrange with the ARVN's Saigon general to provide traveling army medical teams to to into the provinces where the refugee population is concentrated. Que also hopes to increase classroom space for the children of refugees and is making plans to get more assistance to the refugees from province-level officials.

8. Nguyen Hau Chi, the newly appointed province chief for Quang Nam, recently reviewed for General Lansdale some of the problems he expects to encounter when he assumes his new position this month. Pre-eminent among them is the noncooperation of VNQDD members who are unwilling to participate in the nine-village project, a pacification effort in the national priority zone south of Da Nang. (See The Situation in South Vietnam, 29 December 1965 and 9 February 1966 for earlier reports on this project.) The support of this group, whose young men are dodging ARVN efforts to draft them, is conditional upon the resolution of security problems in the province, primarily the security of Route 1 from Da Nang to the province capital of Hoi An and to the populous agricultural river valley just to the west.

NORTH VIETNAM: SURFACE-TO-AIR MISSILE SITES



SECRET

NO FOREIGN DISSEM

RELEASABLE TO UK, CANADA, AUSTRALIA, AND NEW ZEALAND

II. DEVELOPMENTS IN THE BLOC

1. Four US aircraft were lost over North Vietnam this week bringing total US losses to 201. Of these 140 have been lost to conventional groundfire, 12 or possibly 13 to SAMs, three to MIG fighters, and the rest for reasons not directly attributable to hostile action.

2. Two new SAM sites--numbers 91 and 92--were discovered during analysis of recent photography. Both are situated within the established boundaries of SAM defenses in the areas of Hanoi, Haiphong, and Thanh Hoa, they do not extend SAM coverage, but, they do add depth to the defenses in this vital region.

3. Hanoi propaganda began this week to react to the recent US public discussions of American policy objectives in Vietnam. A broadcast on 26 February quoted extensively from Western press account of the US Senate Foreign Relations hearings to prove that public opposition to US policy in Vietnam was growing rapidly. The broadcast claimed that the hearings contributed to this growth by bringing "the truth" to the American people.

4. An indirect though more substantive comment on the current debate appeared in a statement by North Vietnamese lawyer Do Xuan Sang on the role of the Liberation Front (NFLSV) which was also broadcast on 26 February. While not referring to the discussions on the role of the Front currently under way in the US, Sang maintained that the NFLSV "unquestionably had a juridical status in the eyes of international law" because it controlled "four-fifths of the territory of South Vietnam, three quarters of the people, discharged all its international obligations and exercised the powers of a sovereign state." Sang stopped short of calling for recognition of the Front as a government but closed his remarks by quoting Ho Chi Minh's letter of 24 January to the effect that "if the US really wants peace it must recognize the NFLSV as the sole representative of the South Vietnamese people and enter into negotiations with it."

5. Chinese reaction to the recent discussions of the Front's role appeared in a 27 February broadcast which made it clear that Peking does not think

the Vietnamese Communists should settle for anything less than total control of the government in South Vietnam. According to the broadcast, Senator Robert Kennedy's expression of a willingness to give the Front "a role in a coalition government" was nothing but a "trick." According to Peking, the Front would be only a "minority group" in such a government, rather than the "sole representative of the Vietnamese people," as the Communists demand. The Front, asserted the broadcast, would never play the "walk-in part" of a "showpiece in a puppet regime fostered by the US."

Hanoi's Position on Discussion With British in Moscow

6. Hanoi responded quickly to Western press reports hinting that concessions in the DRV position on settling the war had been made during the 23 February contact with the DRV embassy in Moscow by Prime Minister Wilson's special representative, Lord Chalfont. A spokesman for the DRV Foreign Ministry on 25 February issued a statement summarizing the meeting which asserted that all reports carried by Western news agencies and at variance with the official statement were to be considered "distorted news." The official statement claimed that the chargé of the embassy in his conversation with the British representative had condemned UK support for the US policy, unmasked the "wicked scheme of the so-called unconditional negotiations of the US," and "clearly explained the DRV Government's four-point stand."

III. THIRD COUNTRY DEVELOPMENTS

A. JAPAN

1. Bui Diem, secretary of state for foreign affairs and formerly special assistant to Premier Ky, is scheduled to arrive in Japan on 4 March for a five-day "unofficial" visit. Diem has told the embassy that the main purpose for the visit will be to test the atmosphere for a possible visit of Premier Ky to Japan this spring. Earlier plans called for a visit in March by Ky but the Japanese proposed delaying it to an unspecified date. Diem also hopes to confirm the availability of about nine million dollars in Japanese loans previously allocated but which have been unused because of some question over interest rates.

B. FRANCE

1. South Vietnamese Foreign Minister Tran Van Do gave an interview to Vietnam Press, the semi-official GVN news agency, in which he commented more in sorrow than in anger on President De Gaulle's letter to Ho Chi Minh. Do stated that French policy on Vietnam seems to stem more from France's "offended pride" than from reason and equity. He also pointed out that De Gaulle's assertion that the GVN is not representative does not ring true since if the GVN had not broken relations, France would still have an ambassador in Saigon.

VIETNAM DAY COMMITTEE
2407 Fulton Street
Berkeley, California
U.S.A.

December 16, 1965

Dear Friends,

On Tuesday, December 14th, news sources in the United Nations speculated that the Johnson Administration will probably declare war (upon which, they do not say) in January after the proposed cessation of bombings in Vietnam which may occur during the Christmas holidays. The next day, the first real bombing of the large power station near Haiphong in North Vietnam was announced. If the United Nations sources can be trusted, this means the North Vietnamese government, with whom the United States claims it will be seeking peace negotiations during the moratorium in the fighting, in the diplomatic position of risking national suicide if the United States' terms for negotiations are not accepted.

First, we urge that peace groups everywhere, as well as all organizations and individuals opposed to the war, publicly demand that the United States demonstrate its desire for peace in Southeast Asia by extending the cessation of bombings indefinitely.

Second, the strong probability that the United States will soon be at war and will most likely actually bomb the population centers of Hanoi and Haiphong makes it imperative that the anti-war movement respond immediately throughout the world. We therefore urge that, as soon as bombings or a declaration of war take place, demonstrations be held within hours or days at national capitals, at American Embassies/Consulates, Information Centers, and Military Establishments in as many countries as possible. Such a response can represent a significant escalation of the movement to stop this war.

Third, it is also possible that, if war is declared by the United States, the protest movement here will be abruptly silenced. We are depending, therefore, upon our foreign contacts to carry on with the work they have begun around the world to clarify the issues of this war and to put pressure on their governments to stop it.

Yours in the struggle,

Suzanne Gilford, Chairman
International Committee
Vietnam Day Committee

we would like to put it in our organ.

We believe that your message would arouse great attention among 210,000 workers of ZENDENTSU. And serve for strengthening the further strong links of peace and relations between Japan and American peoples.

So , please be kind enough to send ZENDENTSU your steering message concerned.

Cordially yours,

Isami Kondo
Chief editor
All Japan Telecommunications
Workers Union (ZENDENTSU)

1965. 10. 20

Dec. 17, 1965

...COMMUNICATIONS WORKERS UNION...

...our sincere apologies for this belated response...

As you may realize much has transpired in the past several months regarding the anti-war movement in the U.S.A.

In Berkeley, on Nov. 20th, nearly twenty thousand people marched to protest the war in Vietnam and to reaffirm their own Constitutional rights to be able to protest.

During the Thanksgiving weekend (Nov. 24-28) there was a national anti-war convention in Washington, D.C., where delegates, alternates participants and observers representing every political tendency involved in the anti-war movement were present. A major struggle developed during the course of the convention between the Stalinists and the Trotskyists. The issue concerned the formation of a broadly based, non-exclusive membership, national anti-war organization. The problem, even after the convention terminated, has not been fully resolved. At the present moment there exists differences based upon political ideologies within the anti-war movement. This problem is significant. However, it has not destroyed the unity of the movement. The VDC has a "united front" character, and most of the major political tendencies in it are working together. At the present moment the VDC is still undergoing fundamental transformation...

...International Committee for the VDC to issue a factual declaration of any sort. Within the next several months we hope the problems facing us will be resolved, and at that time, if your offer is still open, we would very much like to send you a statement of our policy.

We wish that the tendencies in the anti-war movement in your country were as progressive and outspoken as you are. Once again we appreciate your support and express our solidarity with your organization.

Cordially,

Richard [illegible]
for the Section
International Committee
Berkeley Vietnam Day Comm.

TWENTY FOUR YEARS AFTER PEARL HARBOR
and
THE JAPANESE ANTI-WAR MOVEMENT

24 years ago military warfare began between the ruling classes of the U.S. and Japan with the bombing of Pearl Harbor; this terminated in 1945 with the capitulation of the Japanese ruling class and the atomic bombing of the Japanese people at Hiroshima and Nagasaki. Today the U.S. and the Japanese ruling classes are linked together in an unholy alliance to promote their class interests in Asia, but the Japanese people are demonstrating their desire for peace to the rest of the world.

The bulk of the Japanese people who are active in the anti-war movement represent a broad spectrum of society composed of student organizations, trade unions, intellectual groups, peace committees, political parties, etc. Their struggle for peace involves three specific, yet related, issues: 1) Opposition to U.S. intervention in Vietnam, 2) Opposition to U.S. bases, nuclear weapons and military personnel in Japan, and 3) Opposition to the Japan-Republic of Korea Treaty.

The Japanese people see the war in Vietnam as being the greatest source of danger for a conflagration which could possibly engulf all of Asia, and many readily identify themselves with the unfortunate victims of this war. Aside from mass demonstrations, rallies and petitions many other methods are being utilized by the Japanese to protest the war. One method is direct refusal to participate in its support: "According to UPI on September 11, 1969, three Japanese shipping companies cancelled contracts to carry food and other supplies for the U.S. between Saigon and other important ports in South Vietnam. This occurred right after the Japanese Sailors' Union decision not to work for ships serving U.S. aggressive war in South Vietnam." (Vietnam Courier, Sept. 23, 1965, p. 5.) Another method consists of direct appeal to the American people: "Japanese Ask Americans to Speak Out on Vietnam." Hundreds of Japanese citizens in a full page advertisement in the N.Y. Times of Nov. 16, called on 'Friends in America' to 'Abandon silence and speak out with us for the sake of peace.'" (The Worker, Nov. 28, 1965, p. 7.) This ad was paid for by the Japan "Peace for Vietnam" Committee, which has sent representatives around the world to speak against the war in Vietnam. The extent of the Japanese people's opposition to the war is most mainly shown, perhaps, by the huge [illegible] who ... in anti-war demonstrations; on September 12th, 500,000 persons throughout Japan protested U.S. intervention in Vietnam.

The Japanese people are strongly opposed to U.S. installations, equipment and armed forces on their soil, because they feel that these bases are being used to support the war in Vietnam. "Although the Japanese Government officially backs American policy in Vietnam its support is neither loud nor always clear... Many Japanese people do not appreciate why the United States is fighting in Vietnam and demand the Americans vacate bases in Japan." (Christian Science Monitor, Nov. 30, 1965, p. 10c.) The following is an excerpt from a leaflet, "Letter to Americans Stationing in Japan," issued by the Japan Youth Committee Against War: "We would like to ask you to think about carefully again your government's actions in Vietnam and ask yourself if there were some reason to justify them, and why the U.S. troops have to be enforced in South Vietnam without the content (sic) of the majority people of Vietnam, to kill innocent Vietnamese and to be killed meaninglessly.... We do not want you, also, to use our soil and sea for the purpose of this aggressive action towards Vietnam

threatening world peace and fundamental right for self-determination of oppressed peoples." Numerous outbursts of protests have occurred in Japan directed against U.S. military presence, such as the recent demonstrations at Sasebo Naval Base.

The recent talks involving the ratification of a Japan-South Korea Treaty which would establish NEATO (North East Asia Treaty Organization) have aroused the anti-war forces in Japan. According to Zengakuren (All-Japan Federation of Student Autonomous Associations) this treaty would be mutually advantageous for the Japanese industrialists and the South Korean landowners; it would provide a cheap source of labor and a "stable foreign market to export over-capital and commodity", and "At the same time the Korean ruling class want the import for exploitation, e.g. to import half products from Japan and manufacture by cheap labor for export." ("International Appeal Against the Vietnamese Aggressive War.")

The Japanese government which, by constitution, cannot send troops to Vietnam, is nonetheless helping the U.S. war effort: "This treaty stipulates that Japan provide $500 million from our taxes and $300 million from other resources to South Korea. The subsidy will reinforce the South Korean Government's military outfit and link Japan more closely to the U.S. Government's cold war policy. South Korea has already sent to Vietnam 15,000 soldiers. This policy will be accelerated by the Japan-South Korea Treaty. We will do our best to stop all these doings that bring disaster to the people in Vietnam." (Joint-statement by the Japan Youth Committee Against War, the Tokyo Student Teach-in Committee, and the Japan "Peace for Vietnam" Committee.) The Japan-Vietnam Friendship Association had this to say: "The immediate objective of the present struggle lies in the prevention of ratification of the Japan-ROK treaty and agreements. Doubtlessly, the de facto military alliance pacts were signed between the Sato Cabinet and South Korean Pak regime in compliance with the insistence of the U.S. imperialism seeking frantically its way out of the quagmire of the Vietnamese war. The bilateral pacts are evidently designed to rig up the North East Asia Treaty Organization that will, under the command of U.S. imperialism, link up the reactionary forces of Japan, South Korea and Taiwan, their aim of attack focused on the Socialist countries and the national-liberation movement in Asia." ("People's Struggle Continues Against Japan-ROK Treaty Agreements.") The Japanese people consider the ratification of the Japan-ROK treaty as a very serious threat to the peace of all of Asia, and numerous demonstrations, rallies, speeches and other forms of protest have taken place condemning this treaty.

American intervention in Vietnam, American "occupation" of Japan, and American support of the ruling classes of Japan and South Korea are strongly opposed by the broad-based anti-war movement of the Japanese people.

EO 12958 3.4(b)(1)>5Yrs (C)

1. (SUMMARY: PROFESSOR TRAN QUANG THUAN CLAIMS THAT THE BUDDHIST INSTITUTE (VIEN HOA DAO, VHD) HAS A PLAN FOR INSTALLING A NEW GOVERNMENT AND THAT THIS HAS BEEN DISCUSSED WITH PRIME MINISTER NGUYEN CAO KY AND DIRECTORATE CHAIRMAN NGUYEN VAN THIEU. ALLEGEDLY THIEU AND KY HAVE AGREED TO IT IN PART. THE PLAN CALLS FOR A NATIONALY ASSEMBLY (NA) WHOSE MEMBERS WOULD BE SELECTED BY THE PROVISIONAL COUNCILS, HOPEFULLY BEFORE 15 APRIL, FOR THE PURPOSE OF WRITING A CONSTITUTION AND ORGANIZING GENERAL ELECTIONS. KY AND THIEU "HALF AGREED" TO ABANDON THE PRESENT

ADVISORY COUNCIL FOR BUILDING DEMOCRACY IN FAVOR OF THIS NA. AFTER THE CHAIRMAN OF THE NEW NA HAS BEEN CHOSEN, THE BUDDHISTS THEN INTEND TO PRESS FOR THE REALIZATION OF THE FOUR POINTS OF THE VHD COMMUNIQUE OF 12 MARCH, ESPECIALLY THE PART ASKING FOR THE RETURN OF THE GENERALS TO THEIR MILITARY DUTIES. THUAN CLAIMED THE VHD HAS THE SUPPORT OF FATHERS HOANG QUYHN AND HO VAN VUI IN THIS EFFORT. THE BUDDHISTS WANT TO PROVE THAT THEY HAVE NOT BEEN BOUGHT OFF BY THE KY GOVERNMENT. THEY CONSIDER KY CHILDISH AND IRRESPONSIBLE AND RESENTED THE RECENT REORGANIZATION OF THE GOVERNMENT WHICH THEY SAY WAS CARRIED OUT WITHOUT CONSULTING THEM. THUAN SAID HE BELIEVED STUDENTS WERE LIKELY TO STRIKE IN SAIGON IN A DAY OR TWO.)

1. ACCORDING TO PROFESSOR TRAN QUANG THUAN, THE BUDDHIST INSTITUTE (VIEN HOA DAO, VHD) IS SEEKING NEITHER A COUP NOR THE RESIGNATION OF PRIME MINISTER NGUYEN CAO KY FOR THE FOLLOWING REASONS:

A. IN THE EVENT OF A COUP, EITHER ANOTHER PART OF THE MILITARY WOULD TAKE OVER, OR THE MILITARY WOULD INSTALL ANOTHER GOVERNMENT LIKE THOSE OF TRAN VAN HUONG (NOVEMBER 1964 TO JANUARY 1965) OR PHAN HUY QUAT (FEBRUARY 1965 TO JUNE 1965) WHICH OWED THEIR AUTHORITY TO THE MILITARY.

B. IF PRIME MINISTER KY SHOULD RESIGN, POWER WOULD REMAIN IN THE DIRECTORATE; THAT IS, IN THE MILITARY. HENCE THE BUDDHISTS WANT KY TO REMAIN AS PRIME MINISTER UNTIL

A NATIONAL ASSEMBLY (NA) CAN BE CONVOKED, HOPEFULLY BY 15 APRIL. SINCE ORGANIZATION OF A GENERAL ELECTION WOULD TAKE TOO MUCH TIME, THE PROVINCIAL COUNCILS, WOULD CHOOSE THE MEMBERS OF THE NA. THE NA WOULD THEN WRITE A CONSTITUTION AND ORGANIZE GENERAL ELECTIONS.

2. ON 14 MARCH VHD CHAIRMAN THICH TAM CHAU AND THICH THIEN MINH SAW PRIME MINISTER KY AND THEN DIRECTORATE CHAIRMAN NGUYEN VAN THIEU. ACCORDING TO THUAN BOTH KY AND THIEU AGREED IN PRINCIPLE WITH THE FOUR POINTS OF THE COMMUNIQUE ISSUED AT THE VHD PRESS CONFERENCE ON 12 MARCH. THEIR VIEWS ON SPECIFIC POINTS WERE AS FOLLOWS:

A. POINT ONE (REINTEGRATION OF OFFICERS WHO HAVE CONTRIBUTED TO THE REVOLUTION): THEY "HALF AGREED," SAYING THAT THEY WOULD APPOINT GENERAL TRAN VAN DON AND OTHERS AS MINISTERS OR TO OTHER CIVILIAN POSTS.

B. POINT TWO (RETURN OF GENERALS TO PURELY MILITARY DUTIES): THIS MOST DIFFICULT POINT WAS NOT DISCUSSED.

C. POINT THREE (CONVOCATION OF A NATIONAL ASSEMBLY): KY AND THIEU AGAIN "HALF AGREED." THEY AGREED TO ABANDON THE PRESENT ADVISORY COUNCIL FOR BUILDING DEMOCRACY, BUT THIEU, SPECIALLY, WAS HESITANT ABOUT THE IDEA OF USING THE PROVINCIAL COUNCILS TO FORM THE NA.

D. POINT FOUR (SOCIAL REVOLUTION): KY AND THIEU FILL AGREED, CLAIMING THAT THIS WAS ALSO THEIR POLICY.

E0 12958 3.4(b)(1)>25Yrs
(C)

[redacted]

EO 12958 3.4(b)(1)>25Yrs
(C)
[redacted]
MFG 1-66 (80)

THUAN SAID HE HOPED THE GVN WOULD SOON HOLD A PRESS CONFERENCE TO ANNOUNCE ITS INTENTION TO IMPLEMENT THE ABOVE PLAN.

3. ASSUMING GVN ACCEPTANCE OF THE ABOVE PLAN, THE BUDDHISTS WOULD ORGANIZE NO DEMONSTRATIONS OR MEETINGS UNTIL AFTER THE NATIONAL ASSEMBLY HAD CHOSEN ITS PRESIDING OFFICER. ORDERLY DEMONSTRATIONS WOULD THEN BEGIN AGAIN TO PUT PRESSURE ON THE GVN AND NATIONAL ASSEMBLY TO REALIZE THE FOUR-POINT PROGRAM, ESPECIALLY POINT TWO (RETURN OF GENERALS TO MILITARY DUTIES.)

4. THUAN SAID HE WAS VERY PLEASED THAT THE BUDDHISTS HAD CATHOLIC SUPPORT AT THIS TIME. HE SAID THAT ON 15 MARCH AN EMISSARY REPRESENTING FATHER HOANG QUYNH AND FATHER HO VAN VUI, AND ANOTHER REPRESENTING THE CAO DAI APPROACHED HIM AND SUGGESTED THAT THE FOUR RELIGIONS JOIN IN SIGNING A CENSURE MOTION AGAINST THE GOVERNMENT. THUAN REJECTED THIS PROPOSAL ON THE GROUND THAT IT WOULD THEN APPEAR THAT THE RELIGIOUS LEADER WERE MERELY SEEKING TO REPLACE THE GENERALS.

5. THUAN OFFERED THE FOLLOWING REASONS TO EXPLAIN WHY THE BUDDHISTS HAD DECIDED TO ACT NOW RATHER THAN ADHERE TO PREVIOUS PLANS TO CONCENTRATE ON LONG TERM ORGANIZATION:

A. THE PUBLIC BELIEVED THAT THE VHD SUPPORTED THE KY GOVERNMENT AND THAT TAM CHAU AND THIEN MINH HAD BEEN BOUGHT OFF BY KY. [redacted] COMMENT: THIS BELIEF HAS

EO 12958 3.4(b)(1)>25Yrs
(C)

[redacted]

APPARENTLY BEEN QUITE WIDESPREAD, ESPECIALLY OF TAM CHAU.)

B. THE GVN HAD BEEN TRYING, CONSCIOUSLY OR UNCONSCIOUSLY, TO CORRUPT THE BONZES.

C. KY IS CHILDISH, IRRESPONSIBLE, LAZY, AND A "COWBOY," AND THE PEOPLE DO NOT LIKE HIM MUCH. THUAN COMMENTED THAT KY IS HONEST, HOWEVER, AND A GOOD AIR FORCE COMMANDER.)

D. NEITHER THE VHD NOR THE LAY BUDDHISTS CONNNECTED WITH IT WERE CONSULTED ABOUT THE LATEST REORGANIZATION OF THE GOVERNMENT.

E. THE PRESENT GOVERNMENT BY GENERALS HAS RESULTED IN A WAR-LORD SYSTEM.

F. PARADOXICALLY, THE BUDDHISTS ARE ACTING IN ORDER TO SAVE THE GOOD GENERALS--SUCH AS KY HIMSELF AND GENERAL LE NGUYEN KHANG, COMMANDER OF THE CAPITAL MILITARY DISTRICT--FROM DISASTER.

6. THUAN EMPHASIZED THAT HE LIKED KY PERSONALLY AND THAT THE BUDDHISTS DID NOT HATE ANY GENERAL. EVEN EXILED GENERALS TRAN THIEN KHIEM AND DO CAO TRI COULD RETURN, PROVIDED THEY STAYED OUT OF POLITICS. CONVERSELY, THE BUDDHISTS RECOGNIZED THAT THI COULD NOT BE REAPPOINTED TO THE COMMAND OF I CORPS AND THAT IT MIGHT BE WELL FOR HIM TO GO ABROAD "AFTER HIS HONOR HAD BEEN SAVED." SIMILARLY, THEY RECOGNIZED THAT TRAN VAN DON

COULD NOT BECOME COMMANDER IN CHIEF AGAIN, BUT AS A MATTER OF PRINCIPLE HE SHOULD BE REINTEGRATED INTO THE ARMY.

7. THUAN BELIEVES STUDENT STRIKES ARE LIKELY IN SAIGON WITHIN A DAY OR TWO. HE SAID DEMONSTRATIONS WILL BE HELD ONLY IF ABSOLUTELY NECESSARY, BECAUSE IN SAIGON THEY ARE TOO HARD TO CONTROL. IN ADDITION TO THE DANGER OF VIET CONG INFILTRATION, THERE ARE OPPORTUNIST AND EXTREMIST FACTIONS WHICH TRY TO EXPLOIT THEM.

8. FIELD DISSEM: STATE USMACV 2ND AIR DIV CINCPAC ARPAC CINCPAC ARPAC PACFLT PACAF.

COMMANDER GENERAL NGUYEN CHANH THI AND THAT THE RURAL RECONSTRUCTION PROGRAM IS SUFFERING. HE ASSERTED THAT THE SITUATION IS KEEPING CENTRAL VIETNAM PROVINCE CHIEFS SO BUSY THAT THEY WILL BE UNABLE TO ATTEND THE GOVERNMENT-SPONSORED PROVINCIAL ADMINISTRATION MEETING IN SAIGON 23 TO 25 MARCH.)

E0 12958 3.4(b)(1)>25Yrs (C)

2. ON 21 MARCH [redacted] PROVINCE CHIEF [redacted] EXPRESSED CONCERN THAT THE "UNANIMOUS BIAS" AGAINST OUSTED I CORPS COMMANDER GENERAL NGUYEN CHANH THI SHOWN BY UNITED STATES NEWS MEDIA WAS ADVERSELY AFFECTING THE PEOPLE OF CENTRAL VIETNAM (CVN). [redacted] SAID THE PEOPLE OF CVN WOULD NOT ACCEPT THE MILITARY'S HEAVY-HANDED MANNER OF DISMISSING THI OR OF HANDLING OTHER MATTERS.

E0 12958 3.4(b)(1)>25Yrs (C) [redacted] REMARKED THAT AGITATION WOULD CONTINUE AGAINST DIRECTORATE CHAIRMAN NGUYEN VAN THIEU AND DEPUTY PRIME MINISTER NGUYEN HUU CO. ACCORDING TO [redacted] THE PEOPLE WANT TO AVOID SEEMING TO ATTACK THE SPIRIT OF HONOLULU AND THE REVOLUTIONARY DEVELOPMENT PROGRAM WITH WHICH PRIME MINISTER NGUYEN CAO KY IS SO CLOSELY IDENTIFIED AND HAVE THEREFORE SINGLED OUT THIEU AND CO FOR ATTACK AND EXCLULDED KY. HE SAID THAT THE PEOPLE KNOW, HOWEVER, THAT AN ATTACK AGAINST THIEU AND CO IS AN ATTACK AGAINST THE GOVERNMENT AND THAT THE PEOPLES' EFFORTS

E0 12958 3.4(b)(1)>25Yrs (C) WOULD CONTINUE UNTIL THEIR OBJECTIVE HAS BEEN ACCOMPLISHED, THAT IS, - A CIVILIAN GOVERNMENT. [redacted] CLAIMED MEMBERS OF THE VNQDD WOULD JOIN WITH THE BUDDHISTS AS WOULD SOLDIERS AND RESPONSIBLE CATHOLICS.

4. [redacted] REMARKED THAT THE MILITARY SITUATION IN QUANG NGAI AND QUANG TIN PROVINCES HAS DETERIORATED SINCE THI'S DISMISSAL. HE

SAID DISCIPLINE AND MORALE OF SECOND DIVISION SOLDIERS IS AT A LOW EBB, A SITUATION WHICH WAS KEPT IN CHECK WHILE THI WAS COMMANDER OF I CORPS, BECAUSE THI COULD BE DEPENDED ON TO SHOW UP PERIODICALLY AT UNEXPECTED TIMES AND TO IMPOSE DISCIPLINE. [redacted] SAID THAT THE MILITARY ARE NOW PLAYING CARDS, GAMBLING, DRINKING, AND RUNNING AFTER WOMEN. IN ADDITION, HE CHARGED, THEY ARE SELLING MATERIAL AND FUEL TO THE VIET CONG.

EO 12958 3.4(b)(1)>25 Yrs (C)

5. [redacted] ASSERTED THAT THE REGIONAL AND POPULAR FORCES ARE "EVEN MORE DISORGANIZED THAT EVER." HE ALSO SAID THAT THE RURAL CONSTRUCTION PROGRAM IS BEING SET BACK. FURTHERMORE, THE I CORPS PROVINCE CHIEFS ARE TOO OCCUPIED TO BE ABLE TO ATTEND THE THREE-DAY PROVINCIAL ADMINISTRATION MEETING IN SAIGON 23 TO 25 MARCH. HOWEVER, PROVINCIAL REPRESENTATIVES WOULD BE SENT.

VIET CONG ORDERS TO STUDENT CADRES TO EXPLOIT UNREST IN DANANG AREA BUT TO FOLLOW DIRECTIONS OF VIET CONG FRONT EXCLUSIVELY

PLACE & DATE ACQ.	VIETNAM, SAIGON (23 MARCH 1966)	REF	IN 82430
SOURCE AND APPRAISAL:	[redacted]	FIELD REPORT NO.	[redacted]

EO 12958 3.4(b)(1)>25Yrs (C)

APPROVED FOR RELEASE
DATE: FEB 2001

1. (SUMMARY: VIET CONG (VC) INSTRUCTIONS HAVE BEEN ISSUED TO STUDENT CADRES IN THE DANANG AREA TO TAKE ADVANTAGE OF CURRENT UNREST BY INFILTRATING DEMONSTRATION GROUPS AND ATTEMPTING TO CONCENTRATE ALL FORCES AGAINST THE AMERICANS AND THEIR ALLIES IN AN EFFORT TO CAUSE DISSENSION AMONG THEM. AN 18 MARCH CAUTIONARY INSTRUCTION TO VC STUDENT CADRES, HOWEVER, ADVISED THE STUDENTS TO FOLLOW THE DIRECTIVES OF THE VC FRONT ONLY, POINTING OUT THAT ALL POLITICAL ACTIVITIES OF "REVOLUTIONARY ORGANIZATIONS" WHICH ARE NOT CONTROLLED BY THE FRONT ARE HARMFUL TO THE FRONT. AS PART OF THEIR INSTRUCTIONS

This material contains information affecting the National Defense of the United States within the meaning of the Espionage Laws, Title 18, U.S.C. Secs. 793 and 794, the transmission or revelation of which in any manner to an unauthorized person is prohibited by law.

(C)

FOR INFILTRATING DEMONSTRATION GROUPS, THE STUDENTS WERE TOLD TO INSERT CERTAIN ANTI-GOVERNMENT, ANTI-AMERICAN SLOGANS ON THE BANNERS OF THE GROUPS AND TO ARGUE AT GROUP MEETINGS THAT THE OUSTER OF GENERAL NGUYEN CHANH THI WAS AN AMERICAN CONSPIRACY, BUT TO AVOID ANY MENTION OF THE RESTORATION OF THI TO HIS POST AS I CORPS COMMANDER. INSTRUCTIONS WERE ALSO GIVEN TO INCREASE CLANDESTINE POLITICAL ACTIVITIES IN DANANG AND, SECONDARILY, TO STEP UP ARMED ACTIVITY IN THE CITY.)

2. ON 14 MARCH THE VC DANANG CITY COMMITTEE SENT INSTRUCTIONS TO THE DANANG LIBERATION STUDENTS' ASSOCIATION TO TAKE ADVANTAGE OF CURRENT UNREST IN THE DANANG AREA OVER THE OUSTER OF I CORPS COMMANDER GENERAL NGUYEN CHANH THI BY INFILTRATING ANTI-GOVERNMENT DEMONSTRATION GROUPS AND TURNING THEIR MANIFESTATIONS TOWARD AN ANTI-AMERICAN, ANTI-"LACKEY"THEME. THE PRINCIPAL VC OBJECT, THE STUDENTS WERE TOLD, IS A CONCENTRATION OF FORCES AGAINST AMERICANS AND THEIR ALLIES IN ORDER TO SPREAD DISSENSION AMONG THEM.

3. THE VC DIRECTIVE POINTED OUT THAT THE PRESENT TROUBLE IN DANANG IS SYMBOLIC OF THE DIFFERENCES BETWEEN GENERALS THIEU, KY, AND THI AND THAT, SINCE THE VC BELIEVE THE CRISIS WILL CONTINUE FOR A LONG TIME, IT WOULD BE USEFUL TO EXPLOIT THE UNREST TO ADVANCE THE "PEOPLE'S MOVEMENT." LIBERATION STUDENTS' ASSOCIATION CADRES WERE INSTRUCTED TO ATTEND MEETINGS OF OTHER GROUPS, ARGUE THAT THI'S DISMISSAL WAS AN AMERICAN CONSPIRACY AND THAT THE GOVERNMENT IS A SERVANT OF THE AMERICANS, AND ATTEMPT TO INSERT THE FOLLOWING SLOGANS

E0 12958 3.4(b)(1)>25Yrs

XEROX FROM QUICK COPY

"LEGALLY" ON THE BANNERS OF THESE OTHER GROUPS: "DOWN WITH THE DICTATORIAL GOVERNMENT," "DOWN WITH THE IMPERIALIST ALLIES", "REMOVE FOREIGN TROOPS FROM VIETNAMESE SOIL," "VIETNAMESE SHOULD SOLVE THEIR OWN INTERNAL AFFAIRS," AND "THE VIETNAMESE WANT PEACE AND AN END TO THE WAR."

4. THE STUDENTS WERE CAUTIONED TO AVOID ANY MENTION AT THE MEETINGS OF THE RETURN OR RESTORATION OF GENERAL THI AND WERE FURTHER INSTRUCTED TO STEP UP THEIR ILLEGAL ACTIVITIES THROUGH THE CLANDESTINE DISTRIBUTION OF LEAFLETS URGING STRIKES AGAINST THE AMERICANS AND DEMANDING THEIR REMOVAL FROM SOUTH VIETNAM. THE STUDENTS WERE TOLD, IN ADDITION, THAT ALTHOUGH THE PRINCIPAL EMPHASIS IN THE PRESENT STRUGGLE IS TO BE ON POLITICAL ACTIVITIES, THERE MUST ALSO BE INCREASED ARMED ACTIVITY IN DANANG CITY. [redacted] COMMENT: ALTHOUGH HE STATED HE HAD NOTHING DEFINITE ON WHICH TO BASE HIS BELIEF, THE SOURCE SAID HE FEARED THE VC MIGHT SOON ENGAGE IN NIGHTTIME ACTS OF TERRORISM.) E0 12958 3.4(b)(1)> (C)

A. "DEAR PEOPLE, IN VIEW OF THE SERIOUS SITUATION, WE REQUEST THAT THE PEOPLE REALIZE THE PLOTS OF THE VNQDD AND THE PEOPLE'S FRONT IN ORDER THAT ALL PLANS OF THE AMERICAN IMPERIALISTS AND THEIR SERVANTS, WHO ARE SELLING OUT OUR NATION, MAY BE DESTROYED." [redacted] COMMENT: THE PEOPLE'S FRONT PROBABLY REFERS TO THE POPULAR STRUGGLE FORCE FOR REVOLUTION.)

E0 12958 3.4(b)(1)>25Yrs (C)

B. "KNOCK DOWN THE AMERICAN IMPERIALISTS, THE GROUP OF VIETNAMESE TRAITORS, AND THE THIEU, CO, KY SERVANT GROUP."

C. "KNOCK DOWN THE SERVANT GROUP, THE SOUTH VIETNAMESE PUPPET GOVERNMENT, AND THE SERVANTS WHO ARE SELLING OUT OUR NATION--THIEU, KY, CO."

D. "DEAR SOLDIERS, YOU SHOULD NOT SERVE AMERICA AS SERVANTS. LET US FIRE AT THE AMERICAN PIRATES AND THE PEOPLE'S FRONT. /SIGNED/ DANANG LIBERATION STUDENTS' ASSOCIATION."

E. "LONG LIVE THE NATIONAL LIBERATION FRONT, LONG LIVE HO CHI MINH. /SIGNED/ THE MILITARY POPULATION OF THE FIRST TACTICAL ZONE."

6. ON 18 MARCH THE DANANG COMMITTEE OF THE VC FRONT ISSUED THE FOLLOWING CAUTIONARY INSTRUCTIONS TO ITS STUDENT CADRES IN DANANG:

A. "ALL REVOLUTIONARY AND LIBERATION ORGANIZATIONS OPERATING IN DANANG AND SOME OTHER GROUPS SHOULD BE DIRECTED AND CONTROLLED BY THE NATIONAL LIBERATION FRONT /VC FRONT).

B. "POLITICAL ACTIVITIES OF REVOLUTIONARY ORGANIZATIONS /WHICH ARE NOT CONTROLLED BY THE NATIONAL LIBERATION FRONT/, AS WELL AS REVOLUTIONARY CADRES WHO ARE NOT STRICTLY CONTROLLED AND LED BY THE FRONT ARE HARMFUL TO THE FRONT'S PRINCIPLE OF REVOLUTIONARY ORGANIZATION.

C. "ALL FRONT REVOLUTIONARY ORGANIZATIONS AND LEGAL AND ILLEGAL CADRES MUST BE GOVERNED BY FRONT LEADERSHIP. CADRES OF ALL

MEMORANDUM

SUBJECT: The Political Situation in South Vietnam: The Current Crisis, Possible Future Developments, U.S. Options

I. THE BACKGROUND

At the present time, South Vietnam is neither a "state", in our institutional sense of the word nor -- yet -- a "nation", as we understand and define that term in the West. The Vietnamese have a keen and proud sense of shared membership in a homogenous ethnic group with a common cultural heritage stretching back for many centuries, but they have little sense of shared membership in a single body politic. Articulate and politically conscious elements within South Vietnam -- especially in the military establishment and in urban centers -- are rapidly developing a touchy sense of emotional "nationalism", which is grafted on a traditional and highly developed sense of racial pride, coupled with an equally traditional and developed instinctive dislike for foreigners. As yet, however, there is little sense of a national interest whose claims transcend those of personal ambition or ties to family, associates, region or religion.

With U.S. assistance which they welcome, recognize as essential but nonetheless also resent, non-Communist Vietnamese south of the 17th Parallel are trying simultaneously to cope with an externally directed Communist insurgency and to build something that has never existed before: an independent Vietnamese nation. This endeavor is drastically complicated by the stresses and pressures generated by the insurgency. It is also complicated by other factors: South Vietnam's political parties are all fragmented factions of what were initially clandestine revolutionary organizations. Their leaders are incorrigibly inclined to plot the overthrow of governments and reluctant to support any political structure in which they cannot have the paramount roles. There are no traditionally accepted institutions capable of providing forums for political dissent, measuring the

APPROVED FOR RELEASE
DATE: FEB 2001

relative strength of contending groups, or striking peaceful political bargains. The only organized and disciplined entity in South Vietnam presently capable of managing a government is the military establishment. In the absence of effective political institutions or organizations, religious groups provide the focal point for political sentiments. In the absence of genuine nationalism, regional ties color political emotions and are stronger than nascent higher loyalties.

For the past year South Vietnam has been ruled by a military government which has had to direct a war and, simultaneously, cope with all of the problems outlined above. At the apex of this government has been a Directory of ten generals whose most prominent members have been the Chief of State, General Thieu, and the Premier, General Ky. Neither, however, has possessed independent authority. Instead, both have only exercised power delegated by a collegium.

To survive and accomplish anything this government has had to perform a continual balancing act juggling the aspirations, claims and jealousies of southerners, centristes, and northerners, of Buddhists, of Catholics, and all the other groups who have some measure of political power in South Vietnam. It has also had to cope with civilian restiveness at continued military rule and the widespread desire among politically conscious civilian elements for the evolution of a political structure with a clearer legal title to power and a diminished degree of military authority. Furthermore, it has had to cope with the fact that the military commander of each of the four Corps areas (himself a member of the ruling Directory) is inevitably a warlord whose personal writ within his Corps is at least as strong as that of the central government. Over the past year this problem has been particularly and increasingly acute in South Vietnam's five northernmost provinces which constitute the I Corps area and have been governed by the ambitious, tempermental and sometimes unstable General Nguyen Chanh Thi.

II. THE SCENARIO

It is within this context that South Vietnam's current political crisis developed. By 9 March, General Ky had reached a decision shared by most of his Directory colleagues that the central government could no longer tolerate the Corps area satrapies best exemplified by General Thi's I Corps and, consequently, that Thi had to go. Thi

was called to Saigon for a 10 March Directory meeting at which he was relieved of his command and told that he would be sent abroad for a period of temporary exile. General Ky had prepared his ground carefully for this meeting and was able to obtain the unanimous support of his Directory colleagues. His follow-up execution, however, was not well prepared and was not effectively carried out.

At the 10 March meeting Thi was told he could return briefly to I Corps the following day to wind up his affairs and participate in a change-of-command ceremony designed to save his face. That night, however, the Deputy Prime Minister, General Co, another powerful Directory figure, apparently had a unilateral change of mind. On the morning of the 11th, Co went to the Saigon Airport, prevented Thi from leaving, and in effect placed him under house arrest in Saigon. Five days later the Directory changed its mind again. By then the I Corps situation had begun to be troublesome and Thi was allowed to return to I Corps "for a couple of days" in the hope -- and apparently with the understanding -- that he would exert his personal influence to calm things down before leaving the country. He went back to I Corps on 16 March, is still there, and has done more to aggravate than to assuage the situation.

It was recognized that Thi's dismissal would cause some resentment in I Corps but Ky and his Directory colleagues thought they could keep matters under control. Events proved otherwise, however, for various reasons, among the most important of which are the fact that protest reaction to Thi's ouster was organized and is still directed by key GVN officials in I Corps (e.g., Nguyen Van Man, the mayor of Danang), the fact that Thi's designated successor as I Corps commander, General Chuan, has so far shown himself unable or unwilling to exert effective authority, and -- above all -- the fact that the Buddhists have seized on this opportunity to exert political pressure intended to topple the government.

It was anticipated that Thi's dismissal would be resented by the Buddhists and generate some distress in their ranks. This in fact occured, but in short order it became apparent that the Buddhists -- particularly Tri Quang and his followers -- were not so much interested in Thi himself, with whom they had already become more or less disenchanted, as they were in the opportunity for bringing down the

government. Their initial probes for weakness were not effectively countered and they have accordingly developed their protests into a full-fledged pressure campaign concentrated in but by no means restricted to I Corps.

In the three weeks since Thi's ouster a serious situation has developed in which, at the present time, I corps cannot be said to be effectively under Saigon control, in which Buddhist instigated pressures are seriously threatening the stability and perhaps the actual survival of the present GVN, and in which anti-American and neutralist sentiments are being openly voiced.

III. THE PLAYERS

In the complex political game now being conducted in South Vietnam there are a wide variety of players or groups thereof each with divergent objectives, ambitions, and vested interests.

Ky and the Directory: General Ky and his immediate colleagues obviously want to stay in power, prosecute the war, and conduct the work of social development which they are sincerely if not always efficiently setting in motion. By and large the Directory seems to be hanging together (perhaps to avoid hanging separately) and for the time being at least Ky enjoys the unified, though not necessarily loyal, support of his immediate colleagues. Ky and his associates, however, are obviously disturbed and more than a little unsure of themselves. As indicated above, they keep changing their minds on the best course of action to follow. They are understandably anxious to avoid a head-on collision with the Buddhists or an unwise use of force capable of setting in train a course of events like those which led to Diem's downfall in 1963. It appears, however, that they may be allowing the obvious and very real need for prudence to serve as an excuse for counter-productive procrastination and indecision.

General Thi: Thi provided the occasion for this crisis but is no longer its central element. He obviously resents his ouster and is not disposed to exert himself to ease the problems of his former colleagues. So long as he remains in I Corps he will almost certainly serve as an irritant and visible symbol of the Ky government's

inability to enforce execution of its orders. Throughout his career -- even in the 1960 coup attempt -- Thi has always been someone else's cat's paw, the front -- witting or unwitting -- for other peoples' political manipulations. He remains so today.

The Directory's Key Executive Agents: One of the chief contributors to the present crisis is the fact that Ky and his Directory colleagues have been poorly served, if not actually ill-served, by the chosen executive instruments of their decision to dismiss General Thi. General Chuan, as indicated above, is sitting on a fence. He talks loyalty to Saigon but so far has done nothing to assert or re-establish Saigon's authority in I Corps. There are good grounds for thinking that he personally is more anxious to be on the winning side than to discharge his present responsibilities as I Corps commander. The roles of MSS Chief Colonel Loan, and, particularly, of National Police Director, Colonel Pham Van Lieu, have been, if anything, even more ambivalent. Lieu has been the Ky government's principal go-between in its dealings with Thi but where Lieu's loyalties lie is very much an open question.

The I Corps Bureaucracy: Much of the agitation in I Corps has been not only encouraged but in some cases actually organized by key local officials. The Mayor of Danang, Nguyen Van Man, for example, seems to be the person who organized the "civilian and military struggle committee" which has become the spearhead of anti-GVN protests and demonstrations. Man has done nothing to curb the recurrent strikes which have plagued Danang and may well have been behind them. Bui Hoanh, the province chief of Quang Ngai, has been equally unhelpful. In fact, no I Corps provincial or military official has done anything effective to support the Saigon government.

"The Struggle Group": The most active, vocal and disturbing element in I Corps agitation has been the "struggle groups" and "committees" which have sprung up in Danang, Hue and elsewhere. By and large they seem to be composed of present or recent students, faculty members in I Corps schools (including Hue University) and junior civilian and military officials. They are encouraged and probably directed by Tri Quang's wing of the Buddhist movement. They could never have gotten off the ground without the at least tacit blessing of local officials, though it is not entirely clear if the latter

could now curtail these groups' activities. It is the struggle groups who have taken over the Hue and Danang radio stations, led the demonstrations, put out increasingly anti-American propaganda themes, and begun to voice neutralist and anti-war sentiments.

The Buddhists: South Vietnam's Buddhist movement has considerably more to do with politics than with religion. It is not a tightly organized and disciplined body but it does have widespread support, particularly in youth and student circles. It bears some analogies to the civil rights movement in the U.S. in that it channels strong emotions, finds protest more congenial than constructive advocacy, and has a number of would-be leaders none of whom is willing to let another appear more militant than he. The two major factions within the Buddhist movement are those which coalesce around, respectively, Thich Tri Quang and Thich Tam Chau. Tri Quang's faction is the better organized but is strongest in central Vietnam, including I Corps. Tam Chau's supporters are less well organized but are concentrated in the south, including Saigon, and hence give Tam Chau a voice about equal to that of Tri Quang on the national stage. All of the political Buddhists have been unhappy with the continuation of military rule, and are anxious for a return to civilian government. None, however, has ever been willing to articulate exactly what sort of civilian government he would like to see or whom he would like to have in positions of authority therein. Tam Chau appears prepared to give the Ky government at least some measure of support and assistance so long as it is tangibly forthcoming on the matter of progress of civilian rule. Tri Quang seems currently bent on taking a harder line.

No one has ever been able to divine exactly what Tri Quang wants and he himself would almost certainly be unwilling, if not unable, to spell out his goals with any degree of precision. He apparently does not want the responsibilities of office. He does want a veto power over GVN policies and personnel choices and appears determined to topple any government he cannot control. There is little doubt that Tri Quang is the real driving force behind present agitation, that in the aftermath of Thi's ouster he probed for weaknesses and thinks he has found them. He will almost certainly persist in his pressure until the Ky government falls or until he comes to believe that he cannot succeed and hence must ease off to avoid public defeat. A consummate political realist, he has a keen eye for his opponents'

strengths as well as their weaknesses. He would undoubtedly like to see the present government fall but would almost certainly quiet down if he became convinced that it was going to survive.

Other Vietnamese Groups: In addition to the ones enumerated above, other Vietnamese groups and political figures are closely watching current developments and participating in current activity in various degrees. The Catholics by and large welcomed Thi's ouster and are prepared to give the government some measure of support, they would become even more inclined to provide such support if faced with a clear choice between the present regime and a Buddhist dominated successor. Nonetheless, they are restless and many would like to see a return to civilian rule. Similar sentiments are to be found among other political groups, especially those with ties to central Vietnam, such as some factions of the VNQDD. Southerners (i.e., Cochin Chinese) of all political and religious persuasions are irritated at the troubles caused in central Vietnam and hence are in some measure prepared to support the government, but do not care to wind up on what may prove to be the losing side.

The Communists: Present agitation is a windfall for the Viet Cong. None of the contending factions are now under Viet Cong control but there is little doubt that some of them have been penetrated by Communist elements. The slogans put out over Hue and Danang radios and appearing in struggle committee organized demonstrations are incorporating an increasing number of Communist propaganda themes, including ones directed against the Americans and designed to exacerbate Vietnamese/U.S. relations. Several sources have reported that the Viet Cong are encouraging their followers to take a hand in the current agitation and attempt to divert it to Communist ends. Given current tensions, the instinctive dislike for foreigners common to all Vietnamese but particularly strong in those of central origin, and the inevitable irritants produced by the large U.S. presence, the Viet Cong have a fertile field for disruptive propaganda and political action at the present time.

IV. POSSIBLE FUTURE DEVELOPMENTS

At the present time it is impossible to predict the outcome of South Vietnam's current political crisis. The future course of events is not now inevitable nor is it yet inexorably ordained. What happens next will depend on what various key individuals do, or fail to do, within the next few hours, days and weeks. Broadly speaking, however, events will probably follow one of five general courses: (1) The current crisis will be resolved in the near future by the present government which will emerge with enhanced prestige but with some alterations in formal structure and key personnel. (2) The crisis will drag on for several weeks with the present government in nominal control but with a tarnished image and ever decreasing authority. (3) A new government will come to power different in form and personnel but espousing similar political objectives -- e.g., prosecution of a war and opposition to Communist insurgency. (4) A new government of neutralist persuasion will come to power determined to end the war as soon as possible and invite the U.S. out of Vietnam. (5) South Vietnam will simply descend into a state of anarchy and will split up along corps and regional lines with no effective central control exerted from Saigon.

Survival of the Present Government: It is essential to realize that the "present government of South Vietnam" is the Directory, not General Ky or General Thieu. If the Directory survives, the government will survive. The Directory is and always has been a collegiate body which, collectively, holds supreme political authority. Ky will probably have to resign as premier but he can do so without shaking the fundamental structure of the government, particularly if he simply steps back to resume running the Air Force (which is what he has long said he wants to do anyway) and remains a member of the Directory. If this happens, the best person to succeed him as premier is probably General Chieu, or if he is assigned another post (see below), General Thang.

If the government -- i.e., the Directory -- is to survive without fatally damaged authority it must immediately initiate and effectively follow through a number of actions -- some preventive, some therapeutic, and some designed to seize the political initiative from the Buddhists by meeting their legitimate demands and, simultaneously, capturing the support and imagination of other political groups.

(1) The government must prevent the future spread of unrest outside of I Corps. This can be achieved by an effective use of police authority, particularly in Saigon, embodying a judicious mixture of firmness and restraint. As yet the unrest and demonstrations outside of I Corps are not out of hand and the strength of the organization directing present unrest (particularly Tri Quang's Buddhists) is considerably weaker in Saigon than in I Corps. In this field, therefore, the government still has a little time, though not much.

(2) It must re-establish its authority over I Corps. This cannot be done by military force, particularly since word of the GVN's plans to use such force has already leaked out. Also it will simply have to be recognized that I Corps is always going to be a separate area -- more or less the personal fief of whoever is chosen as Corps Commander. Nevertheless, it is essential that the Saigon government re-establish the appearance of its authority and, above all, regain control of Hue and Danang radio stations and get the students off the streets. The best way to do this is to appoint a new I Corps Commander whom the Buddhists could not oppose at the outset and to whom they would have to give at least a minimal period of grace. In this context, the shrewdest stroke the government could make would be to recall General Duong Van ("Big") Minh from exile and make him Commander of I Corps. This would hoist Tri Quang's Buddhists on their own petard, and give them a government representative to whom they could not initially object. Putting "Big" Minh in I Corps has other advantages too: being outside of Saigon he would be less likely to constitute a political threat on the national level. Also, being a Cochin Chinese, he does not have family roots in the center and hence could not create a personal satrapy in I Corps as easily as some general native to that area. If "Big" Minh is not available or acceptable, other possible choices for I Corps commander designed to achieve the same results are General Chieu, police director Col. Pham Van Lieu, or General Tran Van Don (though of all of these, Don is least likely to be acceptable to the Directory).

(3) The government must show concrete forward motion toward the objective of re-establishing civilian rule. The best way to do this is to announce within the next few days -- and here the time factor is absolutely essential -- the establishment of a body charged with drafting a constitution. To pre-empt Tri Quang and meet his stated demands, the bulk of this body (say 60%) should be selected by the already existing elected provincial councils, though such council representation could be weighted on a population basis. (If it were, this could be presented as "true democracy," something Tri Quang would find it hard to oppose; though such weighting would in fact dilute the influence of his followers.) The balance of the body should be made up of members appointed by the Directory with an eye to insuring that all political groups in South Vietnam, including minority ones, are adequately represented. This body should be charged with drafting a constitution which would establish a legal base for a future government, the structure of that government, and an electoral procedure for setting it up. It should be announced as part of the package that the constitution written by this body would be submitted to "the people" for ratification by popular referendum. Once the constitution itself had been approved by "the people," provision would be made for holding the elections it required and, after their results were in, installing a government in conformity with the constitution's provisions.

The procedures here outlined would constitute a tangible plan, whose implementation would provide visible concrete progress toward a legal government under civilian control. Given Vietnamese politicians' proclivity for haggling over clauses, however, this procedure would take at least a year, probably more, to complete. It should be announced that the present government will continue to hold power as a public trust until a new one can be chosen in conformity with the provisions of the constitution. Hence this procedure would give the present government at least a year's grace to continue its work of prosecuting the war and rebuilding a new Vietnamese society.

(4) The government must in some measure save its face and preserve its image: Ky may have to resign, but if he does this must be presented as a realignment of responsibility within a continuing and unchanged political structure. General Thi must be gotten out of I Corps and, preferably, sent abroad for at least a short period of "medical treatment" to prove that the Directory is capable of making its rulings stick.

No one can guarantee that a plan such as that outlined above will necessarily work. It has a good chance of success, however, if its various provisions are immediately launched and resolutely followed through. If the Directory does not take action along these lines within the very near future, the situation will almost certainly deteriorate along one of the other four lines outlined above.

V. CONSEQUENCES

In assessing the impact of the current political crisis on U.S. interests it is essential to keep in mind a clear distinction between immediate or near-term consequences and the longer-term effects of current events. The present unrest is obviously unsettling, has damaged the prestige and international image of the Saigon government, given a propaganda and political action windfall to the Viet Cong, and provided fresh ammunition for domestic and international critics of U.S. policy. None of this, however, is necessarily permanent, fatal or, in the long run, even harmful if the current crisis results in the emergence of a stronger political structure with a greater command of civilian loyalties and a better legal basis for its rule.

The longer-term consequences of current events will depend on the way in which current troubles are resolved. It is not essential to U.S. interests that Ky remain as premier but is vastly preferable that the Directory remain in power and the essential structure of the Saigon government not be radically changed under pressure of political unrest. However, even if the present government should fall, our position and interests in Vietnam could still be preserved if the present government were replaced by a successor publicly dedicated to the objectives of prosecuting a war and building a free Vietnamese nation independent of Communist control. We would have to recognize that any such successor, at least at the outset, would probably be even less efficient

than the present regime and that its emergence would be a considerable temporary setback for us. Nonetheless, given the background of the present crisis and the present state of political dynamics within South Vietnam, stresses and upheavals such as the one we are now witnessing are something for which we will simply have to be prepared, much as we obviously want to prevent them. The process of nation-building, balance-structuring, and institution-creating in the midst of a war will never be easy and will invariably be complicated by periods of extreme tension within non-Communist ranks.

U.S. interests would be adversely affected if the present crisis drags on much longer (e.g., for more than another week or two at most) even if the Directory and present regime remains nominally in power. The longer present unrest continues the more difficult it will be to effect a satisfactory resolution or create a stable successor to the present political structure. Also the longer it continues, the greater will be the risk of anarchy, dissolution of effective central authority, and the acquisition of power within some segment of the country (e.g., I Corps) by a neutralist-oriented group subject to Communist manipulation and control. These are real dangers to which we must be alert. They are not presently upon us, however, and we will stand a far better chance of preventing their emergence if we retain our sense of perspective and avoid premature panic.

VI. U.S. OPTIONS

A canvass of available U.S. options must also draw the distinction between immediate options and those available to us over the longer term. At the moment we have little choice but to continue the lines of activity in which we are presently engaged; touching base with and keeping tabs on all elements in the current crisis, working behind the scenes with the present government in an effort to strengthen its hand, exerting discreet pressure for forward movement on its part, and providing useful, concrete ideas for its consideration.

Over the longer-term, the U.S. has basically the three options of (1) continued close involvement in South Vietnamese political life, (2) disengaging from internal Vietnamese politics and focusing our whole attention on the military prosecution of the war and, (3) withdrawal from South Vietnam.

Given the U.S. stake and present public posture, withdrawal is not a viable option at the present time. If we were to curtail our commitments now and look for a way out we would only be vindicating the arguments of those within the U.S. and abroad who are vociferously criticizing our present policy.

Assuming that we are to stay in Vietnam at least for the immediate future, disengagement from internal politics would be neither wise nor realistic since the struggle against the Communists could be lost politically by the South Vietnamese while our forces are defeating the Viet Cong on the field of battle. Were this to happen, our investment in lives, material resources and prestige would have been in vain.

For the time being, therefore, our only viable option is that of continued involvement in South Vietnamese political life. In operative terms this involvement entails the following factors:

(1) We must recognize and keep continually in mind the political impact of the U.S. physical presence in South Vietnam and the degree to which it excites the emotional sensibilities even of those who recognize the need for our support, are grateful for our help, and want desperately for us to remain in order that they may continue to exist as free men. Our actions will have to be marked by great delicacy, political finesse, and a continuing effort to make American influence and presence as unobtrusive as circumstances will permit.

(2) We must obtain some additional leverage over the Vietnamese and make them aware that our continued support is contingent upon some modicum of rational behavior on their part. Few Vietnamese are politically sophisticated in the international sense and most are prone -- for a variety of personal and emotional reasons -- to overrate the importance of Vietnam to the U.S. Tri Quang and General Thi, for example, have made it plain that they feel they can play political games in the midst of a war because they can always count on the United States to protect them from Communist control. We have got to disabuse influential Vietnamese figures of the belief that American public opinion

will support our continued effort in Vietnam no matter what the Vietnamese themselves may do. Perhaps the best way to get this message across would be to bring key Vietnamese figures -- including perhaps even Tri Quang himself -- to the United States for orientation or lecture tours and force them to experience at firsthand the full measure of restlessness about Vietnam now prevalent in America. At a minimum if we cannot persuade such leaders as Tri Quang to come and see for themselves, we must arrange for persons whose reports they will credit to come to the United States and bring back a politically sobering message.

(3) The U.S. must avoid becoming too closely identified with any particular South Vietnamese institutional structure or politician and must avoid smothering emerging Vietnamese leaders in too close a public embrace. The timing of news announcements and policy statements, and the other public manifestations of joint endeavor must, wherever possible, be structured to downplay the fact that the Vietnamese are our dependent clients and build their image as independent allies.

(4) Finally, we must do all we can to foster nation-building in Vietnam and the emergence of a stable non-Communist social structure but we must avoid any attempt to force Vietnamese political development into an institutional framework fashioned in our image. Instead, we must encourage the Vietnamese to devise institutional mechanisms responsive to their needs, consonant with their traditions, and capable of reflecting the realities of political power within their social structure.

Text of CIA Intelligence Memorandum

The Situation in South Vietnam as of 10 AM EST

At 5:55 PM Saigon time, when Prime Minister Ky departed Danang, there was still no reported direct confrontation between the three emergency Vietnamese Marine battalions and anti-government agitators in Danang. Before Ky left for Saigon, he announced in a speech that his previous appraisal that Hue and Danang were Communist-held was incorrect. The press reports that while Ky was in Danang he conferred with Buddhist leaders before making his soft-line speech.

In Saigon, however, Buddhist students from the Buddhist Youth Association battled riot police for three hours before being dispersed. One of the demonstrators was wounded slightly by a shot from carbines which were being fired over their heads. A Vietnamese Ranger battalion moved to the Buddhist Headquarters during the demonstration to enforce the 9 PM to 5 AM curfew imposed earlier in the day.

Demonstrations continued in Nha Trang, where the USIS library was reportedly burned and sacked, in Pleiku town, where there were unconfirmed reports of fighting between soldiers loyal and opposed to the government, and in Hue, where students reportedly demonstrated in front of the American Advisory Billet.

The Commanding General of the 3rd U. S. Marine Amphibious Force has ordered the evacuation to secure areas of all U. S. advisors to tactical Vietnamese units in First Corps trouble spots. Eight civilians in Quang Tri city and 75 in Hue are also being air-evacuated to the Marine base at Phu Bai. This is phase one of the contingency evacuation plan and does not include members of the Consulate in Hue [redacted]

ACQ VIETNAM, SAIGON [redacted] FIELD NO. [redacted]
SOURCE [redacted]

1. PRIME MINISTER NGUYEN CAO KY SAID [redacted] THAT BUDDHIST INSTITUTE CHAIRMAN THICH TAM CHAU HAD CONTACTED [redacted] TO SAY THAT HE HAD TURNED OVER CONTROL OF THE STRUGGLE MOVEMENT TO THICH THIEN MINH AND HO GIAC. CHAU SAID HE FELT THERE WAS NOTHING FURTHER HE COULD DO TO CONTROL "EXTREMIST ELEMENTS" IN THE INSTITUTE. TAM CHAU SUGGESTED THAT KY RESIGN IN FAVOR OF DIRECTORATE SECRETARY-GENERAL PHAM XUAN CHIEU WHO WOULD HEAD AN INTERIM GOVERNMENT UNTIL ELECTIONS COULD BE HELD. KY REPLIED THAT THE DIRECTORATE DID NOT WANT HIM TO RESIGN AND, IN ANY CASE, CHIEU DID NOT WANT THE JOB.

SUBJECT BUDDHIST INTENTION FOR CONTINUED CONTROLLED AGITATION IN I CORPS AREA AND EXPECTATION THAT FIRST DIVISION REGIMENTS WOULD OBEY COMMANDER

ACQ VIETNAM, SAIGON (1 APRIL 1966) FIELD NO. [redacted]

SOURCE [redacted]

EO 12958 3.4(b)(1) >25Yrs (C)

1. THICH MAT NGUYEN, REPRESENTING HUE BUDDHIST LEADER THICH DONUW AU HUE AND HIMSELF ONE OF THREE LEADING HUE BONZES, ARRIVED IN DANANG ON THE EVENING OF 10 APRIL TO CALM BUDDHIST AGITATION. HOWEVER, MAT NGUYEN WAS NOT TO STOP THE AGITATION; HE IS TO KEEP THE POT BOILING BUT MAKE SURE IT DOES NOT BOIL OVER. FOR EXAMPLE, ALTHOUGH THE GENERAL STRIKE SUPPOSEDLY HAS ENDED IN DANANG, DRIVERS OF VEHICLES REMAIN ON STRIKE; WHEN THEY RETURN TO WORK ANOTHER GROUP WILL STRIKE. ONE OBJECTIVE OF THE BUDDHISTS IS TO INSTALL TWO HUE BUDDHISTS IN A FUTURE

SUBJECT A GENERAL OFFICER'S ASSESSMENT OF GROUPS FORMING IN THE MILITARY WITH THE AIM OF MAKING DEMANDS ON THE GOVERNMENT

ACQ VIETNAM, SAIGON (23APRIL 1966) FIELD NO. [redacted]

E0 12958 3.4(b)(1)> (C)

SOURCE [redacted]

1. (SUMMARY: THERE IS A LOOSE ASSOCIATION WITHIN THE MILITARY SERVICE, RATHER THAN AN ACTIVE CONSPIRACY, OF FIELD-GRADE AND JUNIOR OFFICERS ADVOCATING REFORMS. IN GENERAL, THESE OFFICERS WITH TO SEE THE GOVERNMENT REMAIN IN POWER. THEY WANT STRICT MEASURES AGAINST CORRUPTION, A MORE ACTIVE PROSECUTION OF THE WAR AGAINST THE VIET CONG, AND FIRM HANDLING OF OPPOSITION ELEMENTS. THEY ARE NOT IDENTIFIED WITH ANY EXISTING POLITICAL FORCE.)

APPROVED FOR RELEASE
DATE: FEB 2001

~~C-O-N-F-I-D-E-N-T-I-A-L~~ [redacted]

E0 12958 3.4(b) (C)

E0 12958 3.4(b)(1)>25Yrs
(C)

2. THE MILITARY OFFICERS WHO HAVE RECENTLY FORMED GROUPS FAVORING MILITARY AND GOVERNMENT REFORMS ARE MORE "FRIENDS TOGETHER" THAN A CONSPIRACY. THEY SHARE THE SAME GENERAL BACKGROUNDS, FACE THE SAME PROBLEMS AND FRUSTRATIONS OF LOW-AND MIDDLE-LEVEL COMMAND, AND HAVE THE SAME PERSONAL ECONOMIC PROBLEMS. THEY ARE DISSATISFIED AND UNHAPPY, EXCITABLE, AND LIKELY TO BE PRECIPITOUS IN THEIR ACTIONS. SINCE MANY OF THESE OFFICERS COMMAND COMPANIES AND BATTALIONS, THEY COULD BRING EFFECTIVE FORCE TO BEAR FOR A COUP D'ETAT IF THEY ACTED IN CONCERT. AT PRESENT THERE ARE NO SIGNS OF EMERGENCE OF LEADERSHIP OR EVIDENCE OF PLANS FOR ACTION IN THE NEAR FUTURE. THEY ARE NOW LACKING IN CENTRAL LEADERSHIP, SOMETHING THEY MUST DEVELOP BEFORE THEY CAN MOVE.

3. VARIOUS TALKS OF A GENERAL NATURE, AND PERHAPS SPECIFIC DISCUSSIONS OF THE PROBLEMS FACING THE COUNTRY, HAVE TAKEN PLACE AMONG THESE OFFICERS. GENERALLY THEY ARE IN AGREEMENT ON THE FOLLOWING POINTS:

A. THE GOVERNMENT OF PRIME MINISTER NGUYEN CAO KY SHOULD REMAIN IN POWER.

B. CORRUPTION MUST BE DEALT WITH EXPEDITIOUSLY IN BOTH THE MILITARY AND THE GOVERNMENT. THEY CITE DEPUTY PRIME MINISTER NGUYEN HUU CO AS A CORRUPT GENERAL AND ARE ALSO OPPOSED TO GENERALS NGUYEN VAN CHUAN AND PHAN XUAN NHUAN.

E0 12958 3.4(b)(1)>25Yrs
(C)

E0 12958 3.4(b)(1)>25Yrs
(C)

C. ALL NATIONAL DIFFERENCES MUST BE SUBMERGED IN AN ALL-OUT EFFORT TO PROSECUTE THE WAR AGAINST THE VIET CONG. RATHER IDEALISTCALLY AND EMOTIONALLY THEY BELIEVE THAT A TRULY MILITARY AND DIRECT APPROACH TO THE PROBLEMS OF SOUTH VIETNAM IS THE ONLY ANSWER.

D. THE GOVERNMENT SHOULD NOT MAKE COMPROMISES WHICH WEAKEN THE SOLIDARITY OF THE GOVERNMENT. THEY CITE, AS AN EXAMPLE, THE "WEAK" APPROACH TO THE STRUGGLE MOVEMENT AND THE FAILURE OF THE GOVERNMENT TO FORCEFULLY SUPPRESS THE OPPOSITION REPRESENTED BY THICH TRI QUANG.

4. THESE OFFICERS ARE NOT OPPOSED TO THE KY GOVERNMENT AS SUCH BUT ONLY SEEK A MORE HONEST, FORCEFUL, AND DIRECT APPROACH TO THE SOLUTION OF PROBLEMS FACING THE COUNTRY. THEY DO NOT SUPPORT OR REPRESENT THE CATHOLICS, BUDDHISTS, OR ANY POLITICAL PARTY, NOR DO THEY HAVE A PLATFORM OF A GROUP IN TERMS OF JOINT PLANNING OR AGREEMENT REGARDING ACTION TO BE TAKEN. THEY DO NOT APPEAR TO BE COALESCING INTO A COHESIVE FORCE. BOTH COLONEL NGUYEN NGOC LOAN, CHIEF OF THE MILITARY SECURITY SERVICE AND DIRECTOR-GENERAL OF THE NATIONAL POLICE, AND GENERAL LE NGUYEN KHANG, COMMANDING OFFICER OF THE MARINE CORPS AND THE CAPITAL MILITARY REGION, PROBABLY HAVE THE "RESPECT" OF A CONSIDERABLE NUMBER OF THESE OFFICERS, BUT NEITHER IS A LEADER OR

E0 12958 3.4(b)(1)>25Yrs
(C)

[redacted]

REPRESENTATEVE OF THESE OFFICERS. (FIELD COMMENT: [redacted]
DESCRIBED COLONEL LOAN AS A "LEADER" OF ONE OF THE FACTIONS COMPOSED OF OFFICERS SEEKING REFORM, BUT A MORE ACCURATE DESIGNATION PROBABLY WOULD BE "SPOKESMAN".)

BUDDHIST ACTION IN VIETNAM:

A Special Assessment of the Situation in the Light of Events in March and April 1966

The origins of the Buddhist initiatives of March and April 1966 in South Vietnam can be found in three important and inter-related energy-releasing forces: (1) the Buddhists' sense of history and particularly their yearning for a rebirth of Buddhism's "Golden Age"; (2) the Buddhist reform movement which had its beginnings in the 1920's, and (3) the social revolution which was triggered by the revolt against Diem in 1963. The ideological content of these three forces is, in our opinion, guiding and will continue to guide the development of Buddhist action in the political realm in the months and years to come. This paper, therefore, provides a brief analysis of the three forces and speculates on possible political trends resulting from their interplay among themselves and with other forces in the Vietnam situation.

Rebirth of the "Golden Age"

The "new," militant Vietnamese Buddhism of today is not simply the product of the struggle against Diem. To look upon it as such is to run the risk of seriously underestimating the vitality of Buddhism and the sense of purpose of its leaders.

The so-called "Golden Age" of Vietnamese Buddhism which ended five centuries ago offers some insight into current Buddhist thinking. Monk leaders today frequently speak of restoring Buddhism to its "rightful place in society." The standard of measure most often used is the Golden Age.

The monk intellectual and writer Thich Nhat Hanh has described these earlier periods as follows in his bestseller Engaged Buddhism:

> Everybody knows that under the Ly and Tran Dynasties, Buddhism played a nation-building role in the realm of literature, morals, arts, education, diplomacy and society. Buddhism during those periods brought progress to Vietnamese society, which demonstrated Buddhist strengths and capacities. According to history, under the Ly Dynasty the most learned persons were Buddhists and monks. The study of Buddhism in those days was a comprehensive and constructive one. It did not bring any social position to anybody. Venerable monks were usually invited to the King's Court to deliver sermons, to discuss cultural, economic, social and even political matters. Monks were invited to receive foreign ambassadors. In spite of that fact, they lived frugally in their pagodas, wore their simple brown robes, and went to the King's Court only at the King's invitation. The intellectuals at that time captured the essence of

APPROVED FOR RELEASE
5/4/98

> Buddhism (works of art of the time proved that fact). They had a rich, unfettered, surpassing spiritual life and used their knowledge to help society, from architecture to social works.

In his short history of Vietnamese Buddhism, Thich Thien An of Van Hanh University recounts numerous examples of Buddhist influence on the Court and the nation. During the Dinh Dynasty (969-980), Vietnam was pacified and united by King Dinh Bo Lanh, a Buddhist who supported and propagated the faith. This movement to diffuse Buddhist teachings was led by the learned monk Ngo Chan Luu, who was rewarded by the King with the title Khuong Viet Thuyen Su, "The Priest Who Helped Restore the Nation." King Ly Thai To, who founded the Ly Dynasty (1010-1225), is regarded as typifying the virtuous ruler. He was guided in all of his activities by perhaps the most famous monk in Vietnamese history, Van Hanh. During the Tran Dynasty (1225-1400), several kings were either monks before they assumed power or retired to monasteries at the end of their rule. The most revered, Tran Nhan Tom (1278-1293), is reputed to have moved back and forth between the monkhood and the throne, depending on whether the country needed his services to bring it peace. There do not appear to be instances of kings actually ruling as monks, however.

While no monk today has yet admitted to personal political ambition, the historical tradition of monk-kings who assume leadership when the country is in danger and who then return to the temple in times of peace is appealing to some Buddhists. A brilliant, 21-year old monk commented in August 1965:

> Although Vietnamese monks have been political leaders in the past, now it would probably be necessary for monks to take off their robes. In the first place, Catholics would oppose monks' holding political office. Also, the recent history of Catholics in Latin America and Makarios in Cyprus demonstrates the difficulties that arise in the contemporary world when an individual holds both lay and clerical power. If monks in Vietnam defrock to enter politics, it would probably be on a temporary basis until certain goals were achieved. They would eventually return to their orders.

The historical precedent for a Thich Tri Quang, for instance, to return to lay life to "save the Nation" is very much alive.

Buddhist Reform Movement

Following the Tran Dynasty, Buddhism entered a period of decline under increased Chinese intellectual influence and the consequent espousal of Confucianism and Taoism by the rulers; and later under the impact of Catholicism imported and encouraged by the French. By the Twentieth Century, Buddhism seemed sterile and moribund in comparison with the Golden Age and also with the influence of Roman Catholicism.

The independence movement against France seems to have been an important factor in the revival of Buddhism in the sense that feelings of nationalism were generated which increased the Buddhists' pride in their heritage and also their shame that their religion had become corrupt. Influences also came down from

China where Buddhism had already undergone a period of reform and revitalization under the aegis of the great Abbot T'ai-hsu.

Little is yet known of this period, but it appears that a small number of scholars and learned monks began actively to promote a Buddhist revival in the 1920's. The widely respected North Vietnamese monk, Thich To Lien, encouraged the reform idea and seems in many respects to have been the architect of the movement. In 1931, a Buddhist Studies Association for Cochin China was established in Saigon, and similar groups were founded at Hue for Annam in 1932 and at Hanoi for Tonkin in 1934. There are indications that French colonial officials encouraged the study and discussion of religious and cultural subjects in the hope of channeling the interests of intellectuals away from the independence movement. Hanoi's Quan Su Pagoda in particular became a meeting place for scholars and intellectuals to discuss the history and philosophy of Buddhism. Professional men, professors and university students began to visit the pagodas which had for centuries been mainly the preserve of old women.

The goals of the reform movement were to restore Buddhist precepts, to reorganize the Buddhist Church* and to build a generation of learned monks. These were to be achieved through the Buddhist Associations. While the programs of the Associations varied from region to region, they generally aimed at tightening up discipline and improving conditions in the monasteries, repairing and reconstructing old pagodas, expanding educational facilities for monks, and increasing social service activities. An important decision made during this period was to propagate Buddhism in the Vietnamese language rather than through the medium of Chinese characters which only monks and a few scholars were able to read. Various periodicals and books on Buddhism began to appear in the language of the common man.

The Second World War and the disorders immediately following it slowed down the reform movement, but by the late 1940's the Associations were reorganized and active again. In 1951, a national Buddhist congress was called and the three regional Associations were unified in a National Association. As had been the practice in the regional groups, the national Association was divided into lay and clerical sections. The clerical section was apparently regarded as a national Sangha (Order of Monks), the first nation-wide hierarchy in the history of Vietnam, and some steps were taken toward internal reorganization and standardization of ceremonies. Following unification of the Associations, the tempo of reform increased. Of particular importance were the establishment of higher training schools for monks and the dispatch of monks abroad for advanced studies.

The leadership of the 1963 Inter-Sect Committee for the Defense of Buddhism was drawn from these regional Associations and the national body, and it is these same groups plus certain independant sects which joined together after the fall of Diem to form the Unified Buddhist Church (UBC).

*The word "church" is not an exact translation of the Vietnamese word but is the version most frequently employed by the monks themselves.

From the above, it can be seen that several decades of continuity in organization, leadership and purpose underlie Vietnamese Buddhism of 1966. Thich Tam Chau was a disciple of Thich To Lien; Tam Chau was also a Vice President, and the present Supreme Bonze of Vietnam, Thich Tinh Khiet, was President of the national Buddhist Association prior to 1963; Thich Tri Quang, at the age of 28, was spokesman of the delegation from Central Vietnam to the 1951 unification congress. Although these relationships have yet to be explored, there appear to be strong "school" ties among monks who were trained at certain Buddhist Studies Institutes. Many of the programs and activities of today's Unified Buddhist Church have roots in this earlier period: the lay Buddhist school system, various social welfare institutions, youth groups such as the Buddhist Families organization and the Buddhist University Students Association.

Monks now in their forties and fifties have within their lifetimes seen the decay of several centuries reversed and Buddhism restored as a vital force in society. Many personally made important contributions to the rebirth. It seems safe to speculate that this experience has helped develop the fierce pride, the intense dedication, and the relative unity which characterize the monk leadership.

We say "relative unity" because the UBC has been troubled by internal factionalism since its establishment. Leading monks, such as Thich Tri Quang and Thich Tam Chau, do not see eye to eye at all times on all issues and on methods to be employed. Some monks obviously are more activist than others. Regional loyalties also have their influence, as do the differences between the minority Theravadans and the majority Mahayanists. When it comes to the basic issues, however, the leaders appear to be able to put up a common front, as happened during the Huong period and also the recent demonstrations demanding early elections and the formation of a constitutional government. On the other hand, victory for the activist group of the Unified Buddhist Church could rapidly lead to factional splits over the goals and methods of running the country.

A further sign of lack of complete harmony in Buddhism as a whole is the existence of a General Buddhist Association, composed largely of southern Buddhist groups, which was recognized by the Huong government apparently in a move to divide the Buddhists. This association claims to have two million members and to have a policy of keeping monks out of politics and of complete tolerance for and cooperation with other religions. We do not expect to hear much from it in regard to political issues in view of its policy of non-involvement.

Finally, it is worth noting that the reform movement did not have grass root origins. It was consciously initiated and has been spread by educated laymen and monks with the latter taking an increasingly important role in recent years. While sociological studies of Vietnamese Buddhism are completely lacking, one can tentatively conclude that the role of the monk in the community is gradually beginning to change from traditional detachment to greater participation and leadership. One of the intriguing questions in

this connection which deserves further study is why Buddhist leadership has centered so strongly in the monks and manifested itself so little in laymen. The almost complete takeover of the UBC by monks when it was formed a few weeks after the 1963 revolution appeared to reflect their disillusionment about the selflessness and honesty of laymen, but additional study may reveal other factors, possibly including scriptural justification.

Having pursued their three goals quietly and tenaciously for over a generation, it is not surprising that the Buddhists are beginning to see some results. The Unified Buddhist Church (UBC) has been formed and a group of well educated and highly motivated monks has been developed. The structure and leadership is, therefore, shaping up. The remaining almost untouched objective is to "purify" Buddhism and strengthen its observance among the people. The monk leadership needs and seeks a calmer atmosphere than that now prevailing in order to pursue this goal effectively.

Social Revolution

The social revolution which is now a major objective of leading Buddhist monks and the UBC finds its origins in the struggle against Diem which began as a defense of Buddhism. All evidence points to the fact that the Buddhists reacted to circumstances without a preconceived plot or plans. As Buddhists, they felt their religion was threatened, and their grievances, whether real or imagined, were emotion-charged and deep. As Vietnamese, they were repelled by the growing harshness and repression of an authoritarian regime. As reformers, they feared their movement to revitalize and modernize Buddhism would fail if the Diem government continued in office.

As the Buddhists gained strength and experience in 1963, the nature of the struggle changed. Buddhist opposition crystallized popular discontent and mounting opposition to dictatorship, and the original cause to defend Buddhism was gradually transformed into the beginnings of a major social revolution.

There is relatively little disagreement among the Buddhists as to what social revolution is or the need for it to occur. It is a frequent theme in the speeches and writings of the Buddhists in the post-Diem period. It is broader than the government's social revolution. Essentially, social revolution in its Buddhist meaning is equated with the popular demands that grew out of the struggle against Diem; namely, a purge of the worst Diemist elements, elimination of corruption, creation of democratic institutions, return to civilian leadership, and improved conditions for the masses. It also seems evident that the social revolution is in the minds of many monks synonymous with the Buddhist reform movement and the restoration of Buddhism to a position of predominance in Vietnam. One of the justifications used by monks for restoring Buddhism is that it is potentially the most powerful unifying force in a badly fragmented Vietnamese society.

Buddhist-led agitation since the fall of Diem has adversely affected both internal security and the war effort, but in most instances the monks have

been able to find justification for their actions either in terms of the Buddhist social revolution or on the basis of self-preservation in the face of what appeared to them to be a threat against Buddhism. Less than two months after the 1963 revolution, Mr. Tran Quang Thuan, then a student leader, warned:

> The rural population considers the change in regime just a coup d'etat, not a revolution, because it has not affected them in a favorable way. A revolution must bring about changes at the lowest levels of society, not just in the superstructure. The great difference between the cities and the countryside is still obvious.

Opposition to the Khanh, Huong and now the Ky governments has been motivated, at least in part, by growing disillusionment with the ability of the military or a military-controlled regime to rule justly and with the relatively slow progress toward the goals of the Buddhist social revolution.

Underlying the desire for social revolution are deep sensitivity and concern for the masses. Of all of the organized groups in Vietnam, the monks are undoubtedly in closest touch with the villages. The UBC has provincial and district committees which are staffed by monks and laymen with direct village connections. They have assumed the role both of interpreter of the aspirations of the people and of protector of the welfare of the masses. Their concern for the masses is certainly genuine, but it is not always clear whether the monks are reacting to the will of the people or are attempting to direct it. In October 1964, Thich Quang Do (a spokesman for the UBC) said: "[The monks] are simply conscious of the aspirations of the people...We know that dictatorship is contrary to the will of the masses, whether it be that of Diem or that which Khanh may be tempted to establish." Thich Tri Quang commented in August 1965 that "...the Vietnamese government does not offer anything to rely on...there is absolutely nothing in common between the people and their government," and in April 1966 he explained, "The population has been made miserable by the war and so they earnestly want an election."

There is certainly strong and sincere conviction among the Buddhists that the message of Buddhism is relevant to the needs of the modern world. While this has enabled them to accept the thesis growing out of the reform movement that Buddhism has a social role to play and to identify with the idea of social revolution, very few have been concerned with the theological and philosophical justifications for their action. In this connection, the work of Thich Nhat Hanh is of interest. Educated in the best Buddhist schools in Vietnam and at the Princeton Theological Seminary and Columbia University, the 40-year old Nhat Hanh is a deeply religious social revolutionary. He is in the forefront of monks who have sought to expand Buddhism's social role, but at the same time he is aware that this could lead to oversecularization and dilution of the religious force of Buddhism. Most of the dozen or so books he has written in the past ten years have dealt with the problem of retaining the purity of Buddhism while at the same time relating Buddhism to the needs of

the contemporary world. The following passage, written in late 1965 or early 1966 is representative of Nhat Hanh's thinking:

> [Buddhism in Vietnam believes in] the self determination and the will of the people...Self-determination is the determination to do what we can today...There is a big gap between the authorities and the people...We must try to make the people believe that politics is not the only means to democracy and peace...The people must recognize this fact and start doing things for themselves by whatever means they possess...As he does not expect aid or grace from anyone or anywhere, the Vietnamese should start making revolution in his own life, a revolution from the lower to the upper level, and should abandon his passive attitude of wait-and-see...Materials needed for the social revolution are love, responsibility, and sacrifice...We must fight against poverty and illness and its allies, ignorance and anarchy. We will use both the technical knowledge that we have acquired from Western nations and the heritage and knowledge handed down from our ancestors to our peasants... We should not put our hope of peace and happiness in Vietnam in money, dictatorships and hatred because experience has shown us that these only bring unhappiness to the people. The potentiality of Buddhism in Vietnam is immense. If we know how to utilize it, we could use its force for the reconstruction of our country.

Buddhism and Politics

Any consideration of Buddhism in politics is complicated by the monks' consistent denial of political goals in the face of reality of their political involvement. Kenneth Morgan of Colgate University spent a month in Vietnam in the summer of 1965 systematically interviewing the top Buddhist leadership and found no monk or layman who advocated political action except in extreme cases where it would be necessary to protect or defend Buddhism. In March 1965, Thich Tri Quang said:

> We never want to direct nor to take any part in government. If the government is working for the interests of the country, then we will exhort the faithful to support such a government. If, on the other hand, the government is inefficient and weak, and tries to discredit the Buddhist faith, then we have no choice but to tell our people to be on their guard.

He defined politics as:

> ...genuine goodwill which works for the interests of the nation. I visualize it as a revolutionary force (not any one political party) that should help better the people's standards of living and preserve their spiritual values.

This discrepancy between theory and action may be partly a question of semantics. Buddhist writers and spokesmen have tended to use the word social, as in social revolution, in the broad sense of all affairs of human society. In their minds, it seems that the concept of guiding or influencing government policy in a pattern similar to that of the Golden Age is not political. When the word politics is used by the Buddhists, it appears to be meant to convey the narrow concept of partisan political involvement. Probably more to the point, however, the Buddhists are prevented from admitting to political goals by the disagreement within the Unified Buddhist Church as to the nature and degree of Buddhist involvement in political affairs. Also, the Buddhists would obviously be unwilling to spell out any political plans they might have as this would forearm other elements in society which oppose them.

Given the foregoing factors plus the limited knowledge we have of Vietnamese Buddhism and its leaders, it is impossible to predict precisely the future course of the Buddhists in politics. One can, however, point to certain characteristics, trends and signs which seem likely to influence the development of the political side of Vietnamese Buddhism.

Throughout the post-Diem period up to the formation of the Ky government, the Buddhists had a minimum political demand, although it was not usually articulated as such: a government which in no way threatened or opposed Buddhism. This required that they be given what from their point of view was an adequate voice in any government, whatever its form. They believed they were entitled to this right because they represent the majority of the Vietnamese people and because they led the revolution against Diem. While there were certainly other considerations and complications, the Buddhists opposed Khanh and Huong because they felt the gains they had won in the 1963 revolution were in jeopardy. They took to the streets after Khanh moved toward dictatorship at Vung Tau and returned to the streets when Huong's policies in their view threatened to weaken their voice in government and also to split their still fragile internal unity. Both the Khanh and Huong governments were frequently and strongly criticized by the Buddhists for not purging Diemist elements and permitting them to continue their evil, presumably anti-Buddhist, ways particularly on the local level and in the countryside.

To the Buddhists, the Ky government represented the continuation of an unsatisfactory situation. It must be recognized that civilian, representative government was an ideal that arose out of the revolution against Diem. A common theme in Buddhist thinking and writing is the importance of reformed government and constructive government programs in winning over the people and thus minimizing the fratricidal war. That the Ky government did not fit this image was evident from the beginning. Opposition to the Ky government erupted briefly in Central Vietnam in the summer of 1965 and has since bubbled just beneath the surface; also present were the frustrations and social and economic problems growing out of the intensified war effort.

The ouster of General Thi provided a focus for Buddhist discontent. Thi was, in effect, the Buddhists' voice in the National Leadership Committee, the junta ruling Vietnam. As a revolutionary who had participated in a coup

attempt against Diem and who took pains to identify himself with the common man, he was also in tune with Buddhist thinking. However, there was little pretense that Thi was the main issue. While the Buddhists criticized the Ky government for corruption, mismanagement and ineptness and were also uneasy that the Chief of State was a Catholic, the overriding issue was who would run the government. The monks were simply through with military rule.

In looking ahead to elections, the Buddhists have decided advantages in leadership and organization. One of the remarkable phenomena of the emergence of Buddhism as a social and political force in Vietnam is the caliber of its monk leadership. Little is known of the internal functioning of the Sangha, but it is clear that monks with ability and intelligence are identified early, trained, and moved into positions of leadership. While not all monks are in agreement with Thich Tri Quang's politics, he is widely respected in the Sangha as an intellectual. Thich Ho Giac, co-chairman of the struggle committee against the Ky government, distinguished himself as a brilliant monk student ten years ago in Phnom Penh. Generally, the component bodies in the Unified Buddhist Church seem to be staffed more on the basis of pertinent experience, training, and intelligence than on traditional factors of seniority, devoutness, or nepotism. An additional advantage the monks have as opinion makers is their presumed lower class origins and nationalistic fervor. They are identified neither with foreign powers nor with the privileged groups of previous regimes. They seldom speak anything but Vietnamese. In some cases, monks are known to hide upper class origins in order to increase their appeal to the masses.

The network of Buddhist organizations throughout Vietnam is complex and of questionable efficiency, but it undoubtedly will be used as a mechanism to influence the electoral process. Under the Supreme Bonze, Thich Tinh Khiet, the Unified Buddhist Church is guided by two national bodies, the High Council of the Buddhist Hierarchy and the Institute for the Execution of the Dharma. The High Council, composed of sixty senior monks, deals exclusively with religious matters and regulation of the clergy. It has appeared relatively inactive, but it has given its Secretary General, Thich Tri Quang, both stature and a channel of access to and influence over the more than twenty thousand monks and nuns of Vietnam.

The national body dealing with the lay affairs of the Unified Buddhist Church is the Institute for the Execution of the Dharma (IED). Under the overall guidance of its chairman, Thich Tam Chau, the IED is led by a Leadership Committee of monks composed of two Vice Chairmen, a Secretary General, a Treasurer and seven Commissioners heading General Commissions for Monk Affairs, Propagation of the Faith, Education, Social and Cultural Affairs, Youth, Lay Affairs, and Finance. Each General Commission is divided into several sections and it is here that the day-to-day affairs of the UBC are carried on. The IED functions through eight regional representatives each embracing several provinces and committees of representatives on the provincial and district levels. The IED organization can and sometimes does extend downward to the villages and city wards which are considered the basic units of the UBC. The internal structure of the IED is based largely on the pattern of the Buddhist Associations in the 1931-1964 period, and this in some cases has provided continuity in leadership and organization.

Within the general sphere of activities of the Institute for the Execution of the Dharma are several monk-run groups whose relationships to the IED are either unclear or imprecisely defined, such as the Chaplain Corps, the Young Monks and Nuns League, and the School of Youth for Social Service. There are also numerous lay organizations usually grouped by occupation--for example, the Buddhist Cyclo Drivers of Hue, the Buddhist Plantation Workers of Banmethuot--but it is difficult to assess their influence or their responsiveness to UBC control. Several Buddhist sects and organizations exist over which the UBC exercises no formal control. However, the degree of mutual cooperation at any given time seems to involve the nature of the issue, and in the event of an election some of these groups would almost inevitably make common cause with the UBC.

The Buddhists are thus approaching elections with a numerical advantage, relative strength in leadership and organization, and a nationalist image of considerable appeal to the common man. Yet they have expressed no demands other than for elections, and they have put forth no national program or objectives. To many foreign observers this has seemed an abdication of responsibility, but the Buddhist leadership in the past has not concerned itself with sophisticated platforms and it may feel that it needs no other program than that of wanting what the people want as expressed through leaders elected democratically.

While Thich Tri Quang recently denied that the Buddhists aim to dominate in the election, he at the same time admitted that they are preparing themselves. If and as the government and other competitive forces, such as the Catholics, undertake political activity on their own behalf the tempo and tone of Buddhist activity may well increase to meet the assumed threat. The Buddhists are undoubtedly already taking steps to identify "good" candidates and will pass the word through the network of Buddhist organizations that these are the ones to be supported. If they are true to past pronouncements, the typical candidate will be young, nationalistic and untainted by foreign influences or close associations with old regimes. A "good" candidate would also be known for his probity, as a strong streak of puritanism runs through modern Vietnamese Buddhism.

The role of the monks in elections and government will probably be indirect. They not only are aware that they lack experience and expertise in government, but they also recognize that Catholics and other elements in society would strenuously object to the open participation of monks. Thich Tri Quang has admitted as much. It is conceivable that monks would leave the Order in order to take active political roles, but thus far there have been no indications of this happening. It also seems doubtful at this stage that a strong effort will be made to create a Buddhist state or make Buddhism the state religion. To some extent, the Buddhist attitude, normally one of tolerance toward other religions (although undoubtedly individual monks are anti-Catholic), may be governed by the amount of resistance put up by Catholics and others to an essentially Buddhist-run state.

Without fuller knowledge of the programs and leadership of a Buddhist-dominated government, its form and political orientation are difficult to foresee

If the IED can be taken as a model, it would have a strong executive but at the same time make allowance for the regional, ethnic and religious diversity of Vietnam. It is possible that an effort will be made to develop and instil a Vietnamese Buddhist ideology; occasionally monks, particularly the younger ones, refer to the need for a new ideology which synthesizes the best of Eastern and Western political thinking, Vietnamese culture and Buddhism. More realistically, Buddhist concern for the welfare of the people will probably initially result in a political philosophy akin to democratic socialism aimed at preventing exploitation of the masses.

It is equally difficult to be certain of the attitude of a Buddhist government toward the war and the United States. Certainly the ambiguity of Thich Tri Quang and his followers is cause for concern as is Viet Cong infiltration into Buddhist organizations, but it is worth noting that the Buddhist leadership as a group in the past has supported neither neutralism nor a communist victory. Similarly, while the American presence in Vietnam has given rise to unpleasant incidents and misunderstandings, there is no indication of general agreement among the Buddhists that the United States should be invited to leave before the situation has improved. Until further evidence is available to the contrary, the more real problem for the Vietnamese will be Buddhist overconfidence in their ability to deal with the Viet Cong; for the Americans it will be the inevitably stronger pride and nationalism of a Buddhist-dominated government.

MEMORANDUM for : The Director

LBJ LIBRARY
Mandatory Review
Case # NLJ 93-68
Document # 173

SUBJECT: The Saigon Government's Move Against Danang

(C) Information available in Washington on precisely what has happened in the Danang area during the past twenty four hours -- and what is now happening there, in Hue and in Saigon -- is too fragmentary to permit even moderately well informed speculation, let alone interpretations or conclusions that can be offered with any degree of confidence. We know that a total of three government (i.e., pro-Saigon) battalions (two marine and one airborne) were moved into the Danang area and that after some -- but apparently minor -skirmishing they took at least temporary control of I Corps Headquarters and other strategic locations including Danang radio. We do not yet know what prompted this operation, what its overall objectives are, whether it is but the first step in a larger Directory plan, and what the reaction of other interested parties (e.g., the Struggle forces, the Buddhists, the First and Second Divisions, etc.) will be.

(U) In some ways, the Directory operation actually launched on 15 May (Vietnam time) strongly resembles the plan discussed in March when the agitation sparked by Gen. Thi's ouster first began building up and Danang first came under effective control of the Struggle Forces. At that time the Directory indicated it was thinking of having pro-GVN loyalist elements, especially among the Central Vietnam VNQDD, stir up activity which would serve as a pretext for large scale intervention by Saigon forces and a forcible re-establishment of Saigon control. This earlier plan was shelved but may well not have been forgotten, since recent events may have been guided by its modified reincarnation. Catholic and VNQDD groups in Central Vietnam have been active in recent weeks and the temperature in the I Corps area has risen as a result of their activity.

APPROVED FOR RELEASE
5/14/98

Not knowing exactly what the Directory's plans and intentions are, one can only speculate on the causes of their recent actions. Gen. Dinh had succeeded in restoring a surface calm to I Corps, but the area obviously could not be said to have been restored to Saigon's effective political control. Dinh's own motives and ambitions were also suspect in the minds of his ostensible Directory colleagues. The Struggle Force could not honestly or accurately be termed a Communist movement, but left wing, neutralist and pro-VC elements were obviously penetrating the struggle force structure and gaining some measure of influence within it. The output of Danang and Hue radios was increasingly incorporating themes of obvious Viet Cong inspiration. The activities of the Buddhists, particularly Buddhist chaplins, were undermining Army morale and discipline in I Corps and were beginning to be felt in II Corps. The Directory may have felt that under its surface calm the situation (in I Corps) was deteriorating rapidly and the rot had to be surgically arrested in the national interest. Ky, Thieu and other senior Directory leaders such as Co may have found themselves under increasing pressure from activists like Col. Loan and Marine general Khang and the field-grade officers known as the "Baby Turks". The Directory almost certainly recognized that had they surfaced their intentions to the Americans, we would have endeavored to dissuade them from acting, and this is probably among the principal reasons why they kept their hand so carefully concealed from us.

As for Ky's objectives, again we can only speculate in a very tentative and diffident manner. Ky and his colleagues may feel that if they can re-establish control over Danang and bag the major struggle leaders (Mayor Mai, Col. Yeu,), Hue can indeed be safely left to wither on the vine and the remainder of the I Corps struggle movement will either collapse or can be curbed by a combination of Saigon-inspired VNQDD and Catholic activity. Conversely, the Danang operation may be only the first phase of a larger plan in which it is envisioned that Hue will be occupied after Danang is secured and the government's writ then forcibly extended throughout ICorps. The Directory may also feel that an effective show of force in Central Vietnam will serve to sober, and hence curb, its more vocal and active opponents throughout the rest of the Country, including Saigon — e.g., the Buddhists responsive to the dictates of the Buddhist Institute over which Tri Quang now exercises de facto control. Even if these are indeed the Directory's objectives, it is still not clear whether the Directory intends to scuttle the present program of elections and transfer to civilian rule or is only trying to strengthen its hand during the ensuing weeks and months of political maneuver.

Reactions are even harder to estimate at the present time than intentions or objectives. Much will depend on how successful the Government's move against Danang proves to be and how effective the struggle organization proves to be when put to the test. If the GVN can secure Danang surgically, swiftly and with minimal effective opposition, its political hand will be at least temporarily strengthened. Gen. Nhuan and Gen. Lam will then have to reassess the new balance of strength and determine what course their personal best interests dictate. This could be the course of conciliation and reacceptance of Saigon control through some face-saving formula. On the other hand, if the Danang operation itself proves sticky or meets with serious resistance, the danger of fratricidal civil war in I Corps becomes very real indeed. Even if the Danang operation itself is successful, the spectre of such civil strife is still very much present.

About all that can be said with confidence about the Buddhists is that they will be profoundly upset by the Government's move. If they sense weakness, irresolution or a tactical opportunity they will certainly move to protest strongly. However, if they should determine that the forces arrayed against them are demonstrably too strong to trifle with, they may hold their fire and bide their time. Again, much will depend on the play of the hand in Danang, in Hue, and in Saigon over the next few hours and days.

In making its move against Danang, the Ky government has gambled a great deal on one play. If the operation proves unsuccessful or sparks anarchy and civil war in I Corps, the odds are considerably better than even that the Directory itself will not be able to survive. Even if the operation succeeds, Vietnamese politics will be even stickier than they have been during the period where various interested parties assess new developments and the balance of forces they have created. At the moment all we can do is keep the closest possible watch over the situation and endeavor to assign meaning and value to facts as they emerge.

INTELLIGENCE MEMORANDUM

FOREIGN SHIPPING TO NORTH VIETNAM IN APRIL 1966

DIRECTORATE OF INTELLIGENCE

APPROVED FOR RELEASE
DATE: MAR 2001

SECRET

GROUP 1
Excluded from automatic downgrading and declassification

WARNING

This material contains information affecting the National Defense of the United States within the meaning of the espionage laws, Title 18, USC, Secs. 793 and 794, the transmission or revelation of which in any manner to an unauthorized person is prohibited by law.

FOREWORD

The data in this memorandum are preliminary and subject to modification as additional information becomes available. Significant changes may occur in data on ship arrivals and cargoes from Communist China and, to a lesser extent, in data on cargoes carried by ships of the Free World. All data on cargoes carried are expressed in metric tons. Data on Soviet and Eastern European ship arrivals and cargoes and on Free World ship arrivals are not likely to be changed significantly. As required, changes will be reported in subsequent memoranda.

FOREIGN SHIPPING TO NORTH VIETNAM IN APRIL 1966*

Summary

A continued low level of arrivals by Free World ships at North Vietnamese ports** helped to keep the total of calls by foreign ships in April to the lowest number since September 1965. Eleven Soviet ships delivered 83 percent of North Vietnam's seaborne imports, including a record volume of petroleum products. The same number of Chinese Communist ships carried 56 percent of identified seaborne exports, principally coal for Mainland China. US airstrikes against Cam Pha stopped coal shipments from that port, and for the first time inflicted damage on a foreign ship in North Vietnamese waters.

The 31 arrivals of foreign ships in April were distributed by flag as shown in the following tabulation:

	1966		
	March	April	Monthly Average 1965
Total	35	31	44
Communist	29	24	23
USSR	12	11	7
Eastern Europe	4	2	4
Communist China	13	11	12
Cuba	0	0	Negl.
Free World	6	7	21
United Kingdom	5	4	11
Other	1	3	10

* This memorandum was produced by the Office of Research and Reports; the estimates and conclusions represent the best judgment of the Directorate of Intelligence as of 20 May 1966.
** For details on ship arrivals and the type and distribution of cargo, see Tables 1 through 4 and Figure 1.

All seven of the Free World ships that called in April were chartered to either North Vietnam or Communist China. Four were Hong Kong-owned British-flag ships, and the others were sailing under the flags of Cyprus, Greece, and Malta. The arrival of only 13 Free World ships at North Vietnam in March and April combined, compared with an average of more than 21 Free World arrivals per month in 1965, attests to the effective response of most Free World countries to the US démarche against such voyages.

As a result of the initial US airstrike against facilities at Cam Pha on 19 April, coal shipments from that port ceased immediately, but were resumed at a reduced rate early in May. There are indications that the rate of shipments will not return to previous levels before July. A prolonged reduction in these shipments would appreciably reduce North Vietnam's foreign exchange earnings, 25 percent of which are derived from coal exports.

Because of damage to one of its ships that was loading coal at quayside at the time of the 19 April strike against Cam Pha, Poland protested to the US Government, and there were indications that Poland was suspending the loading of Polish ships for North Vietnam. There have been no additional signs, however, that Poland would stop its ships from calling at North Vietnam. Such an action would be of little economic significance to either Poland or North Vietnam because the relatively small volume of cargoes by these ships could easily be taken over by Chinese-flag ships.

North Vietnam's seaborne trade in April was 14 percent below the average monthly level of 1965. Only cement was exported in larger-than-normal volumes, and only imports of POL (all from the USSR) and miscellaneous general cargoes arrived in above-average volumes. No shipments of arms or ammunition were detected.

1. Communist Shipping

Soviet ships provided the principal support for North Vietnam's seaborne trade in April, particularly for the import trade. Eighty-three percent of identified inbound cargoes was delivered by eight Soviet ships -- all to Haiphong. The eight Soviet ships, including three tankers, arrived loaded from Black Sea ports. They carried the entire volume of POL and fertilizers delivered to North Vietnam by foreign ships in April. In addition, they delivered general cargo that included steel and other metals, trucks, cranes, and other equipment. One of the eight Soviet ships arrived with a load of cotton. Three other Soviet ships, operating under charter to North Vietnam, arrived in ballast to pick up North Vietnamese export cargoes. Of the nine Soviet ships that departed from North Vietnam in April, five (including two tankers) were empty and the other four carried coal to Japan.

Chinese ships calling at North Vietnam in April apparently were employed primarily in transporting export cargoes (mainly coal) from North Vietnam. Only two sailed to Haiphong, the principal port of discharge for import cargo, but nine sailed directly to the coal ports. Small amounts of inbound cargo were identified aboard only two of these nine ships. Because deliveries made to the coal ports normally consist only of small volumes of general cargoes for local consumption, it is assumed that most or all of the other seven ships arrived empty to load coal. There is no information about cargoes carried by the two Chinese ships that sailed to Haiphong.

All Chinese ships arrived at North Vietnam from China, and nine of the ten that left in April returned to China. One Chinese ship left Haiphong for northern Europe with a number of intermediate stops planned en route.

The two Eastern European ships that called at North Vietnam in April included a new Japanese-built Bulgarian bulk carrier on its maiden voyage to pick up a cargo of coal for France. The other was the Polish-flag ship Beniowski (see Figure 2), a 10,443-GRT dry cargo ship which became the principal figure in an incident resulting in an official Polish note of protest to the US government.

The Beniowski was one of four foreign ships at Port Cam Pha on 19 April when 24 US aircraft dropped over 41 tons of explosives on port facilities there. The Beniowski, which was loading coal for France

when the strike occurred, allegedly was showered with debris and shaken by concussion from ten or more nearby explosions of bombs and rockets.* No ship's personnel were injured, but the bridge deck was reported to have been damaged by "flying splinters" and cabin interiors were said to have been damaged by concussion. The Polish note did not mention that the Beniowski is one of 16 ships jointly owned by Communist China and Poland and operated under the Polish flag by Chipolbrok, the Chinese-Polish Shipping Company.

There are indications that the incident may have caused the Poles to cancel future sailings to North Vietnam by Polish-flag ships, although no such policy change has yet been publicized. Such a restriction would result only in minor, temporary inconvenience to North Vietnam. The volume of cargo for North Vietnam handled by Polish ships has been relatively small, and could be easily taken over by Chinese-flag ships operating under charter to Chipolbrok.**

2. Free World Shipping

The seven Free World ships that called at North Vietnam in April included four Hong Kong-owned, British-flag ships and one each under the flags of Cyprus, Greece, and Malta. Four were under charter to Vietfracht (North Vietnam's ship-chartering organization) and three to Sinofracht (Communist China's ship-chartering organization). Only in March had fewer Free World ships visited North Vietnam. Only two Free World ships delivered cargo to North Vietnam in April -- one carried gypsum and general cargo from China; the other, a Greek-flag ship, delivered general cargo from North Korea and Japan. Four of the five Free World ships that departed North Vietnamese ports in April carried outbound cargoes -- three loaded coal for Japan, and one took cement to Cambodia.

Fears for the safety of ships and crews sailing to North Vietnam were aroused again by the Beniowski incident. A Cypriot-flag ship approaching the outer entrance to Haiphong at the time of the airstrike was forced by a shaken crew to divert to Hong Kong. Resumption of the voyage to North Vietnam has been postponed until a replacement

* The other three ships (under Soviet, Chinese, and Maltese flags) did not report damage from the attack.

** There is precedent for such an arrangement. Of four Chipolbrok ships sold to Communist China and placed under the Chinese flag in 1965, three were immediately placed under charter to Chipolbrok.

crew can be flown in from Greece. In another instance, a Greek-flag ship has had to depart Sihanoukville for Haiphong without eight crewmen who had refused to make the trip. The crew of another Greek ship signed a note of protest against being "forced" to sail to Haiphong, but did make the trip. More such incidents can be expected, and bonus payments for voyages to North Vietnam may be driven above the 100 percent rate that has become standard for these trips.

The share of North Vietnam's seaborne trade carried by Free World ships has declined steadily in recent months and reached a new low in April, as shown below:

	Percent	
	April 1966	1965 Average
Total seaborne trade	15	63
Imports	16	36
Exports	15	73

3. Seaborne Cargoes

Identified seaborne cargoes carried to and from North Vietnamese ports for foreign merchant ships in April totaled only 172,100 tons, the lowest since October 1965. Identified seaborne exports amounted to only 99,300 tons, compared with an average monthly volume of 142,800 tons in 1965, as the volume of all major exports except cement fell below normal levels. The volume of identified seaborne imports, on the other hand, was 72,800 tons, 26 percent above the monthly average for 1965. Exceptionally large imports of POL and miscellaneous general cargoes more than offset below-normal volumes of all other major categories of seaborne imports. No shipments of arms or ammunition were detected.

Seaborne deliveries of POL to North Vietnam reached a record high volume of 34,300 tons* in April, compared with an average monthly

* The previous high monthly volume of POL deliveries was 32,000 tons in December 1965.

volume of 14,000 tons in 1965 and of 18,000 tons in the first three months of this year. The increase apparently was in response to Hanoi's request to the USSR that POL deliveries in the second quarter of this year average 40,000 tons a month.

There are indications that North Vietnam is finding it difficult to cope with the larger volume of bulk petroleum deliveries to Haiphong. A 10,300-GRT Soviet tanker that arrived there on 4 May required 11 days to discharge compared with an average discharge time of 6 days for tankers calling this year. The most plausible explanation for the delay is that the oil is being delivered more rapidly than it can be redistributed beyond the port area. The interruption of through service on the Haiphong-Hanoi rail line undoubtedly has made this problem more difficult.

Imports of miscellaneous general cargoes in April totaled 29,400 tons, 55 percent more than the average monthly volume in 1965 but only six percent above the average level of the first three months of this year. Of this total, Free World ships carried 11,300 tons from Japan, North Korea, and China. Deliveries from these countries included 3,100 tons of Chinese gypsum for the Haiphong cement plant, semifinished and finished industrial materials, and tractors. The 18,100 tons that arrived on Soviet ships from the USSR included cotton, assorted metals for industrial use, truck-mounted cranes, tank trucks, dump trucks, tires, helicopter engines, and steel rails.* Haiphong harbor remained free of congestion (see the photograph, Figure 3).

The volumes of other major categories of imports -- bulk foodstuffs, fertilizers, timber, and coal -- were all below average monthly levels for 1965. For the second consecutive month, no seaborne imports of coking coal were detected. Beginning in November 1965, some of these coal shipments were transferred from rail to sea, but full-scale use of the overland route apparently was resumed in March.

The major factor limiting April seaborne exports to a volume 30 percent below the 1965 average monthly level was the airstrike against Cam Pha, in which the coal-cleaning plant and repair shops apparently were gutted and coal-transporting facilities were damaged. Loading

* Since August 1965 Soviet ships have delivered 13,700 tons of rails, more than enough to complete the Kep-Thai Nguyen line and to add a third rail to the line from Hanoi to the Kwangsi border of China.

activities, abruptly halted by the raid, were not resumed until early May and are proceeding at a slow rate. The first ship loaded in Cam Pha since the raids departed on 9 May. Several other ships have been waiting for coal cargoes since the first week of May, but the next shipment was not due out until after 15 May. There are indications that coal shipments will not return to normal before July.

Any prolonged reduction in coal shipments from Cam Pha would have a serious effect on North Vietnam's foreign exchange earnings, 25 percent of which are derived from coal exports. Most coal shipments move by sea, and over the past 15 months, 90 percent of North Vietnam's seaborne coal exports have originated from Cam Pha. The shipping capacity of the other major coal port, Hon Gay, is restricted by a shallower draft limitation.

Because of the interruption of shipments from Cam Pha, the total volume of North Vietnam's seaborne exports of coal in April amounted to only 82,900 tons, 35 percent below the average monthly volume of the preceding three months. China was the major customer for North Vietnam's anthracite in April, taking 55,100 tons by sea. The remainder went to Japan (19,500 tons) and France (8,300 tons).

Cement was the only major export commodity shipped in above-average volume in April. Foreign merchant ships loaded 15,100 tons of cement at Haiphong, more than double the average monthly volume of such shipments in 1965 and the largest monthly volume since 1964. The major share (9,000 tons) of the cement shipped in April went to Cambodia. The rest went to China (3,000 tons), Hong Kong (2,000 tons), and Singapore (1,100 tons).

Cement exports declined steadily after the first quarter of 1965, dropped to zero in January 1966, but recovered strongly in February, March, and April. The high correlation* between the decline in volume of cement exports and the intensity and duration of the bombing of North Vietnam strongly suggests the existence of a causal relationship, although none has been established. Exports of miscellaneous general cargoes amounted to only 1,400 tons in April, compared with an average of 10,000 tons a month in 1965. No shipments of apatite or pig iron were detected aboard foreign ships in April.

---

* Assuming a lag of one to two months in the changes in volume of cement exports.

No seaborne exports of apatite have been detected since the Hanoi-Lao Cai rail line was cut in July 1965, although the line has been reopened on occasions since then. North Vietnam's failure to implement export shipments in the face of a strong market for its apatite remains a puzzle.

Cuba					1	9.7
Free World	6	26.1	7	42.7	43	234.6

a. Many Soviet and Eastern European ships calling at North Vietnamese ports pick up or discharge only small parts of their total cargoes in North Vietnam, and many of the Free World ships only pick up export cargoes. For this reason, with the possible exception of Chinese Communist ships, aggregate tonnage of ships calling is not closely correlative to actual volume of cargoes moving into and out of North Vietnam, but these data are of value as indications of relative changes in the volume of shipping. Because of rounding, components may not add to the totals shown.

INTELLIGENCE MEMORANDUM*

Politically Significant Groups in South Vietnam

Summary

South Vietnam has a multitude of religious, political, and regional factions. Some are large, loosely organized federations; others are just a handful of men backing an influential leader. Only the various religions have anything like a wide popular base, but they are split internally, and their followers are concentrated for the most part in a few geographic areas. Of the religions, the Buddhist faction headed by Thich Tri Quang has by far the largest popular following. Only two of the political parties have national significance and these are also splintered internally.

At best no more than a tenuous guess can be made on the potential voting strength and voting strongholds of most of the politically influential groups. It appears, however, that Buddhist-backed candidates will garner the largest popular support, and that it will take a rather strong alliance between other factions and groups to offset potential Buddhist strength.

*Prepared by the Office of Current Intelligence

The Buddhists

1. Firm adherents of Buddhism probably comprise only about 15 to 25 percent of the roughly 15.5 million South Vietnamese. However, up to 60 percent of the population has been estimated to identify itself loosely with the religion. The Unified Buddhist Association (UBA), a national organization headquartered in Saigon, is presently the principal vehicle for Buddhist political influence. The UBA has at least a partially effective provincial and grass-roots structure extending down to individual pagodas. However, the UBA is divided along regional lines into two major factions, which have tended to act as the militant and moderate wings of the association.

2. The Central Vietnamese Buddhist faction is headed by Thich Tri Quang, whose power is centered in the northern city of Hue and extends roughly from the northernmost provinces along the coast to the southern part of the central lowlands. Quang's influence is greatest in urban areas and mirrors the somewhat xenophobic, militant attitudes of the central Vietnamese populace with its traditional antagonism toward the southerners. Quang's chief lieutenant is Thich Thien Minh, the UBA's youth commissioner; his key lay followers include the Hue University Rector Bui Tuong Huan, Professor Le Tuyen, and former cabinet minister Tran Quang Thuan. It has been estimated that the influence of the central Vietnamese faction extends over as many as three million South Vietnamese. However, probably less than one million of these are registered voters. The faction has been trying for some time to form a lay Buddhist political party, the Vietnamese Buddhist Forces (UVF), but the party is not yet formally in being.

3. The more moderate southern wing of the UBA is led by Thich Tam Chau, chairman of the Buddhist Institute. Chau is actually a spokesman for the refugee Buddhist clergy from North Vietnam, but he appears to control the bulk of southern-born Buddhists, estimated to number from one to three million. The southern Buddhists, however, appear to be far less tightly knit than those under the influence of Tri Quang's faction. Chau is less politically effective than Tri Quang, and has at times allied

himself with politicians whose actions have later cast discredit on him. His principal associates in the clergy are Thich Tam Giac, head of the Buddhist chaplain corps, and Thich Ho Giac, deputy chaplain and a fiery orator.

4. A splinter group, the Southern Buddhist Studies Association, is headed by lay leader Mai Tho Truyen, who has been prominent in international Buddhist circles but has split with the UBA. Although seldom involved in domestic Buddhist "campaigns," Truyen has participated in various government-sponsored civilian councils. He may have several thousand close followers, most of them scattered among the southern provinces, as well as considerable appeal among UBA adherents generally.

5. The Theravada Buddhist sect numbers more than 500,000. Members are largely of Khmer (ethnic Cambodian) stock, and live in the provinces bordering the Mekong River, primarily near Cambodia but also in Vinh Binh Province near the coast. They have been politically inert at the national level, but their leaders--including Son Thai Nguyen, brother of Khmer Serei leader Son Ngoc Thanh--often exert considerable influence in the provinces where they are concentrated. Nguyen's faction is considered rather militant in its actions; the other major faction of the Theravada Buddhists, the Nguyen Thuy Association, is an older, and more conservative group.

The Catholics

6. It is estimated that there are between a million and 1.5 million Catholics in South Vietnam. They have long been prominent among the country's educated and administrative circles, and are numerous among the military officer corps. The Catholics are concentrated chiefly in Gia Dinh and Bien Hoa provinces near Saigon where there are several refugee settlements. There are also pockets of Catholic influence in the delta, east of Saigon, and in the northern provinces.

7. Almost a million of the Catholics are refugees from Communist North Vietnam. They are

very active politically and very vocally anti-Communist. Their acknowledged leader is Father Hoang Quynh, described as a militant and a political activist. During the past year, however, Quynh has taken a rather moderate tack in relations with the Buddhists and other sects, and his influence has been challenged by other refugee priests, including Fathers Nguyen Quang Lam, Nguyen Van Luc, and Tran Van Kiem. Quynh often chooses to conduct his political operations through an organization headed by lay Catholic leader Nguyen Gia Hien.

8. The Catholics native to South Vietnam are less well organized and less aggressive than their northern refugee counterparts. Their principal leader is the archbishop of Saigon, Nguyen Van Binh, generally a voice for moderation and a widely respected figure. The most vocal of their political spokesmen, however, is probably Father Ho Van Vui, a more militant figure who broke openly with the Diem regime.

The Cao Dai

9. The Cao Dai are an eclectic religious sect combining elements of Buddhism, Christianity, Confucianism, and animism. The sect was formally organized in 1926. Under the French, the Cao Dai enjoyed a measure of political autonomy, including their own army. They claim a following of one to two million, although their real adherents probably number closer to a half million. There are scattered Cao Dai villages in the western provinces of the delta, but the principal base of Cao Dai influence, and the seat of the sect's "Holy See," is in Tay Ninh Province, northwest of Saigon. The Cao Dai population in Tay Ninh appears to number a few hundred thousand.

10. The sect suffers from serious internal splits and it is problematical whether it could become a unified electoral bloc, although it certainly might elect some members to an assembly. Former chief of state Phan Khac Suu is a Cao Dai, but representative of the somewhat independent political Cao Dai elements in Saigon.

11. One principal faction of the sect, and probably the most nationally minded, is led by former Cao Dai "general" Le Van Tat and his brother Le Trung Nghia, who are strongly anti-Buddhist. Tat was chief of Tay Ninh Province from Diem's overthrow until late in the Quat regime. Close to them is Tran Quang Vinh, a "spiritual" leader who served as a member of the advisory High National Council under the Quat government. A rival of Tran Quang Vinh is Cao Hoai Sang, who ousted Vinh from the "Holy See." Sang's political ties, however, are not clear. Another of the sect's factions is led by former "general" Nguyen Thanh Phuong, who heads a small Cao Dai political party, the Vietnamese Restoration Party. Phuong ran as a vice-presidential candidate against the Diem ticket in 1961. At least one Cao Dai faction, under a Major Mung, is openly affiliated with the Viet Cong.

The Hoa Hao

12. The Hoa Hao are a spiritualist Buddhist sect, with possibly close to a million followers, although they claim two million. Most of the members are concentrated in the westernmost area of South Vietnam--An Giang and Chau Doc provinces bordering Cambodia, where they are the dominant political and religious influence. The Hoa Hao still retain remnants of their former private army, but they have suffered from internal divisions and are still without significant national influence. They are, however, a source of recruitment for government paramilitary troops in several delta provinces outside their own domain, and thus may be in process of spreading their local influence.

13. Among the most important Hoa Hao leaders at present are Colonel Tran Van Tuoi, until recently chief of An Giang Province, and Colonel Nguyen Van Hue, the chairman of the An Giang provincial council. Hue is a follower of a once-powerful but unsavory Hoa Hao "general," Tran Van Soai.

14. Other key Hoa Hao figures at present are Colonel Ly Ba Pham, the new An Giang Province chief, and Pham Ba Cam, a Saigon politician who probably has little influence at the local level. One of the many factions in the sect is led by Truong Kim Cu, another former "general" and erstwhile troublemaker.

The Dai Viet Party

15. The Dai Viets are one of the two nationally significant political parties in South Vietnam. They are also splintered into several factions, only two of which are of importance.

16. The northern branch of the Dai Viet Party is composed chiefly of refugees from North Vietnam, and has little in the way of formal mass organization to support its nationally prominent politicians. The faction is led by Dang Van Sung, a publisher, and includes former premier Phan Huy Quat. Undersecretary of Foreign Affairs Bui Diem, an adviser to Premier Ky, has also been associated with this faction. As national figures, some of these men probably could draw a substantial vote, particularly in Saigon, but they have no local strongholds.

17. The southern faction of the Dai Viet Party has been weakened by events of the past two years, and is partly splintered between southern and central wings. Its nominal leader, Nguyen Ton Hoan, is once again in exile after having been ousted as deputy premier to General Khanh; he calls his party the Dai Viet Nationalist Party. Hoan appears to have had ties among several top military officers including Chief of State Nguyen Van Thieu, whose brother, Nguyen Van Kieu, is a prominent Dai Viet Party member. Leadership of the faction by default now is claimed by Ha Thuc Ky, whose actual base of power is in Quang Tri Province in central Vietnam. Ky calls this faction the Revolutionary Dai Viet Party. Its popular strength is unknown. The southern faction has been estimated to have about 50,000 active followers.

The VNQDD (Nationalist) Party

18. Like the Dai Viets, the VNQDD Party has been badly splintered. Its strength and organization are greatest in the various provinces of northern South Vietnam, known to the Vietnamese as "central Vietnam."

19. The southern branch of the VNQDD, based largely in Saigon, does not appear to have extensive grass-roots support. Among its leaders is Nguyen Hoa Hiep, minister of interior under Quat and a somewhat

ineffective administrator who used his government post to build up the faction. Another old-time VNQDD leader, also in Saigon, is Vo Hong Khanh, a businessman and one-time minister in the Bao Dai era. It was recently reported that Khanh will be recognized by local VNQDD factions as the party's national leader in an effort to unify the VNQDD as a counterforce to the Buddhists. Also prominent in the southern branch, although born in North Vietnam, is former deputy premier in the Quat government, Tran Kim Tuyen.

20. The primary base of VNQDD strength is in central Vietnam where the party appears to have some genuine organization and a grassroots structure. The VNQDD could probably command a following of a few hundred thousand throughout central Vietnam. The party has been particularly active in Quang Ngai and Quang Nam provinces, where it has entrenched itself to some extent in the provincial administration. It has nevertheless experienced internal provincial factionalism, chiefly between younger and older elements. The party has strength in Quang Tin, and also has some following in Quang Tri and Thua Thien provinces, but substantially less than Tri Quang's central Vietnamese Buddhist faction. Some VNQDD leaders in central Vietnam have cooperated with Tri Quang in the past, but are now in the process of allying themselves against him. The secretary general of the central Vietnam branch of the VNQDD is Nguyen Dinh Luong. However, a genuine regional leader for this faction has not yet emerged.

Independent Politicians

21. A large number of independent politicians, most of them living in Saigon and heading their own small political parties, are nationally prominent and might well be elected if they were to be candidates for a constituent or national assembly. Some of these men wield influence in the current political scene, but probably have no real power or popular support outside of the political and government circles in which they lobby. Many are former government officials and ministers; others are leaders of regional factions; some are former army officers.

22. Among these men are Pham Quang Dan, a Gia Dinh council member; Tran Van Van, a southern leader; Hoang Co Thuy and his brother Hoang Co Binh, a Saigon councilor; former premier Tran Van Huong, and such figures as retired Generals Tran Van Don, "Big" Minh, etc. In very few cases is it possible to estimate the extent and locale of support such men might draw from the electorate, unless they were endorsed by organized parties, religious groups, or the military. Among them, however, are probably some of the country's best political and administrative talent, as well as some of its most overrated politicians.

23. Of the numerous groups with which many of the individually prominent politicians are associated, the Southern Old Students' (or Dong Nai) Association is one which could develop considerable strength, at least in the southern part of South Vietnam. The Association, founded in 1965 and headed by retired General Tran Van Don, reportedly has about 1,200 members. More than 700 are in the Saigon area. Although it is ostensibly an apolitical association of alumni and teachers from four well-known lycees in South Vietnam, the Association is actually a cover for political activity by southern intellectuals and politicians, many of whom wish to see a predominant southern voice in the government. Among other members of the Association, which reportedly meets regularly each month, are former chief of state Phan Khac Suu and Tran Van Van, prominent in the now defunct High National Council and its secretary general, Nguyen Van Loc.

Labor

24. Although there are several competing trade unions, the only labor organization in South Vietnam with any substantial following is the Confederation of Vietnamese Labor, or CVT, headed by Tran Quoc Buu. The union claims a membership of about 300,000 from its affiliates, but actual strength may be less. Most of the CVT support is in the Saigon area, but it has some relatively important affiliates in Da Nang and other cities of I Corps and in the delta. The CVT gains some rural following from its plantation workers' affiliate, but most of the plantation areas are now Viet Cong - infested and residents there may not be permitted to vote.

25. Among the rivals of the CVT is the General Confederation of Free Syndicates (CGSL), an unregistered union led by Bui Luong, a somewhat unsavory political figure who has sought to draw strength away from the CVT. The Confederation of Vietnamese Trade Syndicates (CSTV) under Vui Van Thien and a splinter group of the CSTV under Le Van Thot and Le Dinh Cu are also rivals of the CVT. The Thot-Cu group draws its present strength from the textile workers, whose ranks have reportedly been infiltrated by the Viet Cong.

Military

26. With approximately 600,000 men under arms, the military could be a potentially powerful voting bloc, although there has never been any evidence that the military would vote as ordered in a secret ballot. A past practice of allowing army troops to vote in areas where they are currently based or operating gives the army the potential of swinging the outcome in a given electoral district. Most of the rank and file of the military, however, would probably vote their own political and religious persuasions, although they might support popular military candidates. The influence of the Buddhists among the officers and ranks of both the army and police in I Corps has recently been demonstrated; certain troops in the delta are known to be strongly Catholic.

27. Veterans of the armed services also constitute a potential political force, possibly allied with the military. There are presently estimated to be as many as 500,000 veterans in the country, but they are less likely to vote as a bloc than in accordance with their individual political and religious loyalties. The only significant veterans' organization, the Veterans' Legion Associations des Anciens Combattants Vietnamiens reportedly has about 30,000 members; only some 4,000, however, are said to be interested enough in the organization to pay dues. Under the Diem regime the Legion was of little significance, but it gained prestige from the election of General Pham Xuan Chieu, secretary general of the Directorate, as its president in September 1965, and from the creation in February 1966 of a new cabinet post for war veterans.

Youth and Students

28. About 60 percent of South Vietnam's population is estimated to be below the age of 30. As a result of past electoral laws which have lowered the voting age to 18, youths in their teens and early 20s could exert a significant political impact. Rural and urban youths have different attitudes and outlooks, as do working youths and students, with the latter exercising the most vocal impact.

29. High school age youth apparently have long been the major target of various pressure groups, including the Viet Cong. Because they contain a less sophisticated and more malleable age group, the high schools have often provided the hard core for political demonstration. Many of them reportedly contain Communist cells. The Viet Cong regard the high schools as a means of infiltrating confirmed followers into the universities and as a source of military and agent recruitment. The proportion of students over 18 is unknown, but somewhat greater than in US high schools.

30. University students, often from conservative middle-class families, remained largely uninterested in politics until the Buddhist campaign against Diem in 1963 enlisted their energies and organizations. There is now a plethora of political organizations in the country's four universities: Saigon with 16,000 students; Hue with some 3,600; Dalat with about 1,600; and Van Hanh--a new Buddhist university in Saigon--with a few hundred students. Both at Saigon and Van Hanh universities, the students have tended to be restrained in their political actions over the past year. The Saigon Students' Union, claiming 4,000 of Saigon University's student body under Tran Quang Tri as president and To Lai Chanh as executive committee chairman, has been particularly resistant to recent political agitation. In general, religious organizations in the Saigon universities, such as the Catholic Students' Federation and the Buddhist Students' Association, have exhibited less religious and political fervor than other student groups.

31. The students at Hue University, who generally represent a less privileged class and are under strong Buddhist influence, have been more militant. The Hue Students' Union, under Tuan Xuan Kiem, has been periodically in ferment during the past two years and has been involved in recent "struggle movement" activity. There is a militant, leftist faction among the Hue faculty, including the rector, and the student body has also been reported as increasingly receptive to Viet Cong propaganda. The university of Dalat is under Catholic administration, but has a militant pro-Buddhist element.

Overseas Chinese

32. The Chinese community in South Vietnam is estimated at about a million, most of whom live in Cholon, the Chinese city adjacent to Saigon. They are Vietnamese nationals by decree of the Diem regime, but have managed to retain their own schools which teach Chinese and their internal societies which have begun to operate more openly since Diem's downfall. The Chinese are strongly entrenched in South Vietnam's commercial life, but few have taken an interest in politics.

33. The increasingly disturbed economic situation, however, together with increased government efforts to bring Chinese youths into the armed services, may draw the Chinese more openly into the picture as a political pressure group. Although most of them appear to be oriented to Taipei rather than Peking, there is some Viet Cong influence among them. A few Chinese firms, apparently motivated by profits, supply the Viet Cong, and some Chinese laborers, particularly in the textile industry, are reported to be Communist agents.

The Montagnards

34. The ethnic tribes in South Vietnam number about 500,000, and are scattered throughout the central highlands, primarily close to the main towns. If allowed to vote, they would probably support tribal candidates, but as there are more than 35 different tribes, any real cohesion among the montagnards is questionable. One of the most

prominent tribal leaders now active in the government is Paul Nur, newly appointed to the commissariat for montagnard affairs, but it is by no means clear that he speaks for all the montagnards.

Popular Voting Strength

35. At the present time, there is insufficient information to support any assessment of the potential voting strength and voting strongholds of any or all of the politically influential groups and factions in South Vietnam. Elections held under the Diem regime were controlled or influenced by the government in such a manner as to provide no framework for a study of voting attitudes or habits. Although provincial and municipal council elections held under the Quat regime in May 1965 appear to have been generally free of government domination, available data on them provide only a rough gauge of political and religious influence among the electorate. Moreover, the issues and candidates were local, and the 1965 results may not necessarily have a valid bearing on a national election.

36. It is not yet known whether the coming elections will be organized to run provincial candidates locally, either as individuals or as party slates, or to run all the national candidates on the same ballot. Such arrangements will be very important as they will help determine the vote-drawing power of candidates with either local, provincial, or national reputations. The 1965 local elections brought out some 3.5 million voters, or perhaps half the estimated potential as measured by voter turnout claimed by the Diem regime.

37. Attempts to plot the areas of probable strength or control by the various power groups--Buddhists, Catholics, the sects, the Dai Viets, or VNQDD--can be done only roughly. There are data concerning the political and religious affiliations of individual provincial council members, and the size of the vote won by each member, but no information is at hand concerning the total vote or affiliations of losing candidates. Moreover, the 1965 results provide almost no clue to political affiliations at the district level.

38. Finally, the suppression of genuine political activity by the Diem regime, and to some extent by the power of the military since that time, has prevented the development of political parties, contributed to their internal splits, and forced or encouraged them to operate clandestinely. Most of the parties are reluctant to reveal their membership,and their strength claims, when made, tend to be inflated. Moreover, candidates in the past elections ran as independents or with government endorsement, but usually without political party or religious labels. There is no accurate census of the population as a whole, or of popular religious affiliations.

39. On the accompanying map, an effort has been made to pinpoint known strongholds or pockets of political or religious influence. It has been impossible to estimate group strengths by cities on the map, except for Hue where Buddhist domination is evident. No attempt was made to estimate possible party or religious voting strength. Attempts to pinpoint areas of major strength by religious or political affiliation have been necessarily limited to the populated coastal areas in the northern part of the country, and the major towns and cities in the delta. Most of the inland area of central Vietnam is sparsely populated, and relatively little information is available on rural political allegiances in the delta outside of the known strongholds of the sects and the Khmers. THE WEEK IN PERSPECTIVE

Political developments during the week continued to center around the forthcoming elections for a constitutional convention. Peripheral demonstrations and minor incidents of violence, however, helped to maintain a troubled atmosphere.

Friendly military operations decreased during the week, but enemy-initiated activity showed a slight rise, with the I Corps continuing to report the greatest number of Communist incidents.

CURRENT SITUATION

I. THE SITUATION IN SOUTH VIETNAM

A. POLITICAL SITUATION

1. Political developments during the week continued to center around the forthcoming elections for a constitutional convention. Peripheral demonstrations and minor incidents of violence, however, helped to maintain a troubled atmosphere.

2. Although a government advisory council recommended a 100-man committee to draft an election law, the government plans to convene only a 34-man group on 5 May to begin the work. Hopefully, the election regulations will be formulated by the end of the month, which will allow the government the 90-day period necessary for the mechanical organization of the elections themselves. However, now that the pressure of Buddhist and antigovernment demonstrations has ceased, there may be an inclination among some government officials to delay the election date. Indicative of this trend was a remark made by Premier Ky to newsmen on 3 May to the effect that the government would try to hold elections by October--a month later than had been indicated in the government decree of 14 April.

3. Despite a flurry of coup rumors last weekend that were evidently touched off by the dismissal of police director Lieu, current reporting indicates that various factions within the military government have no plans to engineer an internal coup for the time being. In regard to re-establishing government authority in central Vietnam, I Corps commander General Dinh has continued to utilize a conciliatory approach and to rely upon Buddhist cooperation to restore at least superficial order. Internal strife among Nationalist Party (VNQDD) elements in I Corps, however, has resulted recently in individual acts of violence in Da Nang. Catholic demonstrations opposing the struggle force are also continuing in the Da Nang area and near Saigon. A final factor that could cause further friction is the attempt by the incoming national police director, Colonel Nguyen Ngoc Loan, to install police officials in I Corps who are more responsive to Saigon. In particular, Loan has apparently

cc rmanded General Dinh's recent appointment of
a regional police director.

. Thus far, the Buddhists have voiced no ob-
j ons to the government's 34-man election law
c ing committee, and have shown little concern
(general election methods. However, they ap-
to be on a direct collision course with the
tary regime regarding the provisional govern-
that will function in the interim between
tions for a constitutional convention and the
al adoption and implementation of the constitu-
itself--a period that could stretch out to
rly a year. The Buddhists, in accordance with
recommendations of the National Political Congress
t met in Saigon last month, maintain that the
cted constitutional convention should name the
visional government, while Premier Ky and other
rrent government officials appear determined to
intain their primacy instead.

5. Conversations during the week between US Embassy officials and various Buddhist leaders indicate that the Buddhists do not plan to organize a formal party for the forthcoming elections, nor do they plan to put forth any actual candidates themselves. Instead, local committees will be established to back the "best candidates," regardless of their party or religious affiliation. Various Buddhists have also suggested that the candidates be elected on a provincial rather than a population basis, and that the constitutional convention should consist of between 100 and 150 representatives. Few details concerning the constitution itself were discussed by the Buddhists, although they probably will favor some sort of parliamentary system. The decision not to establish an overt political party reflects the past Buddhist tendency to maneuver freely behind the scenes with only minimal responsibilities, and will also make it difficult for other groups to organize against them.

6. The non-Buddhist groups that hope to influence the outcome of the upcoming elections show signs of attempting to unite against the Buddhists. The Catholics and the VNQDD were the most vociferous, especially in

I Corps and around Saigon, where they held rallies and demonstrations espousing anti-Communist, pro-American military, and--in some cases--anti - Tri Quang themes. At this time, however, there is little cohesion among the various groups. Some coalitions have been discussed privately between non-Buddhist leaders and with US officials, but the degree of public receptivity has not been determined.

Economic Situation

7. On 29 April a high-level meeting was held in Saigon between Vietnamese and US economic officials. As a result of this meeting, Minister Thanh agreed to release an additional $42 million in foreign exchange for GVN-financed imports in May and June, and announced that a directive had been issued on new procedures for goods imported under the commodity import program. USAID has worked closely with GVN Ministry of Economy Officials in writing a directive to establish a quarterly consolidation of import applications and to force importers to go through Office of Small Business procedures to a greater extent than heretofore. These procedures entail much stricter price checks. As a result of this GVN action, USAID agreed to release a large block of funds ($108 million) so that licensing can be resumed at a normal pace during the second quarter.

8. The rate of license applications for GVN-financed imports rose to 277 daily during 18-23 April, compared with a daily rate of only 100 during 1-8 April and 172 during 9-16 April. Importers were attempting to beat the 30 April deadline for license applications under the $58.4-million GVN foreign-exchange release announced on 7 March for March-April import licensing. Actual licensing of GVN-financed imports, which was negligible during March, amounted to $21.3 million during the first three weeks of April.

9. The index of Saigon retail prices was generally unchanged from last week. Rice prices, however, continued to rise and the price of the average grade reached a new retail high of 920 piasters per 100

kilograms. It appears that Minister Thanh's policy of selling government rice at low prices in Saigon has not been entirely successful. Although the Ministry of Economy is selling at low prices to retailers in Saigon, these retailers report a considerable lag in the delivery of this rice. Moreover, by exerting control over the rice brought to Saigon by convoy, the Ministry of Economy has reduced the flow of rice to the open market where dealers from surrounding provinces purchase large amounts of rice outside of the ministry's sales program. With demand remaining constant, this reduction in the supply of rice has resulted in higher prices on the open market.

10. In the Saigon free market, the price of US $10 bills rose one piaster per dollar to a 1966 high of 173, or close to the 1965 high of 175. The price of $10 MPC (scrip) also rose by one piaster per dollar to 119. On the other hand, both the piaster-dollar cross rate in Hong Kong and the price of gold fell by one piaster per dollar to 152 and 245, respectively.

B. MILITARY SITUATION

1. Enemy-initiated activity increased during the week ending 30 April.

2. During this period there were 790 Communist-initiated incidents compared to the previous week's 765. There were 33 attacks (three large scale) and 527 acts of terrorism compared to the previously reported 20 and 570, respectively. The kill ratio favored free world forces 1.7 to 1 compared to the week before's recomputed 5.33 to 1. Viet Cong losses for the period were 456 killed and 98 captured. Vietnamese casualties for the period were 227 killed, 613 wounded, and 29 missing or captured--a total of 869 compared to the previous week's 368. US losses for the week were 70 killed and 589 wounded and three captured--a total of 662 compared to last week's 582. Free world forces lost two killed and 11 wounded (all ROK). The South Vietnamese lost 192 weapons (three crew served) while the Viet Cong lost 168 weapons (one crew served).

GVN/Allied Activities

3. Friendly large- and small-unit operations, as well as corresponding enemy contacts, decreased during the week.

4. In I Corps, US Marine elements conducting Operation GEORGIA in Quang Nam Province inflicted losses of 93 killed and 21 captured on the Viet Cong while sustaining losses of seven killed and 74 wounded.

5. Combined Operation FILLMORE (rice-harvest security) being conducted by elements of the US 101st

Airborne Division and the ROK Capital Division in Phu Yen Province of II Corps continues. Friendly forces have lost 16 killed and 105 wounded while inflicting losses of 193 killed and 44 captured on the enemy.

6. In Tay Ninh Province of III Corps, the forces conducting combined US/ARVN Operation BIRMINGHAM/AN DAN 79/66 successfully seized a large enemy supply cache. The units seized 1,364 tons of rice, 185.5 tons of salt, 6,800 uniforms plus several thousand sets of other clothing, and destroyed 27 base camps. Ninety-three Viet Cong have been killed and ten captured. Friendly forces have lost 42 killed and 175 wounded.

7. Elements of the ARVN 21st Division terminated a three-day search-and-destroy operation in Chuong Thien Province, IV Corps. Friendly units lost 29 killed and 138 wounded while reportedly killing 247 Viet Cong.

8. Free world forces conducted 104 battalion-size or larger operations during the week, 49 of them achieving contact--32 GVN, 14 US, one ROK, and two combined. There were 26,065 small-unit operations, including 3,584 conducted by US forces and 478 by free world forces. Of the 154 that achieved contact with the enemy, 98 were conducted by US units and two by free world forces.

9. Seven B-52 Stratofortress missions utilizing 54 aircraft were flown during the week ending 1 May. The target areas were in the South Vietnamese provinces of Tay Ninh, Quang Ngai, and Quang Tin.

10. On 25 April, a total of 15 aircraft (LOW STOOP III and IV) supported ground search-and-destroy Operation BIRMINGHAM in Tay Ninh Province. On 28 April in Quang Tin Province, a total of 18 aircraft (SPUR TIP I, II, and III) struck Viet Cong troops that were considered a threat to the Tien Phuoc Special Forces Camp; no ground follow-up was scheduled. On 29 April, three aircraft (SNAP CAP II) made a harassing attack in Quang Ngai Province against a reported enemy base and supply point near the Tra Bong Special Forces Camp; no ground follow-up was scheduled. On 30 April, three aircraft (FINE SAND

III) made a harassing attack in Quang Nam Province against a reported Viet Cong training camp. No ground follow-up was scheduled; however, ground search-and-destroy Operation GEORGIA is in this area. On 1 May, 15 aircraft (LOCK BOX IV) attacked a suspected ammunition storage area in Tay Ninh Province; no ground follow-up was scheduled.

11. During the period 22-28 April, a total of 2,455 tactical air strikes and armed reconnaissance sorties were flown by US Navy, Air Force, and Marine aircraft. VNAF aircraft flew a portion of the armed reconnaissance sorties. The cumulative results of these strikes as reported by pilots included the destruction of 2,015 structures, 38 bunkers, 47 sampans, 5 trenches, 213 huts, 49 riverboats, 7 AW positions, 5 storage areas, 3 trucks, and 1 radio station. Damage was reported to 1,263 structures, 5 bridges, 4 bunkers, 32 sampans, 223 huts, 9 riverboats, 14 AW positions, and 4 trucks. There were a total of 92 secondary explosions.

12. On 23 April, an A-4 Skyhawk was downed by probable ground fire approximately 80 nautical miles south-southeast of Saigon. The pilot ejected and was rescued.

13. Forces conducting Operation MARKET TIME searched 5,319 junks and 23,736 people. Of these, two junks and 66 people were detained. During the week, a US Coast Guard cutter was briefly fired on by a Cambodian PT boat off the northwestern tip of Phu Quoc Island, IV Corps. No damage or casualties resulted.

Communist Activity

14. I Corps continues to lead all other areas in incidents, especially terrorism and antiaircraft fire. The density of enemy units in the northern provinces probably has caused greater demands on the people for support. To ensure that the required support is rendered, in view of friendly activity in the area, the enemy has probably reverted to an increased terrorism campaign. Other activity in the area consisted of a mortar attack on the Hue airfield in Thua Thien Province on 24 April, railway and highway sabotage, and harassing attacks on friendly security elements and installations.

15. No significant Communist activity occurred in II Corps during the week. The continued low incident rate is probably an attempt by the enemy to avoid any act that might draw together the dissident political forces in this area.

16. In Phuoc Tuy Province of III Corps, an attack on a New Life Hamlet by an estimated Viet Cong battalion on 26 April and the simultaneous mortaring of a nearby post, resulted in friendly casualties of 40 killed and 18 wounded, with 21 weapons and two radios also lost. Enemy losses were one killed and one captured. Other activity consisted of small-scale attacks and harassing fire on friendly installations.

17. The greatest number of small-scale attacks occurred in IV Corps. Activity in the area continues to be limited to guerrilla-type, small-unit operations in comparison to the enemy activity in the northern corps areas. Although the enemy in IV Corps maintains the capability to mass large units whenever such an action would be advantageous, the lack of cover in the area and a continued ability to maintain influence through terrorism and small-unit actions indicates that the Communists will probably continue operating in the present manner, massing only when the advantages of such a move greatly overshadow the disadvantages.

18. Changes in lines of communication status consist of the opening of National Route 1 in Binh Dinh Province (except the portion south of Qui Nhon) and in Khanh Hoa Province. Route 14 is closed in Binh Long Province. An extended portion of the national railroad has been reopened between Ca Na, Ninh Thuan Province, and Ninh Hoa, Khanh Hoa Province.

C. REVOLUTIONARY DEVELOPMENT

1. Training for the specialized members (civil affairs, census/grievance, and new life development) of the revolutionary development cadre groups began on 25 April at the National Cadre Training Center. This class, the first to receive such training under the revised program, will number about 1,500 persons; some 3,200 cadres are programmed for specialist training in the next class.

2. The pacification effort is suffering from the effects of economic difficulties that seem to be hampering general progress throughout the country. Construction prices, due to inflation, are rising in some cases beyond the 1966 budget estimates of the program. To counteract the rising prices, the provinces have been authorized to use the reserve funds of the Revolutionary Development Ministry and to negotiate contracts directly with "able and trustworthy contractors" in cases where no bids at all for construction projects have been received.

3. On the basis of agreements reached at the Honolulu Conference substantial GVN/US planning is under way to revitalize village and hamlet governments. Reforms include the election of six-member village councils--possibly by 29 May, the date set for the election of one third of the provincial councils. Each elected village council would then select a council chairman and also a village chief, who up to now has been appointed by the province chief. The US has agreed to support a wage increase for village and hamlet officials to bring their salaries in line with those received by the cadre groups working in their areas.

4. The corps and district civil administrative apparatus has also been reviewed and will be the object of certain reforms. The corps commanders, who are also the official government delegates for civil administration, will be granted more latitude in controlling administrative personnel and in shifting funds within their regions. Three administrative bureaus, instead of the present five, will deal with military and political affairs, administration

and finance, and economic and social welfare. Proposed changes in the district apparatus include the establishment of an advisory council made up of the chairmen of the various village councils. Moreover, consideration is being given to the possible replacement of the district deputy for security--now a military officer--by a civilian.

Returnees (Chieu Hoi)

5. For the second consecutive week, the total number of defectors from the Viet Cong decreased significantly. Only 285 persons rallied during the week ending 22 April, apparently a result of the continuing political instability in the northern provinces and the lack of military activity. US Mission officials point out, however, that definite improvements in the program have been realized since last fall, and that high-level GVN officials have demonstrated more support since 1 January 1966.

6. Psychological operations before and after major military contacts have contributed heavily to the successful inducement of Vietnamese Communists and sympathizers to rally to the government. Millions of Chieu Hoi leaflets, safe conduct passes, and maps bearing instructions on how to rally have been dropped on known and suspected infiltration routes and in-country Viet Cong positions, often in conjunction with B-52 strikes. In the central highlands, leaflets written in tribal languages are being dropped. Moreover, day and night aerial broadcasts are being undertaken to heighten the enemy's anxieties, these broadcasts serve as a useful, though technically difficult, means of warning villagers of impending air strikes in their area.

II. DEVELOPMENTS IN THE BLOC

1. The full text of Premier Pham Van Dong's report to last month's National Assembly meeting, which became available this week, indicated that the premier not only delivered a pep talk to the assembled delegates but also engaged in a relatively frank discussion of the difficulties caused by the US bombing raids. Dong admitted that the North Vietnamese had been forced to mobilize large segments of the population to keep transportation routes open and to strengthen both civil defense and antiaircraft defenses. The premier also confessed that the allocation of manpower resources to meet wartime priorities had been a real problem. The premier claimed, however, that this effort had paid off, and that the monthly average of tonnage moved had increased in 1966 over the last few months of 1965.

2. While cautioning against possible further US escalation of the war, Dong also struck an optimistic note by claiming that the Vietnamese had successfully challenged US military power during the past year, especially in the air. This same theme of optimism dominated a flood of DRV propaganda celebrating the alleged shootdown of the 1,000th US aircraft over North Vietnam on 29 April, a claim that is roughly four times the actual number of US losses. A Nhan Dan editorial occasioned by the shoot-down claim asserted that everywhere in the country people had made contributions to the fight, and that the militia and self-defense forces had demonstrated "many new capabilities and were playing an important role." One of the new capabilities mentioned by Nhan Dan was the ability to use ground-to-air missiles, the first public admission by the DRV that there are SAMs in the North Vietnamese arsenal.

Sino-Soviet Relations on Vietnam

3. The Chinese Communists bitterly assailed Soviet policy on Vietnam this week and flatly denied recent Soviet charges that Peking has hampered Soviet military shipments to the DRV. Speaking at a 30 April mass rally in Peking honoring a visiting high-level Albanian delegation, Premier Chou En-lai disparaged Soviet aid to Hanoi as meager in quantity and inferior

in quality. He also berated the present Soviet leadership in the harshest terms for "sham anti-imperialism" and for collaboration with the US.

4. Chou's remarks were followed up on 3 May with a Foreign Ministry statement designed to undercut Soviet claims of "all out" support for Vietnam and of Chinese obstructionism in the transport of military aid shipments to the DRV. The statement provided the first detailed information on the amount of Soviet military assistance transiting China for the DRV. It asserted that Communist China transported 43,000 tons of Soviet military supplies to North Vietnam in 1965, a figure close to intelligence estimates of the actual tonnage moved. In addition, the statement claimed that during the first quarter of 1966 the USSR used only one third of the 1,730 rail cars Communist China had agreed to make available for military deliveries, and that such goods as were sent by the Soviets had been moved on by the Chinese "with priority, at a high speed, and free of charge."

5. Despite Chinese protestations, however, evidence indicates that Peking has placed onerous restrictions on overland deliveries. Although the restrictions are unlikely to have limited the quantity or types of weapons supplied by the USSR to North Vietnam, they have slowed down the pace of deliveries.

6. This outpouring of Chinese invective betrays Peking's discomfiture over the effectiveness of the recent Soviet charges. Moreover, it probably also reflects Peking's sensitivity to the Soviet success in its call for "unity" at the 23rd CPSU congress last March.

III. THIRD COUNTRY DEVELOPMENTS

A. PEACEFUL SETTLEMENT IN VIETNAM

On 26 April, the semi-official Vietnam Press Agency carried the BBC interview of GVN Foreign Minister Tran Van Do. In reply to a question referring to Senator Mansfield's recent proposals on Vietnam, Do stated that "we must all attempt to apply good will in order to help restore peace, but it is also necessary that our enemies, first and foremost, should have will for peace." Do noted that Senator Mansfield's apparent allusion to the Viet Cong as one of the "certain essential elements" in the Vietnamese situation showed "considerable generosity of spirit" toward an organization that "is only a propaganda instrument of Hanoi."

B. CAMBODIA

1. In a public speech on 24 April, Prince Sihanouk stated that the DRV, Cambodia, and the NFLSV have decided with Cambodia to sign "solemn agreements shortly at a summit meeting which would establish a definite basis for a peaceful coexistence between our two countries."

2. A US military spokesman in Saigon announced on 3 May that on 30 April a battalion of the US 1st Infantry Division operating on the eastern bank of the Gai Bac River in Tay Ninh Province received mortar and small-arms fire from the Cambodian side of the border and that the American commander then directed artillery fire on the gun positions. The US Embassy in Saigon recommends that a US protest be lodged with the Cambodian Government.

C. WEST GERMANY

Eight tons of medical supplies from the Federal Republic of Germany arrived in Saigon on 29 April. This is the first shipment of the 1,500 tons of medical supplies (valued at $4,375,000) offered by Germany.

A CERTAIN NUMBER OF MILITARY MEMBERS ELECTED TO THE CONSTITUENT ASSEMBLY. KY OBSERVED THAT THIS MILITARY GROUP WOULD BE ABLE TO MANEUVER GROUPS NOT ALIGNED WITH THE BUDDHISTS, SO THAT THE BUDDHISTS WOULD NOT BE ABLE TO CONTROL THE ASSEMBLY. KY ALSO TOLD THE GROUP THAT THE MILITARY WAS RESPONSIBLE FOR THE STABILITY OF THE NATION AND THAT IF ANY GOVERNMENT OR GROUPINGS WITHIN THE GOVERNMENT FAVORED COMMUNISM OR NEUTRALISM; THE MILITARY WOULD CRUSH THEM.)

2. DURING A CONVERSATION ON 29 APRIL, FORMER PRIME MINISTER DR. PHAN HUY QUAT REMARKED THAT HE DID NOT INTEND TO PARTICIPATE IN THE PREPARATION OF THE MECHANISM FOR THE FORTHCOMING ELECTIONS. QUAT OBSERVED THAT HE WAS PERFECTLY WILLING TO TAKE PART IN MEETINGS WHICH WOULD SET FORTH THE GENERAL PLANS FOR THE ELECTIONS BUT HE HAD NO INTENTION OF HELPING TO FORMULATE THE VARIOUS DETAILS. [redacted] 1.5(c) 3.4(b)(1)
[redacted] DR. QUAT WAS IN HIGH SPIRITS BUT NOT AS OPTIMISTIC AS HE HAD BEEN ON A PREVIOUS OCCASION CONCERNING THE SUCCESSFUL CARRYING OUT OF ELECTIONS. ALTHOUGH QUAT DID NOT EXPLAIN HIS DECREASING OPTIMISM, QUAT'S SUBSEQUENT REMARKS INDICATED THAT HIS CHANGE IN FEELING IS PROBABLY DUE TO "RECENT IRRESPONSIBLE ACTIONS" ON THE PART OF KY.)

3. QUAT DESCRIBED A DINNER HE HAD ATTENDED WHICH WAS GIVEN 1.5(c) 3.4(b)(1)

1.5(c)
3.4(b)(1)

BY PRIME MINISTER KY ON 27 APRIL. AMONG THE GUESTS WERE PROMINENT POLITICIANS SUCH AS LAWYER TRAN THANH HIEP, VIETNAM NATIONALIST PARTY (VNQDD) FACTION LEADER NGUYEN TUONG BA, LAWYER VUONG VAN BAC, DR. NGUYEN CAO HACH, REPRESENTATIVES FROM THE SOUTHERN OLD STUDENTS' ASSOCIATION, AND SOME MEMBERS OF THE CABINET. KY TOLD THE GROUP, WHICH TOTALED MORE THAN TWENTY, THAT HE WAS HOLDING THE DINNER TO THANK THOSE PRESENT FOR THEIR SUPPORT AND ASSISTANCE DURING THE RECENT POLITICAL CRISIS AND IN MAKING PLANS FOR AN ELECTION-LAW DRAFTING COMMITTEE. BUI DIEM, SECRETARY OF STATE FOR FOREIGN AFFAIRS, INFORMED THE GATHERING THAT THE ARMED FORCES WOULD PARTICIPATE IN THE ELECTIONS IN ONE OF TWO WAYS. ACCORDING TO QUAT, DIEM SAID THE ARMED FORCES WOULD ASK FOR A NUMBER OF SEATS IN THE CONSTITUENT ASSEMBLY FOR MILITARY MEN SELECTED BY THE LEADERS OF THE ARMED FORCES OR WOULD PUT UP CANDIDATES TO RUN FOR ELECTION TO THE ASSEMBLY.

4. QUAT SAID THAT KY THEN INTERRUPTED BUI DIEM, STATING THAT THE ARMED FORCES WOULD MERELY SELECT AND SPONSOR THEIR OWN CANDIDATES FOR ELECTION, BUT WOULD NOT ASK THAT A SPECIAL NUMBER OF SEATS BE RESERVED FOR THE MILITARY. (FIELD COMMENT: [redacted] QUAT TOLD [redacted] THAT KY CLAIMED THE ARMY WOULD

1.5(c)
3.4(b)(1)

1.5(c)
3.4(b)(1)

[redacted]

PRESENT CANDIDATES WHO WOULD HAVE NO DIFFICULTY BEING ELECTED SINCE ABOUT 500,000 PERSONS ARE IN THE MILITARY AND, COUNTING THEIR FAMILIES, THIS WOULD TOTAL SEVERAL MILLION PEOPLE. FROM THIS REMARK QUAT CONCLUDED THAT KY WAS STILL INFATUATED WITH THE IDEA OF A MILITARY POLITICAL PARTY ON THE KOREAN MODEL.)

5. QUAT EXPLAINED THAT KY THEN LAPSED INTO "THIS USUAL BOASTING" ABOUT THE ARMED FORCES AND TOLD THE GROUP THAT THEY WOULD HAVE TO ACCEPT THE FACT THAT STABILITY WAS THE RESPONSIBILITY OF THE ARMED FORCES, EVEN AFTER THE ELECTIONS. KY CONTINUED THAT THE ARMY WOULD HAVE TO BE ON ITS GUARD AND WOULD CRUSH ANY GOVERNMENT ORGANIZATION OR GROUPINGS WITHIN THE GOVERNMENT WHICH FAVORED COMMUNISM OR NEUTRALISM. (FIELD COMMENT: QUAT REMARKED DURING THE [redacted] CONVERSATION THAT HE WOULD BE THE FIRST TO SUPPORT THE RESUMPTION OF POWER BY THE MILITARY IF THICH TRI QUANG'S CLIQUE WERE TO GAIN POWER AND TRY TO IMPOSE A NEUTRALIST SOLUTION; BUT, QUAT ADDED, THERE ARE CERTAIN THINGS WHICH SHOULD BE DONE BUT NOT SAID.)

1.5(c)
3.4(b)(1)

6. DR. QUAT SAID THAT AT 2230 HOURS KY ANNOUNCED THAT HE WANTED TO APOLOGIZE BUT THAT HE WOULD HAVE TO LEAVE TO HAVE "A BIT OF FUN." KY DEPARTED WITH DEPUTY PRIME MINISTER NGUYEN HUU CO. QUAT COMMENTED THAT HE THOUGHT THEY EITHER WENT DANCING OR GAMBLING.

C-O-N-F[redacted]D-E-N-T-I-A-L [redacted]
(classification) (dissem controls)

(VC) ARE UNQUESTIONABLY INVOLVED IN MANY OF THE STRUGGLE GROUPS FORMED IN VARIOUS PARTS OF THE COUNTRY, BUT IT IS DIFFICULT TO ASSESS THE DEGREE OF VC CONTROL OVER ORGANIZATIONS PARTICIPATING IN THE STRUGGLE. IN DANANG, BECAUSE OF APPARENT HIGH-LEVEL VC PENETRATIONS, THE VC MAY NOW BE ABLE TO MANIPULATE THE MOVEMENT TO THEIR OWN ENDS, AND QUANG MAY NO LONGER BE ABLE TO CONTROL IT. TWO KNOWN COMMUNISTS WHO HAVE BEEN ACTIVE IN THE DANANG STRUGGLE MOVEMENT ALMOST FROM ITS INCEPTION ARE DANANG PEOPLE'S COUNCIL MEMBER HA XUAN KY, IDENTIFIED AS A PEOPLE'S REVOLUTIONARY PARTY (PRP) MEMBER, WHO IS CHAIRMAN OF THE PEOPLE'S FORCES TO STRUGGLE FOR REVOLUTION, DANANG, (PFSRD) EXECUTIVE COMMITTEE; AND POLITICAL ADVISOR TO THE PFSRD EXECUTIVE COMMITTEE TRAN DUY TAM, WHO WAS FORMERLY A MEDICAL ASSISTANT TO DANANG MAYOR DR. NGUYEN VAN MAN. KY AND TAM ARE IN CONTACT WITH CHE VIET TAN, SECRETARY OF THE PRP COMMITTEE FOR DANANG AND A MEMBER OF THE VC REGION V COMMITTEE. THEY ARE IN A POSITION TO CONSOLIDATE THEIR HOLD ON THE PFSRD BY FILLING IT WITH VC. HIGHER VC ECHELONS REPORTEDLY DIRECTED SUBORDINATE ORGANIZATIONS TO JOIN STRUGGLE ACTIVITIES BECAUSE OF THE IDENTITY OF VC INTERESTS WITH THOSE OF THE PFSRD. THE ASSAILANT WHO SHOT A VIETNAMESE NATIONALIST PARTY (VNQDD) MEMBER ON 2 MAY HAS BEEN TENTATIVELY IDENTIFIED AS KNOWN COMMUNIST NGUYEN HUU TRANH. THE VC HAVE REPORTEDLY SENT 50 PROPAGANDA

1.5(c)
3.4(b)(1)

1.5(e)
3.4(b)(1)

CADRES INTO DANANG TO BE INFILTRATED INTO THE STRUGGLE MOVEMENT BY VC ALREADY IN PLACE, AND A VC CELL IN A DANANG LABOR ORGANIZATION WAS DIRECTED TO TRY TO WREST CONTROL OF THE DANANG SYNDICATE OF WORKERS UNIONS FROM ITS PRESENT LEADERS AND REPLACE THEM WITH PRP MEMBERS. OUTSIDE THE DANANG AREA, VC PENETRATION OF THE STRUGGLE MOVEMENT IN I CORPS REMAINS ESSENTIALLY CONCEALED, BUT DR. LE KHAC QUYEN, A LEADER OF THE HUE STRUGGLE, HAS BEEN IDENTIFIED BY SEVERAL PERSONS AS A COMMUNIST OR PRO-COMMUNIST. DETERMINATION OF VC INVOLVEMENT OUTSIDE I CORPS IS STILL MORE DIFFICULT TO DETERMINE, BUT VC AGITATORS PARTICIPATED IN DEMONSTRATIONS IN SAIGON, KONTUM, BAN ME THUOT, NHA TRANG, AND DALAT, AND IN NHA TRANG A STUDENT ARRESTED FOR STRUGGLE ACTIVITIES ADMITTED WORKING FOR THE VC UNDER THE DIRECTION OF THE SECRETARY OF THE NHA TRANG MUNICIPAL VC COMMITTEE. A CAPTURED VC QUI NHON COMMITTEE DOCUMENT OF 16 MARCH DIRECTED SUBORDINATE ORGANIZATIONS TO TRY TO PARTICIPATE IN THE LEADERSHIP OF DEMONSTRATIONS AND TO SELECT SUITABLE DEMONSTRATION LEADERS FOR DEVELOPMENT AS VC UNDERGROUND CADRES.)

3. VC INVOLVEMENT IN THE POLITICAL UNREST WHICH HAS PLAGUED SOUTH VIETNAM SINCE MARCH 1966 HAS BEEN WIDESPREAD AND VARIED. PROPAGANDA OVER THE VC LIBERATION RADIO HAS URGED PEOPLE TO JOIN IN THE STRUGGLE MOVEMENT AND OVERTHROW THE GOVERNMENT OF PRIME MINISTER NGUYEN CAO KY. THERE IS NO DOUBT THAT THE VC ARE INVOLVED WITH MANY OF THE ASSORTED STRUGGLE GROUPS WHICH HAVE BEEN FORMED IN VARIOUS PARTS OF THE COUNTRY,

1.5(e)
3.4(b)(1)

1.5(c)
3.4(b)(1)

BUT IT IS DIFFICULT TO ASSESS WHICH ORGANIZATIONS ARE UNDER VC CONTROL AND TO WHAT DEGREE. ALL OF THESE GROUPS ARE TARGETS FOR VC PENETRATIONS; SOME MAY ACTUALLY BE ORGANIZED AND CONTROLLED BY THE VC IN ACCORDANCE WITH PRP DIRECTIVES.

4. THE STRUGGLE MOVEMENT WHICH STARTED IN EARLY MARCH IN HUE AND DANANG, OSTENSIBLY IN RESPONSE TO THE REMOVAL OF LIEUTENANT GENERAL NGUYEN CHANH THI AS I CORPS COMMANDER, WAS QUICKLY TURNED INTO A MOVEMENT TO OVERTURN THE GOVERNMENT OF VIETNAM. THE STRUGGLE EFFORT WAS ORGANIZED AND DIRECTED FROM PAGODAS IN HUE, WITH ULTIMATE CONTROL IN THE HANDS OF THICH TRI QUANG. ALTHOUGH QUANG HAS BEEN ABLE TO DIRECT THE NATIONWIDE MOVEMENT EFFECTIVELY UP TO THIS TIME, THE SITUATION IN DANANG MAY HAVE REACHED A POINT WHERE, BECAUSE OF APPARENT HIGH-LEVEL VC PENETRATIONS, QUANG MAY NO LONGER BE ABLE TO CONTROL THE MOVEMENT, AND THE VC MAY NOW BE ABLE TO MANIPULATE THE DANANG MOVEMENT TO THEIR OWN ENDS. QUANG MAY BE AWARE OF THE COMMUNIST BACKGROUNDS AND CONNECTIONS OF SOME OF THE TOP LEADERSHIP OF THE PFSRD, BUT HE MAY STILL FEEL THAT THEY WILL RESPOND TO THIS DIRECTION. WHILE QUANG MAY HAVE MISCALCULATED HIS OWN STRENGTH, HE MAY ALSO BE SYMPATHETIC WITH THE OBJECTIVES OF VC PENETRATION AGENTS.

5. ON THE EXECUTIVE COMMITTEE OF THE PFSRD ARE AT LEAST TWO KNOWN COMMUNISTS WHO HAVE BEEN ACTIVE ALMOST FROM THE INCEPTION OF THE STRUGGLE MOVEMENT. ONE OF THESE IS HA XUAN KY, A LOCAL HIGH

1.5(c)
3.4(b)(1)

1.5(c)
3.4(b)(1)

C-O-N-F-[redacted]-E-N-T-I-A-L [redacted]

(classification) (dissem controls)

SCHOOL TEACHER, AN ELECTED MEMBER OF THE DANANG PEOPLE'S COUNCIL, AND CURRENTLY CHAIRMAN OF THE PSFRD EXECUTIVE COMMITTEE. KY HAS A PREVIOUS HISTORY OF COMMUNIST ACTIVITY AND HAS BEEN IDENTIFIED BY TWO RELIABLE SOURCES AS A PRP MEMBER. HE HAS BEEN IN CONTACT WITH CHE VIET TAN, WHO IS IDENTIFIED AS SECRETARY OF THE PRP COMMITTEE FOR DANANG AND A MEMBER OF THE VC REGION V COMMITTEE. ANOTHER IDENTIFIED PENETRATION OF THE PFSRD EXECUTIVE COMMITTEE IS TRAN DUY TAM, MORE COMMONLY CALLED DR. TAM. THIS MAN HAS BEEN IDENTIFIED AS THE POLITICAL ADVISOR TO THE PFSRD EXECUTIVE COMMITTEE AND AS SUCH HE WIELDS CONSIDERABLE INFLUENCE ON COMMITTEE ACTIONS. TAM HAS ALSO BEEN IN CONTACT WITH CHE VIET TAN, AND HE HAS INTERFERED IN LOCAL POLICE MATTERS BY PERSONALLY ORDERING RELEASE OF AN INDIVIDUAL DETAINED AS A VC CADRE. TAM PREVIOUSLY WORKED AS A MEDICAL ASSISTANT FOR DR. NGUYEN VAN MAN, MAYOR OF DANANG. ACCORDING TO ONE UNVERIFIED REPORT, TAM INTERCEDED WITH GENERAL THI TO HAVE DR. MAN APPOINTED AS MAYOR OF DANANG. THE FULL EXTENT OF THE INFLUENCE OF THESE TWO MEN ON THE COURSE OF THE STRUGGLE MOVEMENT IN THE INTEREST OF DIRECT ASSISTANCE TO THE VC IS YET TO BE DETERMINED. IT IS CLEAR THAT THEY ARE IN A POSITION TO CONSOLIDATE THEIR HOLD ON THE ORGANIZATION BY CAREFULLY SEEDING THE MOVEMENT WITH FELLOW COMMUNISTS TO THE EXTENT THAT IT WILL NO LONGER BE RESPONSIBLE TO ANY AUTHORITY BUT THEIRS. (HEADQUARTERS COMMENT. [redacted] WHICH REPORTED ON DISSIDENT GROUPS INVOLVED

1.5(c)
3.4(b)(1)

1.5(c)
3.4(b)(1)

IN ANTI-GOVERNMENT ACTIVITIES IN DANANG FROM 11 MARCH TO 10 APRIL, LISTED KY AS CHAIRMAN OF THE "PEOPLE'S STRUGGLE COMMITTEE FOR DANANG," RATHER THAN THE PFSRD, WHICH WAS SHOWN IN THAT REPORT AS "THE POPULAR FORCES TO STRUGGLE FOR REVOLUTION," LED BY BUDDHIST BONZE THICH TRI HUU AS CHAIRMAN OF ITS EXECUTIVE COMMITTEE. TAM WAS NOT LISTED AS A MEMBER OF THE EXECUTIVE COMMITTEE OF EITHER ORGANIZATION IN THAT REPORT.)

6. THERE HAS ALREADY BEEN SOME INFILTRATION OF PRP CADRES INTO THE LOWER LEVELS OF THE STRUGGLE MOVEMENT. A PARTICULARLY OUTSTANDING INSTANCE IS PENETRATION OF THE SO-CALLED "SECURITY SERVICE" OF THE STRUGGLE ORGANIZATION, WHICH IS COMPOSED LARGELY OF LOCAL HOODLUM ELEMENTS. THE ASSAILANT IN THE 2 MAY SHOOTING OF A VNQDD MEMBER HAS BEEN TENTATIVELY IDENTIFIED AS NGUYEN HUU TRANH, A KNOWN COMMUNIST AND AN AGENT OF DR. MAN. IN ADDITION TO HIS CONNECTION WITH THE VC, THANH HAS AN OLDER BROTHER IN THE DANANG GARRISON COMMAND WHO IS KNOWN TO HAVE A FEMALE VC LIAISON CADRE-COURIER LIVING IN HIS HOUSE. A FAIRLY RELIABLE REPORT INDICATES THAT THE VC HAVE SENT INTO DANANG A GROUP OF 50 TRAINED POLITICAL AND PROPAGANDA CADRES TO BE INFILTRATED INTO THE STRUGGLE MOVEMENT BY VC ALREADY IN PLACE.

7. ATTEMPTS BY VC TO PENETRATE AND MANIPULATE THE STRUGGLE MOVEMENT HAVE BEEN CONTINUOUS SINCE ITS INCEPTION, AND IT IS POSSIBLE

1.5(c)
3.4(b)(1)

1.5(e)
3.4(b)(1)

THAT THE VC ANTICIPATED THE OCCURRENCE OF LARGE-SCALE CIVIL DISTURBANCES BEFORE THI'S REMOVAL. IN LATE FEBRUARY, A SENIOR PRP OFFICIAL, POSSIBLY CHE VIET TAN, ISSUED INSTRUCTIONS TO A STUDENT FRONT ORGANIZATION, PROBABLY THE LIBERATION STUDENT AND PUPIL ASSOCIATION, TO ORGANIZE STUDENT AND YOUTH GROUPS IN DANANG, AS WELL AS TAM KY, HOI AN, HUE, AND QUANG TRI BY THE MIDDLE OF MARCH. ALTHOUGH THERE IS NO INDICATION OF THE MISSION OF THESE ORGANIZATIONS, IT PROBABLY WAS TO CAUSE AS MUCH TURMOIL AS POSSIBLE IN ANY DISTURBANCE AS WELL AS TO DISSEMINATE VC PROPAGANDA. IT IS POSSIBLE THAT THESE WERE TO BE DECOY ORGANIZATIONS WHICH COULD DO CONTROLLED AGITATION AND PROPAGANDA WORK, AND IF THEY WERE ELIMINATED THIS WOULD NOT ENDANGER THE PRINCIPAL COVERT APPARATUS. IN ADDITION, THERE HAVE BEEN SEVERAL REPORTS OF HIGHER VC ORGANIZATIONS IN THE DANANG AREA PASSING INSTRUCTIONS TO SUBORDINATE ORGANIZATIONS TO JOIN WITH STRUGGLE GROUP ACTIVITIES BECAUSE OF AN IDENTITY OF INTERESTS BETWEEN THE VC AND THE PFSRD. ONE ELEMENT OF PARTICULAR INTEREST TO THE VC AS A PENETRATION TARGET IS THE DANANG LABOR MOVEMENT. NATIONAL FRONT FOR THE LIBERATION OF SOUTH VIETNAM DANANG COUNCIL CHAIRMAN HA KY NGO DIRECTED THAT A SECRET CELL IN AN UNIDENTIFIED LABOR ORGANIZATION, POSSIBLY THE DANANG SYNDICATE OF DRIVERS AND MECHANICS, WHICH IS SUPPOSED TO BE HIGHLY INFILTRATED BY VC, TO

1.5(e)
3.4(b)(1)

1.5(c)
3.4(b)(1)

START AGITATING TO WREST CONTROL FROM THE PRESENT LEADERS OF THE DANANG SYNDICATE OF WORKERS UNIONS, WHOSE PLACES WOULD THEN BE FILLED BY PRP MEMBERS.

8. THE EXTENT OF VC PENETRATION IN I CORPS OUTSIDE THE DANANG AREA REMAINS ESSENTIALLY CONCEALED. IN HUE THERE MAY BE SOME PENETRATION AT THE TOP OF THE MOVEMENT IN THE PERSON OF DR. LE KHAC QUYEN, WHO HAS BEEN IDENTIFIED BY SEVERAL PERSONS AS A COMMUNIST, OR AT LEAST VERY PRO-COMMUNIST. THERE ARE PROBABLY VC PENETRATIONS AMONG THE MEMBERS OF THE HIGHLY ACTIVE HUE UNIVERSITY STUDENT BODY, BUT THERE IS NO CLEAR LINK TO VC ORGANIZATIONS, AND THE STUDENT LEADERS RETAIN CONTROL OF THEIR FOLLOWERS. STUDENTS FROM THIS UNIVERSITY APPARENTLY PROVIDED CADRES WHO WENT TO OTHER PARTS OF I CORPS, AND PERHAPS BEYOND, TO ORGANIZE A STRUGGLE MOVEMENT AMONG STUDENTS AND OTHER GROUPS.

9. IT IS MORE DIFFICULT TO DETERMINE THE EXTENT OF VC INVOLVEMENT IN THE STRUGGLE MOVEMENT AS IT SPREAD FROM I CORPS TO OTHER AREAS OF THE COUNTRY. THE VC ISSUED INSTRUCTIONS TO THEIR MUNICIPAL COMMITTEES TO EXPLOIT THE SITUATION. VC AGITATORS PARTICIPATED IN DEMONSTRATIONS ORGANIZED AND DIRECTED BY BUDDHISTS IN SAIGON, KONTUM, BAN ME THUOT, NHA TRANG, DALAT, AND OTHER CITIES. A CAPTURED DOCUMENT DATED 16 MARCH FROM THE VC COMMITTEE FOR QUI NHON TO SUBORDINATE SECTIONS REVEALS THE TACTICS THAT THE VC WERE USING [redacted]

1.5(c)
3.4(b)(1)

1.5(c)
3.4(b)(1)

C-O-N-F-[redacted]-E-N-T-I-A-L [redacted]
(classification) (dissem controls)

THE DOCUMENT REQUESTED THAT THE SUBORDINATE SECTIONS: "REPORT URGENTLY EVENTS AMONG STUDENTS AND BUDDHISTS FOR PLANNING PURPOSES, AND LISTEN TO THE RADIO FOR FURTHER INSTRUCTIONS. PREPARE MATERIALS FOR USE, INCLUDING FLAGS, SLOGANS, LEAFLETS, EXPLOSIVES, AND GRENADES. DURING DEMONSTRATIONS URGE PEOPLE TO PARTICIPATE. ATTEMPT TO PARTICIPATE IN LEADERSHIP OF DEMONSTRATIONS AND WIN A NUMBER OF LEADERS SO THAT VC SLOGANS WILL BE USED. AT NIGHT SPREAD PROPAGANDA AND MOUNT MILITARY ACTIONS AGAINST AMERICANS. SELECT DEMONSTRATION LEADERS WITH POSITIVE, ADVANCED, AND ENERGETIC ACTIONS FOR DEVELOPMENT AS UNDERGROUND CADRES." SIMILAR INSTRUCTIONS PROBABLY WERE ISSUED IN ALL PARTS OF THE COUNTRY.

10. POSSIBLY THE MOST CLEAR-CUT EXAMPLE OF VC INVOLVEMENT IN THE STRUGGLE MOVEMENT OUTSIDE I CORPS IS THE CASE OF NGUYEN THI PHUNG, WHO WAS ACTIVE IN THE STUDENT STRUGGLE MOVEMENT IN NHA TRANG. MISS PHUNG WAS ARRESTED ON 23 APRIL AND ADMITTED WORKING FOR THE VC UNDER THE DIRECTION OF HUYNH TUONG, SECRETARY OF THE NHA TRANG VC MUNICIPAL COMMITTEE. SHE APPEARED TO BE A RECENT VC RECRUIT, INDICATING THAT THE VC MOVED QUICKLY TO PENETRATE STUDENT GROUPS.

SECRET

NSC HISTORY INTEREST

1436

Friday, May 13, 1966

The following is the text of a CIA report [redacted]

[redacted]

[redacted] Chou en Lai [redacted] in June 1965, [redacted] said, [redacted] We Chinese are not prepared to accept arbitration or mediation from anyone. On the contrary, we are going to accelerate the Vietnamese war to force the United States to accelerate in turn until the number of U.S. troops there reaches 700,000.

Why, Chou asked, are we doing this? In order to force the U.S. to draw troops from her Asian bases (SIC) and from the U.S. itself for Vietnam. This will automatically increase the hostility of the American people to the U.S. Vietnam policy.

Further, the U.S. will commit large scale atrocities against North Vietnam and this will prove to the yellow race that the U.S. is waging a major war to liquidate all colored people, whether yellow or black. This will cause the people of Asia to hate the Americans.

Thus, we have a doubled edged policy: one for bringing pressure to bear on the U.S. against Vietman policy, and one for causing Asians to oppose U.S. policy. This double edged policy will lead us to our ultimate goal which we want to see realized soon: America will not try to interfere in any area of Asia so as not to repeat their experience in Vietnam. This will give us a free hand in Asia which rightfully belongs to us.

When nations of Asia know the U.S. will not come to defend them and have clear in their minds the U.S. failure in Vietnam plus the American atrocities committed there, then we will have a free hand to liberate Asia

SECRET

[redacted] We intend not only to win in Vietnam, but to make out of it the gateway for the liberation of Asia from American imperialism. Asia belongs to China. It belongs to China more than Latin America belongs to the U.S. We are hindering Soviet aid to North Vietnam because we want nations of Asia to know that their affairs are decided by us and that we have no partners.

[redacted]

[redacted] Chou clearly implies a climax when U.S. troop strength in Vietnam reaches 700,000 with a resulting defeat for the U.S. in Asia and the complete loss of its position. Whether this is to be accomplished by a withdrawal of U.S. forces from Vietnam dictated by a military defeat or by political pressures within the U.S. and Asia is not clear.

ACQ VIETNAM, SAIGON (15 MAY 1966) FIELD NO.

SOURCE THIS IS A SOUTH VIETNAM SITUATION REPORT PREPARED AS OF 2000 HOURS LOCAL TIME ON 15 MAY [redacted] 1.5(e) 3.4(b)(1)

[redacted]

1. ON THE EVENING OF 15 MAY 1966 DANANG CITY APPEARED TO BE HELD BY GOVERNMENT OF VIETNAM (GVN) FORCES. THE CURFEW, WHICH IS FROM 2000 HOURS TO 0500, WAS BEING EFFECTIVELY ENFORCED IN DANANG BY MARINES, AND THE CITY WAS QUIET. THE GVN MOVE TO BRING DANANG BACK UNDER ITS AUTHORITY WAS EXECUTED WITH DISPATCH AND, ON THE WHOLE, EFFICIENTLY. THERE IS LITTLE DOUBT THAT THE STRUGGLE FORCES WERE TAKEN BY SURPRISE, AND ON THE EVENING OF 14 MAY THE ADVANTAGE LAY WITH THE GVN, WHEREAS IN THE MORNING IT LAY WITH THE STRUGGLERS. AFTER INITIAL GAINS IN ESTABLISHING THEMSELVES IN KEY TARGETS, GVN MARINES PULLED BACK AND CONSOLIDATED POSITIONS. 1.5(e) 3.4(b)(1)

1.5(e)
3.4(b)(1)

C O N F [redacted] E N T I A L [redacted]
(classification) (dissem controls)

2. AT 1800 HOURS OPERATIONS BEGAN IN DANANG WHICH SEEMED DESIGNED TO CAPTURE TINH HOI PAGODA, THE NEW STRUGGLE HEADQUARTERS AND REPORTEDLY THE PRESENT LOCATION OF DANANG MAYOR NGUYEN VAN MAN AND DANANG POLICE CHIEF LUU VAN NGO. OTHER ACTIVITIES DURING THE DAY SEEMED DESIGNED TO INTIMIDATE DIEHARD STRUGGLERS AND IMPRESS THOSE WHO HAD BEEN FORCED INTO THE STRUGGLE MOVEMENT WITH THE POWER OF THE GVN. TROOPS ROVED THE CITY, FLUSHING OUT STRUGGLE ADHERENTS BUT NEVER PUSHING THEIR FIREPOWER ADVANTAGE TO THE MAXIMUM. PLANES FLEW OVER THE CITY CONTINUOUSLY IN A CONSIDERABLE SHOW OF STRENGTH.

3. PRIME MINISTER NGUYEN CAO KY AND DIRECTOR GENERAL OF NATIONAL POLICE LOAN WERE AT THE DANANG AIR BASE DIRECTING THE MOVES OF GOVERNMENT FORCES AND APPARENTLY ATTEMPTING TO HANDLE THE SITUATION SO THAT IT WILL RESULT IN A MINIMUM OF DEATHS AND OTHER INCIDENTS THAT COULD CAUSE ADVERSE REACTION FROM THE PEOPLE, WHILE STILL FIRMLY REASSERTING THE AUTHORITY OF THE CENTRAL GOVERNMENT.

4. THE PEOPLE OF DANANG GENERALLY DO NOT SEEM GREATLY DISTURBED BY THE PRESENCE OF THE MARINES. THERE APPEARS TO BE NO OVERT HOSTILITY TOWARD AMERICANS. THE CIVILIAN POPULACE IS GOING ABOUT ITS BUSINESS, EXCEPT THAT YOUNG PEOPLE ARE CLUSTERED AROUND VARIOUS PAGODAS, APPARENTLY AS MUCH OUT OF CURIOSITY AS ANYTHING ELSE. GVN TROOP MORALE APPEARS HIGH.

5. THERE HAS BEEN A REPORT THAT 1000 "SUICIDE YOUTH" ARE IN DANANG ARMED WITH KNIVES AND GRENADES. AT 1900 THE POWER WENT OFF IN THE SECTION OF THE CITY WHERE MOST OF THE ACTIVITY TOOK PLACE DURING THE DAY--THE AREA

1.5(e)

1.5(e)
3.4(b)(1)

C-O-N-F-I-D-[redacted]-N-T-I-A-L [redacted]
(classification) (dissem controls)

OF THE RADIO STATIONS AND THE BUDDHIST SCHOOL. STRUGGLERS WILL PROBABLY TRY TO REGROUP AND, IF NOTHING ELSE, HARASS GVN TROOPS. SHOULD THE STRUGGLERS ACCEPT DEFEAT IN DANANG, THEY WILL PROBABLY CARRY ON IN HUE.

6. ALTHOUGH THE SITUATION IN HUE SEEMS QUIET FOR THE MOMENT, THE PRESENCE OF A MILITARY POWER BASE AMONG UNITS OF THE FIRST DIVISION AND THE LEADERSHIP QUALITIES OF THICH TRI QUANG GIVE THE STRUGGLE FORMIDABLE POTENTIAL FOR CONTINUING.

7. IN HOI AN, COLONEL DAM QUANG YEU IS DEEPLY COMMITTED TO THE STRUGGLE AND CONSTITUTES A THREAT TO CENTRAL AUTHORITY SECOND ONLY TO THOSE IN HUE. AS OF 1800 ON 14 MAY HE WAS ATTEMPTING TO COERCE BUI QUANG SAN, S-2 OF RCC IN QUANG NAM, TO SIGN A STATEMENT TO BE USED IN LOUDSPEAKER BROADCASTS IN HOI AN SAYING SAN IS AGAINST THE GVN. YEU ALSO CONTINUES TO USE THE THEME THAT GENERAL WALT AND AMBASSADOR PORTER ARE FOR THE STRUGGLERS. HOWEVER, YEU HAS HIS HANDS FULL, AND CURRENT REPORTING INDICATES THAT ONE COMPANY OF THE 39TH RANGER BATTALION WHICH HOLDS HOI AN AIRPORT IS PRO-GVN. AT LEAST THREE OF THE TOTAL OF FIFTEEN M113 ARMORED PERSONNEL CARRIERS WOULD COOPERATE WITH GOVERNMENT FORCES.

8. AT THE MOMENT, THE ELEMENT OF SURPRISE SEEMS TO HAVE REDUCED THE STRUGGLERS' POTENTIAL TO REACT QUICKLY. HOWEVER, MUCH REMAINS TO BE DONE BEFORE THE CENTRAL GOVERNMENT CAN FEEL SAFE IN DANANG OR I CORPS,

Case # NLJ 93-68
Document # 142

ACQ VIETNAM, SAIGON (15 MAY 1966) FIELD NO.

SOURCE THIS IS A SOUTH VIETNAM SITUATION REPORT PREPARED FROM 0200 TO 1930 LOCAL TIME ON 15 MAY 1966 BY CAS. [redacted] 1.5(c) 3.4(b)(1)

1. [redacted] GOVERNMENT OF VIETNAM MARINES MOVED INTO DANANG BETWEEN 0200 AND 1400 HOURS ON 15 MAY 1966. DANANG MAYOR NGUYEN VAN MAN REPORTEDLY FLED DANANG. ALL AIR VIETNAM FLIGHTS WERE CANCELLED FOR 15 MAY, PRESUMABLY TO RESTRICT TRAVEL OF UNDESIRABLE ELEMENTS OR POSSIBLY BECAUSE OF GVN AIR TRANSPORT NEEDS. AT 0400 HOURS ON 15 MAY. SAIGON POLICE RAIDED THE BUDDHIST YOUTH CENTER AT 233 HIEN VUONG AND THE LABOR OFFICE AT 197 LE TAY WHICH WAS THE HEADQUARTERS OF THE COMMUNIST-INFLUENCED LABOR YOUTH ASSOCIATION RESPONSIBLE FOR THE ANTI-UNITED STATES DEMONSTRATION ON MAY DAY.

2. AT 0630 SEVEN TANKS UNDER MARINE COMMAND TOOK OVER I CORPS HEADQUARTERS IN DANANG, DISARMING VIETNAMESE ARMY TROOPS THERE. ONE OR TWO PLATOONS OCCUPIED THE STRUGGLE HEADQUARTERS AT PHO DA PAGODA. 1.5(c) 3.4(b)(1)

APPROVED FOR RELEASE
5/4/98

1.5(e)
3.4(b)(1)

THE SECOND MARINE BATTALION WAS REPORTED TO BE MOVING TOWARD DANANG FROM QUANG NGAI, AND THE SECOND BATTALION OF THE SEVENTH REGIMENT OF FIRST DIVISION WAS REPORTED TO BE MOVING TOWARD HUE FROM PHU BAI. SOME GRENADES WERE THROWN EARLY IN THE DAY, BUT NO CASUALTIES WERE REPORTED FROM EARLY ACTION. DANANG CITY WAS QUIET, WITH SKY RAIDERS AND OBSERVATION PLANES OVERHEAD. THE RANGERS WERE IN THE NORTH PART OF THE CITY, AND THE MARINES IN THE SOUTHERN PART.

3. THE STRUGGLE MOVEMENT MOVED FAST TO SET UP DEFENSES IN MANY PARTS OF DANANG, AND THE STRUGGLE RADIO BROADCAST THE FOLLOWING MESSAGES:

A. "ORDER OF ARMED FORCES REVOLUTIONARY HEADQUARTERS: (1) ARTILLERY STAND BY TO FIRE AT TWO TARGETS--MILITARY AND CIVILIAN AIRPORTS. (2) ANTIAIRCRAFT UNITS STAND BY AND READY TO FIRE. ISSUED FOR COLONEL DAM QUANG YEU, COMMANDING OFFICER, BY MAJOR TRAN HUU TRAI, CHIEF OF STAFF."

B. "A CALL TO THE MARINES: YOU SHOULD JOIN THE RANKS OF REVOLUTIONARY PEOPLE IN I CORPS TO FIGHT AGAINST KY AND HIS PUPPETS TO BUILD A TRUE NATIONAL ASSEMBLY."

4. AT 0715 HOURS COLONEL YEU FLEW TO HOI AN FROM DANANG. HE ALERTED THE QNSS MILITARY COMMAND, AND DEPLOYED AN ARMORED PERSONNEL SQUADRON TO GUARD THE CITY AND APPROACHES. SOMETIME DURING THE MORNING

1.5(e)
3.4(b)(1)

3.4(b)(1)

C-O-N-F-[redacted]-E-N-T-I-A-L [redacted]
(classification) (dissem controls)

TWO COMPANIES OF THE 39TH RANGER BATTALION, NORMALLY STATIONED AT QNSS HEADQUARTERS IN HOI AN TRIED TO MOVE TOWARD MIEU BONG, SOUTH OF DANANG, BUT WERE BUZZED BY A VIETNAMESE AIR FORCE (VNAF) FIGHTER PLANE, AFTER WHICH A LIGHT VNAF AIRCRAFT DROPPED A MESSAGE TO THE COLUMN WARNING IT NOT TO PROCEED TO DANANG. YEU ALLEGED THAT PAT ELEMENTS IN QUANG NAM WERE ASSEMBLING AT DIEN BAN WITH THE INTENTION OF MARCHING NORTH TO DANANG. (FIELD COMMENT. PRESUMABLY YEU WAS IMPLYING THE PAT ELEMENTS INTENDED TO GO TO THE ASSISTANCE OF GVN FORCES IN DANANG.)

5. AT 1000 HOURS AN ORDER ORIGINATED BY SECOND DIVISION COMMANDER GENERAL LAM WENT INTO EFFECT RESTRICTING ALL TROOPS UNDER LAM'S COMMAND TO QUARTERS. ON DISTRIBUTION WERE ALL MILITARY UNITS, THE BUDDHIST CHAPLAIN CORPS, AND THE PAT OFFICE. DEPUTY PROVINCE CHIEF LE TICH THIEU AT TAM KY ISSUED THESE ORDERS TO ALL MILITARY IN HIS AREA. PROVINCE CHIEF NGUYEN THANH TOA WAS IN DANANG AT THIS TIME AND WAS SCHEDULED TO RETURN TO TAM KY ON THE MORNING OF 15 MAY. (FIELD COMMENT. THIEU HAS BEEN CONSIDERED TO BE PRO-STRUGGLE BECAUSE OF HIS PAST AFFILIATIONS AND HIS ACTIONS DURING THE RECENT STRUGGLE MOVEMENT.)

6. AT ABOUT 1000 HOURS ON 15 MAY GENERAL LAM RETURNED TO QUANG NGAI FROM DANANG; HE HAD REPORTEDLY FLOWN TO DANANG AT 0800 HOURS. ONE TANK APPEARED AT "THE PAGODA" AT QUANG NGAI AND THEN LEFT. ONE BATTALION OF MARINES LEFT QUANG NGAI FOR DANANG VIA AIR VIETNAM.

1.5(e)
3.4(b)(1)

1.5(e)
3.4(b)(1)

CONFIDENTIAL [redacted]
(classification) (dissem controls)

QUANG NGAI CITY WAS PLACED OFF LIMITS TO THE MILITARY.

7. AT 1030 HOURS THE STRUGGLE RADIO AT DANANG ANNOUNCED THAT THE RADIO WAS UNDER ATTACK AND COMING UNDER CONTROL OF THE GVN FORCES. GENERAL NGUYEN CHANH THI WAS REPORTEDLY IN GENERAL NHUAN'S FIRST DIVISION COMPOUND DIRECTING OPERATIONS. AN ARMY OFFICER WAS REPORTEDLY IN CONTROL OF THE TOWER AT PHU BAI WITH INSTRUCTIONS TO PREVENT THE LANDING OF TROOP CARRIERS. THE FIRST AND SECOND MARINES WERE REPORTEDLY IN DANANG.

8. AT 1120 HOURS ON 15 MAY PUBLIC ADDRESS SYSTEMS IN HOI AN, WHERE COLONEL YEU IS LOCATED, WERE BROADCASTING THAT GENERAL WALT AND AMBASSADOR PORTER SUPPORTED THE STRUGGLE AGAINST THE KY GOVERNMENT AND THAT I CORPS COMMANDER GENERAL DINH WAS ORDERING TROOPS TO FIGHT THE INVADERS.

9. IN HOI AN, BUI QUANG SAN, S-2 OF RCC AND S-2 FOR THE VIETNAMESE NATIONALIST PARTY (VNQDD) WENT TO COLONEL YEU'S OFFICE AT YEU'S REQUEST, AND WAS APPARENTLY CAPTURED BY YEU, ACCORDING TO A HOI AN BUDDHIST WHO IS OPPOSED TO THE STRUGGLE MOVEMENT. AT 1130 HOURS COLONEL YEU INSTRUCTED BUDDHIST MONKS TO TELL ALL YOUNG BUDDHIST MEN TO ASSEMBLE AT THE PAGODA, AND THOSE RESPONSIVE TO HIS ORDERS ASSEMBLED THERE. COLONEL YEU RELEASED SAN AFTER INSTRUCTING SAN TO GIVE ORDERS TO PAT ELEMENTS AND APA'S UNDER SAN'S SUPERVISION TO SUPPORT YEU

IN THE COMING FIGHT WITH THE GVN FORCES. SAN CLAIMED THAT HE REPLIED THAT HE WAS NOT AUTHORIZED TO GIVE SUCH ORDERS, AND LATER SAID THAT HE PLANNED TO WAIT UNTIL THE GVN FORCES CAME TO HOI AN AND THEN HE WOULD INSTRUCT HIS PEOPLE TO FIGHT WITH THE GVN AGAINST YEU. ACCORDING TO SAN, YEU APPEARED VERY NERVOUS AND WORRIED ABOUT THE FACT THAT GVN FORCES HAD CAPTURED KEY POINTS IN DANANG.

10. AS OF 1200 HOURS IT APPEARED THAT GVN FORCES WERE RAPIDLY GAINING CONTROL OF DANANG. THE ELEVENTH RANGER BATTALION REPORTEDLY JOINED THE MARINES IN SWEEPING DANANG.

11. IN HUE THERE WERE STRONG INDICATIONS THAT THE FIRST ARMY OF VIETNAM (ARVN) DIVISION WOULD DEFEND THE ELEVENTH TACTICAL ZONE, THE NORTHERNMOST ZONE OF I CORPS. THE FIRST DIVISION WAS BRINGING ITS TANKS TOWARD HUE FROM POSITIONS IN THE NORTH. THE COMMANDING GENERAL OF THE FIRST DIVISION WAS MEETING WITH "OLD STRUGGLE LEADERS."

12. IN DANANG HEAVY BUT SPORADIC FIRING BROKE OUT AT 1330 HOURS AGAINST THE BUILDINGS SURROUNDING RADIO DANANG AND TRUONG BO DE BUDDHIST SCHOOL; THE FIRING CONTINUED FOR ONE HOUR. THE FIRING PATTERN SEEMED TO BE INITIATED BY THE MARINES, WHO FIRED HEAVILY ON THE OBJECTIVES, AND, ALTHOUGH THE RETURN FIRE WAS SLIGHT, MOVED TO NEW POSITIONS AND REDUCED FIRE PATTERN. THE SITUATION

THEN BECAME ONE OF SEIGE, WITH OCCASIONAL SHOTS BEING EXCHANGED. ELSEWHERE IN DANANG CITY THE MARINES APPEARED TO HAVE REINFORCED THEIR CONTROL OF KEY POINTS, INCLUDING THE STRUGGLE HEADQUARTERS AT PHO DA PAGODA.

13. ALL REMAINED QUIET IN TAM KY AND HUE. HOWEVER, IN HUE WORK HAD CEASED AS A RESULT OF A GENERAL STRIKE AND THERE WAS A STRUGGLE MEETING SCHEDULED FOR 1600 HOURS. THE FIRST DIVISION REPORTEDLY HAD FORCES READY TO MOVE TO THE HUE AIRPORT IF THE GVN ATTEMPTED A MILITARY MOVE AGAINST THE CITY.

14. SOMETIME BEFORE 1800 HOURS, 2,500 PEOPLE IN HUE ATTENDED A BUDDHIST MEETING AT WHICH GVN ACTION IN DANANG WAS CONDEMNED AND A PLEDGE FOR SUPPORT OF THE STRUGGLE WAS MADE. RADIO HUE, WHICH IS CONTROLLED BY STRUGGLE FORCES, STATED IN AN ENGLISH-LANGUAGE BROADCAST THAT ALLIED FORCES WERE STANDING BY THE STRUGGLE MOVEMENT. THERE WAS NO ACTIVITY BY THE FIRST DIVISION EXCEPT PASSIVE DEFENSE OF HUE CITY. GENERAL THI WAS RUNNING THE SHOW AND WAS EXTREMELY ACTIVE.

15. A MEETING AT TINH HOA PAGODA CALLED BY COLONEL YEU FOR 1930 HOURS WAS ATTENDED BY 25 TO 30 YOUNG MEN. YEU'S MESSAGE WAS THAT HOI AN WOULD BE ATTACKED BY GVN TROOPS AND THE YOUTHS SHOULD TELL EVERYONE TO BE READY TO SOUND THE ALARM WHEN THE TROOPS ARRIVED. POLICE CHIEF MINH OF QUANG NAM IN HOI AND HIS CHIEF OF OPERATIONS, TO VAN TAM, WERE SPENDING THE NIGHT AT THE STRUGGLE COMMITTEE IN TINH HOI PAGODA.

SORT OF SIT-IN DEMONSTRATION WHICH MAY DEVELOP INTO A HUNGER STRIKE. (SOURCE COMMENT. THE PURPOSE OF THIS ACTION IS NOT CLEAR, BUT THEIR PRESENCE MAY BE DESIGNED TO DETER MARINES FROM ATTACKING OR FORCIBLY ENTERING THE PAGODA.)

5. FOR A TIME THOSE INSIDE TINH HOI PAGODA HOPED TO RECEIVE MILITARY REINFORCEMENTS FROM HUE AND HOI AN, BUT IN EACH CASE THE REINFORCING COLUMNS WERE BLOCKED ON THE HIGHWAY AND FORCED TO TURN BACK. IT IS NOW BEING RUMORED THAT MAYOR MAN AND TAM MAY TRY TO MAKE THEIR WAY TO THE FRENCH CONSULATE AND SEEK ASYLUM THERE. [redacted] IT IS NOT CERTAIN THAT THE MARINES WOULD PREVENT MAN AND TAM FROM GOING TO THE FRENCH CONSULATE, AS THE MARINES' DUTIES ARE PRIMARILY MILITARY ONES AND THERE IS AT PRESENT NO EFFECTIVE POLICE FORCE ON DUTY. A FEW STRUGGLE MOVEMENT LEADERS HAVE BEEN ARRESTED, BUT IT IS NOT CLEAR WHETHER ORDERS HAVE BEEN ISSUED TO ARREST ALL OF THE PRINCIPAL LEADERS OR WHICH GVN SECURITY SERVICES ARE RESPONSIBLE FOR MAKING SUCH ARRESTS. IT IS DOUBTFUL THAT THE MARINES HAVE BEEN GIVEN ARREST LISTS OR HAVE ESTABLISHED CHECKPOINTS FOR THE PURPOSE OF SCREENING IDENTITY DOCUMENTS. THUS THERE IS A STRONG POSSIBILITY THAT MAN AND TAM MIGHT BE PERMITTED TO ENTER THE FRENCH CONSULATE WITHOUT INTERFERENCE.)

3. Ramparts was established four years ago at Menlo Park, California, by its present editor-in-chief and publisher, Edward M. Keating, New York-born author, lecturer, lawyer, teacher, and Catholic layman. From an original all-Catholic staff of three or four, Ramparts now has a staff of twenty-two plus a dozen outside editors. The headquarters recently moved to San Francisco's North Beach area. Offices are also maintained in New York, Paris, and Munich. The magazine publishes monthly. Associate and contributing editors to Ramparts include Jessica Mitford Treuhaft, Marcus Raskin, Arthur I. Waskow, and John Beecher. Several of the listed individuals have been active in support of identified Communist-sponsored agitation or propaganda groups and at least two of the individuals have been identified as active Communists. Donald Duncan is a former Special Forces enlisted man who has written earlier attacks against CIA in Ramparts, and who has publicly stated, "We will continue to be in danger as long as CIA is deciding policy and manipulating nations."

4. Information from a recent issue of People's World, West Coast Communist Party publication, indicates that Edward Keating has stated he would seek the nomination from the 11th California Congressional District at San Mateo, and has described himself as "unalterably opposed" to United States policy in Vietnam. This publication also stated that Robert Scheer had announced he will seek nomination from the 7th Congressional District of California. Scheer stated his campaign would concentrate on opposition to the war in Vietnam and that he would identify with "all those marching and demonstrating for an end to the war in Vietnam".

5. Agency records reflect that Robert Scheer is presently an employee of the Center for the Study of Democratic Institutions (Fund for the Republic). Scheer was former executive committee member of the University of California branch of the Fair Play for Cuba Committee and was formerly a member of the Vietnam Day Committee, which has been responsible for numerous demonstrations on the West Coast protesting United States action in Vietnam.

1. ACCORDING TO A [redacted] DURING HIS PEACE MISSION TO EUROPE AND ASIA JAPANESE PEACE AMBASSADOR YOKOYAMA MASAYUKI MET WITH CHUONG, SOUTH VIETNAM NATIONAL LIBERATION FRONT REPRESENTATIVE IN PRAGUE, AND NGUYEN VAN AN, NORTH VIETNAMESE CHARGE D'AFFAIRES IN ALGIERS.

E0 12958 3.4(b)(1)>25Yrs (C)

~~SECRET~~ ~~CONTROLLED DISSEM NO FOREIGN DISSEM~~
(classification) (dissem controls)

CHUONG INFORMED YOKOYAMA THAT PERHAPS JAPAN COULD MAKE SOME CONTRIBUTION TO BRING ABOUT AN END OF THE VIETNAMESE CONFLICT. HOWEVER CHUONG CRITICIZED JAPAN FOR ITS COOPERATION WITH THE UNITED STATES FOR THE TRANSPORT AND REPAIR OF UNITED STATES WAR EQUIPMENT AND MANUFACTURE OF NAPALM AND WEAPONS TO SUPPORT UNITED STATES FORCES IN VIETNAM.

2. THE NORTH VIETNAMESE CHARGE IN ALGIERS CITED THE FOUR POINTS PUT FORTH BY HANOI AS CONDITIONS FOR SETTLEMENT OF THE VIETNAM SITUATION AND ALSO CRITICIZED JAPAN FOR ITS CLOSE COOPERATION WITH THE UNITED STATES. NGUYEN VAN AN ALSO STATED THAT NORTH VIETNAM'S DIPLOMACY IS NOT SECRET AND DENIEPTO YOKOYAMA THAT ANY SECRET NEGOTIATIONS HAD BEEN UNDERTAKEN BY NORTH VIETNAM WITH THE UNITED STATES.

3. ANNEX V

THE RESOURCES AND LOGISTIC CAPABILITIES
OF THE COMMUNISTS IN SOUTH VIETNAM

ANNEX V

THE RESOURCES AND LOGISTIC CAPABILITIES OF THE COMMUNISTS IN SOUTH VIETNAM

I. The Viet Cong Economy and Its Manpower

A. The Viet Cong Economy

The Viet Cong have successfully organized and expanded an economic organization to meet the basic task of funding VC revolutionary activity. The basic economic organization, operating through the Finance and Economic Section of the People's Revolutionary (Communist) Party is assisted by the National Liberation Front and Communist military components in acquiring, transporting, and storing within South Vietnam almost all the non-military supplies required by the Viet Cong. During the past five years, the VC economic organization has expanded with the development of VC forces. Starting as a local self-production unit, the economic structure progressed, first, into a voluntary fund drive, then, into an organized taxation and finance mechanism and, finally into an organization activity supporting enlarged base and battlefield requirements.

Taxation appears to be the principal means used by the Viet Cong to acquire financial and material resources within South Vietnam. Agricultural taxation remains the most important source of VC tax receipts and is clearly dependent on continuing Viet Cong access to or some measure of control over the rural population. The Viet Cong currently exercise predominant political influence over 25 to 30 percent of the rice-cultivated area of South Vietnam which produces between 750,000 and 900,000 metric tons of rice per year. Annual consumption of rice by Communist regular forces could be obtained by an average tax of about 3 percent of total production in VC areas alone. The Viet Cong usually tax at a substantially higher level (12 to 15 percent). There is no indication that resentment by the rural population against taxes of this magnitude has reached levels adequate to stop rice collections. Plantation taxes--either in money or in kind--continue to be

collected and are an important source of supply for Viet Cong forces in the northern III Corps. Internal transportation, business establishments, and commercial activities are also widely taxed.

VC-initiated economic activities, seizures, and clandestine operations supplement VC tax receipts. Bond drives, food production, and simple manufacturing units have been initiated by the VC to support military personnel. Significant supplies of war booty continue to be accumulated by the Viet Cong. Clandestine front business operations and discreet purchases by civilians acting for the Viet Cong, provide access to resources from GVN-controlled areas, including imported manufactured goods.

For specific goods in certain areas of South Vietnam, the Viet Cong have utilized traditional smuggling along the South Vietnam - Cambodia border. During recent months, however, Viet Cong use of Cambodia as a source of non-military supplies has increased and been organized in a systematic fashion. Although this logistic support is more costly than domestic acquisition and evidently requires external financial arrangements with banks in Hong Kong, the immunity and proximity of such logistic support to large VC/NVA forces along the Cambodian border apparently has made this source of supplies increasingly valuable. On an annual basis, it is estimated that at least 5,000 and probably as much as 10,000 metric tons of rice are being acquired from Cambodia and a frequently reported figure of 20,000 metric tons appears to be possible. Some of this rice is also acquired to support Communist forces in Laos. In addition, the VC are acquiring in Cambodia substantial quantities of cloth, pharmaceuticals, salt, fish and fish sauce, gasoline, communications equipment, explosive chemicals, and other supplies.

B. <u>The Economic Impact of Increased Military Pressure</u>

The build-up in VC/NVA forces in South Vietnam during the last year has placed a heavy strain on VC logistic operations. Confirmed VC/NVA main force strength has approximately doubled during the last year. Whereas guerrilla personnel, like the civilian population, are expected to be self-sufficient in basic supplies, main force units require extensive logistic

support. Food supplies, especially rice, remain the principal bulk commodities required by these forces. The entire increase in main force strength has been recorded in rice-deficit areas--I and II Corps and northern III Corps. There has been no increase in VC main force strength in the rice-surplus IV Corps where logistic requirements for food supplies are relatively small.

With the concentration of VC/NVA main force strength in I and II Corps and in northern III Corps annual rice requirements clearly exceed the total rice production under VC control in the provinces of Pleiku, Kontun, Phu Bon, the western districts of the coastal provinces of central Vietnam, and the rice-deficit areas of VC military region 7. In all of these areas, there is evidence that the VC are experiencing food supply problems. For example, a recently captured document cited the logistical difficulties experienced by the VC during an early 1966 campaign in rice-deficit Quang Duc Province that did not have sufficient rice for its own provincial force; region forces assigned to the campaign were required to arrange their own rice supply "through the border," presumably the Cambodian border. During the course of the campaign, one-third of VC combat strength was diverted to the transportation of rice.

The increase in allied military action has continued to hamper the logistic system of the Viet Cong. Allied military actions have had an adverse effect on agricultural production in VC controlled areas and on the percentage of the harvest that the VC can acquire and transport to their base areas. The area covered and percentage of crop harvested in these rice-harvesting operations is not reported, and no aggregative estimate of their impact is possible. Even with continued VC access to rice-producing areas, the Viet Cong face a second major difficulty in transporting this commodity. The major portion of this movement has been carried out by civilian laborers, but the danger of involvement in military action has caused serious disaffection among the VC-controlled population as the tempo of military activity has increased. A third major difficulty caused by allied military activity has been the disruption caused by allied destruction of VC supply caches.

C. The Manpower Situation

The South Vietnamese population in VC controlled areas is at least 3.5 million people and could be as much as five million people depending on the extent to which the VC have access to contested areas. Most of the VC controlled population live in the delta region. This controlled population probably contains some 500,000 physically fit young males. An additional 30,000-35,000 youths annually become old enough to fight. In addition to this controlled population the VC also draw on the population of military age in contested areas, on GVN deserters and on recruits from urban areas.

An increasing requirement for manpower during 1965 forced the VC to resort to monetary inducements and to forced conscription and returnee programs to obtain local personnel. With these new methods VC have been able to attain a significantly higher level of local recruitment--over 80,000 in 1965 compared to 30,000-40,000 annually during 1961-64. We estimate that the VC have a capability in 1966 to recruit and train some 7,000 to 10,000 personnel a month.

Recruitment at this scale must be regarded as close to the maximum capabilities of the VC, particularly if these recruits are to receive adequate training. There have been increasing signs of a growing squeeze on VC manpower during 1966. This is reflected in the growing dominance of North Vietnamese troops as the NVA/VC force expands. There are also frequent prisoner reports of manpower shortages and the poor quality and training of new recruits.

In addition to making up for their own losses of an estimated 80,000-90,000 in 1966, we estimate that VC forces will increase by about 5,000 troops in 1966. The VC are also required, however, to provide replacements for a growing number of NVA losses. During 1966 we estimate that the NVA will infiltrate from 55,000-75,000 troops at the same time that they are expanding the NVA troop level by an estimated 49,000 troops. NVA losses during the year, however, will range from 25,000-30,000. Thus the VC could have to make up for 5,000-20,000 NVA

losses, depending on the rate of infiltration and expansion of NVA forces. This indicates a total VC military manpower requirement in 1966 of from 90,000-115,000. This requirement is within the higher end of the range of current estimates of VC recruitment capabilities.

If the casualty rate increases as expected during 1967 to an annual rate of 130,000-150,000 Communist losses will be beyond the estimated recruitment and training capabilities of the VC. More of the manpower burder will then be placed on North Vietnam creating additional pressures on its manpower resources.

II. Communist Logistic Operations in South Vietnam (See Appendix A)

The Communist forces in South Vietnam have created a highly centralized system of Supply Councils to meet the logistics requirements of the VC/NVA forces. This organization operates at each administrative level in South Vietnam working closely with counterpart economic and service organizations of the Central Office for South Vietnam (COSVN) and the Rear Services Staffs of the military command. This elaborate system controls from 40,000-50,000 personnel engaged full-time in logistic support activities. Additional thousands of personnel are conscripted on a part-time basis to assist in transporting supplies, the construction of logistics bases, and the maintenance of supply routes. The VC use an elaborate system of land routes, trails, and inland waterways connecting the infiltration routes from Laos and Cambodia with the major COSVN base areas.

The VC storage system is greatly decentralized working from a large number of small depots, storing generally only 5-10 tons of supplies each. This dispersed system provides maximum protection against large scale destruction or capture of supplies but also serves as a major constraint to the initiation of large sustained enemy actions.

The logistics system used by the Communist forces in South Vietnam has been able to satisfy adequately the minimum requirement for movement and storage of supplies.

This capability has been weakened and made more difficult as the scale of combat has increased and Allied ground operations have disrupted normal logistic movements and overrun storage areas. Difficulty in effectively maintaining the internal distribution of supplies has also been compounded by the manner in which VC/NVA forces are dispersed throughout South Vietnam.

In mid-1966 one-third of the enemy combat and combat support troops was located in the II Corps Area, one third in the III Corps, and the remainder about equally between the I and IV Corps. The IV Corps area with only 15 percent of total VC/NVA regular forces, is the area in which the VC have the greatest self-sufficiency in logistic supplies, particularly foodstuffs. The predominant share of VC/NVA forces is concentrated in food-deficit areas. Thus the II and III Corps areas which are the predominant rice-deficit areas account for almost two-thirds of the total daily logistic requirement.

The inability to transport food from rice surplus to deficit areas has become more severe as Allied ground actions intensify. The Communists have been compelled to turn to Cambodian sources in order to provide rice to the forces in the central highlands. Use of this source of supply has increased in the last half year and may now be as much as 15 tons a day. The need to turn to sources outside the country for rice indicates that internal distribution is one of the most pressing problems faced by the Communists and is probably the most vulnerable aspect of their entire logistics operation.

If the disposition of Communist forces in South Vietnam remains unchanged during the build-up projected through mid-1967 and internal distribution of food is impossible, their dependence on external sources for supplies could double. Our present estimates indicate a maximum external requirement of about 55 tons a day. But if internal distribution of food to the food-deficit areas cannot be effectively accomplished, this requirement could be increased to at least 100 tons a day.

This added logistic requirement would not be critical, particularly if it were met from Cambodian sources. It would not even tax the Laotian infiltration route very severely but would aid substantially in reducing the excess of road capacity over logistic requirements.

The present disposition of Communist forces is much more favorable for the internal distribution of supplies infiltrated into South Vietnam. Over 85 percent of the NVA forces and 35 percent of the VC forces are in the I and II Corps areas in close proximity to the Laotian infiltration corridor and the northern infiltration routes from Cambodia. These forces account for almost three-fourths of the supplies which must be infiltrated from external sources.

The data available on the destruction and capture of supplies by Allied forces during the past year are quite incomplete. Food supplies amounting to at least 10,000-12,000 tons and over 21,000 weapons and 180,000 rounds of ammunition are the major amounts known to have been captured or destroyed. We lack almost completely any meaningful data on Communist stock-piles and are therefore unable to assess the impact of these losses. But as minimum losses, the food stocks may be relatively significant, particularly as Allied operations uncover more storage areas and interfere more with the internal distribution of supplies.

The substantial increase in incidents of Communist terrorism and harassment of local population may indicate that the enemy is finding it increasingly difficult to obtain local support in terms of food and/or labor for its war effort.

APPENDIX A

THE COMMUNIST LOGISTICS SYSTEM IN SOUTH VIETNAM

I. Organization

VC/NVA* logistic operations are under the control and supervision of Supply Councils found at every echelon of command from the Central Office for South Vietnam (COSVN) to the village level. (See Figure III-1)** Village Forward Supply Councils are responsible for procurement and for the distribution of supplies to troops in the field. The province level controls the planning and regulatory agencies which furnish logistic data to the military Rear Service Staffs at the various levels of command. Communications and liaison sections, under the Supply Councils, exercise an important role in safeguarding all types of logistic operations. Party cadre associated with the communication and liaison sections serve as guides, security personnel, station attendants, and supervisory personnel.

Supply Councils also supervise the work of two basic transportation organizations--the People's Revolutionary Party (PRP) Finance and Economic Section transport elements and the military Rear Service Section transport elements.

Transport and supporting elements under the jurisdiction of military Rear Services Sections are organized

*The organization structure outlined in this section is estimated to apply generally to both VC and NVA forces. Some of the material appearing in this section is based on an analysis of a captured document discussing the VC Sao Vang Division, a division containing both VC and NVA elements.

**Figure III-1 follows page III-5 in Annex III.

into (1) transport elements of the Rear Services Sections which are organic to the various echelons of the VC/NVA regular military forces, (2) separate military transport units (not found below military region level) responsible for the receipt and redistribution of supplies, and (3) ordnance sections and armament sections. The Rear Service Staff organic to the VC/NVA Division is organized into four functional sections: a quartermaster section for procurement, storage, and distribution of food and clothing; an ordnance section for procurement, storage, maintenance and distribution of weapons and ammunition; a medical section for medical support and evacuation; and a finance section for financial support.

A. Personnel

Enemy forces in South Vietnam in mid-1966 amounted to 260,000-280,000 including from 40,000-50,000 personnel engaged in logistic support. The composition of important VC supply elements is shown in the following tabulation:

Combat Support

Separate Military Transport Units	5,800
Region/Province/District Ordnance and Ammunition Sections	3,000
Other Combat Support Troops	8,800
Total	17,600

Other Forces

Finance and Economic Transport Units	2,000
Infiltration Corridor Personnel	3,000
Communications and Liaison Units	2,000
Organic Military Transport Elements	7,400
VC/NVA Crewmen on Water Craft	12,000
Total	26,400
TOTAL	44,000

In addition to these regular employees the VC have conscripted thousands of temporary, civilian workers to assist in logistic activities. Recruiting is carried out among men between the ages of 18 and 50 and women between the ages of 20 and 41, with the annual period of service usually being from 1 to 3 months. This conscripted labor is given both political and security training. It is then organized into platoons and companies, and assigned by village and district forward supply councils to the combat units or to a rear services staff. Front line or Class A laborers are used by combat units to transport ammunition and food supplies; to evacuate battle casualties; to remove captured supplies to collection points, and to construct supply depots and defensive positions, as well as in other miscellaneous tasks. Local inhabitants have been conscripted to carry weapons and ammunition inland from coastal areas and to transport food to the mountainous regions. Special groups are assigned to carry supplies and ammunition from the Cambodian border area to enemy base areas.

II. Storage and Distribution

The VC supply system is designed to satisfy both normal, continuous troop requirements and those requirements imposed by rapidly changing battlefield conditions. The VC have established an area supply system which incorporates a large number of small depots--each generally having a capacity of five-ten tons--dispersed throughout areas in which VC units operate. Although classes of supplies in depots are usually mixed, some depots store food exclusively and others contain only weapons and ammunition. Even in the larger war zones, supplies are dispersed throughout the area. Villages that are located close to combat units may also act as supply points. In certain areas, only one-third of the prescribed stock is allocated to depots, with the remaining two-thirds dispersed among civilians for custody. This system limits the damage that can be caused by the destruction of one large depot or supply cache, but it also acts as a major constraint to the initiation of large, sustained enemy actions when large amounts of supplies need to be concentrated in relatively small areas.

A. Distribution of Food

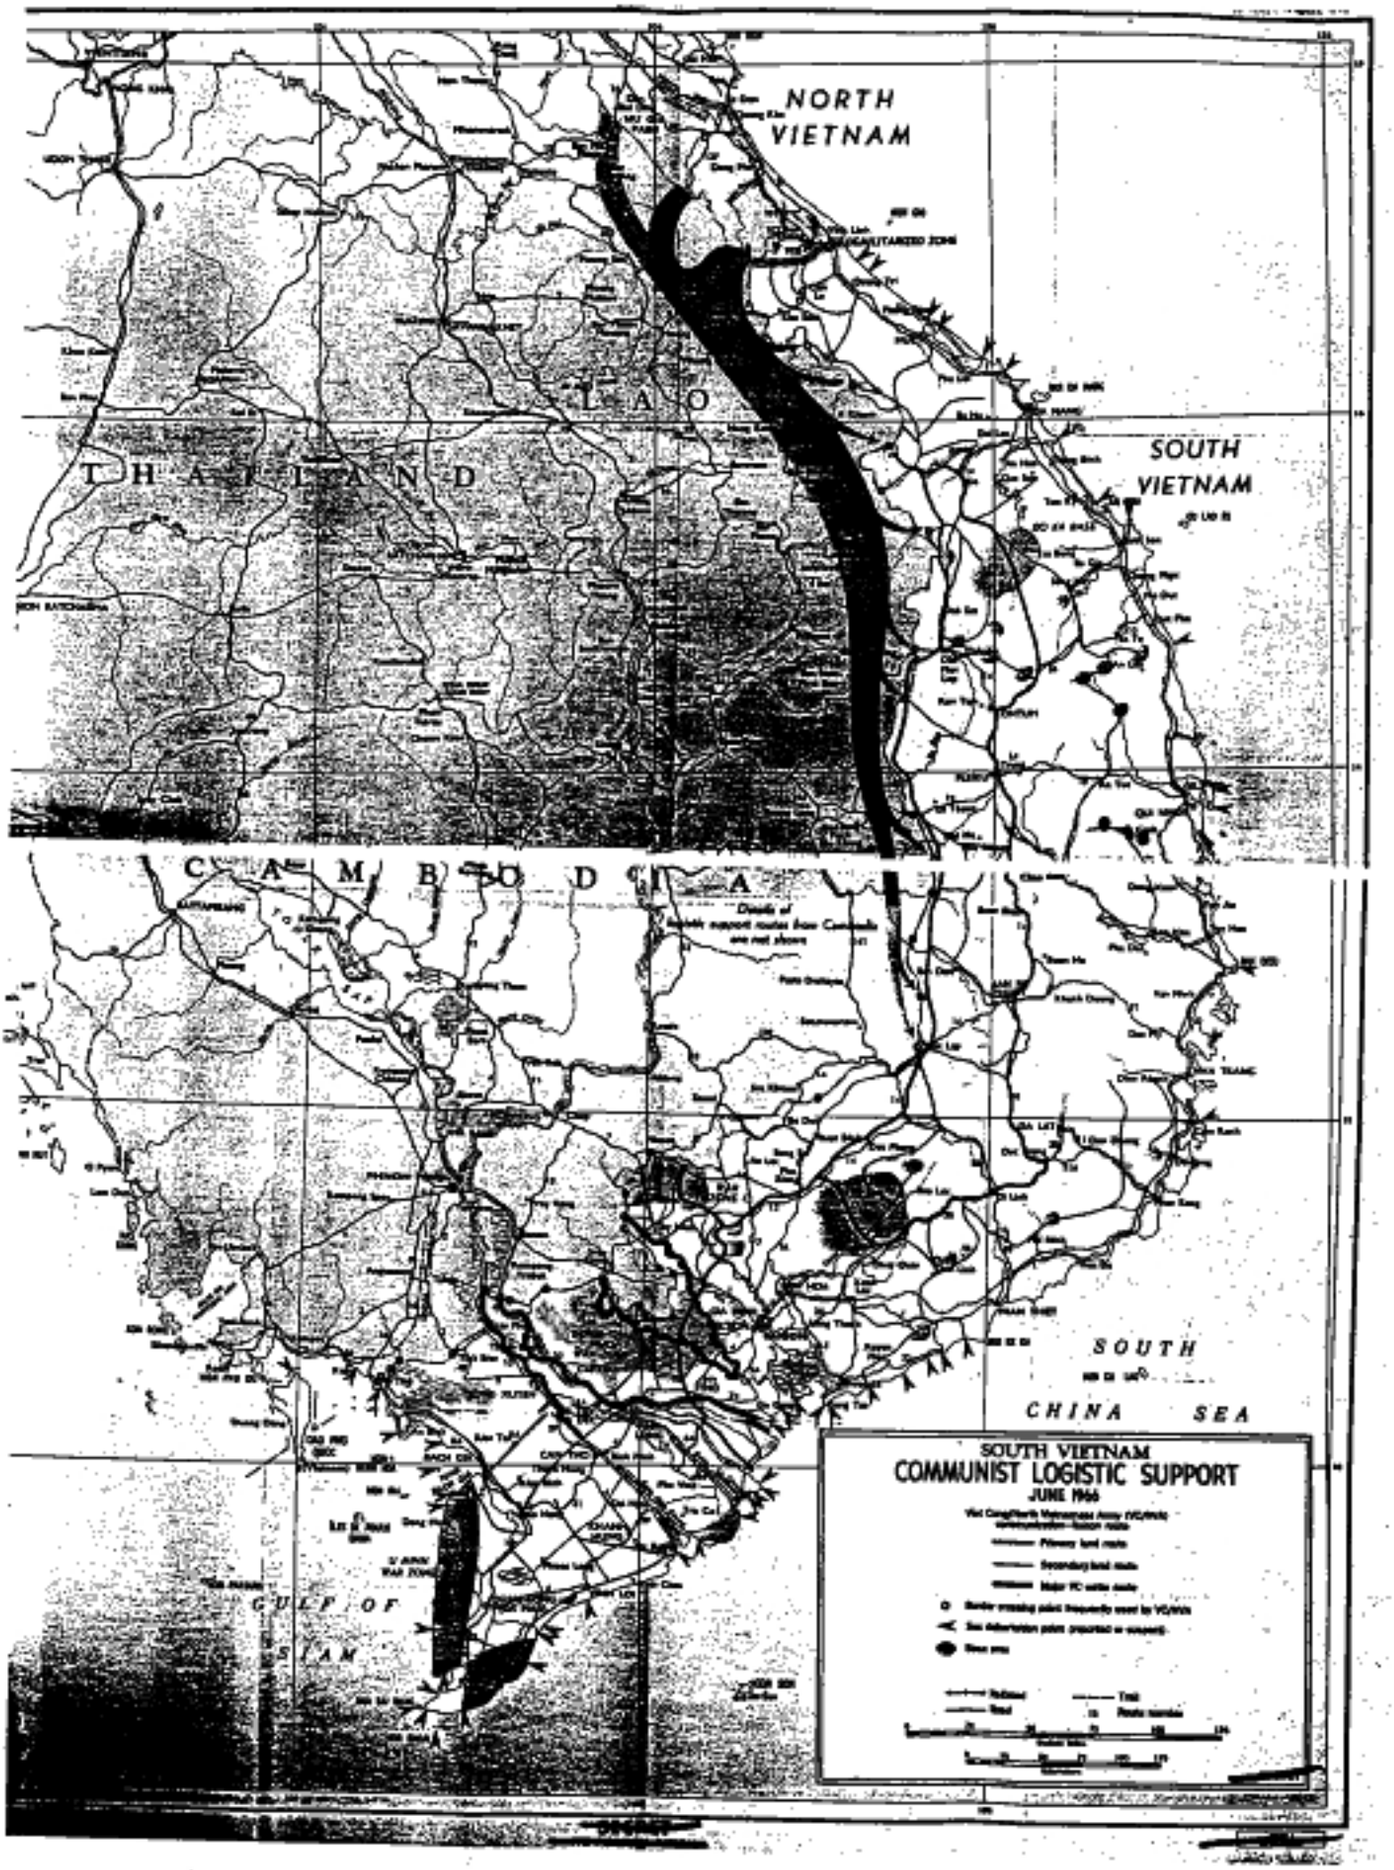
Regiments are given an initial issue of rice corresponding to a 30 day supply, which is to be replenished when half of the supply is consumed. Rear service staffs are charged with maintaining a stock equivalent to one month's supply for all forces operating in their area of jurisdiction. When a regiment leaves the area the remaining rice must be returned to these staffs. Troops usually have a seven-day supply of rice in their individual packs as a reserve for emergencies; the unit draws rice from supply points located along the line of movement. This method reduces the supply train and the requirement for porters. Each regiment is assigned an area from which food is purchased. A rear supply element of the regiment normally sends out purchasing teams to the area to contact local VC authorities and to arrange for purchase in the prescribed quantities.

III. Transportation Routes

The enemy in South Vietnam makes use of a very large number and variety of lines of communication. These include major South Vietnamese highways, secondary roads, waterways, trails and innumerable footpaths. (See Figure V-1). Many of the land routes, especially in the north, are narrow, unimproved trails, negotiable only by foot, animal, or small two or three-wheeled vehicles, but trucks are sometimes used on segments of the major routes when they are under Communist control, and sometimes on routes nominally under GVN control. Extensive use is made of water craft in the Delta area.

A. Land Routes

The most frequently used land routes for the movement of personnel are probably the two in a north-south orientation connecting the Laotian and Cambodian infiltration corridor with the large established enemy base areas in Tay Ninh Province northwest of Saigon. The first route, which runs just inside South Vietnam along the Cambodian border, consists for the most part of a connecting group of trails although it follows or parallels existing roads in its southern segments. The second



NORTH

COMMUNIST LOGISTIC SUPPORT
JUNE 1966

route runs between the first route and the coast and follows route 14 for many miles. Many lateral routes connect the two major north-south routes and with coastal points. Some of the north-south routes in the eastern section of the country running roughly between route 19 and the Saigon area are used mainly as supply routes.

Enemy forces attempt to use major South Vietnamese highways to the maximum extent possible. When such roads are only partly under their control, personnel and/or supplies move parallel to the uncontrolled sections. A large portion of the network is located near South Vietnamese provincial and military boundaries where surveillance may be least effective. The enemy selects routes in many cases which are just outside the fire envelope of static GVN artillery units.

Besides Route 14, the VC probably make extensive use of Route 20 north from Saigon, Route 21 west from Khanh Hoa to Darlac, Route 22 through Tay Ninh, Provincial Routes 12 and 8 in the Delta region, Provincial Route 7 west from the coastal province of Phu Yen, and Provincial Routes 13, 4, 1, and 8 north of Saigon. Most of the use of trucks occurs on these roads.

B. Waterways

The VC depend on water craft as the basic means of transportation in the Delta region of South Vietnam. The VC main and local force units in IV Corps alone probably possess about 4,000 craft of varying sizes; the approximately 40,000 militia in IV Corps probably use additional thousands of vessels.

Troops usually are transported in small three-man sampans, and supply movements vary from organized convoys of medium-sized craft capable of carrying loads of one ton or more to small individual craft. The average load per water craft is estimated at 1 3/4 tons but the enemy also has much larger types at his disposal.

Several factors permit Communist forces to make extensive use of waterways in the Delta. There is no

registration of civilian boats, so that Communist boats are difficult to identify. Curfew restrictions cannot be imposed or enforced except on some major waterways because of the lack of adequate communications and patrol craft. Moreover, security is maintained by moving primarily at night, by taking advantage of foliage near river banks, by maintaining advance and rear units to warn of nearby flight activity and by sinking boats for later recovery when detection seems imminent.

IV. War Zones

War Zones usually consist of a group of dispersed and relatively primitive supply caches, command posts, arms workshops, training facilities, and troop bivouacs linked by a network of unpaved roads, trails, and paths. They generally are located on major transport routes used by the enemy in areas which are sparsely populated and/or populated by ethnic or religious minorities hostile to the South Vietnamese government. The war zones located near planned Communist areas of combat probably serve as staging areas, while those located well away from friendly forces most likely contain facilities for weapons repair and manufacture, training, and rest. Areas, such as War Zone C, adjacent to the Cambodian border also serve as access to sanctuary and as transit points for movement of supplies and troops. Until late 1962, the enemy operated in these zones with relative impunity, but the areas have been coming under increasingly heavy ground and air attack in recent months.

V. Logistic Resupply Requirement for Communist Forces in South Vietnam

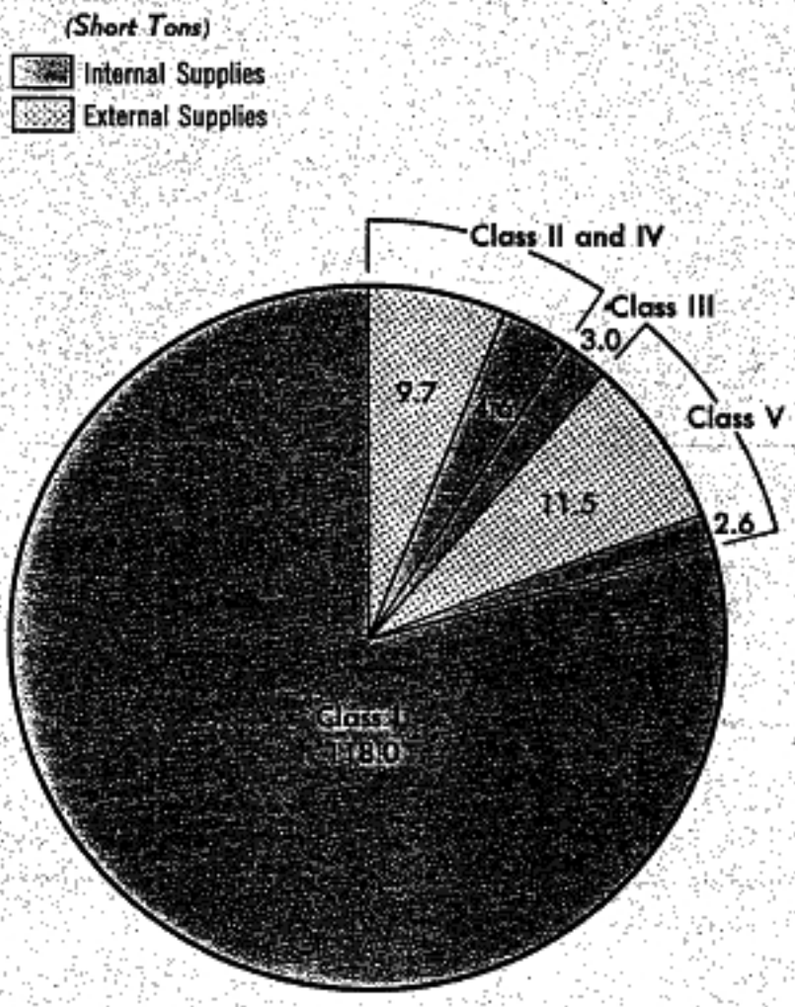
The VC/NVA forces in South Vietnam have a daily total logistic requirement of 150 tons. This logistic requirement is divided into 5 classes: Class I (food), Class II (weapons), Class III (petroleum), Class IV (quartermaster, engineer and medical) and Class V (ammunition). Figure V-2 shows the daily volume of each class of supply and the amounts supplied from internal and external sources.

A. Class I (Food Supplies)

The Communist forces in South Vietnam obtain most of their food supplies within the country. Although

Figure V-2

SOUTH VIETNAM
DAILY VC/NVA LOGISTIC REQUIREMENTS AS OF MID-YEAR 1966
BY CLASS AND SOURCE OF SUPPLY*



*Requirements as calculated by CIA and contained in ranges presented in NIE 14.3-66.

these forces control sufficient rice production to satisfy all VC/NVA food requirements, large quantities of rice apparently are being transported from Cambodia to enemy controlled rice-deficit areas in South Vietnam. This is because of the difficulty in sustaining internal distribution of large amounts of bulk commodities.

The principal rice-deficit areas with large troop concentrations include the provinces of Kontum, Pleiku, Darlac, Phu Bon, and Quang Duc, all in the II Corps area, and Phuoc Long, Binh Long and the northern part of Tay Ninh in the III Corps. If the main and local force VC and NVA troops in these areas were made completely dependent on Cambodian sources for food, Cambodia would be providing about 25 percent of the total daily food requirement for all Communist forces in South Vietnam.

Enemy incidents of terrorism and harassment have risen from a monthly average of 1,629 in 1964 to 2,233 during the first four months of 1966. Although these increases are attributable to various factors they may indicate that the enemy is finding it increasingly difficult to obtain local support in terms of food, and/or labor, for the war effort.

B. Class II and Class IV Supplies

1. Weapons

The enemy stock of weapons has been accumulated from several sources. These include weapons which have been captured, locally-produced, buried or left behind in South Vietnam from the Indochina War, and infiltrated from North Vietnam. Local manufacture of military supplies, however, presently emphasizes ammunition, hand grenades, and mines rather than the fabrication of individual weapons.

Significant quantities of Soviet and East European weapons and Chinese Communist copies of these weapons have been infiltrated into South Vietnam from North Vietnam. About 30 percent of the VC main force is estimated to have been at least partially equipped with the new family of Chinese 7.62 mm weapons by January 1966.

With respect to heavy weapons, the crew-served 60/61 mm and 81/82 mm mortars are now found in most main force battalions. The recent introduction of 120 mm mortars also has added to the firepower of Communist forces in the south. Other heavy weapons known to have been used by Communist forces include the 75 mm recoilless rifle, the 70 mm pack howitzer, and possibly the 105 mm howitzer, the latter having been captured from friendly forces or dating from the war with the French.

The flow of weapons from outside South Vietnam has enabled the VC to achieve some progress in weapons standardization within main force units. However, nonstandard weapons are used by a large number of VC local forces and guerrilla forces. Data on weapons captured in 1963, 1964, and 1965 show that the use of Chinese-manufactured arms is increasing as seen in the following tabulation:

(Percentages based on captured items)

	Chinese	U. S.	French	Home made and other
1963	8.4	27.7	49.8	14.1
1964	22.7	29.1	32.6	15.6
1965	27.0	50.0	8.0	15.0
1966 (estimate)	35.0	30.0	15.0	20.0*

*Includes 5 percent from USSR.

Of the nearly 1,000 weapons captured by Allied troops in clashes with the NVA near Plei Me last November, 86 percent were of Chinese Communist manufacture, 11 percent of North Korean manufacture, and 3 percent of Soviet manufacture. These arms represent the most modern weapons used by Chinese and North Korean forces, suggesting that NVA units are well equipped.

2. Clothing

Enemy requirements for clothing and other textile products are not extensive, and most of it is obtained locally by a special VC clothing unit. However, a number of clothing items such as khaki uniforms, underwear, and winter clothing for the mountainous regions have been produced in North Vietnam and are issued to infiltrators. Some clothing is also required in Cambodia.

3. Medical Supplies

Medical supplies are obtained both locally and from various Communist and Free World countries through Cambodia and North Vietnam. Antibiotics, plasma, and quinine are the principal items acquired from external sources. Medical supplies are in fairly tight supply so that their external procurement has a high priority.

4. Transportation Equipment

Trucks, water craft, and other transportation equipment used by enemy forces in South Vietnam usually are acquired in the country, sometimes by confiscation, but also by purchase or borrowing.

5. Signal Supplies

Most VC communications equipment has been supplied by East European Communist countries or Communist China or is of US, Japanese, or French manufacture and has been captured on the battlefield. NVA equipment is infiltrated with military personnel.

6. Engineer and Chemical Supplies

Most VC/NVA chemical and engineer supplies are estimated to be obtained from within the country, although some chemicals are also smuggled in from Cambodia. A large share of the chemicals is used for the production of filler for locally-produced ammunition.

C. Class III (Petroleum)

The total requirement for petroleum products for VC/NVA forces in South Vietnam is small, being needed primarily for confiscated vehicles, motorized junks in the Delta region, generator equipment at command posts, and in some crude arms factories. The VC obtain supplies from taxation of the content of petroleum tank trucks in VC/NVA-controlled areas of South Vietnam, seizure of petroleum supplies, and purchase from local gasoline stations or in Cambodia.

D. Class V (Ammunition)

In the present situation of relative independence from external sources for most supplies, ammunition is the principal determinant of the volume of supplies which must be infiltrated from North Vietnam. The supply of ammunition is particularly important to the major combat elements equipped with the new family of weapons who are completely dependent on outside sources for their ammunition. Due to the extensive use of a variety of weapons, however, the enemy utilizes both internal and external sources for the supply of ammunition. Standard ammunition is generally manufactured in the Communist countries. The remainder of the supply is from captured stock or is manufactured locally in VC engineer workshops. Viet Cong munition factories are not estimated to have a present capability to manufacture 7.62 mm ammunition. There is no evidence that expended shells are reloaded, and captured U.S. 7.62 mm ammunition is not compatible with Communist weapons.

The heavier ammunition employed by the enemy includes 40 mm antitank grenades, 57 mm and 75 mm recoilless rifle rounds, 60 mm, 82 mm, and 120 mm mortar rounds, and 70 mm, 75 mm and 105 mm howitzer ammunition. All heavier ammunition is either captured or obtained from external sources.

VI. Geographic Distribution of Logistic Requirements for VC/NVA Forces in South Vietnam

As of mid-year 1966 the strength of VC/NVA regular forces in South Vietnam stood at 118,000 personnel. The

disposition of these forces by Corps area is shown in Figure V-3 which also shows the major areas of rice cultivation. The predominant share of these forces is located in rice-deficit areas.

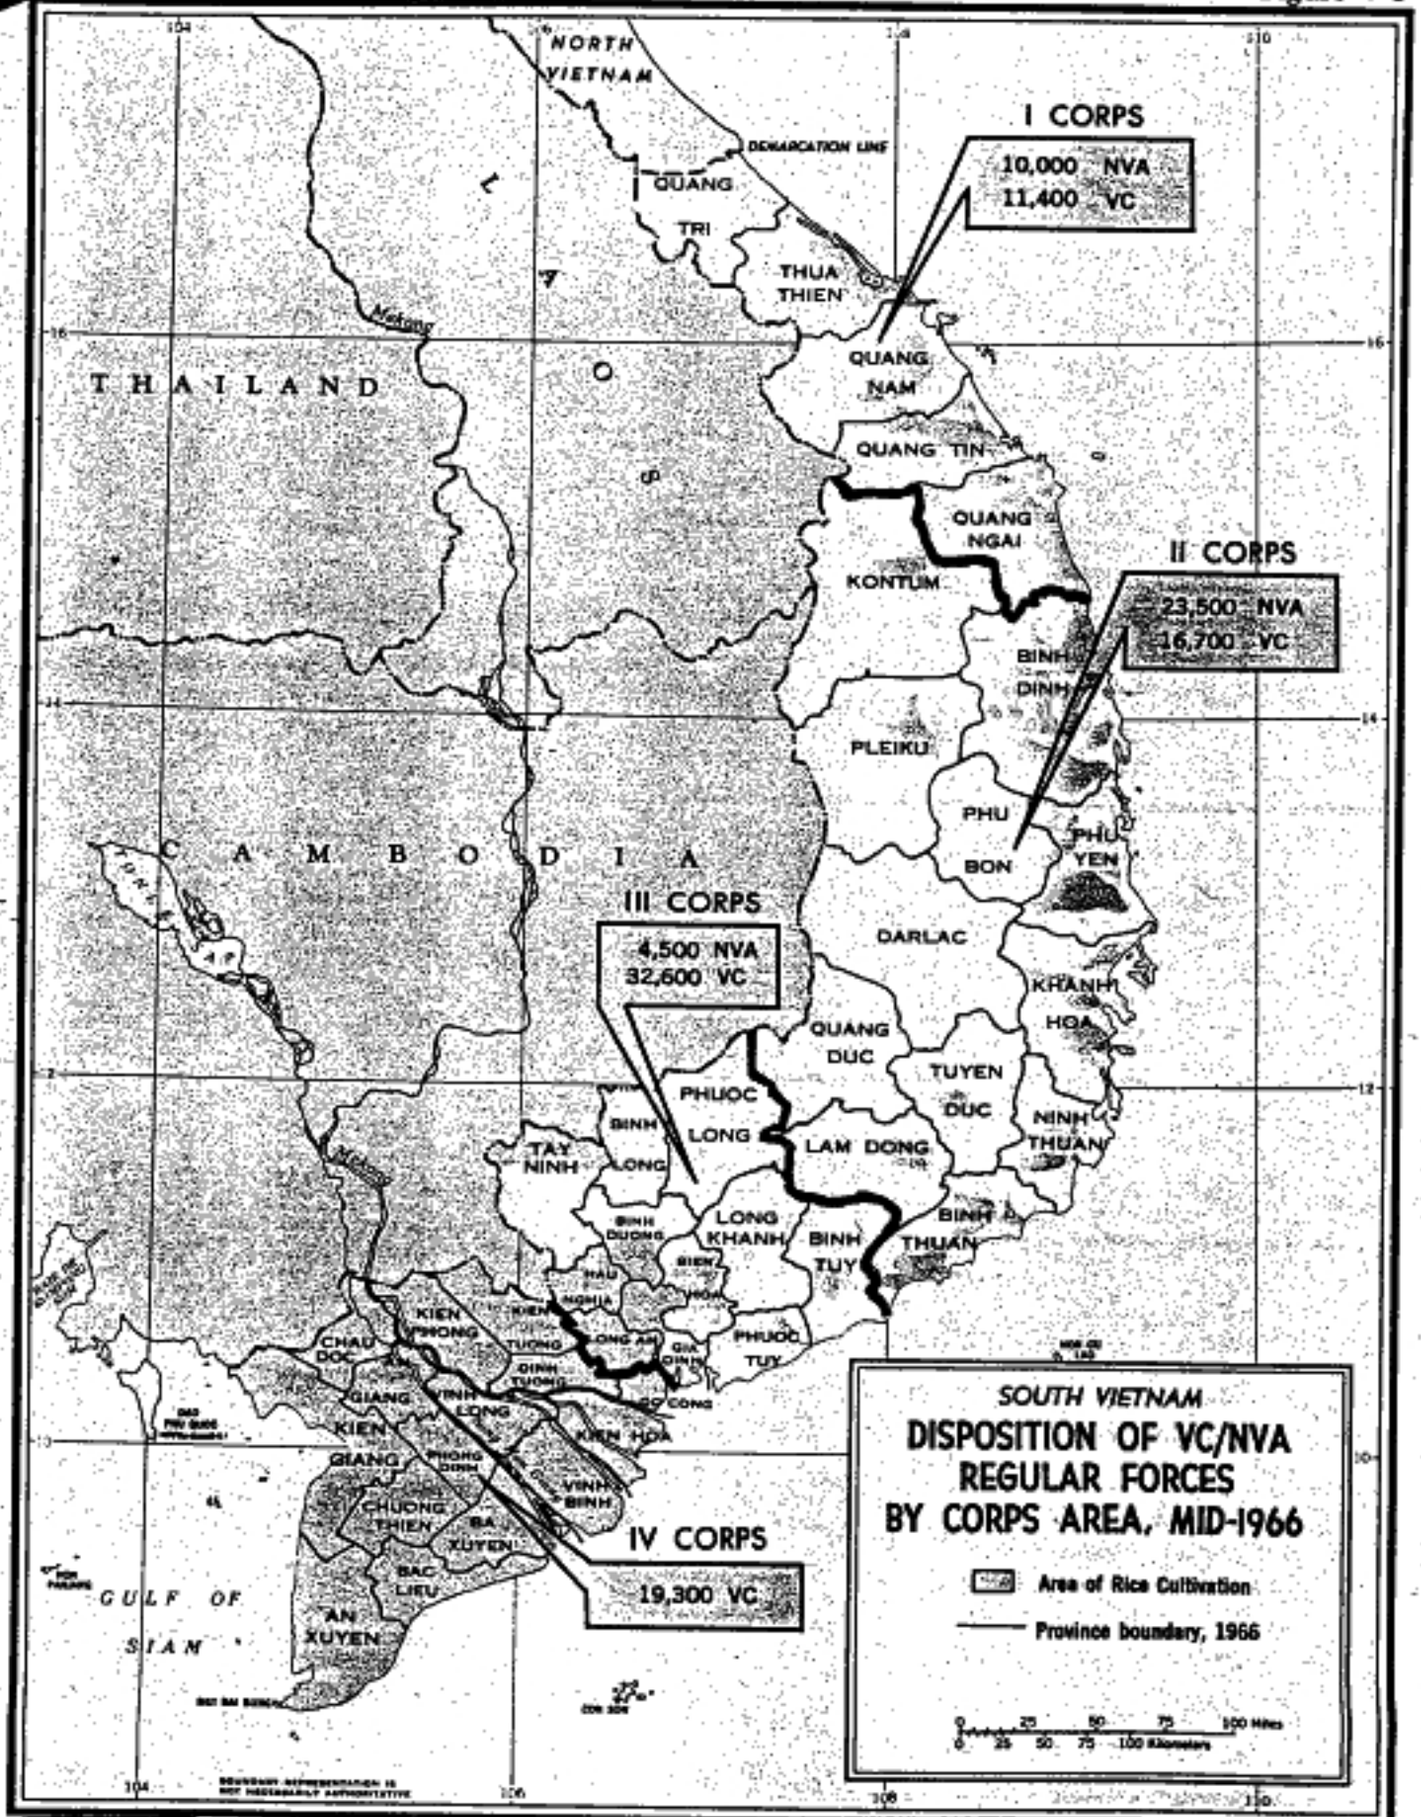
In Figure V-4 we show by Corps area the current allocation of total logistic requirements--150 tons a day--and that portion--some 20 tons a day--which must be supplied from external sources. The distribution of Communist forces reflects an unevenness in daily logistic requirements by Corps area and leads to internal distribution problems.

Thus the forces in the I and IV Corps areas require only 19 and 15 percent respectively of total daily requirements. The IV Corps, with the smallest concentration of forces, is also the area in which the Communists have the greatest self-sufficiency in food. The II and III Corps areas, in which most of the Communist forces are concentrated, account for almost two-thirds of the total daily requirement. These areas are also the predominant rice-deficit areas.

The inability to transport food from rice surplus to deficit areas is apparently becoming more severe. The Communists consequently have had to turn to Cambodian sources as a logistic expedient to provide rice to some of the forces in the central highlands. This movement has increased in the last half year and has reached an estimated 15 tons a day. The need to turn to Cambodian sources for rice indicates that internal distribution is one of the most pressing problems faced by the Communists and is probably the most vulnerable aspect of their entire logistics operation. As US/GVN and allied forces have increasing success in capturing or destroying Communist stockpiles and in disrupting Communist control of transport routes this problem would be even more aggravated. It would not, however, be critical, particularly as long as food supplies could be obtained and infiltrated from Cambodia. Even if they had to be provided by North Vietnam through Laos the volumes which we estimate would be required could be accommodated on the Laotian infiltration network.

SECRET

Figure V-3



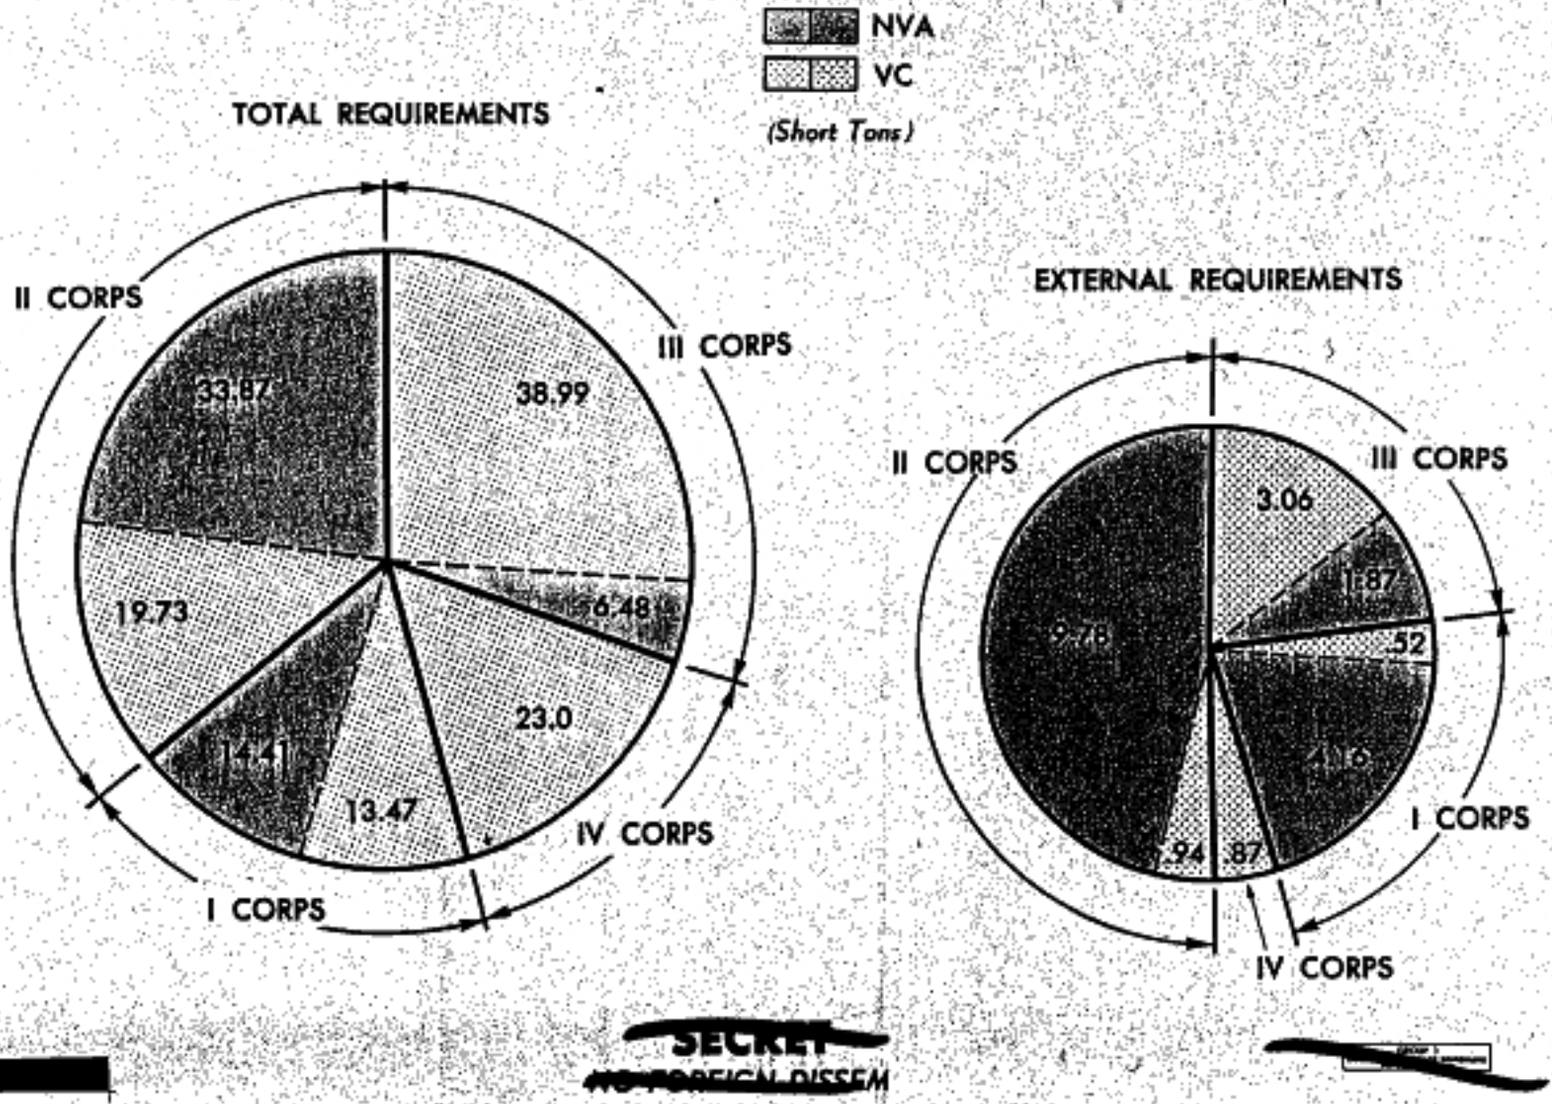
SECRET

SECRET

SOUTH VIETNAM

Figure V-4

DAILY VC/NVA LOGISTIC REQUIREMENTS AS OF MID-YEAR 1966, BY CORPS AREA



SECRET
NO FOREIGN DISSEM

The current estimates of the build-up of Communist forces and the highest probable levels of combat through mid-1967 yield an external logistic requirement for Class II and IV and Class V supplies of 55 tons a day. If the disposition of Communist forces remains the same and internal distribution of food is impossible, an additional 45 tons of food could be required daily in the food-deficit areas (See Figure V-5). This added logistic requirement would not tax the infiltration route through Laos very severely, but it would aid substantially in reducing the excess of road capacity over logistic requirements. But as the Communist build-up continues and the level of combat increases the excess of road capacity in Laos over logistic requirements could be diminished substantially.

The present disposition of Communist forces in South Vietnam is much more favorable for resupply from external sources. Over 85 percent of the NVA forces and 35 percent of the VC forces are in the I and II Corps areas in close proximity to both the Laotian infiltration corridor and the infiltration routes from Cambodia. These forces account for almost three-fourths of the supplies which must be infiltrated from external sources.

VII. Effect of Destruction and Capture of Supplies

The destruction and capture of Communist supplies by US and Allied forces during the past year as compiled from available data for selected categories of supplies are shown below. The data for food, ammunition, and POL basically represent losses incurred in the provinces of Binh Duong, Bien Hoa and Tay Ninh in III Corps area, and Quang Duc, Binh Dinh, Phu Yen, and Pleiku in II Corps--areas where US forces engaged in large search and destroy operations. Weapons losses include those inflicted by South Vietnamese troops as well as US and Allied forces.

Food (tons)	10-12,000
Ammunition	
Small arms and 12.7 mm machine gun (rounds)	180,000
POL (gallons)	7,700
Weapons	21,284

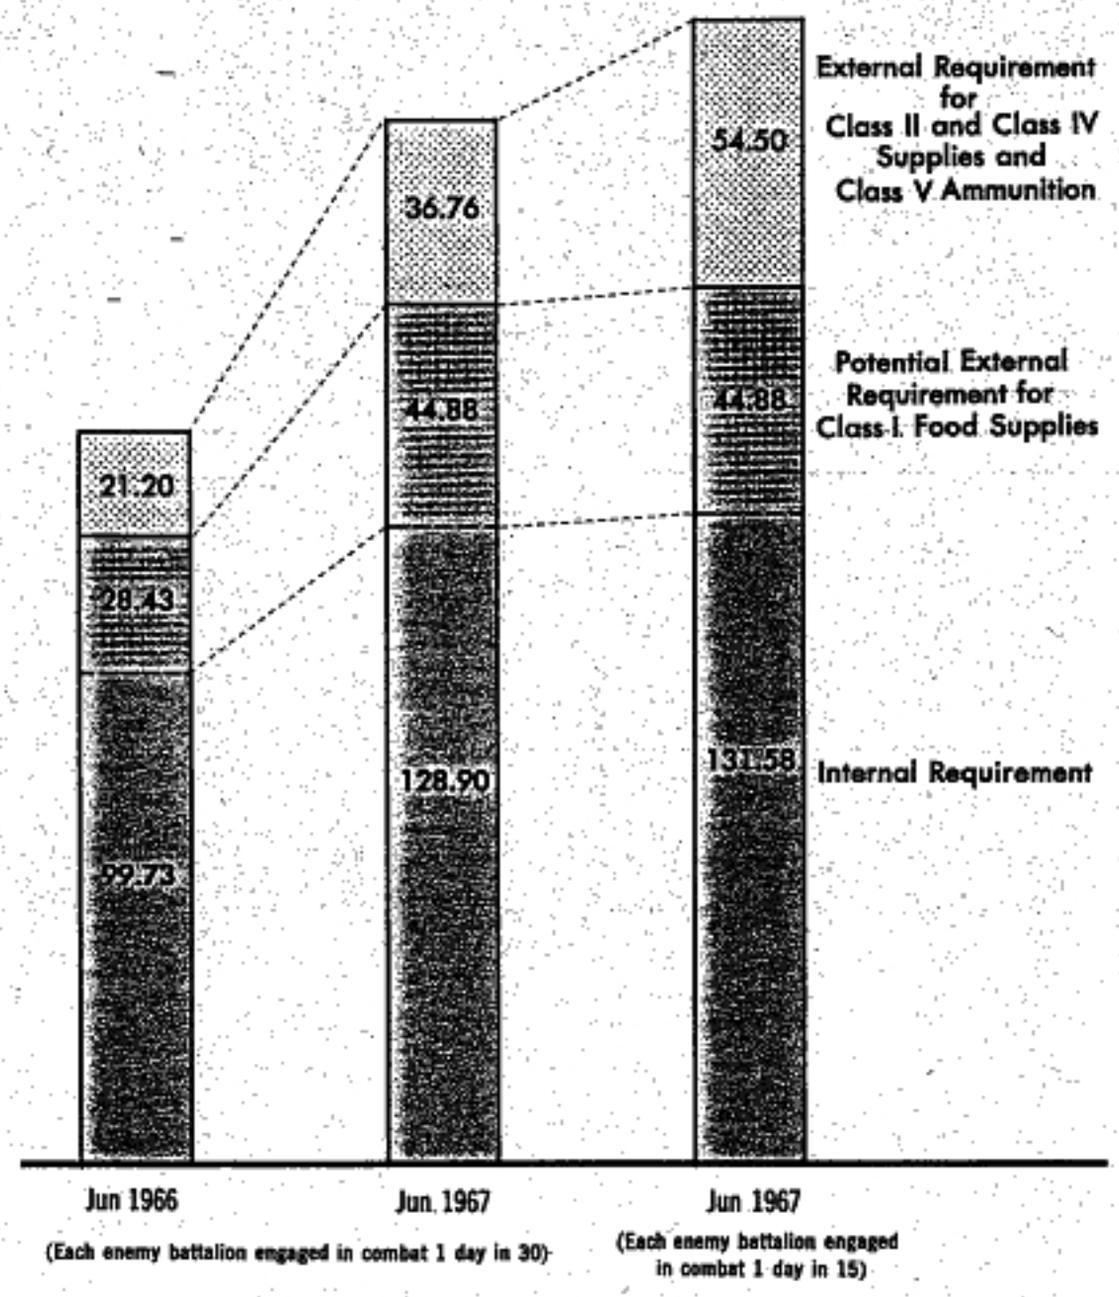
SECRET

Figure V-5

SOUTH VIETNAM
DAILY LOGISTIC REQUIREMENTS OF VC/NVA FORCES AT VARYING LEVELS OF COMBAT

June 1966 and Projected June 1967

(Short Tons)



[redacted] SECRET [redacted]

The quantity of food known to have been captured or destroyed represents an amount sufficient to feed the current Communist main and local forces in South Vietnam for a period of about three months. This quantity becomes relatively significant when considered as the minimum loss of food to the enemy. Moreover, recent allied operations have not only destroyed enemy food crops and uncovered VC food storage points, but protected rice harvests from enemy acquisition and interdicted the movement of some food to VC distribution points.

Known losses of small arms and heavy machine gun ammunition, however, represent only about three days' supply for the current order of battle of VC/NVA troops at present levels of combat. Although the magnitude of losses sustained in engagements with ARVN forces or as a result of air strikes cannot be determined at the present time, such losses to date have had little discernible effect on the enemy's ability to initiate attacks or on the rate with which he expends his ammunition.

Known losses of POL in South Vietnam represent less than a two week supply for VC/NVA forces. Losses inflicted against POL stocks by ARVN forces and air strikes probably have added to the quantity of such supplies denied the enemy, but due to the small requirement estimated for VC/NVA forces operating in South Vietnam these losses probably have no effect on enemy capabilities.

The known number of weapons captured or destroyed by friendly forces through June 1966 was sufficient to equip some 40 battalions. Losses incurred as a result of air strikes have raised the total weapons loss, but again, if such losses are examined in the context of the number of VC-initiated attacks over recent months, it becomes clear that total weapons losses have not been prohibitive.

The quantities of destroyed and captured Communist supplies undoubtedly have added to the logistic problems faced by VC/NVA forces in South Vietnam but the extent of these adverse effects cannot be estimated since we are almost totally lacking in knowledge of Communist stockpiles in South Vietnam. The data presently available do not include losses inflicted by South Vietnamese forces (with the exception of losses of weapons); supplies lost as a result of B-52 strikes; or supplies destroyed as a result of numerous strikes by U.S. tactical aircraft.

MEMORANDUM FOR: Mr. Bromley Smith
White House Staff
The White House

SUBJECT : Foreign Shipping to North Vietnam in April 1966

1. The attached is the latest in our series of monthly reports on foreign shipping to North Vietnam.

2. The report notes that the number of calls by foreign ships in April was the lowest since October 1965, in large measure because of the continuing small number of arrivals by Free World ships -- only seven. Total seaborne trade was 14 percent below the monthly average for 1965. Coal exports from Cam Pha were cut off for a time by a U. S. air strike on 19 April; the same strike allegedly damaged a Polish ship. No maritime shipments of arms or ammunition were detected.

MEMORANDUM FOR THE PRESIDENT

Moscow, by its protest of 5 August alleging that US aircraft strafed a Soviet merchant ship in Haiphong harbor, displays a growing uncertainty and apprehension concerning US policy. Its protest is carefully worded, however, so that it does not imply that the strafing was deliberate, and the note itself does not appear to signal a change in Moscow's present policy of limiting Soviet risks in the conflict.

On the contrary, recent signs of Soviet attitudes toward the US seem to underscore Moscow's desire to continue to deal with the US on practical questions of interest and importance despite the strains of Vietnam. This attitude was evident in Premier Kosygin's address to the Supreme Soviet on the day following the "strafing" incident.

Kosygin blamed the US for the strain in Soviet-American relations, but said the Soviet government did "not believe that Soviet-American relations cannot be different from what they are now." He stated that although "aggressive moods obviously predominate in Washington at the present stage, we know that there are other, sounder tendencies there, too. The strengthening of these tendencies will be received with due understanding on our part." The Soviet premier pointed out that despite the "exceedingly tense" international situation caused by the war, measures such as a nonproliferation treaty could still be dealt with.

~~TOP SECRET TRINE~~

In recent days, the USSR has demonstrated its desire to make progress on other matters. The US Embassy in Moscow noted the cooperative spirit displayed by the Soviets toward the US in discussions which ended on 30 July concerning the conservation and use of fishery resources. Much the same spirit and a general lack of polemics was evident on the part of the Soviets in the outer space treaty negotiations in Geneva.

On Vietnam, the Soviets have been attempting recently to persuade third parties to urge restraint on the US. Soviet ambassadors have made demarches to Free World countries (e.g., Sweden and Denmark) warning of the gravity of the situation. The intensely emotional position that Brezhnev took on the subject during UN Secretary General U Thant's visit to Moscow also may have been calculated to create pressure on the US from other quarters to ease military pressure on Hanoi. These tactics reveal not only Moscow's concern over US policy in Vietnam, but a continuing frustration over its inability thus far to influence the course of events there.

The Soviet note charges that US aircraft "strafed the moorings of Haiphong port" on 2 August and "in this connection, large caliber bullets" hit the Soviet vessel Medyn, endangering the lives of the crew. Although this ship, a large-hatch dry cargo vessel carrying POL in drums, is known to have been in Haiphong harbor at the time of the US air strike against the Haiphong POL storage site, its exact position cannot be established. Nor can it be established that the vessel actually was hit by US ordnance. Pilots of the strike aircraft reported all bombs were dropped in the target area and that no foreign shipping was involved. Strike aircraft were armed with guns, but did not use them. Flak-suppression aircraft which accompanied the strike aircraft were not armed with guns or other ordnance which would fit the description of "large caliber bullets."

This Special Report is a supplement to the current intelligence weekly issued on this date by the Office of Current Intelligence. Special Reports are published separately in order to give the subject more comprehensive treatment than is possible in that publication. Special Reports are produced by the Office of Current Intelligence, Office of Research and Reports or the Directorate of Science and Technology.

THIS MATERIAL CONTAINS INFORMATION AFFECTING THE NATIONAL DEFENSE OF THE UNITED STATES WITHIN THE MEANING OF THE ESPIONAGE LAWS, TITLE 18, USC, SECTIONS 793 AND 794, THE TRANSMISSION OR REVELATION OF WHICH IN ANY MANNER TO AN UNAUTHORIZED PERSON IS PROHIBITED BY LAW.

DISSEMINATION CONTROLS

This document MUST NOT BE RELEASED TO FOREIGN GOVERNMENTS. If marked with specific dissemination controls in accordance with the provisions of DCID 1/7, the document must be handled within the framework of the limitation so imposed.

THE UN'S PROBLEMS ON EVE OF 21ST GENERAL ASSEMBLY

The 21st session of the UN General Assembly, convening on 20 September, could be the most difficult and rancorous in United Nations history.

The foremost of many problems facing the membership is finding a successor to Secretary General Thant. Thant, who says he will not offer himself for another term after his present one expires in November, has become increasingly concerned about the major powers' failure to make greater use of the UN organization and especially of the office of the Secretary General. He has also deplored the atrophy of the UN's peacekeeping function, as evidenced by its inability to bring about a settlement in Vietnam, its minor role in the Dominican crisis last year, and the present ills of its operations on Cyprus and the Middle East. In part because of such operations, the UN is still in the red financially. It will remain so as long as the USSR and France, the principal debtors to the UN, fail to make voluntary contributions to relieve the situation.

Serious though these issues may be, they are likely to be overshadowed in the coming session by still others of a substantive nature. The Afro-Asians, who can now dominate the assembly by virtue of their numerical superiority, are expected to tie up most of the coming session with a bitter campaign against what they consider vestiges of colonialism on a variety of African problems. The question of the future of the disarmament negotiations will also need to be faced, however, as will the recurring problem of Chinese representation.

An African Assembly

Among the African problems, that of South-West Africa will be given priority. African delegates remain determined to loose the Republic of South Africa's hold on the territory, despite their recent failure to accomplish this through the International Court of Justice (ICJ), the UN's principal judicial body. The court refused to rule on the merits of the case, insisting that the plaintiffs--Liberia and Ethiopia--had no legal right to require South Africa to meet its League of Nations mandate obligations in the territory.

The UN Secretariat has suggested that the afternoon sessions

be devoted to the South-West Africa question, with the rest of the general debate held during the morning meetings. The African group is pleased with this plan since it will dramatize the urgency of the problem and will give the foreign ministers who usually participate at the beginning of the general debate an opportunity to speak out. The discussion will cover the report of the Committee of 24 on the subject of South Africa and the secretary general's report on the educational and training programs for South-West Africa, but it will concentrate on the situation arising from the recent ICJ judgment.

The Africans will attempt to pass a resolution stripping South Africa of its League mandate and placing South-West Africa under UN administration. Such action, however, is of questionable legality and might precipitate South Africa's withdrawal from the UN. Another tactic would be a request to the ICJ for an advisory opinion on whether South Africa has breached its mandate. However, at the present time the anti-ICJ sentiment prevailing among the Africans makes it doubtful that they would go to the court again. During the ICJ election the Africans plan to "purge the court" by filling the five vacancies on the bench with judges more sympathetic to their views. In addition, they plan to introduce an amendment to the UN Charter enlarging the court to give Africa and Asia more representation, as was done for the Security Council and the Economic and Social Council last year.

Considerable sentiment exists for an attempt by the assembly to revoke South Africa's League mandate, but a strong condemnatory resolution, which would have no juridical consequences, might be enough to satisfy the Africans. Ernest Gross, the legal counsel for Ethiopia and Liberia in the recent ICJ case, proposed that a UN commission for South-West Africa be set up to supervise the administration of the mandate and work toward ultimate independence for the territory. Such a maneuver would be a delaying tactic and would rule out any action by the assembly to end the mandate.

Other African issues will involve Rhodesia, the Portuguese territories, and South Africa's apartheid (racial segregation) policies. The General Assembly will consider the report of the Special Committee on Colonialism which recommended mandatory economic sanctions against Rhodesia under Chapter 7 of the UN Charter and called on the UK to take all measures including the use of force to abolish Ian Smith's rebel, white-minority regime. The Africans are likely to attempt to pass an assembly resolution requesting that the Security Council take stronger mandatory action under Chapter 7 than the voluntary measures under Chapter 6 that the UN took last year.

Financing and Peacekeeping

The noise and heat generated by the African debates are likely to dissipate what little impulse exists to deal with UN finances and peacekeeping. The members have little stomach for tackling these problems. There are deep divisions among them on political principles as well as interpretation of the UN Charter's articles on peacekeeping functions. The feeble Committee of 33 set up to deal with the question is now on its last legs. After many months of discussion no new suggestions have been presented and the apathy of the Afro-Asians has brought the meetings to a quiet close. The committee's report to the General Assembly will contain little of substantive value.

Only the Irish have shown any interest in searching for a solution. Even though their proposals were shelved by the last assembly and hardly considered by the Committee of 33, the Irish intend to present them to this assembly. Their plan for financing future peacekeeping operations allows any of the permanent members (US, USSR, UK, France, and China) to avoid sharing the cost of a peacekeeping operation by simply not voting in favor of it. The Canadians are thinking about presenting their formula on financing which apportions the cost of an operation among the members according to a special scale.

Over a year ago an appeal was made for voluntary contributions to relieve the growing UN debt. However, the major debtors --the Soviet Union and France-- have as yet given no sign that they will make a contribution.

The UN's financial conditions are contributing to the ills of the present peacekeeping operation in Cyprus. The secretary general has had to pass the "begging bowl" to keep the operation alive. Members with forces on the island continue to threaten to pull out unless they are reimbursed for their expenses. This has led some countries to suggest that the forces be reduced or be replaced by an observer mission--a change which might endanger the shaky peace now maintained on the island.

The UN operation in the Middle East (UNEF) is suffering from the same ills. Here too there is considerable support for a major reduction in troop strength. The majority of members hold that unless there is some demonstrated progress toward easing Arab-Israeli tension they will be unwilling to continue contributions. The general view is that future financial support for UNEF should be through voluntary contributions.

Disarmament

The numerous disarmament items on the agenda for the 21st General Assembly will be time-consuming and difficult to handle. At last year's assembly these same items--nonproliferation of nuclear weapons, a comprehensive nuclear test ban treaty, nuclear-free zones, and others--were

discussed and then handed over to the Eighteen Nation Disarmament Committee (ENDC) for further study. However, the ENDC's failure to make progress on any of these issues has led many Afro-Asian countries to question the value of continuing it.

East-West differences over a nonproliferation treaty and the diminishing support from the ENDC's nonaligned members for the Western formula have stalled the negotiations. The deadlock has caused the eight nonaligned members to consider presenting their own version of a treaty at the next ENDC session. Their draft would call for a ban on the transfer of nuclear weapons to states not already having them, a cutoff on the production of fissionable material for weapons, a reduction of stockpiles by nuclear states, and the universal application of international safeguards to all nuclear activities. The eight have drafted a memorandum reaffirming their conviction that a nonproliferation treaty should be concluded and should include these restrictions or be accompanied with or followed by other measures which accomplish the same goals.

Of even more interest to the nonaligned countries is the proposal to extend the limited test ban treaty of 1963 to cover all testing. The nonaligned group sees this issue as the one on which the ENDC might make progress. The nonaligned will argue that improvements in technological capabilities to monitor underground explosions has reduced the need for on-site inspections, hitherto one of the stumbling blocks to such a treaty.

Other possible disarmament topics are a Latin American nuclear-free zone and abolition of foreign military bases, another favorite of the Afro-Asians as well as the Soviet bloc.

While there seems to be little progress toward settlement of the various disarmament issues, there is one bright spot in the related subjects of outer space: the treaty draft now approaching completion in the legal subcommittee of the Committee on Peaceful Uses of Outer Space. The Soviet Union may, however, seek to extract certain propaganda advantages.

Admittance of Peking

Another go-around on the question of seating Communist China is expected to occur at about mid-session. The vote was a tie last year and a close vote is expected this year.

Secretary General Thant's reasons for not accepting a second term include a reference to the Chinese representation issue. He reiterated his dissatisfaction that the world organization has not yet achieved universality of membership. It is generally known that Thant has supported the admission of China but his listing it as one of the reasons for his resignation will probably cause some members to reconsider their position on the issue.

However, the recent developments inside China which have further tarnished its international image, together with its leaders' statements disclaiming any desire to come into the UN, will possibly affect Peking's chances of winning more votes.

Last year the ruling that admission of Communist China was an "important question" requiring a two-thirds majority for passage was upheld. This year the importance of this procedural ruling is even greater owing to the likelihood of some changes in the voting pattern. Iran and Senegal intend to vote for admission. Canada is wavering and may abstain. However, Chad and the Maldive Islands, which abstained last year, are expected to support Taiwan. The outcome will depend on the Afro-Asians, who control the most votes in the General Assembly, and their attitudes on the Chinese issue may be affected by the outcome of the debate on South-West Africa and Rhodesia.

Other Issues

Although Vietnam will not be on the agenda, it is certain the foreign ministers will discuss it in their opening speeches. There is also a rumor that the Afro-Asian nations will introduce a resolution at the end of the general debate either on their own or at the request of the secretary general. This resolution would merely call for the cessation of hostilities and the beginning of negotiations. However, the Soviets have recently been making it clear to their friends at the UN that they want no resolution of any sort on Vietnam.

Another kind of admission problem--UN membership for small states ("the bits and pieces problem")--may receive further airing at the 21st General Assembly. The admission of the Maldive Islands last year caused concern that numerous small entities might aspire to UN membership upon becoming independent. Such territories, too small to carry out charter obligations, could find their way into the assembly to the detriment of states with major responsibilities. It has been suggested that there should either be a minimum standard on the size of the states becoming members, or some form of associate status. It has also been proposed that the Security Council committee on membership be revived in order to prevent acceptance of small states simply because no one wants to oppose them.

The Korean question will again be on the agenda but will probably not come up until the end of the session, in which case it would be brushed aside. Saudi Arabia will probably introduce a proposal to invite North Korea to attend the assembly discussions. There is a strong feeling among the nonaligned members that this should be done and that direct talks between the parties should be held.

Thant's Departure and Its Effect on the UN

Overshadowing all of the numerous problems the UN faces is Secretary General Thant's decision not to offer himself as a candidate for another five-year term. There is a possibility that after a formal appeal by the Security Council, Thant will decide to accept a shortened term for perhaps two or three years. Many of his colleagues feel that Thant genuinely wants to leave his post, but they also hope he will not leave if the leadership crisis has not been resolved by 3 November, the day his term expires.

If Thant adheres to his decision to leave, the UN will face the difficult problem of finding a qualified successor acceptable to all the major powers. At present there are no strong candidates, and the search is likely to be long and rigorous. Possible candidates that have been mentioned are Prebisch of Argentina, Garcia Robles or Cuevas Cancino of Mexico, Adebo of Nigeria, Slim of Tunisia, D'Arboussier of Senegal, Rolz-Bennett of Guatemala, Enckell of Finland, and Pazhwak of Afghanistan. The Afro-Asians have agreed among themselves that Thant should be pressed to stay on for an extension of his term if no suitable replacement can be found. (SECRET FOREIGN DISSEM)

1. THE FOLLOWING CLARIFICATION WAS OBTAINED ON 27 OCTOBER FROM THE DEBRIEFERS [redacted] ABOUT THE "FIVE-MAN ASSASSINATION TEAM" (PARA 1A OF REF)

[redacted] PRESUMABLY COMMUNIST, GROUP IN NAKORN PHATHON AND WAS TAKEN TO A MEETING ON THE EVENING OF 10 OCTOBER AT A CHICKEN FARM OUTSIDE TOWN WHERE TEN PERSONS WERE PRESENT. THE GROUP LISTENED TO A LOUDSPEAKER OVER WHICH AN UNIDENTIFIED SPEAKER, SPEAKING THAI WITH A CHINESE ACCENT, TOLD THEM THAT A FIVE-MAN VIETNAMESE TEAM WOULD BE COMING TO NAKORN PHATHON FROM VIENTIANE TO PLAN THE ASSASSINATION ATTEMPT OF PRESIDENT JOHNSON. THE GROUP WAS SAID TO HAVE A LONG RANGE RIFLE WITH A TELESCOPIC SIGHT AND SMALL TRANSMITTING RADIOS FOR COMMUNICATIONS AMONG THEMSELVES. THE ATTEMPT WOULD BE MADE ALONG THE ROUTE BETWEEN DON MUANG AIRPORT AND THE CAPITOL HOTEL AREA ON PAHOLYOTHIN ROAD OR ON RAJDAMNERN AVENUE. ESCAPE WOULD BE BY BOAT DOWN THE RIVER. THE SPEAKER CONCLUDED BY STATING THAT EACH MEMBER WOULD RECEIVE A PRIVATE NOTE LISTING HIS ASSIGNMENT DURING THE OPERATION. [redacted] THE SPEECH CAME FROM A TAPE RECORDER RATHER THAN FROM A CONCEALED ORATOR ALTHOUGH THE LATTER WAS NOT IMPOSSIBLE.

ASIAN COMMUNIST EMPLOYMENT OF NEGOTIATIONS AS A POLITICAL TACTIC

This report, originally given a limited distribution in a different form, sets forth the fight-talk tactic used by the Chinese, Korean, and Vietnamese Communists in the course of important military conflicts, namely, the Chinese civil war, the Korean war, and the Indochina war against the French. It focuses on the factors which have impelled the Asian Communist leaders to begin negotiations and on the various tactics used during negotiations in the effort to extract political concessions from the West. It also discusses the lessons which the North Vietnamese today profess to see in these earlier situations, confirming them in their conviction not to negotiate prior to attaining a public declaration of surrender from Washington on the issue of troop withdrawal.

This report, prepared by the Research Staff, has been informally coordinated within CIA. The responsible analysts, [Arthur A. Cohen and Helen-Louise Hunter,] would welcome comment, addressed to the Chief or Deputy Chief of the staff [(at Ext. 7213 or 4088).]

ASIAN COMMUNIST EMPLOYMENT OF NEGOTIATIONS AS A POLITICAL TACTIC

Summary

This paper discusses the Asian (particularly Chinese) Communist practice of negotiating, focusing on the motives which, in the past, have impelled Asian Communists to negotiate and the signs they have given when they were prepared to talk. It includes an analysis of the fight-talk tactic used in the Chinese civil war in the 1930s and 1940s as well as a detailed examination of the Korean experience of 1950-53 and the Vietnamese experience of 1953-54. Finally, there is a short discussion of implications for Vietnam today.

a. General Findings

On the two occasions when the Chinese Communists have initiated negotiations during military conflicts, their forces were either

(a) weak and in danger of annihilation, as in the Chinese civil war, or

(b) badly hurt in the field, as in the Korean war.

As they negotiated, they continued to fight. This fight-and-talk tactic was formulated by Mao Tse-tung in 1940 as a means to preserve his weak forces from being destroyed by Chiang Kai-shek's militarily superior armies. Subsequently, it was used in Korea by the Chinese and North Koreans, at first as a expedient to shield their badly hurt armies in 1951, and then, from 1951 to 1953, as a holding tactic until they could extract terms enabling them to disengage from a costly limited war.

In Indochina, however, the decision to begin negotiations was imposed by the Soviet and Chinese leaders on Ho Chi Minh when they feared American involvement and escalation of the war more than he did in 1953. They urged Ho to close out the war, which he was by no means losing in the field, and persuaded him to make concessions to the French after talks started and to try to seize Vietnam by a process

of low-risk political subversion. Even after Ho had been induced to begin negotiations, his desire to use Mao's original fight-and-talk tactic for a protracted period was subordinated to the larger interests of Soviet policy (to split the Western alliance in Europe) and Chinese policy (to prevent the US from establishing alliances in Asia). The Soviets and Chinese viewed these interests as being best served by a "peace" offensive and hindered by continuation of the Indochina war. Ho made concessions, particularly on the matter of partition, which were later viewed by him and his lieutenants as a mistake not to be repeated.

b. The CCP-KMT Civil War (1937 to 1949)

Constantly maneuvering to preserve the badly depleted ranks of his Red Army from complete destruction by Chiang Kai-shek's militarily superior forces, Mao in September 1937 finally induced Chiang to establish, on paper, a CCP-KMT united front against Japan. But within the context of this paper alliance, Mao expanded his military and political forces in the northwest and even directed quick-decision thrusts to be made against isolated KMT units. As a pattern of limited armed conflict and political struggle emerged in 1940, Mao avoided major military operations which would provoke a major counterattack and developed a tactic of limited-fight, limited talk: "After we have repulsed the attack of the /KMT forces/ and before they launch a new one, we should stop at the proper moment and bring that particular fight to a close. In the period that follows, we should make a truce with them." (Mao's statement of 11 March 1940). In this way, Mao gained a series of small victories without running the risk of a general civil war, while expanding his territorial holdings behind the Japanese lines.

While fighting continued on the local level, CCP-KMT negotiations went forward on the national level intermittently from 1940 to 1946. Represented in Chungking by his brillant negotiator, Chou En-lai, Mao used various lulls in the civil war to increase his regular forces, and in 1944, he permitted the American Army Observer Mission to operate in Yenan because its very presence had a political restraining effect on Chiang. Recognizing the strengthened military and political position of Chiang after the surrender of Japan in August 1945, Mao tried to settle for a half-way station--legalization of the CCP--on the road to an eventual seizure of national power. Chiang refused to facilitate this eventual takeover. On 19 August 1946, shortly after KMT planes bombed Yenan, Mao dropped the talking half of his dual tactic

and began to fight the all-out civil war, which his forces decisively won in mid-1949.

c. The Korean War (1950 to 1953)

Initial Chinese Communist military successes from November through December 1950 increased Mao's confidence that the UN forces could be driven from Korea if military pressure was sustained, and Chou En-lai rejected a cease-fire as "a breathing spell" for the UN. But a series of manpower-killing advances by UN and ROK units in March and early April 1951 followed by the blunting of the Communists' big April and May offensives, which cost them an estimated 221,000 men, left Mao's best armies on the defensive by 1 June 1951. Of the 21 Chinese Communist divisions which had initiated the April and May offensives, 16 had suffered about 50 percent casualties.

These disastrous defeats impelled Mao to begin negotiations, but there were no prior indications that he was prepared to drop his previous political conditions for a cease-fire. When, on 23 June 1951, Soviet UN delegate Malik for the first time called for talks for a cease-fire, he merely avoided raising the preconditions that the US must withdraw from Taiwan and that Peking should be admitted to the UN. Mao seized upon the military breathing-spell to improve the badly impaired combat capabilities of his forces in the field.

Mao's strategy at the armistice negotiations (July 1951 to July 1953) was to wage a "protracted struggle," combining tactics of political attrition with limited military pressure. But this strategy did not break the determination of the US negotiators to defend the principle of voluntary repatriation of war prisoners. The death of Stalin (5 March 1953) permitted the development of a new Soviet attitude toward East-West tensions in general and concluding an armistice in particular. Soviet pressure on Mao and his own recognition that further resistance was purposeless, and even harmful to his economic program, impelled him to retreat and accept voluntary repatriation--a move which opened the way for the armistice agreement of 27 July 1953.

d. Vietnam (1953 to 1954)

The same considerations that led the Soviets and the Chinese to negotiate an end to the Korean war in mid-1953 made them look with favor upon a negotiated settlement of

the Indochina war. At the time, however, the fortunes of the Vietnamese Communists in their eight-year fight with the French were steadily improving and Ho Chi Minh gave no indication that he would be willing to accept less in a negotiated settlement than his forces could seize on the battlefield.

The first indication that the Communists might consider negotiations came from the Soviets, who began in August 1953 to quote with approval demands in the French press for a "Panmunjom" in Indochina. By September, the Chinese had also indicated a willingness to discuss Indochina at the conference table. But Vietnamese Communist propaganda made it clear that these Soviet and Chinese initiatives were being made at a time when Ho was still resisting the concept of negotiations. The attitude of the Viet Minh leaders at this time is illustrative of the generalization that Asian Communists have been unwilling to begin negotiations when they have been in an advantageous position militarily, or have not been badly hurt in the field.

As the French Government was being subjected to increasing pressure from many members of the National Assembly and from the French public for an end to the costly war, Moscow and Peking acted to convince Ho that he could make major gains through negotiations. On 29 November 1953, he finally took the initiative in proposing negotiations, but it was a hedged proposal that, in effect, demanded a complete French surrender.

Premier Laniel was able to resist the strong domestic pressure for immediate bilateral negotiations with the Viet Minh by agreeing to discuss Indochina at the Geneva conference in May 1954. Although Ho clearly preferred bilaterals, (in which he would have been in a much stronger position vis-a-vis the French than he was at Geneva), he was again pressured by the Soviets to agree to international negotiations.

At Geneva, Molotov and Chou En-lai moved adroitly to avoid any impasse that could be used by the US as an excuse for intervention in the fighting. Ho, whose delegate, Pham Van Dong, started with maximum demands after the fall of Dien Bien Phu (7 May 1954), apparently calculated that negotiations could continue for some time without leading to American involvement. His tactics of protracted negotiations, which would afford him more time to solidify his military position, were similar to those of Mao in Korea. But again

and again, the Soviets and Chinese acted to undercut his delegate's maximum demands at Geneva for French political concessions in exchange for a ceasefire.

The Viet Minh certainly had not expected to have to make as many political concessions as they finally agreed to at Geneva. Ho was in a position to negotiate from strength and to do so for a long time, but he found himself caught in a Sino-Soviet political web and was persuaded not to use his growing military capability to force major concessions. It was clear at the time that the North Vietnamese were far from completely satisfied with the Geneva compromises. As time has gone on, they have probably become even more convinced that the political concessions they made there were a mistake. The clear awareness that they were impelled, primarily by Moscow and Peking, to stop at a half-way station on the road to total military victory has made them all the more determined to fight on in the present situation.

e. Implications for Vietnam Today

North Vietnamese and Chinese Communist officials have indicated privately that the compromises made in 1954, providing the Viet Minh with something less than a total takeover of Vietnam, were a mistake. Ho's determination not to stop half-way again, even in the face of increased US airstrikes, is bolstered by Mao's special need to keep him fighting. Mao's special need, which stems largely from an image of himself as "leader" of the international Communist movement, is to prove Soviet and other doubters wrong regarding the ability of revolutionaries to defeat the US in a protracted small war.

Discussion

A. The CCP-KMT Civil War (1937 to 1949)

The badly depleted ranks of Mao's Red Army, which straggled into the sanctuary of northwest China in November 1935 after the punishing attacks of Chiang Kai-shek's forces during the Long March, were incapable of resisting an all-out KMT offensive. Aware of this basic fact, Mao repeatedly appealed to Chiang to end the civil war and establish a CCP-KMT united front to expel Japanese forces from north China. Chiang was unwilling to comply primarily because Mao insisted on preserving his military units for use in the revolution: "It

goes without saying that we shall never allow Chiang to lay a finger on the Red Army." (Mao's statement of 14 March 1936). But Japan's large-scale attack on China in July 1937 provided Mao with a new opportunity to move Chiang into a united front against Japan. Mao took the first formal step; on 22 September 1937 the CCP declared that its armed forces would be under the "direct control" of Chiang. Actually, three days after this paper statement, Mao made it clear that "direct control" was only an anti-Japanese political facade and that units and their weapons would remain under Communist control:

> It is necessary to maintain the CCP's absolutely independent leadership in what originally was the Red Army as well as in all guerrilla units. Communists are not permitted to vacillate on this principle. (CCP resolution of 25 September 1937)

Mao used the mythical anti-Japanese united front to deter the KMT forces from attacking his new sanctuary in the northwest and to expand his military, territorial, and political holdings. Most of the CCP effort was directed toward extending its assets, some was directed toward guarding against a KMT attack, and only a little was directed toward engaging Japanese armed forces. Negotiations for the reorganization of the former "Red Army" units moved very slowly in 1937 and 1938, and clashes continued on the local level between some Nationalist and Communist forces. As friction increased, Mao began to formulate his political-military tactic. On 6 November 1938, he directed that the CCP's main field work should be in the relatively secure rear areas of the Japanese forces, calculating that the political-military vacuum behind the Japanese lines would shield the CCP from superior KMT forces until the foothold in the northwest could be expanded. Mao enlarged his armed forces as quickly and efficiently as possible, but he always stopped just short of provoking an open break with Chiang and the retribution of a major KMT offensive.

Calculated restraint, intended to provide Chiang with no pretext for an offensive, was designed by Mao to be a temporary tactic to gain vitally needed breathing spells prior to

the opening of a revolutionary advance in the future. Mao indicated the "positive" role of reduced military aggressiveness as a tactic in advancing the revolution:

> Our concession, withdrawal, turning to the defensive or suspending action, whether in dealing with allies or enemies, should always be regarded as part of the entire revolutionary policy, as an indispensable link in the general revolutionary line, as a segment in the curvilinear movement. In short they are positive. (Mao's statement of 5 November 1938)

That is, defensive or suspended action was part of Mao's policy to expand his armies and the CCP membership behind Japanese lines with the aim of seizing more territory at the expense of the KMT. But quick-decision thrusts were never abandoned. For example, in the spring of 1939, Communist forces moved quickly into Shantung Province, and in the winter of 1939-1940, they decimated KMT forces in Hopei Province. These clashes were fully concordant with Mao's policy of expanding holdings by armed struggle within the context of the CCP-KMT paper united front.

A pattern of limited armed conflict and political struggle emerged in CCP-KMT relations in the spring of 1940. Mao began to refine his fighting-and-talking tactic. Militarily, he limited the offensive operations of the Communist armies, which were still considerably inferior to KMT armies; politically, he worked vigorously to indoctrinate workers, peasants, and intellectuals. In this fashion, he groped his way, seeking out and exploiting the soft spots in Chiang's military and political armor.

Mao systematized his tactic. On 11 March 1940, he set forth the unique position that there was no incongruity between waging a political-military struggle against Chiang while maintaining a united front with him. The struggle half of this dialectical policy was intended to demonstrate to Chiang that Mao's forces could not be destroyed--that they would fight back against any KMT offensives. The unity half was intended to deter KMT attacks and to "avert the outbreak of large-scale civil war." Mao depicted the partial struggle against Chiang as "the most important means for strengthening KMT-CCP cooperation," his calculation having been, as he pointed out on 4 May 1940 in a directive to Communist field commanders operating in east China, that clashes with the KMT forces were necessary --

> so as to make the KMT afraid to oppress us...and compel them to recognize our legal status, and make them hesitate to engineer a split.

That is, Mao, on occasion, used military action in certain areas rather than direct political concessions to sustain the united front on paper.

He correctly estimated that small CCP military thrusts would not provoke Chiang to move beyond limited counter-attacks because Chiang did not have the military capability in 1940 to open a nation-wide offensive against CCP forces so long as the war against Japan was being waged. Mao's estimate of 4 May 1940 was that

> The present military conflicts are local and not nation-wide. They are merely acts of strategic reconnaissance on the part of our opponents and are as yet not large-scale actions intended to annihilate the Communists.

In this way, he defended the general plan for limited civil war which he had enunciated on 11 March 1940 as a limited-fight, limited-talk tactic. Mao had set forth the important tactic in considerable detail:

> First, we will never /sic/ attack unless attacked; if attacked, we will certainly counterattack.... Second, we do not fight unless we are sure of victory; we must on no account fight without preparation and without certainty of the outcome....Third, the principle of truce. After we have repulsed the attack of the die-hards /i.e., the KMT forces/ and before they launch a new one, we should stop at the proper moment and bring that particular fight to a close. In the period that follows, we should make a truce with them. We must on no account fight on daily and hourly without stopping, nor become dizzy with success. Herein lies the temporary nature of every particular struggle. Only when the die-hards launch a new offensive should we retaliate with a new struggle.

This became the basic tactical principle of Mao. His practice indicated that his forces were directed to fight, close off the particular battle with a defeat of KMT forces, and then seek a truce and be prepared to negotiate in the hope that Chiang would not take a local and limited defeat as the

reason for a large-scale offensive against all Communist armies. This is the tactical principle designed to advance Mao's protracted war waged with initially weak forces, limiting their actions to safe proportions.

In this way, Mao gained a series of local victories without running a great risk of general civil war. At the same time, he seized territory by expanding the base areas behind the Japanese lines and by controlling the actions of his field commanders, whose forces sporadically chopped away at small KMT units. For example, the First Contingent of the Communist New Fourth Army commanded by General Chen Yi decimated KMT forces in northern Kiangsu in July 1940 and, in the second half of 1940, several Communist victories were won in the lower Yangtze valley. Mao had directed that the New Fourth must be expanded to 100,000 men; by the end of 1940, his generals were successful in expanding this army to approximately that number of combat regulars.

While fighting continued on the local level, CCP-KMT negotiations took place on the national level in the second half of 1940 as Mao implemented his fighting-and-talking tactic. Even when vastly superior KMT forces unexpectedly surrounded and destroyed 9,000 men attached to the New Fourth's headquarters as they were withdrawing to the north of the Yangtze River, Mao refused to consider this setback as invalidating his principle of waging a limited war. In June 1943, the intermittent negotiations between the KMT and CCP reached another major impasse in Chungking, just as they had in late 1939 and in January 1941. Chiang asked Mao to give a conclusive reply to his demands to relinquish the independent CCP government and to incorporate CCP forces into Nationalist armies. Chou En-lai, the brillant Communist representative in Chungking, deflected these demands and charged the KMT with increasing their forces along the northwest border base areas. Chou attained some success in his political effort to depict Chiang as the obdurate element in the united front.

The failure of Chiang to launch large-scale attacks against Communist forces in 1943 was attributed by Mao at the time to the political success in arousing domestic and international opinion against Chiang's policies. (Liberation Daily, 5 October 1943). Two additional factors were Japan's east China offensive against KMT forces and US efforts to stop Chiang's attempts to suppress the Communists. That is, Mao

adroitly used political pressures to compensate for military weakness: "The Communists are not capable of much, if any, offensive action." (Report of Colonel Depass, 16 November 1943)

Expediently, from 1943 to 1945, Mao used the lull in the CCP-KMT protracted war to further expand his armed forces, which increased to 475,000 regulars by October 1944. The Wallace mission to China in June 1944 resulted in the dispatch of the American Army Observer Mission to Yenan, which Mao favored because of "its political effect upon the KMT":

> Any contact you Americans may have with us Communists is gold. Of course, we are glad to have the Observer Mission here because it will help to beat Japan. But there is no use in pretending that--up to now at least --the chief importance of your coming is not its political effect on the KMT. (Mao's remarks to John S. Service, interview of 27 August 1944)

That is, Mao exploited the US desire to end the civil war and get on with the war against Japan, adroitly using it as a political shield against the potential offensive-power of Chiang's superior military forces. He was capable then of considerably more tactical flexibility than he has been in recent years.

By insisting on policies which made the KMT appear unreasonable, Mao deflected Chiang's demand that, to become a legal party, the CCP should disband its armed forces. In a carefully worded proposal, which Mao maneuvered Ambassador Hurley to sign with him in Yenan on 10 November 1944, Mao agreed only "to work for" the unification of all military forces while insisting on the formation of a "coalition national government and a united national military council." His intention was to exploit the generally held view that the CCP was justified in refusing to disband its armies before the formation of a coalition government. However, in order to keep the negotiations alive, he directed Chou En-lai in Chungking to join Ambassador Hurley in pressing Chiang to accept the proposal. Chiang insisted on disbanding the Communist armies, and Mao was then able to "expose" Chiang as recalcitrant in rejecting a "reasonable" negotiations compromise--i.e., a coalition. The widespread domestic and international appeal of the Maoist program for a settlement, the rapidly expanding military-political power of the CCP, and US anxiety to bring about

unity put Chiang at a considerable disadvantage in the talks. Mao's success with dilatory tactics--that is, his substituting of talks about "working for" unified armed forces in the place of action taken to disband CCP armies--further isolated Chiang in China and internationally.

All along, Mao had continued to expand his forces, and by 24 April 1945, he claimed that they totalled 910,000 regulars and more than 2,200,000 militia. Mao made a major move shortly before Japan's surrender, ordering CCP troops to link up with Soviet troops driving southward in Manchuria (10 August 1945). As CCP and KMT armies raced for control of various Japanese-vacated areas and as Chiang prepared to strike at Mao's forces, the Communist leader accepted Chiang's invitation to accompany Ambassador Hurley to Chungking, arriving on 28 August 1945. Mao was still anxious to gain a series of breathing spells. Two days before flying to Chungking, Mao drafted an inner-party policy line on negotiations, in which he indicated that the CCP should be prepared to make some concessions--namely, some reduction in the size of those base areas which were indefensible and in the strength of CCP armed forces.

> Without such concessions, we cannot explode the KMT's civil war plot, cannot gain the political initiative, cannot win the sympathy of world public opinion and the middle-of-the-roaders in China and cannot gain in exchange legal status for our party and a state of peace.
>
> But there are limits to such concessions: the principle is that they must not damage the fundamental interests of the people /i.e., CCP control of the base areas and the armed forces/. (Mao's statement of 26 August 1945)

Mao in Chungking recognized the strengthened military and diplomatic position of Chiang after the surrender of Japan and the signing in Moscow of the Sino-Soviet treaty. In private talks, he dropped his demand (to which he later returned) for a coalition government and high command, but insisted on retaining not less than 20 divisions as well as exclusive control of the base areas in north China. He wanted to obtain a settlement, a half-way station of legalization on the road to an eventual seizure of national power, inasmuch as his armies were still smaller and more badly-equipped than Chiang's. "The Communist armies do not possess

sufficient strength to directly oppose the KMT armies in positional warfare; but over a long period of time as an occupying force, the KMT cannot hold out even with US help." (August 1945 report of Colonel Yeaton from Yenan) Chiang accurately summarized Mao's position as equivalent to allowing the CCP to carry on its political revolution without opposition or hindrance while professing to end the KMT-CCP military clashes by negotiating. Actually, while Mao was talking, CCP forces were consolidating their control over newly taken territory in the north, and when Mao returned on 11 October 1945, after refusing to disband his forces, he justified in the context of protracted revolution, his willingness to negotiate.

Mao made it clear to cadres in Yenan on 17 October that reducing CCP forces to 20 divisions would not mean handing over weapons. "The arms of the people, every gun and every bullet, must all be kept, must not be handed over." He then reminded cadres that his strategy was to wage a long revolutionary war:

> Was our party right or wrong in deciding at its 7th Congress /in April 1945/ that we were willing to negotiate with the KMT provided that they changed their policy? It was absolutely right. The Chinese revolution is a long one and victory can only be won step by step.

As both sides raced to seize Japanese arms and fill the territorial vacuum, Mao directed the Northeast Bureau of the CCP to expand its holdings and use the newly-arrived 100,000 Communist troops to hold the rural areas remote from the existing centers of KMT control. Between the truce of January and June 1946, both sides took territory in Manchuria. During the whole period of the Marshall mission in late 1945 and 1946, Mao tried to disgrace Chiang politically by advocating a moderate program of "peace, democracy, and unity" while his armed forces expanded. He relied heavily on their ability to avoid decisive engagements, to prolong the stop-start fighting, and to counter-attack against small KMT units.

In the final series of negotiations of Mao's long revolutionary war, he gave priority to the goal of attaining a ceasefire and an extension of the Manchurian truce. He was also concerned in June 1946 about US aid to Chiang's forces. On the one hand, he relied on General Marshall's

mediation to gain an immediate cease-fire, to ameliorate Chiang's demands, and to state his own settlement terms. Chou En-lai, urbane and persuasive, ably discharged his task by appearing conciliatory, moderate, and reasonable. On the other hand, Mao's press and radio in Yenan criticized US policy with increasing vehemency in an effort to deter Washington from giving further aid to the KMT. By 26 June 1946, Mao demanded that the US stop all military assistance to Chiang and withdraw all US troops from the mainland; his concern with the modern equipment sent to the KMT forces had been deepened. "Let them know that whatever happens, if we are faced with mechanized war, we shall fight on if necessary with our hands and feet." (Mao's statement to Robert Payne in June 1946)

Although his armies were still numerically inferior to Chiang's, Mao issued an inner-party directive on 20 July warning his forces to prepare to smash Chiang's offensive by an all-out "war of self-defense," which required the temporary abandonment of indefensible cities and the opening of mobile warfare. Mao had no alternative but to fight against superior forces and on 19 August 1946, shortly after KMT planes bombed Yenan, Mao was impelled to drop the talking half of his dual tactic and prepare for all-out civil war, which his forces won in the straight forward contest of military strength waged between late 1946 and mid-1949.

In drawing an analogy between the Chinese civil war and the Vietnam war today, CCP propagandists emphasize the protracted nature of both conflicts and the evolution of weak into strong Communist forces. But they deliberately de-emphasize, or avoid any reference to, the talking-half of Mao's tactic and the temporary half-way station he tried to obtain. Unlike the Soviet propagandists, they insist that talking should take place only after the US withdraws its forces from South Vietnam.

B. The Korean War (1950 to 1953)

Military developments in Korea in the spring of 1951 provide a clear-cut example of the Asian Communists having been impelled to switch to the talking phase after they had been hurt in the field. That is, they viewed the large losses

of Chinese Communist Forces (CCF) combat regulars as the sufficient cause for drastically reducing the fighting phase. The military struggle was subordinated to a political "protracted struggle," the intention being to wear down Western negotiators to attain a favorable political settlement.

When, in late November 1950, the CCF entered the war in force, North Korean Peoples Army (NKPA) combat casualties were already very high, estimated by the United Nations Command (UNC) at 200,000 in addition to 135,000 prisoners. The NKPA had been virtually destroyed and never fought again above corps strength in the Korean war. The initial CCF successes against UNC forces from November through December 1950 increased the confidence of the Chinese Communist leaders that they could drive UNC forces from Korea if CCF pressure was sustained. On 22 December 1950 and again on 19 January 1951, Chou En-lai rejected a cease-fire, describing it as a means to gain "a breathing spell" for UNC forces, and demanded that prior to any halt in the fighting all foreign troops must be withdrawn from Korea, US armed forces must be withdrawn from Taiwan, and Peking's representatives must be admitted to the United Nations. As UNC forces retreated from the Yalu River, however, they took a heavy toll of CCF combat units. For example, between 27 November and 11 December, the 60,000 men of the eight divisions committed by the 9th Army Group, Third CCF Field Army, were estimated by the Marine Corps to have suffered 37,500 combat casualties, a little over half of them inflicted by ground forces and the rest by air attack. The 9th Army Group was so damaged by firepower that it disappeared from the Korean battlefield for three months. By mid-January 1951, UNC forces had stopped the CCF all along the front.

General Ridgway directed UNC forces to comply with his dictum of "inflicting maximum casualties on the enemy" rather than gaining ground. The dictum was put into practice in the months following the UNC offensive which started in late January 1951. By 9 February, OPERATION PUNCH had annihilated at least 4,200 CCF (body count) and when, on 14 February, CCF infantry for the first time in Korea attacked in mass waves, UNC forces killed thousands of Chinese at Chipyong-ni. CCF mass infantry assaults resulted in further heavy Chinese casualties on the 20th and again on the 21st with the start of OPERATION KILLER. By 1 March, the entire Chinese front south of the Han River had collapsed and UNC

units moved to within 30 miles of the 38th parallel. CCF manpower and equipment losses continued to be "heavy" after the start of OPERATION RIPPER on 7 March, and on 14 March, Seoul was retaken as CCF and small NKPA forces fell back. A series of manpower-killing advances launched by UNC and ROK units in late March and early April moved the allied forces across the 38th parallel. The ranks of the best armies--Lin Piao's 4th Field Army and Chen Yi's 3rd Field Army--which the Chinese leaders used in the first massive assault against the UNC forces had been seriously depleted. "Now the best troops are annihilated; this forced the CCF to send replacements from the 1st and 2nd field armies.... The CCF suffered high casualties and its faith in victory had been reduced." (From interrogation report of Assistant Battalion Commander, 40th Army, 4th CCF Field Army).*

General Van Fleet met the first Communist spring offensive, launched on 22 April 1951, with the manpower-killing tactics of General Ridgway, and directed his corps commanders on 30 April

> Expend steel and fire, not men.... I want so many artillery holes that a man can step from one to the other.

Because they used massed infantry assaults against concentrated US artillery, automatic-weapons, and air firepower, units of six CCF armies suffered a total of 70,000 casualties between 21 and 29 April and were forced to end their first spring offensive. Their second spring offensive was even more destructive to CCF men and materiel.

On 16 May, 21 CCF divisions, flanked by a total of 9 NKPA divisions, opened the second spring offensive along a 105-mile front using human wave tactics against strongly fortified UNC positions. Although gains of 10 to 15 miles were made along most of the front, the Communist offensive was completely spent by 21 May, and UNC forces, which had recoiled only slightly, lashed back in a major counter-offensive, depriving the Communists of the opportunity to place screening forces between their main armies and the

*The prisoner reports that are referred to in this paper are, in almost every case, the reports of prisoners captured and interrogated in March and April 1951--that is, after the collapse of the January 1951 CCF offensive and before the even more costly defeats of the spring of 1951.

UNC units. UNC counterattacks quickly carried into CCF and NKPA former assembly areas, where large quantities of supplies were captured as many dumps were overrun. By 1 June, the CCF and NKPA lost more than 102,000 men, and of the 21 CCF divisions which had initiated the offensive, 16 had suffered about 50 percent casualties. The following table, which is based on US Far East Command estimates, indicates the magnitude of the Communist losses:

Unit	Strength 16 May	Strength 22 May	Strength 1 June	% Losses
East Central Front (Main attack)				
12th CCF Army	30,000	17,000	10,000	67%
27th CCF Army	31,000	25,000	21,000	32%
39th CCF Army	20,000	20,000	19,000	5%
40th CCF Army	17,000(?)	27,000(?)	27,000(?)	0
II NK Corps	18,000	18,000	17,000	5%
V NK Corps	19,000	18,000	16,000	16%
Central Front				
10th CCF Army	24,000	24,000	23,000	4%
15th CCF Army	32,000	23,000	14,000	56%
20th CCF Army	32,000	32,000	31,000	3%
26th CCF Army	21,000	17,000	19,000	9%
60th CCF Army	31,000	27,000	14,000	55%
63rd CCF Army	29,000	22,000	15,000	48%
Western Front				
64th CCF Army	28,000	22,000	20,000	29%
65th CCF Army	29,000	22,000	18,000	38%
I NK Corps	17,000	11,000	12,000	29%
VI NK Corps	28,000	28,000	28,000	0
TOTALS:	406,000	353,000	304,000	25%

The table indicates that as of 1 June 1951, the Communists had sustained a loss of 25 percent of their total 16 May strength in Korea. From 1 to 14 June, they suffered an additional 49,000 casualties (not included in the table above).

Most of the CCF prisoners were taken during the last week of May in frantic efforts to escape, indicating that the political-control fabric of many CCF units had been shattered, primarily because large numbers of political officers and non-coms had been killed.

The combined heavy losses to the first wave field armies--i.e., the CCF 3rd and 4th--and the second wave armies--i.e., the CCF 1st and 2nd--had significantly reduced the quality of the forces which the Chinese leaders could put in the field in June 1951. Many of their best combat officers and political cadres had been killed or captured, partly because of the Maoist practice which required that they take front-line positions to lead their troops. Many political officers were killed in combat "because they spent much of their time with the men in the front line to lead the battle themselves" (from interrogation report of a private in the 125th Division, 4th CCF Field Army), and in some companies all officers including the company commander had been ordered to the front line to raise the men's "fighting spirit" (from interrogation report of the Company Political Officer in the 118th Division, 4th CCF Field Army). "The casualties among the commanders were high...because they took the lead at the front" (from interrogation report of Battalion Commander, 64th Army, 1st CCF Field Army). The massed infantry attacks--used for the first time by the CCF in Korea in mid-February 1951--facilitated the destruction: "We fought only with human wave tactics; great numbers of men have been sacrificed; it was indescribably miserable" (from interrogation report of Private, 42nd Army, 4th CCF Field Army). The Maoist doctrine of "defeating the enemy's firepower with a superiority in manpower...is a military idea which is no good... These views of mine were shared by most lower-level leaders and the men in the CCF, though they could not dare to make them public" (from interrogation of Assistant Battalion Political Officer, 40th Army, 4th CCF Field Army). "'Human wave' tactics are supposed to overwhelm the enemy's firepower with predominance of manpower and thus win the victory. From my first experience in this war, I found that this tactic had no sense and no value.... In actual combat, it was nothing but a mass loss of lives and defeat" (from interrogation report of Squad Leader and CCP member, 40th Army, 4th CCF Field Army). The quality and number of CCF cadres who were lost to the four CCF field armies probably was the sufficient cause for the Chinese Communist leaders, whose forces comprised abut 95 percent of the Communist combat units in Korea, to switch to the talking phase.

In the disastrous offensives of spring 1951, the CCF and NKPA sustained an estimated 221,000 casualties from 21 April to 16 June. By 16 June, the Chinese casualties since the CCF entered the Korean war were approximately 577,000, including roughly 73,000 non-battle casualties--mostly due to various epidemics--and 16,500 prisoners. (No data are reported here on NKPA total casualties since November 1950.)

The war was increasingly costly for the Chinese in other ways. It forced the regime to modify its program of long-range economic development and to place the economy on a war footing. The war also subjected the regime to economic sanctions imposed by the West, increased inflationary pressures, and strained economic relations between urban and rural areas. The Chinese Communists became increasingly dependent on the USSR, partly because the Chinese were unable to replace from their own resources the stocks of material being expended in Korea.

The first step toward ending the commitment in Korea was to begin negotiations for a cease-fire, the calculation apparently having been that political concessions could be gained by combining protracted talks with propaganda accusations, while the fighting was kept limited.

Following a series of statements made by American and United Nations' officials in late May and early June 1951 regarding the UNC's willingness to end the fighting without demanding a surrender of Communist forces, the Chinese Communists and the Soviets apparently decided to gain a breathing-spell. Prior to the 23 June radio speech of Soviet United Nations' delegate Jacob Malik, there apparently were no indications that the Chinese were willing to accept these Western proposals. On the contrary, the indications continued to point to Chinese intransigence. Unexpectedly, in his radio speech, Malik indicated a change in the Communist position when he avoided linking the Communists' proposal for a cease-fire to their earlier demands that the US must withdraw from Taiwan and that Peking must be admitted to the United Nations. "The Soviet peoples believe that as a first step, discussions should be started between the belligerents for a cease-fire and an armistice providing for the mutual withdrawal of forces from the 38th parallel."

The Chinese, too, were careful not to admit they had dropped preconditions. On 23 June, the Peking People's Daily frontpaged Malik's proposal without acceding to truce

talks. The Chinese did not accede to truce talks publicly until 1 July, and on 2 July they rationalized the change in their basic position without acknowledging explicitly that it had changed. The Chinese later formulated their switch to the talking phase as follows:

> After the five great campaigns /I.e., offensives from November 1950 to May 1951/, the Volunteers switched over in good time to the strategic line of "engaging in protracted warfare while conducting positive defense" and strictly subordinated the military struggle to the political struggle. (NCNA commentary of 28 November 1958)

The Chinese used the military breathing-spell to improve their impaired over-all combat capabilities. By the time the armistice negotiations started on 8 July 1951, the Chinese had improved their artillery and small-arm stores and had replaced their manpower losses while the NKPA divisions were rebuilt. Politically, they had already exploited the theme of seeking peace and of opposing American "warmongering" with considerable success, gaining face internationally and placing themselves in a favorable propaganda position as the initiators of the truce talks. They were unwilling to move the talks along to a mutually acceptable conclusion within any short period. On the contrary, they used Mao's tactic of wearing down UNC negotiators in a "protracted struggle" (Peking's phrase of 3 September 1951) in order to extract major concessions.

UNC ground advances had ended temporarily on 11 June after the ROK I Corps had taken Chorwon and Kumhwa at the base of the Iron Triangle at points about 20 miles north of the 38th parallel. All of South Korea except for a small part of the Western flank had been cleared of Communist forces enabling fortification of the UNC line in depth in an area 10-20 miles north of the parallel. The Joint Chiefs of Staff (JCS), acting on a policy position agreed upon at meetings of the National Security Council (NSC) held on 2 and 16 May 1951, informed General Ridgway not to go beyond the general vicinity of the new line. In his memoirs, President Truman depicted the NSC policy objectives for Korea as follows:

> Regarding Korea, we distinguished between the political aim--a unified, independent, democratic Korea--and the military aim of repelling the aggression and terminating the hostilities under an armistice agreement. With the fighting ended, the purpose would be to establish the

> authority of the Republic of Korea south of a northern boundary line suitable for defense and administration and not substantially below the 38th Parallel, to provide for the withdrawal of non-Korean armed forces from all of Korea, and to build up the ROK forces so as to deter or repel a renewed North Korean aggression.

Unlike MacArthur's demand for total victory and expulsion of the Communists from the North, this policy envisaged a status quo along the 38th, a North and South Korea for an interim period, and an armistice agreement ensuring the status quo. In order to impell the Communist leaders to consider entering into armistice negotiations, a series of public statements were made in May and June. On 17 May, Senator Edwin Johnson introduced a resolution into the Senate asking the United Nations to urge the belligerents to declare an armistice by 25 June along the 38th parallel, to agree to the exchange of all war prisoners, and to withdraw all foreign troops by the end of the year. Moscow news media were quick to give extensive publicity to the resolution. On 26 May, Lester Pearson, President of the United Nations General Assembly, stated that total surrender of the aggressors might not be necessary, that it would be sufficient to achieve the objective of stopping the aggression. On 1 June, Trygve Lie, Secretary General of the United Nations, stated that the time was right to stop the fighting, inasmuch as the UNC had forced the invaders back beyond the 38th parallel, which could be the approximate line of demarcation. Also on 1 June, Secretary Acheson told senators at the MacArthur Hearings that the Administration's immediate aim was ending the aggression (the complete unification of Korea being the long-term goal); he was more explicit in his statement on 2 June, declaring that if a cease-fire were arranged around the 38th parallel, "that would accomplish the military purposes in Korea." That is, the 1950 policy of complete unification of Korea and expulsion of the Communists was replaced by the more modest and less costly 1951 policy of settling for a non-Communist half in the South.

The ending of major UNC ground advances in June 1951 was a move dictated by higher American political policy. Whether major UNC advances (1) could have been sustained in drives toward the Yalu and (2) would have impelled the Communists to avoid delaying tactics at the subsequent armistice negotiations (which began on 8 July 1951) are conjectural matters. Although badly hurt, the CCF was still a fighting force; on 1 July, an estimated total of 62 CCF (40) and NKPA (22) divisions confronted 17 of the UNC under General

Van Fleet--a disparity in numbers which provided the Communists with a capability to mount a major offensive and, as a consequence, became a constant source of concern for UNC strategists. The UNC would have required an additional input of at least three divisions to consider pressing forward in further large-scale advances into areas were Communist supply lines were increasingly shorter and UNC lines were increasingly longer. It was doubtful that Van Fleet had sufficient forces to annihilate Communist forces by maneuver and encirclement. Beyond the basic military considerations, the majority of nations composing the UNC were reluctant again to advance toward the Yalu. General Van Fleet's strategic view in June 1951 was:

> Continued pursuit of the enemy was neither practical nor expedient. The most profitable employment for the Eighth Army, therefore, was to establish a defense line on the nearest commanding terrain /the KANSAS-WYOMING phase lines/ north of the 38th parallel. and from there to push forward in a limited advance to accomplish the maximum destruction to the enemy consistent with minimum danger to the integrity of the Eighth Army.

This Ridgway-Van Fleet strategy of maintaining military pressure by means of "limited advance" was the predominant feature of the remainder of the Korean war.* By 1 July, the main

*But even the policy of "limited advance" was costly. For example, UNC infantry attacks on Bloody Ridge in late August and early September 1951, which took the ridge, cost UN and ROK forces over 2,700 casualties and, according to UNC estimates, cost the Communists over 15,000 casualties. Higher losses for both sides were reported after UNC forces took Heartbreak Ridge on 13 October following thirty days of bloody fighting. This policy maintained the UNC military initiative, preventing the Communists from opening a major drive; it provided UNC negotiators with the military pressure sufficient to impell Communist negotiators in October to drop their demand for a demarcation line south of the battle line--that is, the demand for a line at the 38th parallel.

Limited UNC advances in October 1951 had inflicted on the CCF and NKPA the highest monthly total of casualties for the negotiations period and had gained important terrain, but UNC casualties in the advances were high--i.e., 40,000.

fortification of phase line KANSAS was complete and by 30 July, the lull in operations due to armistice negotiations permitted Van Fleet to fortify phase line WYOMING farther north, forming it into another main line of defense.

However, the UNC made it clear from the start--in Admiral Joy's statement at the first armistice meeting on 8 July 1951--that the Communists would not be handed a de facto cease-fire and that fighting would continue until (1) they agreed to reasonable armistice terms and (2) a military armistice commission was prepared to function.

The Communist tactic of political attrition succeeded in frustrating UNC negotiators, but it did not gain the Communists major concessions. Small-scale but sustained UNC military pressure on Communist forces in Korea in October 1951 was reflected in the talks. On 26 October, the Communists in effect dropped their demand that the demarcation line be moved down to correspond with the 38th parallel.

On the other hand, they gained a 30-day de facto cease-fire from 27 November to 27 December, enabling them to further strengthen front-line defenses and to augment unit strength. Further, pressure on their negotiators was relaxed because of a UNC concession on the matter of a permanent or temporary line of demarcation. In early November, the Communist negotiators insisted on establishing a map line of demarcation immediately rather than after the armistice was signed, but General Ridgway and the UNC negotiators opposed this demand, recognizing that a permanent line (at the line of contact) would prevent the UNC from using limited advances to pressure the Communists to get on with the task of concluding an armistice. But the JCS in Washington advised establishment of a map line of demarcation with a time limit appended. The time limit permitted invalidation, by the UNC, of the line at the expiration of a 30-day period. General Ridgway still objected that this in effect granted the Communists a de facto cease-fire for one month and that such a cease-fire would impede the UNC strategy of sustaining military pressure--i.e., pushing the line northward--to prevent further stalling at the negotiations. Ridgway was overruled and on 27 November a map line of demarcation was formally agreed on; by 27 December, the expiration of the 30-day limit, there had been no significant change on the battlefield or in the negotiations, suggesting that the Communist calculation on the premanency of the line of demarcation was proving to be correct, providing them with exemption from UNC military pressure and further time to protract the negotiations.

The Chinese desired a political victory together with a military truce, and as the talks centered on the prisoner issue, they adamantly refused to accept a political setback. The major deadlock on the matter of voluntary repatriation of prisoners prolonged the talks from April 1952 to July 1953, inasmuch as the Chinese insisted on the forcible return of all CCF (and NKPA) prisoners in order to avoid a major propaganda defeat if large numbers were to opt for the West. The Communists would not recognize the UNC stand on voluntary repatriation as a valid principle and argued that it was in conflict with the Geneva Convention which required a compulsory, all-for-all exchange. As an alternative, they calculated that if a relatively small number would resist repatriation--that is, about 16,000 of a total of 132,000 CCF and NKPA prisoners--they could tacitly agree to the UNC screening process.

Both the Communists and the UNC were shocked by the results of the screening process after about only half had been questioned. Over 40,000 of about 65,000 prisoners screened indicated that they would resist repatriation to China and North Korea, but the UNC had given the Communist negotiators an estimate of 116,000 willing to return of the total 132,000 prisoners. When, on 19 April, the Communists were informed that only 70,000 would return without the use of force, the CCF Colonel Tsai was speechless, asked for a recess, and on the following day--apparently on instructions from Peking--said that the UNC's earlier estimate of 116,000 was a far cry from 70,000. It was "completely impossible for us to consider" and "you flagrantly repudiated what you said before." Because the Communists had been stung once by the screening procedure, they indicated they would have nothing more to do with it.

Small, division-scale battles continued in the field, but the Communists were still unwilling to change the nature of the war into that of major offensive actions. The tried to deflect politically damaging charges of inhumanity on the prisoner issue by launching a concerted propaganda campaign, accusing the US--starting in late February 1952--of waging "bacteriological warfare" in North Korea and Manchuria. More importantly, Communist-instigated riots in the POW camps were intended to undercut the UNC position on voluntary repatriation by discrediting the entire screening process. In the POW camps, the Communist soldiers shifted their responsibilities from military to political goals. Close coordination was established between the POW camps and the

Panmunjom truce talks. On 20 May 1952, after forcing a contrived confession of "compulsory screening" from General Dodd, who had been held prisoner by the prisoners of the Koje-do camp, chief negotiator Nam Il charged that

> The commandant of your prisoner-of-war camp could not but confess before the whole world your inhuman treatment and murderous violence against our captured personnel, and the criminal and unlawful acts committed by your side in screening and re-arming war prisoners by force. (emphasis supplied)

The Communist negotiators adroitly used the Koje-do incident to discredit the UNC figures and insisted that they obtain 132,000 prisoners in exchange for 12,000 prisoners held by them on the principle of an all-for-all exchange and forcible repatriation. Neither side conceded, and at the recess of talks on 26 July 1952, a year of negotiation had produced an estimated 2,000,000 words of discussion and nearly 800 hours of formal meetings. The prisoner issue was the only remaining agenda item.

On the battlefield, a military stalemate continued. Mao had confronted the US with his limited-risk protracted war. He apparently believed that Washington would continue to avoid pressing for an all-out military victory because of the manpower losses such a victory would require. By July 1952, CCF and NKPA ground forces strength had almost doubled since the start of the talks in July 1951--from 502,000 to 947,000. He also apparently believed that he could deter the US from initiating airstrikes against the China mainland because of Washington's uncertainty regarding Stalin's reaction to such strikes.

While Stalin lived, Communist negotiators at Panmunjom refused to retreat from their demand for forcible repatriation. New Delhi's efforts to smooth the way for a compromise were rejected when Foreign Minister Vishinsky on 24 November 1952 and Chou En-lai on 28 November 1952 attacked the Indian resolution on repatriation as unacceptable. Mao, too, remained adamant into 1953, declaring that "however many years American imperialism prefers to fight, we are ready to fight it..." (speech of 7 February 1953). Stalin had raised East-West tensions to a high level, and Mao was prepared to sustain those tensions.

On the battlefield, small-unit actions continued in localized struggles for hill positions and, although the Communists had taken losses in October 1952 that had cut their estimated total strength from 1,008,900 to 972,000 at the end of the month, their total began to climb slowly again in November as fighting tapered off. Both sides made the same calculation, namely, that a major offensive would lead to a very high casualty rate but not a military breakthrough.

The death of Stalin (5 March 1953) permitted the development of an entirely new attitude among the Soviet leaders toward East-West tensions in general and toward concluding an armistice in particular.* Moscow now appeared to be more anxious to negotiate a quick end to the war than did Peking. Soviet statements in March following Stalin's death were more conciliatory toward the West than those of the Chinese. Chairman of the Council of Ministers Malenkov stated on 15 March that "there is no disputed or unresolved question that cannot be settled peacefully by mutual agreement of the interested countries." For the first time since the end of World War II, Moscow Radio on 21 March admitted that the US and Britain had played a role in winning a "common victory" over the Axis powers. This followed Foreign Minister Molotov's unexpected agreement on 18 March to intercede with the North Korean leaders to obtain the release of 10 British diplomats and missionaries interned in North Korea since the start of the war. A further indication of the change in the Soviet attitude was Malenkov's depiction of the Korean war as a "defensive" operation in his 17 March message to Kim Il-sung on the anniversary of a Soviet-Korean agreement. Significantly, it differed from a similar message to Kim in 1951, when Stalin had described the war as a "struggle for liberation of the

*The death of Stalin provided the Soviet leaders with the opportunity to jettison Stalin's more senseless and unproductive positions and to use methods of flexibility in diplomacy --such as a variety of goodwill gestures and a diminution of doctrinal hostility to Western governments. Stalin was concerned about the international situation leading to a general war, but for reasons of doctrinal obsessions and personal prestige, he refused to moderate the Soviet attitude toward the West and toward neutrals, and refused to make concessions on important international issues dividing the West and the Communist bloc.

fatherland," in which any cease-fire would be conditioned on the withdrawal of US forces from Korea.

Three days after Chou's return from talks with the post-Stalin leadership in Moscow, the Communists unexpectedly agreed to a routine UNC offer for an exchange of sick and wounded prisoners which General Clark had reiterated in his letter of 26 February. In suggesting that the exchange of the sick and wounded might be the first step leading to the "smooth settlement of the entire question of prisoners of war, thereby achieving an armistice in Korea for which people throughout the world are longing," the Communists indicated on 28 March a new and real interest in solving the last crucial problem blocking a cease-fire agreement. This was the first indication that the Chinese might be willing to make a concession on repatriation.

But Mao waged a protracted political struggle as he prepared to make his retreat on forcible repatriation as small as possible. The Chinese used ambiguous and face-saving language in an effort to hold a series of fallback positions, which they surrendered only after it was clear the UNC would insist on the voluntary principle. An ambiguous proposal by Chou En-lai on 30 March--that both sides

> should undertake to repatriate immediately after the cessation of hostilities all those prisoners of war in their custody who insist upon repatriation and hand over the remaining prisoners of war to a neutral state so as to ensure a just solution to the question of their repatriation (emphasis supplied)--

left unclear the matter of final disposition of prisoners who were unwilling to return to China and North Korea. The Chinese propagandists described Chou's proposal as a "procedural concession," which it was, as the point that prisoners who were unwilling to be repatriated should be handed over to a neutral country represented a Chinese retreat. Chou had been deliberately vague in not stating Chinese demands for forcible repatriation, but Chinese propaganda returned to the demands by insisting on the principle of total repatriation by way of a neutral state. That the Chinese had made a concession in fact while insisting on the principle to cover their retreat is indicated by the statement of the senior Soviet member of the UN Secretariat, Kassaniev, who told a member of the Norwegian delegation on 30 March that Chou's declaration on prisoners was "the real thing" and that only "technicalities" remain to be worked out.

The UNC appraised this concession as indicating no change on the substantive matter of voluntary repatriation, and they pressed the Communists to clarify their position on where screening would take place, on its duration, and on whether the voluntary principle would be part of a cease-fire agreement. After manipulating the language of their counter-proposals throughout April, on 7 May the Communists made two more key concessions. They dropped the requirement that no repatriates should be sent physically to a neutral state and reduced the explaining period from six to four months. Finally, on 4 June, the Communists' chief negotiator, Nam Il, using language designed to conceal the Chinese capitulation on forcible repatriation, stated that "according to the application of each individual, those who elect to go to the neutral nations shall be assisted by the Neutral National Repatriation Commission and the Red Cross Society of India." That is, men who refused to return to the Communist countries could reach non-Communist countries through the channel of a neutral-nations commission stationed in Korea, if explanations failed to persuade them to return home. In this way, Mao accepted voluntary repatriation in a disguised form. His propagandists stated that ex-prisoners may go to "neutral states," without making it clear that they were in fact free to go wherever they chose.

Mao was anxious to still extract a degree of political prestige before the cease-fire agreement was signed. Face-saving offensives were launched in June and July by the Communists to achieve several objectives: (a) to move the line farther south, (b) to give ROK forces a bloody-nose in order to convince Rhee that his forces could not "March North," and (c) to convince international opinion that the CCF and NKPA were not weaker than UNC forces and that the Communist motive in seeking an armistice was not that of avoiding military defeat. Although suffering heavy losses between April and July 1953--an estimated total of 134,412--there were over one million CCF and NKPA forces in Korea, well-fed adequately clothed, and effectively supported by massed artillery by the time of the signing of the armistice on 27 July.

Mao's capitulation on the principle of forcible repatriation--a capitulation which provided the West with a major propaganda victory--apparently stemmed from several major considerations.

1. One was pressure from the post-Stalin leadership. The Soviet leaders were clearly anxious to consolidate their

internal position and to relax international tension. They were alert to the harder policy taken toward the China mainland by the new administration of President Eisenhower. Neither the Soviet nor the Chinese leaders could be certain that the new administration would keep the war limited in the event that truce talks remained deadlocked. Chinese apprehension over the possibility of an attack, or at least a series of substantial raids, from Taiwan was reflected in the resumption of recruiting in Shanghai in February and March 1953 and in defense activity along the south China coast. Implicit warnings from U.S. officials that Washington would not accept an indefinite deadlock and Secretary of State Dulles' explicit statement to Nehru on 22 May--viz., if a truce could not be arranged, the U.S. could not be expected to continue to refrain from using atomic weapons--further increased Communist apprehensions. They were also aware that in the spring of 1953, the U.S. had moved atomic missiles to Okinawa. The post-Stalin leadership desired to move a greater distance from the brink of involvement in the Korean war than Stalin had believed necessary; they were unwilling to risk an escalation on the battlefield which might well have provoked extension of U.S. airstrikes to the China mainland.

2. Mao could perceive no further advantage in continuing the limited war. He was aware that the talking phase--i.e., the war of political attrition, intended to reduce the staying power of the UNC on the voluntary repatriation issue--had failed. The blackmail accusations--that is, American "warmongering" and "bacteriological warfare," which were components of the talking phase--had not forced a UNC concession. His plan of attrition, requiring policy critics in non-Communist countries to soften up the leaders of enemy governments (while policy critics in the Communist countries were effectively eliminated), did not provide him with the advantage he calculated would be decisive in inducing a major retreat. Despite his efforts during the talking phase, the UNC prevailed on the issue of repatriation, announcing on 21 July that 69,000 Koreans and 5,000 Chinese would return to Communist control, but 7,800 Koreans and 14,500 Chinese would be non-repatriates. (Earlier, on 18 June, Rhee had released 25,000 Korean prisoners.) Obviously, these figures represented a political embarrassment to his regime which the new Soviet leaders had to convince him to accept.

3. Mao wanted to get on with the job of industralization. Although political and economic conditions in China and North Korea probably were not exerting compelling pressure on the Communists to conclude an armistice in the summer of 1953, the war was probably viewed as injurious to long-term economic development programs. Political controls had been increased in China during the war and the economic strains on the Chinese were probably less severe in the spring of 1953 than they had been in 1950 and 1951. But Mao was anxious to begin China's First Five-Year Plan of economic development, and the North Koreans were aware that they would have to start virtually from scratch to rebuild.

To sum up, Mao moved into the talking phase in Korea because his best field armies had suffered very heavy losses and were retreating under UNC military pressure. He apparently viewed the enormous loss of human lives with revolutionary callousness, but was forced to draw back because the military capability of his armies had been greatly reduced. When confronted with the UNC's demand that no prisoners should be forced to return to Communist control, he engaged in a "protracted struggle" in the hope of forcing a major concession from the Western powers by combining division-level battlefield pressure with political wearing-down tactics. But he decided to end the Chinese commitment when UNC persistence and Soviet pressure convinced him that further intransigence was purposeless and even harmful to the mainland's economic construction.*

*Total casualties for the CCF and NKPA for the entire war--i.e., from June 1950 to July 1953--were estimated to be 1,500,000, including prisoners of war. In the same period, the UNC casualties were 500,000, of which US losses were 142,019--33,629 dead, 103,284 wounded, and 5,178 missing or captured.

During the longest period of deadlocked negotiations on any one issue--that of repatriation of prisoners, which extended from April 1952 to July 1953--CCF and NKPA casualties were estimated to be over 250,000, while those of the UNC were about 125,000.

C. Vietnam (1953 to 1954)

Near the end of the Korean war, Viet Minh prestige was steadily increasing, and its military successes and organizational effectiveness bolstered Ho Chi Minh's confidence that he could attain a decisive military victory. He was determined therefore, to prosecute the revolutionary guerrilla war more actively and felt under no real compulsion to move toward the talking phase of his long-term effort against the French. On the other hand, lack of French military success and increasing domestic political pressure to reduce or close out the commitment in Indochina made a succession of French premiers and cabinets pessimistic about ever attaining a military decision over Ho's forces.

Even after General Navarre assumed command in Indochina on 8 May 1953, the French were unable to revise their losing strategy in the field despite a much touted (but never implemented) plan for mobile warfare drawn on paper. The force of 150,000 Vietnamese regulars, 50,000 Vietnamese auxiliaries, 15,000 Laotians, and 10,000 Cambodians that Navarre commanded proved unable to take over effectively the job of static defense, so Navarre was impelled to fall back on the old losing policy of tying down and dispersing French and French Union regulars to defend a series of key strongpoints. Out of a total of 175,000 regulars and about 55,000 auxiliaries, there were only seven mobile groups and eight parachute battalions--the equivalent of three divisions--that were not assigned to immobile, defensive duties.

In contrast, the Viet Minh was not tied down to static defense and with about 125,000 regulars, 75,000 full-time regional and provincial troops, about 150,000 part-time guerrillas--in short, the operating equivalent of nine regular divisions--moved freely through the countryside and chose the place to attack the enemy forces. For example, strong Viet Minh guerrilla elements together with two Viet Minh divisions sufficed to contain the 114,000 regular French Union forces in the Tonkin Delta. The Viet Minh skill in guerrilla warfare and in infiltrating into areas under French control seriously reduced Navarre's ability to take the offensive.

While the French were cursed with the necessity of defending a number of politically important but militarily unimportant points, Navarre was also under political restraint from Paris. Because of domestic criticism of the war in

Indochina, the French government had directed its commander in the field to incur the fewest possible number of French casualties. The Viet Minh, on the other hand, was receiving strong support, both military and political, from its allies. The armistice in Korea had enabled Mao to increase significantly his aid across the southern China border to Ho's forces, strengthening their unit firepower and overall military capability. All along, Viet Minh regular forces in northern Indochina continued their gradual evolution from lightly armed guerrilla bands to a regularly organized military force with Chinese and Soviet equipment.

For all these reasons, Ho clearly preferred a complete military victory and gave no indication that he would be willing to attain less in a negotiated settlement than his forces could seize on the battlefield.

The post-Stalin Soviet leadership, however, viewed a softer policy toward East-West military conflicts as a necessary element in their long-range effort to dissolve the Western alliance in Europe. They tried to temporize on every major East-West difference in order to increase pressure against the US by its allies for a relaxation of trade controls, for great power negotiations, and for delays in rearmament and in European integration. The Soviet leaders calculated that such pressures and frictions would progressively reduce the West's capability for united action, as witness Malenkov's statement of the Soviet strategy in his speech of 8 August 1953:

> If today, in conditions of tension in international relations, the North Atlantic bloc is rent by internal strife and contradictions, the lessening of this tension may lead to its disintegration.

This strategy formed the basis of the Soviet campaign of negotiations, the pivotal slogan of which had been set forth by Malenkov in his statement that "there is not a single controversial or unsettled question which could not be solved by peaceful means on the basis of mutual agreement of the interested countries." (Speech of 15 March 1953) But Ho apparently was unwilling to end the war for Soviet political interests, and Moscow was impelled to make a distinction between the need to settle the Korean war and the need to continue the Indochina war.

Shortly after Stalin's death (5 March 1953), the Soviet leaders had made a distinction between the Korean war, which should be settled, and the Indochinese fight for "national independence," which should continue. (Pravda article of 11 April 1953) They insisted that the Soviet Union cannot be expected to "retard the liberation movement" of colonial peoples. (Pravda editorial of 25 April 1953) But the Soviet leaders also tried desperately to deny that their position on Indochina cut across their "peace policy" and seized upon and quoted with approval Churchill's remark that the Viet Minh offensive into Laos was not necessarily a Soviet-inspired move "inconsistent with the attitude of the Soviet government," and suggested that the chances for mutual understanding between East and West would be improved if other Western leaders would recognize the real causes of the "liberation movements." (Pravda editorial of 24 May 1953) Ho made it clear to the Soviet leaders, who did not have the influence with him that they had had with Kim Il-sung, that the distinction between the peace movement and the Indochina war must be maintained.

Ho was also aware of the demoralizing effect that French political disputes were having on French troops in Indochina and almost certainly viewed this development as improving Viet Minh chances in the field. The French military initiative in Indochina was constantly being tempered by political considerations in Paris, and on 9 June 1953, a senior French official in Saigon stated privately that the confused state of French politics and the political issues involved in handling the Indochina war were complicating General Navarre's task of restoring morale and confidence in the French officer corps. The Viet Minh continued to insist inflexibly on the hard-line demand that the basic condition for negotiations was the complete withdrawal of French troops. By late July 1953, they had gained effective control over more than half of the Tonkin population and were believed to have the military capability to occupy the entire delta.

The signing of the Korean armistice in late July 1953 provided the Soviet leaders with the opportunity to maneuver actively for a negotiated settlement of the Indochina war. During the first two weeks after the armistice, Moscow's statements directed in large part to the French, established the line that the Korean truce demonstrated the "victory of negotiations over force" and that this has given a "new stimulus" to the struggle for a peaceful solution to the "dirty war" in Indochina. Whereas prior to the truce, Moscow

had attacked suggestions for East-West negotiations concerning Indochina, by mid-August 1953 it was quoting with approval demands in the French press for a "Panmunjom" in Indochina. By contrast, Viet Minh broadcasts in mid-August 1953 warned that the armistice must not affect the continuation of the war against the French, who will not seek an armistice "in a short time," and that "we must wage a protracted struggle... intensify our fighting so as to annihilate more enemy troops; this is the only way to compel the enemy to accept peace in Vietnam."

As the Soviet leaders began to maneuver for a negotiated settlement, they acted to impress the Chinese leaders with the political benefits which would accrue to China in the event of high-level talks. They gave increasing prominence to the big-power status of the Peking regime and declared that "serious current problems" in Asia could not be resolved without Chinese Communist participation. (Soviet note to the Western powers of 4 August 1953)

The Chinese, who had been working for several years to gain wider recognition as the only legitimate government of China, welcomed this Soviet line. Indicating that the Chinese Communist position was closer to the Soviet position, their delegate to the World Peace Council called for "step by step negotiations" on East-West issues. (Speech of 15 June 1953 by Kuo Mo-jo) On 2 September, Peking specifically cited the Indochina issue as one which could be solved "only by applying the principle of negotiated settlement."

By late summer, the Soviets had begun to contact important French officials privately. These Soviet initiatives were made at a time when Ho was still resisting the concept of negotiations: the "French...and American propaganda campaign," which has the "semblance of peace," is advanced in the "vain hope of weakening the will of our people, who ask only to fight...however painful and long." (Ho Chi Minh speech on 2 September 1953) Ho continued to insist on a "protracted struggle," inasmuch as his forces had not been hurt in the field. On the contrary, in the fall of 1953, Viet Minh military capabilities were at a new high point as a result of the marked increase in Chinese aid, the relatively light casualties suffered during the previous campaign season, and the excellent state of its intelligence regarding French troop dispositions and tactical plans.

The attitude of the Viet Minh leaders at the time is further confirmation of the generalization that the Asian Communists have been unwilling to begin the talking-phase of their dual tactics at a time when they are militarily in an advantageous position and have not suffered high casualties in the field.

French operations to counter expanded Viet Minh guerrilla warfare in the southern Tonkin Delta area had met with very limited success in October 1953 and at the cost of heavy casualties. After an area was "cleared" by the French, the Viet Minh reappeared quickly and Navarre's men, like those of Salan, his defensive-minded predecessor, were tied down and dispersed in a static defense of provincial crossroads waiting for the Viet Minh to come at them again in the night. As the French waited for the Viet Minh fall offensive, reliable reports indicated that they had only four battalions in their mobile reserves in Tonkin and that their military position was "grave." The Viet Minh was aware of this French weakness through a Viet Minh source which was believed by American officials to have penetrated the French high command.

As certain French cabinet officials and many members of the National Assembly increased their demands that Premier Laniel and Foreign Minister Bidault move to end the costly war by negotiations, Ho apparently was brought under increasing pressure from Moscow and Peking to agree to enter the talking-phase of the Viet Minh effort in Indochina. Quoting Izvestiya in its Vietnamese-language broadcast of 24 September, Moscow Radio declared that there exists no international misunderstanding which could not be settled peaceably.

[redacted] the French government was convinced that France could not win the war in Indochina any more than the US could win the Korean war. [redacted] Ministry spokesman who indicated to American officials that the only way France saw of ending the war lay through a negotiated settlement with the Viet Minh.]

[redacted] On 10 October, Chou En-lai accepted the US proposals for a meeting to discuss the time and place for the Korean political conference, and Peking's propaganda continued to point to the need to settle international problems through peaceful means.

Ho was clearly reluctant to switch to the talking-phase, but because of Soviet and Chinese pressure as well as domestic pressure on the French government to agree to bilaterals, he apparently believed that even a hedged offer to talk would improve his international prestige without hindering Viet Minh military initiatives. In their note of 26 November to the Western powers, the Soviet leaders had indicated their desire to prepare the way for a five-power East-West foreign ministers' conference at which Communist China would be present, and they apparently insisted that Ho should at least appear to be less adamantly against talks with the French than he had been. (Politburo member Truong Chinh had declared on 25 September 1951 that peace negotiations would be "illusory" and that the French would have to be expelled as a necessary condition of peace, and Ho personally stated on 2 September 1953 that "We know that only resistance, however painful and long it may be, can give us victory and restore peace to us.")

When, in late October 1953, Ho began to bring his position a step closer to that of Peking and Moscow, he accepted the principle of negotiations but insisted on the practice of continuing military methods to gain a settlement satisfactory to the Viet Minh. He conceded through his spokesmen that "every international problem can be settled by negotiations" (28 October) and that "to stop the Vietnam war through negotiations is completely necessary and also possible" (23 November). But in his reply to questions posed by the Stockholm paper, Expressen, Ho on 29 November in effect demanded a complete French surrender. He asked the French to begin bilateral negotiations by making a peace proposal--which Ho was only prepared to discuss--to stop fighting, to recognize the Viet Minh regime, and, by implication, to withdraw from Vietnam. Ho implied that, in return, he might not continue his war until the Viet Minh gained a complete military

victory.* Actually, he continued to fight, and despite some displays of French aggressiveness, the military initiative was with the Viet Minh, whose forces in late November 1953 included divisions so disposed as to permit attacks against northwest Tonkin, against the northwest corner of the delta, or against Laos.

Ho's hedged proposal of 29 November was a three-pronged exercise of considerable political skill. It (1) advanced the Soviet and Chinese "peace offensive," (2) further isolated the Laniel government from the National Assembly and the French press, and (3) revived and deepend Vietnamese distrust of the French, who were viewed as being at the brink of a "pacifist trap" and who might decide against a greater military effort in the field. At the same time, Ho had his own paramount interest to protect, namely, winning a complete military victory, and in the first Viet Minh comment on his proposal, it was made clear to Moscow and Peking that peace could be attained only through "prolonged" military struggle and that the Viet Minh had no illusion that peace could be easily won. (Viet Minh news agency broadcast of 7 December 1953)

In France, Premier Laniel, supported by Foreign Minister Bidault, rejected immediate negotiations with the Viet Minh in the illusory hope that future negotiations could be attained on more favorable terms after military successes in the field.

Ho's generals continued their highly successful strategy of dispersing French forces in static defense positions while moving into areas of their own choosing. When, in early December 1953, General Navarre made the recently captured Dien Bien Phu a strongpoint to prevent moves into northern Laos, some Viet Minh forces began to move artillery into the surrounding area and, in late December, other Viet Minh forces swept southward into central Laos.

This invasion of Laos by the Viet Minh was treated cautionsly by Moscow and Peking, who muted reports of the new development in their commentaries and stressed the demand for

*Ho stated that "if the French government wishes to have an armistice and settle the question through negotiations, we will be ready to meet the French proposal."

an end to the war. The Soviet leaders, who were searching desperately for "proof" that Ho really intended to negotiate, centered their commentaries on this proposal of 29 November. "The recent statement by President Ho Chi Minh on his preparedness to examine a French proposal on an armistice, should such a proposal be made, constituted striking proof of the peaceful intentions of the Democratic Republic of Vietnam." (Moscow Radio commentary of 10 January 1954) While initiating little independent comment, Peking continued to rebroadcast foreign statements alleging that only US pressure prevented Paris from seeking an end to the Indochina war.

By contrast, the Viet Minh generally avoided the matter of a negotiated settlement and reminded its forces that real peace could be won "only by pushing forward the armed struggle and by dealing deadly blows at the enemy until he is compelled to demand negotiations." (Viet Minh radio broadcast of 24 December 1953) By mid-January 1954, when at least six battalions of Viet Minh were maintaining pressure on French forces in central Laos and more than 18 battalions were blocking all avenues of exit from Dien Bien Phu and bringing in artillery for the siege, the divergence between Ho, on the one hand, and the Soviet and Chinese leaders, on the other, remained clear-cut and reflected his reluctance to enter the talking-phase when his forces were consolidating portions of northwest Tonkin. By insisting that Paris submit a formal proposal for talks to the Viet Minh, Ho had placed the onus for avoiding negotiations on the French government, which continued to equivocate on the issue.

His forces held the initiative throughout Indochina as the result of widespread simultaneous offensive actions by the time the four-power Berlin conference convened on 25 January 1954. The drive into northern Laos of an estimated 12,000 Viet Minh troops, continued encirclement of Dien Bien Phu, the capture of small French posts in southern and central Laos, and extensive harassing operations in the Tonkin Delta forced a further overall dispersal of French regular forces. On 3 February, the American army attache in Saigon reported that staff thinking and procedures at French headquarters were of the "1935-39 vintage" and that Navarre's strategy was identical to that of the defense-minded Salan. Navarre tied up 12 battalions of regular troops at Dien Bien Phu, only to be by-passed by the Viet Minh, who had moved into portions of Laos but had not been engaged even where the

French had a three-to-one advantage. French patrolling from strongpoints was "the exception rather than the rule," reflecting apparent instructions from Paris to Navarre that he must conduct a "minimum-casualty holding action" with a view to eventual big-power negotiations.

As domestic pressure to end the war increased on the French government in the absence of victories in the field, two alternatives to bilateral negotiations with the Viet Minh were considered: (1) an international negotiated settlement or (2) "internationalization" of the war through UN--i.e., American--involvement. Regarding (1), well before the fall of Dien Bien Phu, French government officials and army staff officers regarded an international negotiated peace as the inevitable solution to the war. In February 1953 they prepared for negotiations at Geneva. Regarding (2), almost all French spokesmen vigorously had opposed internationalization of the conflict and, largely for fear of giving a pretext for Chinese intervention, they continued to rebuff firmly any suggestion that American troops would be necessary.

The Communists hit hard at the possibility of American involvement in responding to speculation in the Western press, reflecting their own calculation that the increasing Viet Minh initiatives in the field might impel "direct intervention" by Washington. One of Molotov's chief aims at the Berlin meeting in agreeing to the Geneva conference was to block any possible increase in American military assistance to the French. The Chinese Communists, satisfied with the Berlin agreement as a first step in gaining general acceptance by the international community, warned that increased American involvement in Indochina was making the issue of Geneva more complicated. Ho Chi Minh expressed his concern when, on 3 March, he accused the US of "another step" toward direct intervention in "allowing the American air force to participate" in the Indochina war.

Soviet plans to end the war by a negotiated settlement at Geneva included a move to convince Ho that important international prestige could be derived from entering the talking-phase of his military effort in Indochina. Pravda on 8 March attacked Foreign Minister Bidault's public statement that it was not necessary to invite Ho's representative to Geneva and insisted that "it is impossible to solve the Indochina problem without considering the lawful right of her people." As Soviet propaganda continued to

press for Viet Minh participation at Geneva, Ho was provided a clear insight into his prospective political gains: unprecedented international prestige, intensification of French-Vietnamese frictions, demoralization of French forces in the field, and reduction of the risk of direct American involvement in the war. Nevertheless, he clearly preferred bilaterals with the French (in order to prevent US pressure on Laniel to remain intransigent) and considered attendance at a multilateral conference would reduce his position of strength. He finally agreed, however, to multilaterals.

Moscow and Paris began to set forth their positions before the Geneva conference was convened. [On 4 March, a Soviet embassy official in London told American officials that if the US and France object to an amalgamation of the Vietnam and Viet Minh administrations, "they can agree to a division along the 16th parallel." This first Soviet comment on Geneva suggested that] Moscow was the most active advocate of partition which would deprive the French of the heavily populated, strategic Tonkin Delta and open the way for Viet Minh control of the whole country. Premier Laniel set forth the French position publicly on 5 March by calling for the complete withdrawal of all rebel troops from Laos and Cambodia, establishment of a neutral zone around the Red River delta, and withdrawal of all Viet Minh troops from that area. He was aware that these terms would be unacceptable to Ho, as was later conceded by the Foreign Ministry official who formulated them in order to forestall any Viet Minh offers for bilateral negotiations before Geneva. Rumors in Paris of direct French-Viet Minh contacts were not confirmed, and on 9 March, the Geneva alternative enabled Laniel to resist pressure for immediate bilateral talks with the Viet Minh.

All the while, Viet Minh tactical capabilities were continuing to improve, particularly with respect to anti-aircraft artillery and heavier infantry weapons acquired from China. Each succeeding campaigning season left the French occupying fewer outposts and the Viet Minh spread over larger areas of the intervening countryside.

Before entering the talking-phase of the Indochina effort, Ho apparently decided to demonstrate Viet Minh strength in the field. He made a major military move for political reasons; on 12 March, Viet Minh battalions hit strongpoints at Dien Bien Phu. He was willing to accept high losses--from 4,000 to 5,000 killed and wounded out of a total of 40,000 troops by 15 March. He was also willing to depart

from Viet Minh military tactics by hitting a major strongpoint without the element of surprise. Though the size and timing of the attack were anticipated, however, the Communist assault did incorporate one major factor for which the French were not prepared; the massive and extensive use of artillery. Communist possession and employment of artillery in itself provided a major element of surprise and rendered invalid the French tactical assumption, on which planning for the defense of Dien Bien Phu had been based.

In early April during the siege, Ho indicated to the pro-Communist newsman Wilfred Burchett that the French situation at Dien Bien Phu was hopeless. Ho placed a helmet upside down on a table, and compared the helmet's rim to the hills around Dien Bien Phu, saying: "They shoot up and we shoot in." He apparently calculated that loss of Dien Bien Phu would reduce Vietnamese army morale, already lowered by talk of an imminent truce; seriously discredit the "new" strategy of Navarre; give the Viet Minh a tremendous boost in prestige immediately prior to the Geneva conference, thus increasing the incentive for defection by Vietnamese nationalists; and increase French domestic pressure for direct negotiations with his representatives.

As Laniel and Bidault parried domestic demands for direct French - Viet Minh negotiations, they were also subjected to increasing Soviet pressure before the Geneva conference began.

Moscow and Peking were anxious to disparage American foot-dragging and used Secretary Dulles' speech on 29 March, in which he suggested that the West should take "united action" to prevent a Communist seizure of Indochina, to spur Paris into bilaterals. They were particularly fearful that the American preference for the French to fight would stiffen Bidault further at Geneva and make French concessions more difficult to extract from him there, flanked by Secretary Dulles. They were also concerned about American statements regarding eventual if not immediate involvement: Pravda on 11 April claimed that the real target of US threats was China, and the Peking People's Daily declared on 21 April

that "faced with armed aggression, the Chinese people will certainly not refrain from doing something about it." On 28 April, Chou En-lai made another noncommittal deterrent statement: the Chinese "most emphatically will not tolerate aggression against us by any country" and the US is looking toward a "new world war."

The series of assaults on Dien Bien Phu throughout April indicated that Ho intended to take the strongpoint even at a very high cost. Despite murderous losses, which in late April and early May were variously estimated at about two divisions (about 18,000 men), Ho's forces continued to attack in intermittent phases. Their estimated strength was about 20,000 infantry plus some 9,000 supporting troops, as compared with less than 10,000 French Union Troops. There were 134,000 French and Vietnamese regulars in the Tonkin Delta, but the greater part of this number was still tied down in static defense, leaving the relatively few mobile units to counter the increased Viet Minh activity.

By the start of the Geneva conference on 27 April 1954, the overall military situation in Indochina and the particularly serious situation at Dien Bien Phu had provided Ho, and his Soviet and Chinese partners, with a position of considerable strength to use to offset American warnings about possible internationalization of the war. Soviet officials privately made various suggestions for a settlement --such as partition, nation-wide elections, and an immediate cease-fire. Calculating that the French would be more amenable to some sort of partition than to a coalition government, Soviet diplomats on the opening day of the conference privately suggested to American officials that the idea of partition would meet China's requirement that its southern border should be buffered by a Communist regime.

The Soviet-Chinese effort to soften up the French on the issue of partition was made in the face of the opposition of Ho, who like Bao Dai, claimed sovereignty over all Vietnam. [redacted]

(S)

At the Geneva conference, the Viet Minh delegate, Pham Van Dong, tried to use military developments in Indochina as a backdrop in demanding major French concessions. Dien Bien Phu fell on 7 May, with Viet Minh losses estimated at about 21,000, of which about one-half were killed, and French Union losses of about 18,000 men. On 10 May, Pham Van Dong set forth maximum conditions in the form of an eight-point resolution, the main points of which were political which were linked with military provisions for a cease-fire: French recognition of the independence of the three Indochinese Communist-sponsored states, withdrawal of "foreign troops," elections in each state, and a total cease-fire involving occupation by each side of unspecified areas, no reinforcements, and a mixed control commission. Partition was not mentioned. By tying the French-desired cease-fire to political concessions, the Viet Minh put themselves in the position of using the military weapon to extract a French political retreat.

When a conference deadlock was threatened by French determination to deal with military matters first (i.e. to effect a cease-fire) and Viet Minh insistence that political and military questions be dealt with together, Chou En-lai and Molotov, playing major negotiating roles, moved adroitly to avoid any impasse that could be used by the US as an excuse for intervention in the fighting. [In his major speech of 14 May, Molotov had explicitly rejected the French terms for an armistice because Bidault's formula did not deal with political questions. However, at the secret session on the 17th, he conceded that military questions could be discussed first. Chou En-lai also retreated; in a private conversation with Eden on 20 May, he stated that the military and political aspects of any Indochina settlement must be dealt with separately, with priority for a cease-fire. These concessions strongly suggested that neither Moscow nor Peking desired protracted talks; they undercut Viet Minh intransigence and policy to prolong the talks.]

Ho calculated that negotiations could continue together with the fighting for some time without leading to American involvement. A Viet Minh commentary of mid-May seemed to be directed at reminding the Chinese and Soviets that there was no pressing need to end the war:

> We still remember the Korean lesson which taught us that one could negotiate and fight at the same time ...for two years.

Ho was clearly determined to protract the talking-phase to gain as much territory of Vietnam, Laos, and Cambodia as the French were willing to concede. As the Viet Minh augmented its forces in the Tonkin Delta with units from the Dien Bien Phu operation, helping to compress French-controlled areas there, Ho's delegate at Geneva apparently was instructed to insist again on political concessions in exchange for a cease-fire. He hardened the Communist position, which Molotov and Chou En-lai had been making increasingly more flexible.

Pham Van Dong on 25 May insisted on French political concessions before agreeing to end the fighting. He linked any cease-fire prospect with arrangements for "Khmer Isserak and Pathet Lao," the Communist-contrived regimes in Cambodia and Laos, and in effect denied that military and political questions could be separated. Dong also took a hard line on the Soviet-Chinese concept of partition, proposing the "readjusting of areas under control of each state...taking into account the actual areas controlled, including population, and strategic interests." Inasmuch as Chinese Communist maps showed the Viet Minh as holding most of Vietnam, about half of Laos, and parts of Cambodia, the Viet Minh proposal was a demand for considerable territory--more than its units held on the ground.

On 29 May, however, an agreement was reached to have representatives of both commands meet at Geneva to study the disposition of forces prior to a cease-fire. Molotov and Chou apparently were the prime movers on the Communist side in making this concession. Moscow and Peking, whose policy was centered on splitting the Americans from the French and preventing a system of alliances from forming in Asia, were apprehensive regarding the demands of French military leaders and some Laniel cabinet members that the US enter the war. Accordingly, Molotov and Chou worked hard to attain some kind of agreement at Geneva and to prevent an abortive conference from leading to internationalization of the war. Militarily, Ho was keeping up the pressure: a captured Viet Minh document of late May 1954 directed Viet Minh commanders in the Tonkin Delta area to continue their harassing and guerrilla activities for an unspecified period "pending commitment of the battle corps."

[told Ambassador Heath in Geneva that he favored partition as a solution at about the 16th parallel--i.e., at about the line suggested by the Soviets earlier.

The negotiations took a new turn as the Laniel government tried to survive the National Assembly debate on Indochina which began on 9 June. On the preceding day, the Communists indicated that they would use the weakened government position to gain their maximum demands; Molotov returned to a hard line, similar to that of Pham Van Dong as set forth on 10 May. Molotov demanded independence for Vietnam, Laos, and Cambodia, free elections in these states, and withdrawal of all foreign troops. He seemed to believe that the Laniel government would either move toward the maximum Communist position or be replaced by a government pledged to negotiate an immediate end to the war, and on 9 June, a Soviet Pravda writer told an American journalist in Geneva that no progress on Indochina was possible until after the French government crisis was resolved.

EO 12958
3.4(b)(1)>25Yrs
EO 12958
3.4(b)(6)>25Yrs
(S)

[redacted] On 12 June, the Laniel government fell, losing the vote of confidence in the National Assembly after the debate on the war; on 18 June, Pierre Mendes-France took over as the new Premier, and he promised to close out the fighting by 20 July.]

In the military conversations between the French and the Viet Minh in Geneva, the latter asked for direct control of about three-fourths of Vietnam, half of Laos, and much of Cambodia. In the field, General Ely stated privately on 15 June that the military situation in the Tonkin Delta was precarious and that French and Vietnamese troops were "very, very tired." The Viet Minh maintained a capability for a full-scale attack on the delta.

The ever-present prospect of American involvement again impelled Molotov and Chou to keep the conference alive with small concessions. On 16 June, Molotov tried to break the deadlock over the composition of the international truce supervisory commission, and on the same day, Chou made a settlement proposal which implied withdrawal of Viet Minh forces from Laos and Cambodia. Under pressure, Pham Van Dong also suggested postponement of a political settlement for those two states. Thus by the time the Geneva conference terminated its Korea phase and temporarily adjourned,

the Soviets and Chinese seemed to have moved back in effect to a position envisaging a partition of Vietnam and a neutral Laos and Cambodia. When Pierre Mendes-France took over as the new Premier pledged to seek an end to the war before 20 July, the road was opened to a final settlement.

EO 12958 3.4(b)(1)>25Yrs
EO 12958 3.4(b)(6)>25Yrs
(S)

[redacted] Regarding Laos and Cambodia, Chou said that all foreign forces, including the Viet Minh, should be withdrawn and that there must be no American bases in either state. When the new French Premier complained that the military staff talks between the French and Viet Minh at Geneva had been stalled for several days because of Viet Minh intransigence, Chou agreed to intervene to speed the talks. During the conference recess, Chou, in discussions with Nehru in late June in New Delhi, apparently set forth a partition plan.

Chou then moved to apply pressure on Ho to drop his demands for retaining troops in Laos and Cambodia and for a partition line as far south as the 14th parallel. He met with Ho at Nanning on the China-Vietnam border in early July, on his return from India and Burma, to discuss with him the terms for a final settlement. A clear sign that Chou had insisted that Ho give some ground in the intransigent Viet Minh position appeared in the remark made by the Chinese deputy foreign minister [redacted] on 8 July: Chou had had a "very good meeting" with Ho, the results of which "would be helpful to the French." When the Viet Minh tried again at the reconvened conference to gain permission to retain their troops in Laos and Cambodia and to settle on the 14th parallel, Mendes-France complained to Chou that this was unacceptable and out of accord with Chou's position. Chou replied that both sides must make concessions, with the Viet Minh making the larger. On 13 July, following Chou's statement to the French Premier, Pham Van Dong changed his position and told Mendes-France that he was prepared to compromise on the 16th parallel. The French still preferred a line between the 17th and 18th parallels, and rejected Viet Minh demands for control of some part of Laos and elections in all three Associated States.]

EO 12958 3.4(b)(1)>25Yrs
EO 12958 3.4(b)(6)>25Yrs
(S)

The final settlement on 20 July indicated that the Viet Minh had retreated on three points. They accepted the partition of Vietnam (they had insisted on "unity" of Vietnam) and with the line at the 17th parallel (they had wanted the 14th); they agreed to withdraw from areas south of that line in Vietnam and from all of Laos and Cambodia; and they accepted July 1956 as the date for national elections--a two-year delay contrasting with their demand for only a six-month delay.

Pham Van Dong had come to Geneva with the apparent expectation that the Viet Minh's increasingly strong military position in the field would enable him to extract considerable concessions from the French to open the way for Communist forces to further penetrate Laos and Cambodia and consolidate everything above the 14th parallel in Vietnam. But Soviet and Chinese pressures, stemming from larger policy considerations and fear of American intervention, frustrated this hope for maximum French concessions. Although Ho perceived certain advantages in ending the military phase--that is, his forces could take territory by political subversion and, therefore, his effort would be less costly in terms of manpower and safer in terms of non-involvement by the US--he had not expected to have to make so many political concessions. These concessions were later viewed by him and his lieutenants as a major mistake. His forces had not been badly hurt in field, as the Chinese armies had been in Korea in the spring of 1951 when Mao moved to the talking-phase of the Korean war. He probably was concerned about the prospect of US intervention, but Moscow and Peking were clearly more concerned about the consequences to their policy of internationalization of the war. He was in a position to negotiate from strength and to do so for a long time--"two years" as his radio declared in mid-May 1954--but he found himself caught in a Sino-Soviet political web and was persuaded not to use his growing military capability to force major concessions.

[French military and intelligence officials agreed that Viet Minh forces in the delta following the fall of Dien Bien Phu were capable of launching a damaging full-scale offensive, but it never took place. In mid-July, one Communist journalist stated that he assumed Chou had pressed Ho to keep the fighting at a low boil when the Geneva conference was in its last phase. The Chinese indicated their national interest in settling the fighting-phase when, on 23 July, one of their journalists at Geneva declared privately: "We have won the first campaign for the neutralization of all Southeast Asia," the implication being that only]

[Thailand was a probable area for the establishment of an American base. Chou in late July, after the Geneva agreements were concluded, stated on two occasions that Asian states must work out their "own" security arrangements, and Pravda on 22 July emphasized that the area will not be permitted to join any "aggressive groupings."]

[By contrast, the North Vietnamese leaders were far less categorical in praising the Geneva conference agreements.] Pham Van Dong declared at the closing session on 21 July that the problem of Vietnamese unification remained: "We shall achieve this unity, and we shall achieve it just as we have won the war." This contradicted the Pravda statement on 22 July that Vietnamese independence had been "won." On 22 July, Ho renewed his exhortations for a "long and arduous struggle" and declared that the division of Vietnam was only a temporary and transitional arrangement: "Central, South and North Vietnam are all our land, and our country undoubtedly will be unified, the compatriots throughout our country will certainly be liberated." [The Viet Minh ambassador in Peking, Hoang Van Hoan acknowledged to Indian correspondents on 22 July that despite the strong military position of the Viet Minh, it had to compromise on several vital points, notably the timing of elections (put off for two years), the question of French troop withdrawal, and the location of the temporary demarcation line at the 17th parallel, in order to secure peace in Vietnam.] The leaders of the "Resistance Government Khmer and Pathet Lao," repeated Ho's view that the agreements are but a "first step" and called for a long, hard struggle.

Neither Moscow nor Peking revived propaganda support for these resistance phantom-governments. Moscow made little effort to describe the agreement on Vietnam as "temporary" or to stress that portion of the conference declaration disclaiming any intent to permanently partition Vietnam; that is, the Soviet leaders were satisfied with partition. Peking stressed its own new international prestige and the boost to the cause of "collective peace in Asia" provided by the agreements, which were a manifestation of Chou's five principles as declared jointly with Nehru, U Nu, and Ho.

To sum up, the Soviet and Chinese leaders induced Ho to enter the talking-phase of the Indochina war because:

1. It was a major problem which stimulated Western defense efforts and threatened to make a mockery of the

"peace offensive" designed to impede these efforts. Soviet policy in Europe, devised to produce schisms and paralysis in France and to split Britain from the US, required that an end be brought to this war, just as the Korean war had been removed as a defense-stimulating conflict.

2. Peking as well as Moscow feared that any further military advances in Indochina by the Viet Minh might have led to the formation of a strong anti-Communist alliance including some of the previously uncommitted Asian states.

EO 12958 3.4(b)(1)>25Yrs
EO 12958 3.4(b)(6)>25Yrs
(S)

[redacted]

3. With the example of Korea before them, the Chinese and Soviet leaders could not ignore the possibility that a continued offensive in Indochina would greatly increase the risk of Ameridan intervention and a global war. They preferred a far lower level of risk, namely, political subversion carried out by the Viet Minh. They "paid off" Ho by continuing (in violation of the Geneva agreements) to supply military equipment to make his army a modernized fighting force.

The developments in 1953 and 1954 have influenced the attitude of Ho and his lieutenants toward the current war. The clear awareness that they had been impelled, primarily by Moscow and Peking, to stop at a half-way station on the road to total military victory in Vietnam, apparently has made them very reluctant to stop half way again.

D. Implications for Vietnam Today

It is impossible to exaggerate the importance of this historical lesson for Ho. It sustains his hostility toward any suggestion that he again stop at a half-way station on the road to control of all Vietnam. [redacted]

[redacted]

(S)

[redacted] Only through full and unconditional independence can we achieve stability....We are determined to continue to fight until we achieve total victory, that is, military and political, and the Americans leave and accept our four points. (emphasis supplied)

The Chinese leaders, too, apparently believe that they had made a mistake in pressuring Ho to stop at a half-way station in 1954. Chou En-lai told a visiting youth delegation on 1 January 1966 that

> China will continue her absolute support of Vietnam. To tell the truth, I personally signed the Geneva agreement and I regret that my having done so is causing trouble for our comrades in Vietnam. I am not going to be deceived by the American peace campaign this time.

Actually, it was the Soviet-Chinese (not the "American") peace offensive that required an end to the war, and Molotov was Chou's partner in persuading Ho to make concessions to the French.

Ho is now in a stronger position to reject any Soviet suggestions that he should close out the fighting, and Soviet influence on him is as strong or as weak as Moscow's positive support for the war. That is, when Moscow avoided involvement (i.e., when Khrushchev decided to stand clear of providing important political and military aid to Hanoi), Soviet influence was at an all-time low. On the other hand, when Moscow incurred a degree of commitment (i.e., when the post-Khrushchev leadership decided to supply Hanoi with military aid and political support against the US), Soviet influence increased. However, it will never be as great as it had been in 1954.

The Chinese leaders have helped to make this impossible. In contrast to 1954, they are now the opponents, not the partners, of the Soviets. Ho's militancy is bolstered by Mao's support, which itself stems from special personal requirements. That is, Mao is personally far more pretentious than Ho--as witness the current irrationalities of the Mao cult in China--and with increasing neuroticism insists that his unique doctrine of "people's war" should legitimatize his claim to be the successor of Lenin and Stalin as the "leader of the international Communist movement." Unlike Ho, whose sights are centered on his own national war, Mao

has a larger anti-Soviet doctrinal point to make: protracted small wars are effective in all under-developed areas and must be the main strategy against the US.

Mao has a considerable personal stake in proving to active doubters--namely, the Soviets, the East Europeans, the neutrals, and even men in his own party and military establishment--that his principle of protracted small war will work against the superior American military capability anywhere. Vietnam is the main proving ground for this thesis. [Chou En-lai told [redacted] members on 7 January 1966 that if the Vietnamese Communists continue their military operations

E0 12958

E0 12958
3.4(b)(6)>25Yrs
(S)

> they will make the Americans admit their defeat and drive them out....The most important thing ...is to prove this by actual deed. Unless we defeat the enemy, we will not be believed. (emphasis supplied)]

Any sign, therefore, from Hanoi that Ho is willing even to consider the matter of negotiating a cease-fire or a cessation of US air strikes against the North before a total withdrawal of American troops occurs is criticized by Peking. For example, using a double-edged statement, intended for neutrals and for the North Vietnamese, Chou En-lai on 2 September 1965 warned that: "As long as the US does not withdraw its troops, it can carry on endless talks with you so that it may hang on there indefinitely." (emphasis supplied) [That this was a clear warning to Hanoi is suggested by the fact that Chou made the statement [redacted] at the North Vietnamese embassy in Peking.]

E0 12958
3.4(b)(1)>25Yrs
E0 12958
3.4(b)(6)>25Yrs
(S)

Despite the constant concern of the Chinese leaders that Ho might agree to negotiations before US troops are withdrawn from the South, Ho continues to assign a high priority to prolonging his reactivated war. He and his lieutenants have absorbed Mao's own view on protracted civil war. When, in December 1936, Mao said that "to wage a revolutionary war for ten years, as we have done, might be surprising in other countries," he was rejecting modern Western and Soviet military doctrine on quick-decision ("impatient") war. He made his point emphatic in June 1946, noting that the Spanish civil war was "fought for three years, but we have fought for twenty years." Ho declared on 17 July 1966 that

The war may still last 10, 20 years, or longer. Hanoi, Haiphong, and other cities and enterprises may be destroyed, but the Vietnamese people will not be intimidated.

EO 12958
3.4(b)(1)>25Yrs
EO 12958
3.4(b)(6)>25Yrs
(S)

[redacted]

Ho apparently believes that he can continue the war primarily because, despite losses in the North and South, he is still able to put forces into the South and to supply them for operations. On the other hand, the Maoist doctrine he has absorbed has a strong ingredient of opportunism. That is, there is no fixed principle that determines when and in what situation negotiations or a cease-fire should be accepted. The deciding factor is a very practical consideration--namely, inability to keep fighting. In the event that US air strikes were to continue to increase his problems, his willingness to negotiate a cessation of the strikes would not be blocked by any doctrinal consideration. The Chinese leaders apparently are aware of the ever-present prospect that Ho might view negotiations as a means to gain a breathing-spell from US pressure and are attacking not only the matter of talks before a total American withdrawal but also the matter of talks to attain a suspension of air strikes against the North.

Despite the constant concern of the Chinese, the cessations of bombing in May 1965 and in December-January 1966 failed to budge the North Vietnamese from their adamant opposition to negotiations because the U.S. had not yielded to their basic demand: that Washington make a unilateral public pledge--prior to negotiations--to withdraw from the South and also (a theme introduced in summer 1965) provide some proof that it would do so. An important political consideration in Hanoi's advancement of this line was the need for deception--that is, the need to commit Washington to a declaration of surrender while pretending that the demand for such a declaration was reasonable. Euphemistic language was used to conceal the fact that the demand was simply for surrender. The North Vietnamese did not, therefore, demand a "surrender" expressly, but rather called on

Washington to "recognize" or "accept" the four points (as set forth on 8 April 1965). Following American military inputs in July 1965, Hanoi became even more unreasonable, and even more frequently demanded that the U.S. "carry out" or show by "actual deeds" that it recognized these points and would abide by them. Further, toward the end of the second suspension of bombing, Ho went beyond the demand for proof of U.S. acceptance of the four points to the demand that Washington negotiate with the Liberation Front and stop bombing forever and "unconditionally." In this way, Ho tried to deflect the appeals of Western and neutral leaders for the commencement of negotiations, and to neutralize the effects of the important American political weapon (the cessation of bombing) which had revealed Hanoi as the real recalcitrant opposed to negotiations. In short, Hanoi's position since January 1966 has been more adamantly opposed to negotiations than it had seemed to be previously.

THE EFFECTIVENESS OF THE ROLLING THUNDER PROGRAM IN NORTH VIETNAM* 1 JANUARY-30 SEPTEMBER 1966

The Rolling Thunder air offensive against North Vietnam has been accelerated sharply in 1966, compared with operations in 1965. The 59,000 attack sorties flown in the first nine months of 1966 against targets in North Vietnam were about 2.3 times the 1965 effort; the 90,000 tons of ordnance dropped was 2.6 times the ordnance delivered on targets in 1965. The 1966 air operations have also been carried out more efficiently than the 1965 campaign. The average bomb load per attack sortie has increased, and the rate of aircraft losses has been some 58 percent of the 1965 rate.

In spite of these improvements, it is estimated that the cost effectiveness of the air campaign diminished in 1966. The direct operating cost of inflicting a dollar's worth of damage in North Vietnam has increased by about 28 percent -- from an estimated $6.80 in 1965 to about $8.70 in 1966. The major determinants of this decrease in cost effectiveness have been the far greater proportion of attack sorties accounted for by armed reconnaissance strikes (as opposed to initial strikes on fixed targets) and the geographic concentration of the air effort against logistic targets in the southern areas of North Vietnam, principally Military Region IV.

By the end of 1965, a growing scarcity of fruitful fixed targets outside of sanctuary areas, as well as other operational restrictions virtually forced a continually increasing emphasis on armed reconnaissance. This trend was temporarily interrupted by the strikes against major petroleum storage installations, which began late in June 1966. Strike sorties against JCS fixed-target systems dropped from more than 30 percent of

* This memorandum was produced by CIA. Aside from the normal substantive exchange with other agencies at the working level, this memorandum has not been coordinated outside CIA. It was prepared by the Office of Research and Reports and was coordinated with the Office of National Estimates, the Office of Current Intelligence, and the Special Assistant for Vietnamese Affairs; the estimates and conclusions represent the best judgment of the Directorate of Intelligence as of 3 November 1966.

the total sorties flown in 1965 to less than 3 percent in 1966. Armed reconnaissance sorties increased by over 230 percent, from about 17,300 sorties in 1965 to 57,300 in 1966. Almost two-thirds of these -- 37,000 sorties -- were directed at the southernmost areas of North Vietnam, the Panhandle section south of Vinh.

The air campaign over Laos shows similar emphasis on the attempted interdiction of the infiltration network into South Vietnam. Attack sorties flown under the Barrel Roll and Steel Tiger programs increased from 11,000 sorties in 1965 to about 38,000 during the first nine months of 1966. Ninety-five percent of the attack sorties flown in Laos in 1966 were on armed reconnaissance missions.

The major measurable effects on North Vietnam of Rolling Thunder attacks are:

(1) About 20 percent, or 70,000, of the total military forces are engaged directly in defensive programs and countermeasures against the Rolling Thunder program. About 220,000 full-time and 100,000 part-time workers have been diverted to repair, reconstruction, and dispersal programs in North Vietnam and Laos. In 1965 and 1966, from 25,000 to 35,000 persons are tentatively estimated to have been casualties of air attacks in the North.

(2) Physical damage to economic and military targets has also increased. This damage amounted to $65 million in 1965 and an additional $95 million in the first nine months of 1966. Of the latter total, over 70 percent represented damage to economic targets.

Despite the increased weight of air attack, North Vietnam continues to increase its support to the insurgency in South Vietnam. The Rolling Thunder program has not been able to prevent about a threefold increase in the level of personnel infiltration in 1966. The external logistic support needed to maintain the expanded VC/NVA force in South Vietnam has been adequate. In particular, despite the neutralization of the major petroleum storage facilities in the North, petroleum supplies have continued to be imported in needed amounts.

Taking a broader view, during the course of the Rolling Thunder program the North Vietnamese capability to support the war effort has improved.

(1) The capacity of the transportation system, at least as it affects the ability to handle the flow of men and military supplies to South Vietnam, has been increased.

(2) The sizable manpower drain has peaked, unless there is a sharp increase in estimated VC/NVA manpower losses in South Vietnam or a radical change in the nature of the air campaign against North Vietnam. In 1965 and 1966, North Vietnam had to mobilize 80 percent of its physically fit males as they reached draft age. Subject to the assumptions just delineated, this levy could be as low as 50 percent of the 1967 class.

(3) Aid from the USSR and Communist China received in 1965 and 1966 has amounted, in estimated value, to about five times the total damage caused by Rolling Thunder attacks.

The fact that a large share of the imports now flowing into North Vietnam is not military aid but machinery and equipment seems particularly significant. On the one hand, it reflects a willingness of the major Communist powers to provide additional equipment for war-related industrial facilities, probably encouraged by the fact that the modern industrial sector of the North Vietnamese economy has been largely off-limits to air attack. On the other hand, it suggests that adequate reserves of skilled manpower, electric generating capacity, and other essential inputs are available on a significant scale for conversion to a war-supporting role. While this new emphasis accelerates the ability to support military operations in the short run, it does postpone Hanoi's long-run plans for the development of heavy industry.

Nor has Rolling Thunder served visibly to reduce the determination of Hanoi to continue the war. We see no signs that the air attack has shaken the confidence of the regime, and with increased Soviet and Chinese aid to bolster its capabilities, North Vietnam in the short term, at least, will apparently take no positive step toward a negotiated settlement. In any event, it is estimated that Hanoi will continue to be insistent on a cessation of the bombings as a prerequisite for negotiations. Analysis of popular attitudes in North Vietnam indicates a continued firmness in support of the regime's policies. Although the long-term effects of the war may have some wearying effect on the population, there is no evidence

that it has yet reached a point sufficient to deter Hanoi's leaders from their present policies.

Finally, the course of the air campaign in 1966 has had no significant effect on the attitudes of third countries. From the resumption of the bombings in January 1966 to the escalation represented by the bombing of the petroleum storage facilities, third-country attitudes have been, predictably, relatively constant. The unyielding attitude of the North Vietnamese, particularly during the January bombing pause, has had a somewhat sobering impact on some third countries. Indeed, the escalation against POL storage facilities produced a reaction more restrained and less critical than had been anticipated. Among Communist third countries, the USSR and the Eastern European countries would prefer a negotiated settlement because they regard a continuation of the war as potentially dangerous to themselves and in any case as posing an awkward dilemma for them within the Communist world. The Chinese Communists, however, remain adamant in their attitudes toward the war and any steps leading toward a negotiated settlement.

Over and above the measurable effects discussed in the foregoing, the Rolling Thunder program has certain intangible aspects such as enemy morale and determination which are much more difficult to assess. The Rolling Thunder program has been the object of much neutralist criticism and the target of a concerted Communist diplomatic and propaganda campaign. In one sense, this must serve to stiffen Hanoi's back; at the same time, the program has become one way Hanoi probably measures US determination -- though the extent of US commitment on the ground conveys this determination far more persuasively. Moreover, the Rolling Thunder operation carries some threat of further escalation, and in this way may exert a certain worrisome pressure on Hanoi. On the other hand, if Rolling Thunder were to be terminated at this point without concessions, the United States would be deprived of one form of leverage against Hanoi which it now has.

I. The Rolling Thunder Attack in January-September 1966

A. Scale of Operations

During the first nine months of 1966, US/GVN forces flew nearly 59,500 attack sorties against North Vietnam.* Of this total, the United States flew 58,700 sorties and the Vietnamese Air Force (VNAF) the remaining 800. The combined effort represents an increase of approximately 130 percent over the nearly 26,000 attack sorties flown against North Vietnam in all of 1965. As shown in Table 1, the air attack on North Vietnam in 1966 represents a larger share of the total attack in Southeast Asia than it did in 1965. The number of attack sorties flown in South Vietnam, on the other hand, represents a smaller share of the total number of attack sorties in Southeast Asia in 1966 than it did in 1965.

Attack sorties specifically flown as initial strikes or restrikes on fixed targets from the target list of the Joint Chiefs of Staff (JCS) have become very rare. In 1965, such sorties accounted for nearly 30 percent of all attack sorties flown against North Vietnam, and armed reconnaissance sorties accounted for approximately 70 percent. In 1966 the share of fixed target attack sorties not involving any armed reconnaissance had shrunk to 0.6 percent, with armed reconnaissance sorties accounting for 99.4 percent. This change was a continuation of a trend already under way in the latter months of 1965, when, in comparison with previous levels, fixed target sorties declined both absolutely and as a share of the total attack on North Vietnam. The decline undoubtedly reflects the diminishing number of new fixed targets available for attack, broadened authorization for armed reconnaissance, and, at least in part, a change in definitions used. Restrikes on JCS fixed targets were also carried out by armed reconnaissance sorties. Including these restrikes on armed reconnaissance, about 1,600 sorties, or somewhat less than 3 percent of the total number of attack sorties on North Vietnam, were directed against JCS targets.

B. Ordnance

During the first nine months of 1966, approximately 90,000 tons of ordnance were delivered on North Vietnam, or about 2.6 times the

* Attack sorties include: strike, flak suppression, armed reconnaissance, and air interdiction.

Table 1

Attack Sorties by US/GVN Forces in Southeast Asia
During 1965 and January-September 1966

Area	Force	1965 Number of Sorties	1965 Percent	January-September 1966 Number of Sorties	January-September 1966 Percent
North Vietnam		25,890	20	59,494	28
	US	25,276		58,696	
	VNAF	614		798	
South Vietnam		96,549	72	121,388	55
	US	73,412		97,299	
	VNAF	23,137		24,089	
Laos	US	10,819	8	38,291	17
All areas of operation		133,258	100	219,173	100
	US	109,507		194,286	
	VNAF	23,751		24,887	

tonnage delivered in 1965. The amounts delivered on North Vietnam during the early months of the year were much smaller than in the later months. The total for the three-month period January-March was only 12,795 tons, whereas 16,342 tons were delivered in July and 17,333 tons in August. The amount delivered in August was equal to approximately 50 percent of the total delivered on North Vietnam in 1965.

The total ordnance tonnage delivered by air in Southeast Asia, however, has remained fairly constant throughout the year. It was a little over 38,000 tons in January and had increased to over 44,000 by August. As indicated in Table 2, during the early months of the year, when the tonnage delivered on North Vietnam was small, the tonnage delivered on Laos was relatively large. In the spring and summer the tonnages delivered on Laos decreased as the tonnages delivered on North Vietnam increased. Deliveries on targets in South Vietnam have remained relatively constant.

Table 2

Ordnance Delivered by Air in Southeast Asia

Month	Country			Total
	North Vietnam	Laos	South Vietnam	
January	273	13,918	23,869	38,060
February	4,780	10,878	21,783	37,441
March	7,742	8,983	24,093	40,818
April	9,037	9,287	18,921	37,245
May	7,556	7,126	18,080	32,762
June	10,963	4,519	19,025	34,507
July	16,342	2,358	23,182	41,882
August	17,333	1,435	25,590	44,358
Total	74,026	58,504	174,543	307,073

During the first nine months of 1966 the average ordnance load per attack sortie against North Vietnam was a little more than 1.5 tons per sortie -- a slight increase over the 1.4 tons per sortie averaged in 1965. In July 1966 the average load was 1.9 tons, approximately the same as the average load per bomber sortie flown by US Air Forces against Germany in World War II. In August 1966 the average load per attack sortie flown against North Vietnam was 1.6 tons.

C. Aircraft Losses

A total of 228 planes, including support as well as attack aircraft, were lost during the nine-month period January-September 1966. All were US aircraft. The ratio of total losses to attack sorties was about 0.38 percent in 1966, compared with a ratio of approximately 0.65 percent in 1965. This is equal to an average loss of a little more than 3.8 aircraft per 1,000 attack sorties in 1966, compared with a loss of 6.5 aircraft per 1,000 attack sorties in 1965. Losses, by model, of fixed-wing aircraft in 1965 and 1966 are compared in Table 3. Losses as a percent of total sorties flown by models of aircraft most used either remained the same or declined.

Table 3

Losses by Model of Fixed-Wing Aircraft
During 1965 and January-September 1966

D. Cost Effectiveness of Operations Against North Vietnam in 1966

The value of the aircraft lost on sorties against North Vietnam in 1966 may be estimated at about $480 million, on the basis of average costs for production models of the types of aircraft lost. A preliminary estimate of the sortie overhead costs for the attack sorties and for the accompanying support sorties is about $200 million. If the ordnance mix in 1966 was about the same as in 1965, the cost of the ordnance delivered by sorties against North Vietnam in 1966 may have been in the

neighborhood of $150 million. On this basis, the direct operating cost (excluding manpower losses) of the aerial attack on North Vietnam during the first nine months of 1966 may be estimated at about $830 million, as follows:

	Million US $
Aircraft losses	480
Sortie overhead costs	200
Ordnance costs	150
Total	830

A preliminary estimate of the damage done to North Vietnam by the aerial attack is about $95 million. Thus the cost of one dollar's worth of damage to the DRV may be estimated at roughly $8.70. This is an increase of about 28 percent above the estimated cost of $6.80 per dollar's worth of damage in 1965. The increase in cost per unit of damage has been caused by loss of planes of more expensive models, by the increased sortie overhead costs resulting from flying a larger number of sorties, and by the fact that many of the most attractive targets were destroyed in 1965.

II. Target Systems Attacked in January-September 1966

A. Fixed Targets

1. General

The Rolling Thunder attacks during January-September 1966 continued trends that were well defined by the last quarter of 1965. The growing scarcity of fruitful fixed targets which were eligible for attack by the criteria of Rolling Thunder forced a continually increasing emphasis on armed reconnaissance missions and a consequent decline in the number of fixed target strikes. Although 125 fixed targets were struck in 1965, most of the 1966 counterpart effort was in restrikes of these targets. Only 25 new fixed targets were struck in the first nine months of 1966 (see Table 4). Attack sorties flown against JCS fixed target systems dropped dramatically in 1966, compared with 1965. In 1965, about 30 percent of total attack sorties were flown specifically as fixed-target sorties. In 1966, including both fixed-target sorties and restrikes of fixed targets on armed reconnaissance sorties, only somewhat less than 3 percent of total attack sorties were directed against JCS fixed targets. (See Table 5.) Nevertheless, the effectiveness of fixed-target strike attacks, measured in terms of damage costs, more than doubled. Damage directly attributable to airstrikes on fixed targets rose from $5,000 per sortie in 1965 to $11,000 per sortie in 1966. The principal cause of this rise undoubtedly is the concentration of the attack effort on high cost target systems such as powerplants, bridges, and POL storage areas. Strikes on these three target systems accounted for over 60 percent of the fixed target program thus far in 1966, whereas they comprised only 24 percent of the effort in 1965. Other factors, such as the reduction in average strike size, may have contributed to the rise in fixed-target strike effectiveness, but it is apparent that target selection is the key element.

Strikes on military installations included in the JCS fixed-target system accounted for only 40 percent of the total fixed-target strike sorties in 1966. The major portion of this program consisted of restrikes on targets already hit in 1965, and, in general, these attacks produced damage of lower economic cost than those directed against industrial targets.

2. Electric Power Targets

Despite the destruction of about one-third of North Vietnam's electric power industry by US airstrikes, the loss is not yet large enough to have an important impact on the economy. The effectiveness of the strikes has been reduced by carrying out strikes against targets of small economic significance.

Table 4

Comparison of Rolling Thunder Strikes
on Major Fixed-Target Systems:
1965 and January-September 1966

JCS Fixed Target System	Number Targeted	Number of Targets Struck: Struck 1965	Restruck Jan-Sept 1966	New Strikes Jan-Sept 1966
Barracks/supply depots/ ammunition depots	106	64	46	11
POL storage	13	4	4	7
Powerplants	20	6	6	1
Manufacturing and explosives plants	1	1	0	0
Airfields	11	4	3	0
Bridges	61	44	42	6
Radar and communications installations	5	2	0	0
Total	217	125	101	25

US airstrikes against North Vietnamese powerplants have resulted in the neutralization of an estimated 59.000 kilowatts (kw), or 32 percent, of a total installed generating capacity of 187,000 kw. The total cost of damage inflicted is estimated to be $11.5 million. During 1965 there was a total of 21 strikes and restrikes against six Vietnamese powerplants. The cost of damage inflicted is estimated to be about $6.3 million, and the total capacity put out of service amounted to 47,000 kw, of which 24,000 kw was put back into service by March 1966. During 1966 there was a total of 12 strikes and [illegible]trikes against five powerplants. The cost of damage in 1966 is estimated to be about $5.2 million, and the amount of capacity neutralized was about 12,000 kw, plus another 24,000 kw of capacity destroyed that probably would have gone into service during 1966. The following tabulation presents details of the air strikes during 1966:

Powerplant	Date of Air Strikes	Estimated Cost of Damage (Million US $)	Capacity Out of Service
Uong Bi (JCS 82)	18 Apr 66	Negl.	24,000 kw. Put back in service July 1966.
	28 Apr 66	Negl.	No known additional damage.
	11 Aug 66	4.4	24,000 kw put back in service was again neutralized; 24,000 kw being installed was also neutralized.
	14 Aug 66	Negl.	
	17 Aug 66	Negl.	
Thai Nguyen (JCS 82.16)	Between 6-8 Jul 66	0.8	12,000 kw out of 24,000 kw put out of service.
Viet Tri (JCS 82.17)	Prior to 19 Jul 66	Negl.	Probably not out of service more than a few days.
Thanh Hoa (JCS 82.1)	22 Sep 66	N.A.	Restoration under way but estimated not to have operated since summer 1965.
	23 Sep 66	N.A.	
	23 Sep 66	N.A.	
Ben Thuy (JCS 82.11)	23 Oct 66	N.A.	Restoration under way but estimated not to have operated since summer 1965.
	26 Oct 66	N.A.	

During 1966, most of the strikes (7 out of 12) took place in the northern part of the country, while the majority of the strikes (17 out of 21) during 1965 occurred in the south. Two single strikes against the Thai Nguyen and Viet Tri powerplants and five restrikes against the Uong Bi powerplant all were in the north. The remaining missions were accounted for by five restrikes against the Ben Thuy and Thanh Hoa powerplants in the south, both of which were initially put out of operation in the summer of 1965.

The 11 August 1966 strike against the Uong Bi powerplant rates as the most effective single strike against a North Vietnamese powerplant, severely damaging and putting out of service 24,000 kw that had been in service and another 24,000 kw that was almost ready for operation. Total cost of damage resulting from this strike alone was about $4.4 million. Loss of the plant denies North Vietnam the use of its largest and most efficient powerplant for at least one year.

Table 5

Comparison of Rolling Thunder Strike Sorties
on Major Fixed-Target Systems:
1965 and January-September 1966

Ordnance in Tons

JCS Fixed-Target System	1965	Jan-Sept 1966	Total
Barracks/supply depots/ ammunition depots			
Sorties	4,291	272	4,563
Ordnance	7,299	337	7,636
POL storage			
Sorties	128	400	528
Ordnance	120	480	600
Powerplants			
Sorties	229	50	279
Ordnance	370	47	417
Manufacturing and explosives plants			
Sorties	28	N.A.	28
Ordnance	90	N.A.	90
Airfields			
Sorties	421	91	512
Ordnance	330	85	415
Bridges			
Sorties	1,713	565	2,278
Ordnance	3,198	856	4,054
Radar and communications installations			
Sorties	15	N.A.	15
Ordnance	20	N.A.	20
Naval bases, railroad yards, and ports			
Sorties	1,875	222	2,097
Ordnance	1,373	327	1,700
Total			
Sorties	8,700	1,600	10,300
Ordnance	12,800	2,132	14,932

Airstrikes against powerplants during 1966 generally appear to be more effective than in 1965. In terms of capacity put out of operation, each strike averaged some 2,240 kw in 1965 compared with only 1,000 kw in 1966. In value terms, the cost of damage averaged about $300,000 for each strike in 1965 and $430,000 in 1966. However, if the strikes for both years are weighed in terms of long-range effectiveness, the above comparisons are misleading. Accounting of the damage to the Uong Bi powerplant makes a significant difference. If all the capacity put out of operation at Uong Bi is counted in 1966, including the amount being installed which was destroyed, then average capacity put out of operation per strike in 1965 amounts to 1,095 kw, as against 5,000 kw per strike in 1966. The comparison in value terms would not change.

3. Petroleum Storage Targets

US airstrikes against JCS-designated petroleum storage target systems have destroyed almost 80 percent of the pre-strike capacity of 129,110 tons. Almost three-fourths of this destruction was achieved during 1966 when 59 air strikes were flown against petroleum storage targets, compared with only 9 strikes in 1965. The following tabulation summarizes the air campaign against petroleum storage targets during 1965:

JCS	Name	Capacity 1965 Beginning	Capacity 1965 End	Number of Strikes
42	Phu Van	840	0	1
50	Vinh	8,000	1,180	5
51.12	Nam Dinh	11,020	0	2
51.16	Phu Qui	7,560	0	1
Total		27,420	1,180	9

Destruction of JCS petroleum storage targets during the first nine months of 1966 was as follows:

JCS	Name	Capacity a/ 28 June	Capacity a/ 25 October	Number of Strikes
42	Phu Van b/	0	0	0
48	Haiphong	40,620	4,330	3
49	Hanoi	30,620	0	1
50	Vinh	1,180	1,180	12
51	Nguyen Khe	7,500	6,680	10
51.1	Ha Gia (Phuc Yen) b/	9,910	9,910	0
51.11	Bac Giang	2,260	1,560	4
51.12	Nam Dinh b/	0	0	0
51.13	Do Son	2,860	1,430	14
51.14	Viet Tri	1,400	40	8
51.16	Phu Qui b/	0	0	0
51.17	Duong Nham	4,130	0	7
51.18	Can Thon (Kep) b/	1,210	1,210	0
Total		101,690	26,340	59

a. Tons of average petroleum.
b. Not struck to date in 1966.

The effects of neutralizing most of the major petroleum storage facilities have been largely offset by the development of an elaborate system of resupply and dispersed storage sites. The North Vietnamese have been able to maintain petroleum imports at almost normal levels by a combination of movement of petroleum overland from China, the lightering of 10,000-ton Soviet tankers, and, more recently, the use of small 4,000-ton Soviet tankers delivering petroleum from the Soviet Far East.

Difficulties in distributing petroleum internally have been noted, but they do not appear to be sufficient to cause other than highly local transportation difficulties or to interfere with the logistic resupply of the Communist forces in South Vietnam.

4. Lines of Communications

a. North Vietnam

The rail lines, highways, and waterways of North Vietnam were hit continually from January through September 1966, with emphasis primarily on the same areas that were struck in 1965. Of the 355 bridges confirmed by aerial photography to have been struck since the start of bombing, about 140 were targets struck for the first time in 1966. All lines of communications (LOC's) were hit with greater intensity during 1966, but the only new LOC's taken under attack were the roads developed as alternates to routes bombed in 1965.

Airstrikes against JCS-targeted bridges, like strikes against all bridges in North Vietnam, have been concentrated in the southern part of the country. The number of strikes against highway bridges on the JCS target list decreased during 1966, whereas strikes against JCS bridges on the rail lines increased as shown in Table 6.

(1) Railroads

In spite of the increase in airstrikes against the rail lines in 1966, there has been no significant increase in the total length of time the rail lines have been interdicted for through rail service during the year as shown in Table 7. Aerial photography confirmed that a total of 82 railroad and combination rail/highway bridges were damaged or destroyed on all rail lines in North Vietnam since the start of the bombing. This figure represents 28 percent of all rail bridges in the country, half of which were destroyed or damaged from January through September 1966. Table 8 shows a comparison of data by individual line. The Hanoi - Dong Dang and Hanoi - Haiphong lines, the two most important lines for the movement of both imports and domestic goods, have been interdicted for a total of only about two months and one month, respectively, during 1966. The average volume of traffic moved on these two lines could easily have been equal to that moved in 1965 because the lines are normally used below maximum capacity, thus traffic backlogged during periods of interdiction could have been moved while the lines were open. Two additional

bridges were struck on the Dong Dang line during 1966 bringing the total on this line to four bridges, all located approximately midway between Hanoi and the China border. No additional bridges were struck on the Haiphong line.

Table 6

North Vietnam: Airstrikes Against JCS Targeted Bridges
1965 and January-September 1966

Type and Location	Number of JCS Targeted Bridges Struck		Number of Strikes [a]	
	1965	Jan-Sep 1966 [b]	1965	Jan-Sep 1966
Railroad and railroad/ highway	16	16	67	96
Hanoi - Dong Dang line	3	3	6	14
Hanoi - Lao Cai line	1	2	7	9
Hanoi - Haiphong line	2	1	5	5
Hanoi - south [c]	10	10	49	68
Highway	31	16	77	37
21° to 23°	12	7	28	12
19° to 21°	3	1	5	1
17° to 19°	16	8	44	24
Total	47	32	144	133

a. Including restrikes against JCS bridges.
b. Including JCS bridges initially struck in 1965.
c. Including the Hanoi-Vinh line and the makeshift line south of Vinh.

Table 7

North Vietnam:
Estimated Total Length of Time Railroad Lines were Interdicted
for Through Rail Service
1965 and January-September 1966

Railroad Line	1965	Jan-Sep 1966
Hanoi - Dong Dang	1 month	2 months
Hanoi - Haiphong	1 week	1 month
Hanoi - Lao Cai	5 months	5 months
Hanoi - Vinh	9 months	8 months
Hanoi - Thai Nguyen	Negl.	Negl.

Table 8

Railroad Bridges Destroyed or Damaged, by Line
1965 Through 30 September 1966

Railroad Line	Total Bridges on Line	Percent Destroyed/Damaged in 1965	Percent Destroyed/Damaged in 1965 and 1966 Through Sep 30
Hanoi - Lao Cai	139	8	12
Hanoi - Dong Dang	53	4	8
Hanoi - Haiphong	10	20	20
Hanoi - Dong Hoi	85	32	69
Hanoi - Thai Nguyen	7	0	14
Total	294		
Average		14	28

The Hanoi - Lao Cai line has been interdicted for through service for almost 60 percent of 1966, compared with about 40 percent of 1965. The Hanoi - Vinh line has been disrupted for through rail service almost continually since it was first struck in April 1965, except during the cessation of bombing in January 1966. Four of the major bridges destroyed on this line during 1965 have bypass bridges in place and shuttling operations under way. At least 32 additional railroad and combination bridges have been struck on this line in 1966.

(2) Highways

The most significant hindrance to highway traffic has resulted from strikes against routes in the southern part of North Vietnam. Strikes against the central and northern parts of the country have resulted in only minor disruptions of truck service. Route 1A, running along the coast to the DMZ, has been subjected to the most bombing, but apparently also continues to be the most heavily used road in the south. Other north-south routes, such as routes 15 and 101, have been used primarily as supplements or as alternates when portions of route 1A were interdicted. Aerial photography has confirmed the destruction or damage of about 100 additional highway bridges, primarily in the south, in 1966, for a total of 273 highway bridges struck since the start of the bombing. In addition, roadbeds have been cratered at chokepoints, and alternate routes have been bombed. The southernmost motorable road crossing into Laos west of Dong Hoi, completed in April, also has been heavily bombed. The significantly higher level of reported destruction and damage of trucks in the south during 1966, shown in Table 9, has added greatly to the problem of moving supplies south. In spite of these heavy losses, there have been no indications of serious shortages of supplies resulting from either the loss of trucks or of lowered road capacities.

(3) Waterways

The most significant change in the movement of supplies to the south thus far in 1966 has been the increased emphasis on the use of inland and coastal waterways. Airstrikes against the waterways followed the same pattern during 1966 as in 1965, with attacks primarily against watercraft, port areas, and other cargo-handling facilities. No significant damage to the water LOC's has resulted from the numerous strikes against the ports and transshipment facilities in southern North Vietnam. Dredging of waterways, an annual project for the North Vietnamese, probably increased during 1966 in the south. Airstrikes against watercraft probably have been more important in hindering water shipments than strikes against facilities. The number

of watercraft reported destroyed and damaged in 1966 increased nearly five-fold over 1965. The number of watercraft used in the southern area apparently has not decreased, however.

Table 9

Reported Losses of Transport Equipment Due to Bombing in North Vietnam a/
1965 and January-September 1966

	1965		Jan-Sep 1966	
	Destroyed	Damaged	Destroyed	Damaged
Vessels	460	750	2,700	4,350
Trucks b/	320	480	1,600	1,500
Railroad freight cars c/	230	590	1,060	870
Locomotives	6	6	10	13

a. These data are basically those from pilot reports but adjusted downward to eliminate some duplication. Data probably include some exaggeration.
b. Additional trucks were destroyed and damaged in Laos, resulting in effective losses of about 1,000 trucks from the inventory.
c. Including small makeshift railroad cars used on the line south of Hanoi. This type of car is not included in the inventory of mainline freight cars.

b. Laos

Air operations against lines of communications have been concentrated in the north-central and Panhandle areas of Communist-held Laos. The roads and river crossings in the Panhandle were hardest hit in 1966, with about 70 percent of the sorties flown in this region. Strikes have been carried out against bridges, fords, ferries, and choke-points. Some 38,000 sorties, primarily armed reconnaissance, were flown against LOC's and fixed targets located in the north central area and the Panhandle during the first nine months of 1966. Air attacks were heaviest during the dry season, when an average of about 1,300 sorties were flown per week. The level of sorties dropped to an average of about 150 per week during the rainy season, which started

in June. Pilots reported the following damage to LOC's in Laos for the period from 1 April through 30 September 1966:

Region	Bridges	Road Cuts	Fords and Ferries
North Central (Barrel Roll)	13	99	2
Panhandle (Steel Tiger/ Tiger Hound)	173	1,071	114

Aerial photography since January 1966 has confirmed that seven bridges in the north-central region and 57 bridges in the Panhandle, most of which are on fordable streams, were heavily damaged or destroyed. It is estimated that about 1,000 trucks have been destroyed on roads in the Panhandle since the start of bombing in southern Laos.

B. Targets of Opportunity (Armed Reconnaissance Missions)

A total of 57,300 armed reconnaissance sorties were flown in the first nine months of 1966, compared with 17,300 sorties in 1965. This increase of about 230 percent reflects not only the scarcity of authorized fixed targets but also the increasing concern with infiltration of men and supplies into South Vietnam. The latter concern is apparent in the fact that almost two-thirds of the armed reconnaissance sorties were directed against targets in the southernmost areas of North Vietnam, the Panhandle section south of Vinh.

The rise in damage effectiveness for armed reconnaissance sorties -- from $600 per sortie in 1965 to $900 per sortie in 1966 -- is principally attributable to the concentration of attack on transportation facilities south of Vinh and their systematic destruction. There are, however, two other factors that contribute to the rise in damage per sortie, neither of which is a truly sound comparable indicator of mission effectiveness. The first of these is the inclusion of damage inflicted on naval craft -- a figure unavailable and thus excluded from the assessment of strikes made in 1965. The second is represented by the downing of North Vietnamese interceptor aircraft by Rolling Thunder missions. The cost of these aircraft and the number downed is not related to the number of Rolling Thunder sorties flown, and the disproportionate rise in dollar replacement cost to North Vietnam should therefore be taken into account when measuring effectiveness of the Rolling Thunder program.

C. Laos Air Operations

Approximately 38,000 attack sorties were flown under the Barrel Roll and Steel Tiger programs against the north-central and Panhandle areas of Communist-held Laos during the first nine months of 1966. This air effort shows a marked increase over nearly 11,000 attack sorties flown in similar missions during 1965. Of the attack sorties flown over Laos during January-September of this year, 95 percent were on armed reconnaissance missions. About 70 percent of the attack missions struck targets of opportunity within the Steel Tiger area of operations; the other 30 percent performed similar tasks within the Barrel Roll area.

The intensity of the current air war over Laos is varied to meet fluctuations in weather and the level of enemy truck traffic and infiltration. During 1966, monthly attack sorties over Laos ranged from 8,000 in January (dry season) to 800 in August (wet season). Air-strikes were heavily directed against trucks, bridges, fords, ferries, and road choke-points. It is estimated that during 1966, air attacks in Laos have inflicted at least $5 million damage against the Communist forces. The bulk of this damage, primarily accounted for by truck and bridge destruction, was inflicted in the Steel Tiger area of operation.

III. The Effects of the Rolling Thunder Program in 1966

A. Physical Damage

Attack sorties flown by the Rolling Thunder program increased approximately 130 percent during the first nine months of 1966, compared with all of 1965, but the value of physical damage increased by only about 45 percent. A comparison of total measurable damage to economic and military target systems for 1965 and January-September 1966 is as follows:

	Million US $	
	1965	January-September 1966
Economic targets	34.8	67.2
Military targets	30.4	28.0
Total	65.2	95.2

Damage to military targets, which accounted for 47 percent of the total damage in 1965, accounted for less than 30 percent in 1966. By far the greatest share of damage to military targets was inflicted on aircraft and naval craft, which accounted for 90 percent of the total military damage in 1966. No estimates of damage to naval craft are available for 1965; damage to aircraft in that year accounted for only 10 percent of total damage to military targets.

The major changes in damages inflicted on economic target systems in 1966 as compared with 1965 were the sharp increases in the destruction or damage sustained by transport equipment and the indirect losses of exports and agricultural crops which are attributable to the bombings. Losses in transport equipment jumped from US $6 million in 1965 to $24.5 million in 1966. Indirect losses of agricultural crops and export earnings almost tripled -- from $9.2 million in 1965 to $25.4 million in 1966.

The air attack in 1966 shows some general correlation between the increase in attack sorties and the level of physical damage. Thus, the months of July, August, and September accounted for almost one-half -- 47 percent -- of the total damage sustained by

economic targets. During the same period the air attack accounted for almost 58 percent of the sorties flown to date in 1966. Military damage has remained at relatively low levels during 1966 except during the last four months, when increasing losses of aircraft and naval craft have been sustained. The cumulative effects, by economic sector, of the Rolling Thunder program are discussed in Part IV of this memorandum. The overall effect has been to inflict increasing damage to the transportation system and to cause extensive distribution problems, most notably in petroleum distribution. The airstrikes have continued to depress economic growth and to cause the abandonment of some plans for economic development. Nevertheless, essential economic activities continue; most transportation routes remain open. The level of damage has not been sufficient to cause any sector of the economy to collapse. Nor has popular support of the war been significantly diminished. Hanoi's support of its military activities in South Vietnam has been made more costly and burdensome but has not been reduced below the levels required to continue military operations at the levels maintained throughout most of 1966.

B. Casualties in 1966

All estimates of casualties from bombing North Vietnam are subject to an unknown and conceivably large margin of error because of the questionable validity of the assumptions and estimates used in the calculations. Information emanating from Hanoi is of little value in estimating casualties, with propaganda pronouncements continuing to be directed to the large but usually unspecified numbers of casualties inflicted from the bombing of schools and hospitals. The few numerical reports of civilian casualties produced by Hanoi have been notable for the relatively insignificant quantities shown. By all yardsticks of measurement, however, we conclude that casualties from US/GVN bombing attacks are not a major effect of the air war, in the sense that this number is probably relatively small. Our estimate of 16,000 to 21,000 casualties for the first nine months of 1966 is considered to be preliminary.

1. North Vietnamese Claims of Casualties

There have been no official North Vietnamese estimates of total casualties since September 1965, when Egyptian journalists were reportedly told that 40,000 North Vietnamese had already been killed and 35,000 wounded. This claim is unsupported and far too high. A letter in May 1966 from the Hanoi Red Cross to the International Committee of the Red Cross in Geneva specifically cited

only 239 civilian casualties inflicted since 31 January 1966, although implying many more. Despite the claims concerning school children, the Education Ministry admitted in October 1966 to the death of only 300 students and 30 teachers since the inception of the bombing in August 1964. Hanoi, of course, must balance the propaganda benefits of claiming heavy casualties against the adverse effect on popular morale.

2. Estimated Casualties from Strikes Against Fixed Targets

A recent comprehensive study of civilian casualties in 90 JCS-targeted areas, both urban and rural, carried out by the Defense Intelligence Agency (DIA), based on photography and demographic statistics for the targeted areas, indicated that a minimum of some 500 civilian casualties were inflicted by some 525 strikes. The minimum estimate, equating to about one civilian casualty per strike, presumes adequate warning for the personnel in the targeted areas. If the personnel received no warning, casualties could be as high as ten times the minimum estimate, the DIA study concluded. For the purposes of our current estimate, the method derived from the Nam Dinh case study was used for urban areas. The conclusion of the Nam Dinh analysis was that casualties ranged from 1 per 12,000 of population to 1 per 18,000 of population. For rural areas a minimum ratio of 0.7 casualties per strike (and a maximum of 7.0 casualties per strike) was implied by the DIA study. For the purpose of estimating casualties against fixed targets in rural areas, the mean of 3.8 casualties per strike has been used in our current estimate.

The application of the Nam Dinh example to 1966 strikes against JCS targets in urban areas yields a total estimate of 200 civilian casualties. If it is assumed that the rural population near JCS fixed targets has less access to sophisticated air raid warning systems and that therefore casualties per average strike are more likely to be close to the 3.8 average between the minimum (0.7) and maximum (7.0) suggested by the DIA photographic study, total civilian casualties from the 218 airstrikes against fixed targets in rural areas in the first nine months of 1966 probably amounted to about 800. The combined nine month 1966 total estimate is that civilian casualties from attacks against JCS fixed targets in 1966 to date have not exceeded 1,000.

Military casualties in fixed target areas in the first nine months of 1966 are estimated to have been negligible.

3. Estimated Casualties from Armed Reconnaissance

The earlier analysis [redacted] in our first casualty study indicated that an average of 1.3 civilian casualties occurred per armed reconnaissance mission, each mission including an average of 5 aircraft. Each sortie thus produced an average of about 0.25 casualty. Comparative analysis of weapons effectiveness and civilian population density supplied by DIA for our first casualty study resulted in a ratio of 0.17 casualties per sortie. In January-September 1966 there were a total of some 57,000 armed reconnaissance attack sorties (excluding those against fixed targets), yielding an estimate of some 10,000 to 15,000 total civilian casualties from armed reconnaissance in the first nine months of 1966, compared with some 4,000 in 1965.

One casualty is normally assigned by DIA for each truck or watercraft damaged or destroyed and 0.01 casualty for each railroad car or locomotive damaged or destroyed. Since some 10,000 motor trucks and watercraft have been reported damaged or destroyed during the first nine months of 1966, casualties of 10,000 are indicated. It is estimated, however, that at least half of these vehicles are operated by civilians whose casualties as a consequence of armed reconnaissance have already been estimated above. The total derived from this method has therefore been reduced to 5,000 and is regarded to comprise only military personnel. Estimates for the first nine months of 1966 are as follows:

	Casualties
Civilian	
Attacks against fixed targets	1,000
Armed reconnaissance	10,000 to 15,000
Subtotal	11,000 to 16,000
Military	
Attacks against fixed targets	Negl.
Armed reconnaissance	5,000
Subtotal	5,000
Total (half killed, half wounded)	16,000 to 21,000

C. North Vietnamese Countermeasures

1. Repair and Reconstruction

The intense effort by the North Vietnamese to keep LOC's open and to maintain an acceptable level of output from its limited industrial capacity has improved their ability to counter the effects of US/GVN air strikes in 1966. Indeed, the capacity of the transport network has been increased by their efforts. Rapid repair and expansion of the road network together with the transfer of traffic from railroads to roads and waterways have been the major determinants of North Vietnamese success.

The roads in North Vietnam, primarily south of Hanoi, have been kept open almost continuously since the start of the bombing by the extensive use of bypasses to destroyed highway bridges and the construction of new alternative routes. Although the air attack in 1966 concentrated on neutralizing these new projects, the system of countermeasures inaugurated in 1965 has been successful in diminishing the effect of bombings. We estimate that 400 miles of short bypasses and an additional 300 miles of alternative routes were constructed in 1965, with the larger projects completed by September 1966. To complete this work, a system of workcamps was organized. The North Vietnamese used these work camps to anticipate airstrikes on LOC's by pre-positioning labor and materials for repairs to damaged bridges or cratered roads and railbeds. Speed and simplicity of repair have been the main features of the maintenance program which uses large amounts of highly mobile labor and local building materials to insure the required flexibility. Rather than repair highway bridges, the North Vietnamese have chosen to build multiple stream crossings such as fords, ferries, and culverts at any one point. The proliferation of stream crossings has greatly improved their ability to maintain through traffic.

Aerial photography in 1966 has revealed a new bridging technique based on the use of steel cables and removable bridge decking to further reduce vulnerability to air attack. Thirty-eight of these cable bridges have been seen on major routes in North Vietnam to date. Comparative day and night photography of one cable bridge showed that the bridge decking is in place at night for traffic and removed at dawn, leaving only the steel cables exposed to air attack. The North Vietnamese have also expended greater effort in 1966 in camouflaging existing bridges and building alternate dummy bridges with rope and netting.

Although rail traffic has been maintained almost continuously in 1966 on their main lines from China and Haiphong port to Hanoi, the North Vietnamese have not been able to repair rail bridges rapidly or provide as many multiple stream crossings as they have done on the highways. This has resulted in some lowering of capacity on rail lines relative to other means of transport. Comparisons of rates of repair reveal that the Dong Dang line from China and the line from Haiphong have been kept open more than the other lines. Chinese railway engineering units stationed on the Dong Dang line have apparently been instrumental in keeping this line open for a greater time. Bypass bridges have been built and original rail bridges repaired to operable condition. A new standard-gauge rail line which runs west from Kep to Thai Nguyen is almost complete, while an additional rail has been installed on the meter-gauge line northeast from Kep to the China border. This work provides the North Vietnamese with a standard-gauge line from China and avoids the need to transload goods at Dong Dang on the China border. Bypass railroad bridges have been seen under construction next to bridges in the suburbs of Hanoi and Haiphong which have not been bombed.

An analysis of North Vietnamese repair practices reveals that they have chosen to resort to temporary bridges and bypasses rather than attempt to provide more permanent replacement spans. The estimated cost for permanent replacement of all damaged bridges to date totals $16.2 million, up about $6 million since 1 January 1966. Since other types of bypasses were used more often to replace damaged highway bridges, the North Vietnamese have spent only $2.5 million to date to repair some bridges to operable condition and to provide bypasses to the remainder. This implies an actual North Vietnamese expenditure on repairs and bypasses amounting to only 14 percent of the cost of permanent repairs. In addition we estimate it would cost another $1.1 million to temporarily replace the present inventory of unrepaired bridges. The total labor input required to complete temporary repairs to all bridges to date is estimated to be 153,000 man-days. By comparison, it is estimated that the North Vietnamese have expended 62,000 man-days on bridge repairs to date, or only 40 percent of what all temporary repairs would require.

2. Civil Defense

The North Vietnamese civil defense system has been characterized by increased precautions to minimize casualties and damage during 1966. A new dispersal of the urban population was ordered this year, and shelter systems have been improved and multiplied.

a. Organization and Manpower

Controlled nationally by a Directorate in the Ministry of Defense, Vietnamese civil defense at the province and town level remains a civilian rather than military type of organization. Peoples "air defense work committees" are established in districts, towns, wards, enterprises, and on state farms. These committees are headed by Party or administrative officials, and their subordinate civil defense units are manned by local residents and employees. Steps have been taken to divide medical assets more equitably, undoubtedly because of urban evacuation and the air raids, which occur principally in areas outside Hanoi and Haiphong. In April 1966 the North Vietnamese claimed they had substantially increased the number of medical workers and dispersed medical installations to the countryside. Thus "92 percent of the villages now have medical stations."

Because civilian volunteers (perhaps 150,000) are used almost exclusively to perform civil defense duties and because each household is responsible for providing its own shelter, no severe manpower drain seems to have been imposed by civil defense work.

b. Protective Construction

Reliable observers and published statements agree that old shelters were refurbished and large numbers of new shelters prepared during 1966. Most progress was reported during the June-September period, and this was probably in compliance with a general order. Shelters of various types are quickly available in Hanoi, and many of the foxholes along the streets have been lined with sections of concrete sewer pipe. According to the North Vietnamese press, some 55,000 shelters were built in Haiphong during one ten-day period. In Vinh, it is claimed that every family has its own shelter, and that there are also 150 kilometers of communication trenches, 8,000 other shelter spaces, and special shelters for machines, documents, and state property. The Vinh Linh area claims 1,000 kilometers of trenches and tunnels, or nearly 15 meters per capita. Other provinces report in a similar manner -- thousands of shelters and many kilometers of trenches built.

Protective measures for industrial equipment are said to have been taken in Hanoi plants -- probably in the form of blast walls between machines, similar to those built in Japan during World War II.

c. Dispersal of Population and Industry

Although the precise degree of urban population dispersed and resettled outside cities is not known, about a 50-percent evacuation seems to have been accomplished. Efforts prior to 1966 may have resulted in about a one-third evacuation of Hanoi. There has been a tendency for evacuees to return to the city, and a letdown in civil defense interest in early 1966 may ha had a permissive effect in this regard. A new dispersal order reportedly was issued about 1 July. Recent newspaper accounts have stated that as much as 75 percent of Hanoi's population may now have been evacuated. However, difficulties in persuading people to relocate has been confirmed, and in August a city official told a newsman the city was about 50 percent evacuated but that the effort was continuing.

The population of Haiphong was partially dispersed, largely this year, after near-by bombings. According to French press reports, over half the people have left; schools are closed and "not an idle hand remains."

Some dispersal of industry is still reported. However, sample photography of plants has failed to bear out anything more than slightly decreased activity at bona fide industrial installations in Hanoi and Haiphong. It is probable that some small industry and shops have been moved out of urban areas. For example, a North Vietnamese newspaper stated on 1 September, "Over one hundred handicraft cooperatives in Haiphong have been carrying out the evacuation policy seriously." The North Vietnamese concede that the movement of many industries is not possible because of lack of electricity outside cities.

Dispersal, camouflage, and personnel shelters for construction workers are used to reduce damage at road camps. [redacted] forbade construction operations in one area until "adequate" air raid shelters were prepared at work sites. Special care was ordered taken to disperse materials and storehouses.

d. Other Civil Defense Measures

The North Vietnamese use camouflage, movement by night with reduced lighting, and dispersal to reduce transport vulnerability. Business, marketing, and the movement of people and goods is frequently restricted to evening and early morning hours.

The movement of goods offloaded at Haiphong takes place under the cover of darkness. At times, poor weather, hampering air operations, has been reported as a factor inducing some shops to keep open during daylight hours.

In addition to the general effort to resettle permanently residents not directly engaged in production or antiaircraft defense, a noticeable portion of the population of Hanoi disperses during the day and returns at night. Foreign observers have reported -- as recently as mid-October -- an appreciable increase at night and on weekends in the size of the capital's population. The daily exodus serves not only to reduce the concentration of people in daylight hours but also to provide manpower for industry and agriculture in outlying areas. The influx of people into the city at night has been attributed to a lack of accommodations in the nearby countryside as well as to the opportunity to shop and conduct business in the evening and early morning hours when markets are open.

e. Alerts

Most observers and letters agree that the North Vietnamese population usually takes shelter in a disciplined manner during air alerts, which are signaled by sirens, whistles, or other audible means. This, of course, means a disruption of industrial and transport operation, and some personal hardship in areas frequently approached or overflown by aircraft. While such lost production and hardships are not readily measurable, they seem cumulative in effect and may have particular consequences in some critical areas, such as ports.

For example, we have several reports from Haiphong with observations occurring at some time during each month from April to October 1966. [redacted] all agreed that dock work ceased completely during air alerts when workers took shelter. [redacted] the alerts "greatly disrupted" dock work and [redacted] one ship was damaged while docking during an alert.

It thus appears that a population disciplined in taking shelter may be vulnerable in the production sense to frequent harassing overflights or to approaches of aircraft toward transportation and industrial centers.

D. North Vietnamese Political Reactions

After enduring 18 months of air attack, the North Vietnamese appear as determined as ever to continue the war. There has been no indication that the bombing program has shaken the confidence of the Hanoi leadership in their ultimate victory. Communist leaders who have talked with the North Vietnamese recently have been greatly impressed with their firmness. A Polish government official recently told a US newsman that Ho Chi Minh's first words to any Communist visitor are always, "We are winning."

There is no sign that any faction of the North Vietnamese leadership is out of step with Ho on the advisability of continuing the conflict, even though the airstrikes have caused the postponement of some of Hanoi's long-cherished program of heavy industry development. At the 12th Central Committee Plenum held some time in 1965, according to a captured document, a decision was made to put the program for the development of heavy industry on the shelf for the duration. Since that time the leadership has appeared to be in complete agreement that the war is the number-one order of business.

One effect of the Rolling Thunder program has been to reinforce certain North Vietnamese attitudes which existed prior to the airstrikes. For example, Hanoi has long been anxious to secure the closest possible Sino-Soviet cooperation in support of the Vietnam war. This has been one reason for the neutral position taken by the North Vietnamese in the Sino-Soviet dispute and for Hanoi's opposition to open hostility between the two powers.

The Rolling Thunder program has also resulted in Hanoi's increased emphasis on the necessity of a halt in US air attacks before there can be a negotiated settlement of the war. The current North Vietnamese position is that the United States must not expect or demand any quid pro quo in return for a cessation of the bombings.

The available evidence indicates that the people of North Vietnam still firmly support the policies of the Hanoi government. The regime has managed to maintain the swell of patriotism which was engendered by the first US airstrikes and has capitalized on a spirit of national resistance against the "US aggressors" to spur the people on to greater sacrifices on behalf of the war in South Vietnam.

Evidence on the feelings of the North Vietnamese toward the war in the south prior to February 1965 was scanty. The available information suggested that the northerners were interested in seeing the insurgents win, but that they did not relish the prospect of having to risk their own economic standing, let alone their lives, on behalf of the southern struggle. Since the bombings of North Vietnam began, however, there appears to be more enthusiasm for supporting the war in the south.

[redacted] A slight drop was noted from 55 percent in 1965 to 48 percent in 1966 in [redacted] expressing active support for the government. This decline may reflect some wearying effect caused by the cumulative impact of the bombing. There are at present, however, no discernible political pressures from within North Vietnam sufficient to cause the Hanoi leaders to alter their decision to continue the war effort.

E. Soviet and Chinese Communist Assistance

1. Military Aid

During the first half of 1966, Soviet and Chinese military aid deliveries to Hanoi are believed to have been at an annual rate slightly above the 1965 level of $250 million (see Tables 10 and 11). These data include the Soviet surface-to-air missile (SAM) program, the bulk of which (20 of 24 firing battalions) was provided during 1965. Non-SAM-related assistance in 1966 (estimated at $218 million) is about 50 percent higher than the total non-SAM military aid in 1965 ($144 million).

The USSR accounted for 80 to 85 percent of the military assistance provided by the two major Communist countries, USSR and Communist China, during 1965 and the first half of 1966. Thirty-six MIG's (11 of which were MIG 21's) and nearly 1,200 antiaircraft guns were delivered by the USSR in 1965 and 24 MIG's and about 425 guns during the first half of 1966. In addition, as many as 1,500 Soviet military technicians may have been engaged in training North Vietnamese military personnel in the use of SAM's and aircraft.

Chinese Communist military deliveries during 1966 have been at a rate nearly double those in 1965. Aid has consisted primarily of small arms, ammunition, and trucks. The Chinese also delivered eight MIG-15/17 fighters and about $5 million worth of radar equipment in 1965, as well as four small naval craft in the first half of 1966. In addition to the delivery of military equipment, there are between 25,000 and 45,000 Chinese logistic support troops in North Vietnam working on the construction and repair of transportation facilities. An unknown number of Chinese military personnel also are employed in training North Vietnamese to operate and maintain equipment provided by the Chinese.

2. Economic Aid

All developments foreshadow substantially increased aid to Hanoi from other Communist countries in late 1966 and 1967, a trend already confirmed by the volume and composition of North Vietnamese imports in 1966 to date. The frequent signings of aid pacts and the stress in the announcements on the support for the war effort indicate a growing emphasis on materials and services needed to continue the war. [redacted] the recent Warsaw Pact meeting stated that the Pact countries had signed pledges of $1 billion in goods and cash to support Hanoi in the war effort. The Soviet Union would supply $800 million of this aid.

It is estimated that deliveries of economic aid in 1965 were $150 million, two to three times the average annual level in 1955-64. This sharp rise has been continued in 1966, and, as in 1965, the USSR is the major contributor. In the last nine months, deliveries of economic aid totaled about $200 million, and an unusually large number of new Soviet industrial aid contracts with North Vietnam were noticed [redacted] In June 1966, Soviet specialists were reported in North Vietnam to determine equipment needs for constructing new enterprises and rebuilding those destroyed by US air attacks.

After an apparent hiatus of two years, Communist economic assistance to Hanoi was revived in February 1965 when Premier Kosygin visited Hanoi. As the war expanded, numerous new extensions of economic aid were made in mid-1965, but these additions are believed to have been small. Since then, the tempo of aid agreement signings has increased sharply (see Tables 12 [redacted]

In 1966, Moscow reported an agreement in May to provide technical assistance, one in September for $2 million in "free

charge commodities" (possibly consumer goods and medicines), and one in October of additional grants for economic development and increased military aid. China announced additional aid for agriculture in July and a nonrefundable economic and technical agreement in August. In September and October 1966, North Korea and all the Eastern European Communist countries except Yugoslavia signed new aid agreements with North Vietnam. In addition, gifts of money and medicines from workers and other organizations in Communist countries have been announced at a value of $5 million to $10 million.

TOP SECRET TRINE

IV. General Assessment of the Rolling Thunder Program

A. Agriculture

During the past 18 months the production of paddy rice in North Vietnam -- the main agricultural crop in that country -- was about 200,000 tons below the average. While this is only 3 percent below the average for the 18-month period, all of this shortfall occurred during the past six months. Such a shortfall amounts to about $17 million worth of rice on the international market. In addition, the production of subsidiary crops -- manioc, sweet potatoes, corn, and green beans -- was probably below normal during the 1965/66 winter/spring season. There is insufficient information, however, on which to estimate the shortfall of these crops, which are important food substitutes for the preferred rice.

It is difficult to determine the extent to which the bombing attacks contributed to the shortfall of agricultural production. Undoubtedly, poor weather in the last half of 1965 and in the first half of 1966 contributed to the poor performance of agriculture. Although there is little evidence that air attacks directly damaged significant amounts of agricultural crops, the indirect disruptive effects of the bombing on agricultural production were considerable. Agriculture in North Vietnam has usually experienced difficulties -- partly because of the chronically undependable weather and partly as a result of management problems associated with the socialization of agriculture into agricultural cooperatives. The war has brought such additional problems as manpower shortages -- particularly skilled manpower -- disruption of normal farming and fishing schedules, and the interruption of electrically powered irrigation systems and the production and distribution of chemical fertilizers. The North Vietnamese have attempted to lessen the disruptive effects of the bombing attacks by importing increased amounts of chemical fertilizers and substantial numbers of diesel generators to power the irrigation systems. These measures have not been completely successful.

The agricultural shortfall, the disruptive effects of the bombing attacks on the transportation of food to deficit areas, and the increased requirements for the war have contributed to food shortages -- particularly in rural areas. However, food supplies in the larger cities such as Hanoi have been maintained at adequate levels, and there have been no indications of critical shortages anywhere. The continuation of the bombing attacks will continue to exacerbate the tight food situation in North Vietnam. However, the self-sufficient nature of the agricultural economy and the availability of food imports -- particularly from Communist China -- suggest that food supplies are not likely to become critical.

B. Industry

The North Vietnamese industrial sector has not been drastically altered since the start of the Rolling Thunder program in 1965. Some changes have been made in plant production and industrial development because of the war situation, but the regime seems to have been successful in keeping the disruption to a minimum.

The decision to postpone the beginning of the second five-year plan (1966-70) and the substitution of the two-year plan (1966-67) were the result of war pressures on the North Vietnamese economy including the step-up in US bombing. An examination of regime statements since early 1965 on its economic plans suggests that the regime has increased the tempo of some of the programs already begun under the first five-year plan -- dispersal of industry, enlargement and mechanization of agricultural cooperatives, and evacuation of civilians to rural areas. In addition, the decision was taken to postpone heavy industry expansion, with the exception of the machine building and electric powerplants, and to shift emphasis to the increased development of light and local industry. On the surface the decision to postpone heavy industrial expansion appears to have ominous economic overtones for the continued economic development of the country, but the regime has merely postponed part of its heavy industrial expansion; it has not abandoned it.

North Vietnam has published almost no aggregate industrial production data for 1965 and 1966; fragmentary information available indicates that present industrial production is at or above the 1964 level of industrial output. No data on heavy industrial production have been published, but in 1965 the central state-run light industry increased its output by 4.6 percent over 1964, while the output of local industry and handicraft increased by 7.7 percent in 1965. Despite these small increases in industrial output, the regime in August 1966 noted that the "US imperialists have created difficulties for the economy in general and light industry in particular." No information on 1966 output quotas for individual plants or industries is available, but nearly all the reports on individual plants in the popular press are consistent in claiming that the plants are producing at or above their 1965 level despite varying problems.

Evidence of the postponement of heavy industrial development is provided by the recent departure of the Soviet specialists working on the Thac Ba hydroelectric powerplant, which was nearly two years away from completion. No reason was given for their departure. After an examination of the scanty evidence available on industrial

expansion in 1965-66 and future plans for expansion, however, the abandonment of the Thac Ba project appears to be almost unique. In contrast, in June 1966, [redacted] Recent reports more strongly reinforce the thesis that the North Vietnamese have not entirely abandoned their program for heavy industrial expansion. During October, Hanoi sent representatives to Poland and Communist China to examine methods and techniques for installing rolled steel capacity and making other improvements in iron and steel production. These reports imply that the regime still intends to complete the Thai Nguyen Iron and Steel Plant -- North Vietnam's only iron and steel complex.

US bombing has created some difficulties in the North Vietnamese industrial sector. However, some of the problems such as poor management and administration in individual plants and the shortage of skilled labor existed before the bombing began. The bombing of the electric powerplants does not appear to have seriously affected industrial output. Power shortages have been observed, particularly in Hanoi, but the individual plants have been able to cope with the situation by using mobile generators and by increasing the number of shifts at the plants.

The step-up in the dispersal program, too, caused some difficulties. Many plants attempted to operate simultaneously at both the original location and at the dispersed site. Production was slowed down by this practice, and transportation and distribution costs increased. The smooth evacuation of the plant workers was difficult. Some workers were evacuated to the dispersed site but were still expected to work at the original site; some workers did not wish to be evacuated and morale problems were evident. The organization of the evacuation was poorly handled by the cadres and the trade union leaders responsible for the movement. There is no hard evidence that industrial production has been seriously slowed down by the dispersal program. Nevertheless, most of the dispersed plants are found in the local, light, and handicraft sectors of industry, which are major components of total industrial output; the dispersal program in these sectors has probably depressed total industrial production in the past year.

The first CIA report dealing with the bombing of North Vietnam released in March 1966, listed 15 major industrial plants, [redacted]

[redacted] A review of Hanoi press reports on these plants is helpful in assessing the effect of US bombing on the North Vietnamese industrial plants. The Thai Nguyen Iron and Steel Complex is claimed to have lost about 1,000 cadre and workers to the war effort, but still claimed to have exceeded its planned goal. The Haiphong Cement Plant reportedly suffered from a shortage of coal, was harassed by the bombing, and at the end of 1965 was just meeting its planned production quota. The Nam Binh Textile Plant was dispersed but announced that it was installing new machinery in August 1966. The 8 March Textile Plant in Hanoi dispersed part of its operations and found that its transportation costs had increased. The Hanoi Rubber Products Plant lost workers but claimed to have increased its overall output with the production of automobile tires up by 50 percent in the first six months of 1966 as compared with the same period in 1965. The Viet Tri Paper Mill lost production time because of air raids, it was stated, but it improved the quality of its production. The Viet Tri Chemical Combine had a difficult year in 1965. Its machinery and equipment were old, part of it was dispersed, and it lost time because of air raids. Still, the plant claimed achievement of its production quota and began to produce new products.

In combination these claims add up to admitted labor shortages, temporary loss of output due to dispersal, and problems in changing the production mix. They do not, however, reflect serious and prolonged production problems even if one discounts the general claim of meeting planned goals.

In general, the machine building industry has suffered from the same problems as the other industries. One significant observation from reviewing press reports is the conversion of machine building plants to production of agricultural machinery which is aimed at alleviating manpower shortages through increased mechanization of the agricultural cooperatives.

The determination of the regime to continue to train its youth both at home and abroad in technical and academic skills further demonstrates that US bombing has not created severe manpower shortages. There is continuing evidence that North Vietnamese students are being sent to other Communist countries for training. (Around 5,000 students were abroad in 1965 and early 1966, and some reports have suggested that as many as 20,000 may go abroad for study in the next few years.) Further, the regime has just recently opened four colleges with emphasis on technical and engineering skills.

A Rolling Thunder program could have done great damage to the modern industrial sector of the North Vietnamese economy. However, Rolling Thunder target systems chosen did not include the main industrial facilities. The Hanoi regime, possibly now acting on the assumption that industrial installations will not be the main targets of attack, continues to request accelerated deliveries of machinery, goods, and even industrial plants from other Communist countries. Perhaps, if Rolling Thunder had more heavily damaged some of these targets, the North Vietnamese would have a harder time convincing their Communist partners to continue sending industrial aid.

C. Transportation

The transport system of North Vietnam continues to function adequately. There have been and continue to be periodic delays in the movement of goods, which produce temporary local shortages. But transportation is supporting the essential segments of the economy and is providing the required support for the war in the North and in the South.

The rudimentary nature and somewhat primitive character of the system is probably more of an asset than a hindrance in overcoming the effects of the air war on it. The small, light-weight, antiquated railroad system is augmented by reasonably modern but low-capacity motor trucks and a few modern craft on the inland and coastal waterways. But, for the most part, transport is provided by primitive sampans and junks and animal transport, carts, bicycles, and human bearers. Traffic per capita is exceedingly small. Rumania, for example, a country with substantially the same population and 50 percent more area, has 20 times the tonnage per capita that is found in North Vietnam. Thus North Vietnam with a small industrial base and a population with simple wants and needs can exist with a rudimentary primitive type of transportation system, and the task of impairing significantly the movement of traffic over it by the use of air power becomes difficult.

The initial attacks against transportation in the Rolling Thunder program affected the southern part of the country, which is of relatively minor importance to the economy. Concentration of the attacks in this area provided time for the North Vietnamese to obtain advice from the North Koreans and advice and aid from the Chinese. During this period, organizations were also established for the repair of damage and for the marshaling of all forms of transport for the movement of traffic.

These organizations have been remarkably effective in making the necessary repairs, in providing alternate facilities, and in commandeering all forms of transport to keep the essential traffic moving. As a consequence, after 18 months of attack under the Rolling Thunder program, in spite of the heavy cost in terms of manpower and material, the transportation system is better able to continue operating while coping with damage and loss of personnel than it was when the program began.

If the level of attacks achieved during the first nine months of 1966 is maintained for the remainder of the year, total transport performance in 1966 will continue to increase as it has in past years in terms of tons carried, but will decrease slightly in terms of ton-miles, as it did in 1965 (see Table 14). Rail transportation has been more affected by the attacks than other forms of transport. Performance by railroad transport has been reduced both in terms of tons carried and ton-miles, but rail transportation continues to be the principal mode of transport in terms of ton-miles. Increases in tons carried by other modes have more than compensated for the loss in rail tons carried.

The reduction in rail traffic has not affected the volume of imports and exports moved by rail between China and North Vietnam. The volume of such shipments probably will increase again in 1966 as it had in 1965. Halting of through traffic by destruction of bridges on the two lines important for the movement of foreign trade -- the lines from Hanoi to Dong Dang and Haiphong -- has extended over a relatively small percent of the 18 months.

Destruction of bridges and other facilities on the lines from Hanoi to Lao Cai and Vinh has been more continuous and thus more serious for the domestic economy. Especially noteworthy have been the attacks on the Viet Tri bridge on the Lao Cai line and the Phu Ly bridge on the Vinh line. These bridges have remained out of service for fairly long periods of time. Traffic within the modern industrial sector of the economy -- between Hanoi and the industrial cities of Lam Thao, Viet Tri, and Nam Dinh -- has thus been disrupted. Limited through service has now been restored between these cities, however, and shuttle service between the breaks and the line is in use on the remainder of the lines.

The North Vietnamese with the help of Chinese engineers have expanded and improved the railroad system by the addition of some dual tracking, a new line, and alternate rail bridges for some of the bridges on the Hanoi - Dong Dang and Hanoi - Haiphong lines.

Table 14

North Vietnam: Estimated Transport Performance
1964, 1965, and Projected 1966

	1964	1965	1966 a/
Total Performance	20.6	21.7	22.0
Million tons carried	1,200	1,160	1,100
Million ton-miles			
International Trade by Rail			
Imports (thousand tons carried)	180	350	N.A.
Exports (thousand tons carried)	220	170	N.A.

a. Projected for the full year, assuming a continuation of performance at the level of the first nine months.

Dual tracking on the Dong Dang line, which permits both Chinese standard-gauge and North Vietnamese meter-gauge equipment to be used, very likely now extends from the Chinese border south as far as Kep, and some preparations have been made to extend the dual tracking from Kep to Hanoi. A new standard-gauge line from Kep to Thai Nguyen may also have been completed, thus providing a more direct route for shipment of Chinese coal to the iron and steel complex at Thai Nguyen and an alternative route for rail traffic between Kep and Hanoi. Another improvement directly related to the war effort is the extension of a low-cost makeshift rail line south of Vinh toward the Demilitarized Zone. This line is kept in service with inexpensive expedients in spite of intensive bombing.

North Vietnam has suffered a high level of destruction of railroad rolling stock, particularly in 1966, but there is no evidence of a shortage of locomotives or freight cars. It is estimated that the inventory of locomotives remains at about the pre-April 1965 number. The North Vietnamese freight car inventory, however, has been significantly reduced (see Table 1). The Chinese probably have made freight cars available to North Vietnam from the meter-gauge rolling stock of Yunnan Province and formerly used for the Chinese transit traffic through North Vietnam. The loss of this traffic and other traffic such as the transport of apatite after the

Lao Cai line was interdicted in July of 1965 has reduced the requirement for rail transport. Furthermore, Chinese standard-gauge equipment can be used on the new dual-gauge and standard-gauge lines in North Vietnam. Much of the reportedly destroyed rolling stock probably consisted of the makeshift equipment used on the line south of Hanoi, the type that probably could be built in North Vietnam. Thus North Vietnam has sustained a high level of destruction of rolling stock and has continued to operate the railroads at a reasonable level. The North Vietnamese are nevertheless negotiating with the Chinese to buy quite large numbers of rolling stock, presumably to avoid using Chinese equipment within North Vietnam.

North Vietnam is making increasing use of highway and inland and coastal water transport. Traffic moving over these networks is more difficult to disrupt than is traffic on the railroad system. Highway and water transport is also being used to shuttle traffic around breaks in railroad lines. It is estimated that performance by these modes increased in 1965 and 1966, both in terms of tons carried and ton-miles. These increases have been made possible by the considerable expansion and improvement of the road and inland water networks and maintenance of the inventory of transport equipment at the necessary level. New alternate roads have been built and additional waterways dredged. Alternate highway bridges, for the most part pontoon or cable types, as well as ferries and fords have been or are being built. Imports of motor trucks by North Vietnam from Communist countries far exceeded the destruction of these vehicles by air attack in 1965 and have kept pace with such destruction so far in 1966 (see Table 16). In spite of extensive destruction of watercraft, the number observed in use is constantly increasing. The North Vietnamese can build many of the small types observed in use, and Communist countries are providing small modern tugs, dry cargo barges, and tank barges.

The truck route into and through southern Laos is likewise considerably more capable of supporting infiltration now than it was 18 months ago. The fairweather truckable network has been greatly extended and provided with many miles of alternate routes. The portion of the year during which trucks can use the route has been increased by better road alignment and surfacing. After the heavy rains in the fall of 1965, truck traffic began to flow south into Laos a month earlier than it had in 1964. This year, truck traffic into Laos has begun to move in significant volume a month earlier than it did in 1965.

Table 15

North Vietnam: Rolling Stock Inventory
as of the End of 1964 and 1965 and 1 October 1966

	Units
Locomotives (totals rounded)	
As of the end of 1964	120
Imports during 1965	4
Domestic production	3
Losses	-6
As of the end of 1965	120
Imports during January-September 1966	6
Losses	-10 a/
As of 1 October 1966	120
Freight cars b/ (totals rounded)	
As of the end of 1964	1,800
Imports during 1965	60
Losses (230 destroyed times 60 percent)	-140
As of the end of 1965	1,700
Imports during 1966	60
Losses (1,060 destroyed times 60 percent)	-640
As of 1 October 1966	1,100 c/

a. Probably includes some makeshift locomotives used on the rail line south of Hanoi. It has been assumed, therefore, that the mainline locomotive inventory has been maintained at about the end of 1964 level by imports.

b. Reported losses of railroad freight cars have included small makeshift cars used on the rail line south of Hanoi as well as some exaggerations from pilot reports. Thus only 60 percent of those reported destroyed and none of those reported damaged have been deducted from the inventory.

c. These data represent a significant decrease in the inventory during 1966, but this inventory is still sufficient for performance at the level estimated. The actual number of freight cars in North Vietnam must be significantly higher than indicated, however. No evidence exists of a shortage of freight cars in North Vietnam. The number of freight cars imported is a minimum figure. Furthermore, Communist China probably has loaned or given North Vietnam all the freight cars needed. Although no information is available to indicate that Chinese cars from Yunnan Province are operating in North Vietnam, it is logical that this province has made meter-gauge stock available to North Vietnam.

Table 16

North Vietnam: Cargo Truck Inventory a/
as of the End of 1964 and 1965 and 1 October 1966

As of the end of 1964		9,000
Imports during 1965		3,443
Losses	900	-900
Airstrikes	360	
Normal retirement	540	
As of the end of 1965		11,500 b/
Imports during January-September 1966		3,200
Losses	3,200	-3,200
Airstrikes in North Vietnam	1,700	
Airstrikes in Laos	1,000	
Normal retirement	500	
As of 1 October 1966		11,500

a. Includes cargo trucks of one-ton or more capacity. Losses from inventory due to airstrikes were computed using 75 percent of the number reported destroyed and 25 percent of the number reported damaged. Normal retirement was computed at the rate of 6 percent per year.
b. North Vietnam had at least 3,000 additional vehicles, such as jeeps, command cars, ambulances, and service vehicles.

Maintenance and expansion of the transport system has been very costly to North Vietnam interms of manpower diverted and resources expended, in spite of the use of low-cost expedients wherever possible. Through September 1966, repair and restoration cost of damaged or destroyed transport facilities and equipment totaled more than $50 million, or almost one-third of the measurable direct and indirect cost of the Rolling Thunder program to North Vietnam, as follows:

Category	Repair and Restoration Cost (Million US $)
Bridges	19.8
Restoration	16.2
Temporary repair	3.6
Transportation equipment	30.5
Railroad yards and ports	1.0
Total	51.3

The restoration cost at the end of 1965 amounted to only $17.2 million. The increase of $34.1 million during the first nine months of 1966 is accounted for chiefly by damage and destruction to transport equipment amounting to $24.5 million. The cost of restoring and repairing bridges increased by $9.3 million, while railroad yards and ports increased by $300,000.

The sharp increase in the transport equipment category reflects the heavy emphasis on armed reconnaissance missions in the Rolling Thunder program throughout 1966. These equipment losses have been largely offset by imports from Communist countries. Possibly a more serious loss to North Vietnam has been the loss of trained personnel.

The North Vietnamese, with Chinese aid, have gained in experience and efficiency in expanding routes and making the necessary repairs. As a consequence the transport system is now considerably less vulnerable than it was during 1965. The system is performing at a level adequate for military and essential economic needs. It can be expected to operate at this level unless there is a basic change in the pattern and weight of air attack against transportation in North Vietnam.

D. Foreign Trade

North Vietnam's foreign trade, since the initiation of Rolling Thunder, has been marked by two major developments: (1) an increasing volume of imports from Communist countries (Free World imports have been largely maintained); and (2) a general reduction in exports. By the fall of 1966, seaborne imports seemed to have reached a peak set

by the capacity of ports and their connecting rail distribution facilities, while known exports continued to decline.

Recent aid agreements signed by other Communist countries with Hanoi signal the intention to continue a high level of shipments to North Vietnam. Imports were sharply accelerated in both 1965 and 1966. Goods received from the Soviet Union and Eastern Europe reached an estimated value of $180 million in 1965,* nearly 65 percent more than in 1964. Comparable value data are not available for 1966, but the volume of seaborne imports from Communist countries in the first nine months averaged about 50 percent more than the same period in 1965. Imports of manufactured goods (largely machinery, equipment, and rolled steel products) comprised a major share of the imports from Communist countries and accounted for the sharpest increases in volume of shipments. Imports of fertilizer and petroleum have also increased significantly.

The value of North Vietnam's exports remained steady within a range of $100 million to $110 million in both 1964 and 1965. Seaborne exports of apatite, which had an average f. o. b. value of nearly $418,000 a month in the first seven months of 1965, virtually ceased following the initiation in July 1965 of recurrent interdictions of the rail line connecting the apatite mines at Lao Cai with Haiphong. The major export losses, however, followed the strikes against coal processing facilities at Cam Pha in April 1966. Seaborne coal exports in the first quarter of 1966 had an average f. o. b. value of $1.8 million a month, but have had an average value of only $0.6 million a month since April and the trend is still downward. There have been additional reductions in seaborne exports of cement, pig iron, and manufactured goods, but the decline in these exports cannot be directly related to the effects of bombing. It is also possible, but not probable, that increased volumes of these commodities have been shipped undetected to Communist China. Continuation of the present degree of retardation of shipments of coal and apatite will cause North Vietnam's export earnings in 1966 to be at least $12 million less than in 1965, approximately half of which is in Free World hard currency, thereby worsening the already large imbalance between imports and exports.

* The estimated distribution of these imports, which include economic aid, is as follows: from China and the Soviet Union, $75 million each; and from the Eastern European countries, $30 million.

E. Manpower Developments in North Vietnam

The Rolling Thunder program, together with other US/GVN military actions in South Vietnam, has placed a significant strain on North Vietnam's manpower resources. The allocation of manpower in response to the air attacks has taxed the ingenuity of North Vietnam's leadership, has forced the country to make meaningful sacrifices in terms of disruption to some normal civilian pursuits, and has inflicted real costs resulting from disruptions of economic activity, most notably in agriculture, transportation, and construction. At the same time, the regime has allocated the bulk of its physically fit youth coming of military age to building up its military forces. In spite of these pressures there are several indications that the quantitative drain on manpower may have peaked during 1966.

The buildup of North Vietnam's armed forces and the replacement of manpower losses in South Vietnam have required the mobilization of at least 170,000 men since 1 January 1965. This figure may be larger if a substantial number of troops are being discharged because of age or illness. At a minimum, total conscription for military service probably has approached 80 percent of the number of physically fit males -- 220,000 -- reaching the draft age of 18 in 1965-66. There is, however, a total pool estimated at about 2.1 million to 2.3 million males in the 15 to 49 age group who are physically fit for military service.

A large measure of the military build-up in North Vietnam is accounted for by forces committed to defensive programs in reaction to the Rolling Thunder program. At least 70,000 North Vietnamese troops, or close to 20 percent of the armed forces, are assigned to units involved almost exclusively in defensive programs and countermeasures against the Rolling Thunder program. This estimate includes those forces assigned to the Air Force, to AAA and SAM units, and to engineering and transportation units. In addition a large number of militia are assigned to air defense activities.

The mobilization of civilian labor has exceeded the manpower needs for the build-up of military forces. By early 1966, North Vietnam had to reallocate large amounts of labor to repair or reconstruction activities and to dispersal and emergency programs directly related to the Rolling Thunder attack. These programs are believed to have required the full-time services of 200,000 workers and the part-time utilization of another 100,000. The obligation of some 150,000

persons to fulfill civil defense responsibilities has created an additional part-time diversion of labor.

The size of this commitment of labor is estimated to have remained stable during 1966. Although the weight of air attack has increased, the labor force has gained a great deal of experience in making quick repairs, using camouflage, and adopting other innovations to neutralize the effects of air attack. The experience gained in this type of construction work has enabled the North Vietnamese to develop faster recuperability from airstrikes. As the expertise and hence the labor productivity of the North Vietnamese improves, and assuming the pattern of air attack does not change, it is estimated that the North Vietnamese will be able to reduce the size of the repair-of-damage labor force and still increase its effectiveness. The commitment of labor could be greater, however, if more of the airstrikes against the logistic target system were concentrated on the rail and combination rail/highway bridges on the major LOC's in the northern part of the country.

Two other manpower drains of some significance are the North Vietnamese assigned to repair and construction activities on the infiltration route through Laos, and casualties resulting from the Rolling Thunder program.

The road repair and construction activities in Laos require the commitment of some 20,000 to 25,000 persons, about three-fourths of whom are North Vietnamese. Since the pattern of this activity has not changed appreciably in the last six months, it is estimated that this commitment has remained stable.

Casualties inflicted in 1966 as a result of the Rolling Thunder program are tentatively estimated at from 16,000 to 21,000. This would be an increase of 40 to 50 percent over the level estimated for 1965. Casualties are probably about three-fourths civilian (principally persons engaged in logistic and transportation activities in direct support of the war effort) and one-fourth military.

The drain on North Vietnam's manpower resulting from military and civilian mobilization and casualties in both North and South Vietnam has amounted to 400,000 to 425,000 persons. This includes an estimated military mobilization of at least 170,000 persons and the full-time assignment of about 220,000 persons to war-associated tasks in North Vietnam and Laos, largely a consequence of Rolling Thunder. This total diversion amounts to about 5 percent of North Vietnam's civilian labor force.

The ability of North Vietnam to meet the numerical commitment of manpower resources is apparent. However, there are many indications that the manpower drain has inflicted strains on the country. Recent indications of possible war-associated strains on manpower are reports that additional women have been trained and are serving in agricultural occupations and in the militia, and that the regime is trying -- apparently with limited success -- to make greater use of unskilled workers from the peasant and urban population. The disappointing fifth-month harvest has probably made it incumbent on the regime to provide more agricultural manpower in order to achieve a successful tenth-month harvest. The regime has also been forced to shelve some plans for industrial expansion.

F. Third Country Attitudes

There has been little significant change in the attitudes of Free World countries toward the US bombing program during the last two years, either because of its continuation or escalation. Free World reaction to the latest escalation of the bombings -- the strikes against the POL storage facilities in the Hanoi-Haiphong area -- produced the normal leftist and Communist cries of "outrage" in Free World states. The overall official reaction, however, was more restrained and less critical than expected.

The so-called non-aligned, or neutral, nations who have attempted from time to time to serve as intermediaries in getting negotiations started have not altered their basic positions during the past year as a result of the continued US airstrikes. The unyielding attitude of the North Vietnamese, however, has had a somewhat sobering impact on certain of these neutral nations. In particular, they have realized that the United States has a valid point in demanding some sign from Hanoi that it will respond positively to a cessation of the bombings. This has not produced a swing toward the United States by these nations, but it has served somewhat to mitigate North Vietnamese efforts to convince the neutrals that the United States is solely to blame for the continuation of the war.

1. Soviet and Eastern European Attitudes

The effectiveness of the US airstrikes in destroying North Vietnamese military hardware and in disrupting the transportation system in North Vietnam has caused Hanoi to place increasing demands on the USSR and the Eastern European countries. In response, these countries have agreed to provide additional economic and military goods.

At the same time, however, there is growing apprehension in the USSR and the Eastern European countries that their own national interests will be threatened by a continuation of the bombing raids. On numerous occasions during the past several weeks, Eastern European diplomats have assured the United States that their increased aid to Hanoi is designed to wean the North Vietnamese away from China and thus improve the chances of getting Hanoi to the negotiating table.

These diplomats clearly believe that there is no chance of getting Hanoi to negotiate until the United States ceases its bombing of North Vietnam. Thus far, however, neither the USSR nor any of the Eastern European countries has indicated that it can assure the United States that Hanoi will make a positive move toward negotiations if US airstrikes cease. The Poles have advised the United States that they do not intend to carry US overtures for negotiations to Hanoi again unless they are given some sign that such activity on their part will be productive.

2. Communist China's Attitude

The Chinese have not altered their position on the war as a result of the Rolling Thunder program. They remain as determined as ever to oppose any move toward peace which does not entail total US capitulation to North Vietnamese demands. Chinese policy remains even tougher than that of the Vietnamese on what it will take to get negotiations started. Peking still insists that the United States must withdraw its troops from South Vietnam before talks can begin.

SUBJECT SPECULATION ON PRESENCE OF AMERICAN PRISONERS IN HANOI, AND DEFENSE MEASURES, RATIONING, AND PUBLIC MORALE IN HANOI

ACQ [redacted]

SOURCE [redacted]

1. SUMMARY.

[redacted] IF AMERICAN PRISONERS ARE BEING HELD IN HANOI, THEY ARE PROBABLY AT A LARGE ESTABLISHMENT IN A POSSIBLE MILITARY HEADQUARTERS AREA (AREA 65) WHICH IS SURROUNDED BY WALLS WHICH ARE LIGHTED ALL NIGHT AND ARE TOPPED WITH ELECTRIFIED WIRE. JUST AFTER THE 29 JUNE 1966 BOMBINGS OF OIL DEPOTS OUTSIDE HANOI, A CAPTURED AMERICAN PILOT WAS REPORTEDLY SEEN BEING TAKEN ALONG A STREET LEADING FROM THIS AREA AND BACK ALONG THE SAME STREET. AFTER THE BOMBINGS, MIG-17'S MANEUVERED OVER HANOI ALMOST DAILY. 5 4 MIG-21'S AND AN ILYUSHIN-28 WITH NORTH VIETNAMESE MARKINGS WERE ALSO OBSERVED IN SEPTEMBER. SOME SHOPS SHUT AFTER THE BOMBING BUT REOPENED

IN AUGUST. THERE WAS NO SHORTAGE OF PETROLEUM PRODUCTS FOR FOREIGNERS IN HANOI. IN SEPTEMBER AND OCTOBER MEAT, RICE, SUGAR, MATCHES, AND SOAP WERE RATIONED. THE SUPPLY OF RICE AND SUGAR WAS SUFFICIENT FOR PEOPLE TO OBTAIN THEIR QUOTAS, BUT IN MID-SEPTEMBER SOME PEOPLE SAID THEY WERE NOT GETTING THEIR QUOTAS OF MEAT. THE PEOPLE WERE CONVINCED THAT HANOI WOULD BE BOMBED, BUT THEY REMAINED CALM. THERE WAS LITTLE POLICE CONTROL OF THE LOCAL POPULATION, AND SOVIET PERSONNEL WERE FREE TO LEAVE HANOI AS THEY WISHED. THE AI HO AREA ACROSS THE RED RIVER FROM HANOI APPEARED TO BE A MILITARY TRAINING AREA, AND ANOTHER RESTRICTED AREA IN THE O YEN PHU SECTION NORTH OF THE HO TRUC BACH LAKE WAS FREQUENTED BY SOVIET PERSONNEL.)

2. [redacted] IN AN AREA OF HANOI [redacted] THERE WAS A LARGE WALLED-IN ESTABLISHMENT WITH THREE STRANDS OF ELECTRIFIED WIRE WITH NEW LOOKING INSULATORS ON TOP OF THE WALLS. THE WALLS WERE WHITE, FRESHLY PAINTED AND LIGHTED ALL NIGHT. THE ENTRANCE WAS GUARDED BY TWO UNIFORMED VIETNAMESE. THE AREA WAS VERY QUIET. ONCE IN EARLY SEPTEMBER 1965 PEOPLE INSIDE THE WALLS WERE SPEAKING WHAT SEEMED TO BE ENGLISH. [redacted] IF AMERICAN PRISONERS WERE IN HANOI THEY WERE PROBABLY IN THIS LOCATION. [redacted] RIGHT AFTER THE 29 JUNE BOMBINGS OF OIL DEPOTS OUTSIDE HANOI A PILOT CAPTURED IN THE ATTACK WAS TAKEN ALONG THE STREET FROM THE 65 AREA TO THE 131 AREA BY A RAILROAD TRACKS AND THEN TO A LOCATION IN THE AREA OF THE INTERNATIONAL

[redacted]

[redacted]

CONTROL COMMISSION OFFICE IN THE 170 AREA. HE WAS THEN TAKEN BACK ALONG THE SAME STREET. [redacted] COMMENT. TDCSDB-315/02978-66 REPORTED THAT [redacted] BELIEVED THE AMERICAN PRISONERS WERE LOCATED IN THE HANOI CITY JAIL IN A BLOCK BOUNDED BY DAI LO HAI BA TRUNG, HANG BONG, PHO HOA LO, AND PHO HO QUAN SU, IDENTIFIED AS COORDINATE WJ-8512[redacted] [redacted] THAT LOCATION AND THE ONE REPORTED HERE DO NOT APPEAR TO BE IDENTICAL.)

3. AFTER THE 29 JUNE BOMBINGS MIG-17'S FLEW OVER HANOI DURING DAYLIGHT HOURS ALMOST DAILY. THE PLANES WENT THROUGH MANEUVERS THERE, DIVING AND BANKING SEVERAL THOUSAND FEET UP. THEY STAYED UP FOR A SHORT TIME, THEN DISAPPEARED. ONCE IN SEPTEMBER MIG-21'S FLEW OVER HANOI. ON A SUNDAY IN SEPTEMBER AN ILYUSHIN-14 WITH NORTH VIETNAMESE MARKINGS LANDED IN THE [redacted] AREA. [redacted]

4/5. RIGHT AFTER THE BOMBINGS THE SHOPS IN THE HO HOAN KIEM LAKE AREA ([redacted]) WERE SHUTTERED UP AND THE AREA DESERTED IN THE DAYTIME. THE PEOPLE WERE SENT TO WORK IN THE COUNTRYSIDE DURING THE DAY BUT RETURNED HOME AT NIGHT. AS OF THE END OF AUGUST, HOWEVER, [redacted]

THE SHOPS HAD REOPENED, AT LEAST FOR SEVERAL HOURS A DAY. THE STATE STORE [redacted] NEAR A HOSPITAL WAS OPEN MORNINGS FROM 0600 HOURS TO 0800 HOURS. THERE WERE NO REFUGEE CAMPS IN HANOI NOR EVIDENCE OF SHANTIES OR TEMPORARY REFUGEE HOUSING. NO SCHOOLS WERE OPEN IN HANOI. CHILDREN WHO LIVED IN HANOI ATTENDED SCHOOLS IN THE SURROUNDING COUNTRYSIDE.

5. FACTORIES THROUGHOUT HANOI WORKED A FULL SCHEDULE. THE FACTORY TWO BLOCKS FROM THE MINISTRY OF THE INTERIOR [redacted] WHICH SEEMED TO BE A STATIONERY FACTORY, WORKED AROUND THE CLOCK.

6. THERE WAS NO SHORTAGE OF GASOLINE AND OIL SUPPLIES FOR FOREIGNERS IN HANOI AFTER THE 29 JUNE BOMBINGS. THEY COULD BE PURCHASED FREELY AT ONE OF THREE STATE OUTLETS. OIL TANKS WERE BEING REPAIRED IN THE WAREHOUSE AREA ALONG THE RED RIVER [redacted] WHEN THE WELDING, SURFACING, AND PAINTING WERE COMPLETED, THE TANKS WERE MOVED OUT FROM THIS AREA BY TRUCK.

7. SINCE JUST BEFORE DECEMBER 1965 EACH PERSON HAD BEEN ALLOWED A RATION OF 300 GRAMS OF MEAT A MONTH. SOME VIETNAMESE SAID IN MID-SEPTEMBER 1966 THAT THEY WERE NOT GETTING THEIR QUOTA. RICE WAS RATIONED BUT WAS IN SUFFICIENT SUPPLY. HOWEVER, WHEAT AND RICE BREAD WERE BEING SUBSTITUTED FOR THE RICE RATION IN CERTAIN AREAS OF HANOI. MATCHES WERE RATIONED AS OF LATE OCTOBER 1966. TWO BOXES PER PERSON WERE ISSUED TO LAST UNTIL THE END OF THE YEAR. THE RATIONING OF SOAP ALSO BEGAN IN LATE

[redacted]

[redacted]

OCTOBER, WITH ONE BAR OF SCRUBBING SOAP PER ADULT FOR THREE MONTHS. ONLY CHILDREN UNDER ONE YEAR WERE PERMITTED TOILET SOAP AND THIS WAS RATIONED AT THE SAME RATE. SUGAR WAS RATIONED, BUT PEOPLE WERE ABLE TO GET THEIR QUOTAS.

8. TRUCK CONVOYS, OFTEN OF 12 OR MORE TRUCKS, PARKED ALONG THE RED RIVER [redacted] THE TRUCKS APPEARED TO BE CZECH MANUFACTURE. THE DRIVERS SLEPT IN THE CABS, POSSIBLY AWAITING NIGHTFALL, AS THE SOUND OF TRUCKS MOVING OUT IN THE DIRECTION OF THE LONG BIEN BRIDGE COULD BE HEARD AT NIGHT. THERE WERE MORE TRUCKS IN RECENT WEEKS IN HANOI THAN THERE HAD BEEN PREVIOUSLY.

9. THERE WAS VERY LITTLE POLICE CONTROL OF THE POPULATION IN HANOI ITSELF. POLICE AT CHECKPOINTS AT THE BASE OF THE LONG XIEN BRIDGE ON THE HANOI SIDE SEEMED MOST CONCERNED WITH REGULATING TRAFFIC. VIETNAMESE WERE OFTEN NOT CHECKED, AND ONLY THOSE WITH LARGE CARTS WHICH MIGHT IMPEDE TRAFFIC ON THE BRIDGE WERE HELD UP. OTHER CHECKPOINTS WERE AT THE CROSSROADS AT NGA TU SO, AT PHUONG LIET [redacted], AND AT THE CROSSROAD [redacted] BETWEEN THE PARK AND THE CEMETERY. [redacted]

[redacted]

10. JUDGING FROM CONVERSATIONS WITH VIETNAMESE WORKING FOR FOREIGN DIPLOMATIC ESTABLISHMENTS AND SHOP OWNERS IN THE HO HOAN KIEM LAKE AREA, IT APPEARED THAT THE VIETNAMESE WERE CONVINCED HANOI WOULD BE BOMBED,

[redacted]

[redacted]

BUT THEY TOOK THE PROSPECT OF BOMBING CALMLY, AS THEY DID STORIES OF BOMBING IN THE COUNTRYSIDE. THERE WERE MANY SINGLE-PERSON SEMI-CONCRETE BOMB SHELTERS BEING CONSTRUCTED ON THE STREETS ALL OVER HANOI. THEY WERE ABOUT TWO FEET IN DIAMETER AND FIVE FEET HIGH WITH A CONCRETE LID. WHEN FINISHED THEY WERE BURIED IN THE GROUND.

[redacted] WHEN QUESTIONED, SOME VIETNAMESE APPEARED TO BE UNCLEAR AS TO WHY NORTH VIETNAM WAS FIGHTING. ONE BOURGEOIS VIETNAMESE FUNCTIONARY MADE THE COMMENT IN EARLY 1966 THAT SOLDIERS WHO WENT TO SOUTH VIETNAM NEVER CAME BACK AND WERE NEVER HEARD FROM AGAIN. THERE WERE NO WAR VETERANS OR WOUNDED IN EVIDENCE IN HANOI. [redacted] WORKED FOR THE FRENCH MISSION AS AN ADMINISTRATIVE OFFICER SAID THAT WHEN HE HAD TAKEN A GROUP OF FRENCH TO HAIPHONG JUST AFTER THE 29 JUNE BOMBINGS HE OBSERVED THAT MANY OF THE BRIDGES HAD BEEN DESTROYED AND PLANKS USED TO CONSTRUCT SINGLE-LANE WOODEN BRIDGES OVER WHICH TRUCKS COULD PASS.

11. THE AI MO AREA ON THE OTHER SIDE OF THE RED RIVER FROM HANOI APPEARED TO BE USED AS A MILITARY TRAINING AREA. TROOPS WALKED IN GROUPS IN THIS AREA WITH GUNS AND PACKS ON THEIR BACKS. ANOTHER RESTRICTED AREA WAS IN THE O YEN PHU SECTION JUST NORTH OF THE HO TRUC BACH LAKE. THIS WAS SURROUNDED BY A WALL AND THERE WAS A SIGN

[redacted]

[redacted]

[redacted] "NO ENTRY". SOVIET BLOC PERSONNEL FREQUENTED THE AREA. [redacted] COMMENT. THE AREA COULD HAVE BEEN A LOCAL PRISON.)

12. A NUMBER OF SOVIET BLOC PERSONNEL WERE CONCENTRATED IN [redacted] HANOI NEAR BA DINH SQUARE. THERE WAS NO NOTICEABLE INCREASE OR DECREASE IN SOVIET BLOC PERSONNEL IN RECENT MONTHS. THE SOVIETS HAD NO CHECKPOINT RESTRICTIONS AND WERE FREE TO LEAVE HANOI AS THEY WISHED. BUSLOADS OF SOVIET PERSONNEL OFTEN WENT IN THE DIRECTION OF THE LONG BIEN BRIDGE AND ALONG THE ROAD TOWARD THE AIRPORT DURING THE DAYTIME.

13. [redacted] HAD SEEN HO CHI MINH SOMETIME IN THE LAST THREE WEEKS IN OCTOBER.

14. [redacted] DISSEM. STATE ARMY AIR CINCPAC PACFLT PACAF ARPAC USMACV-SAIGON 7TH AIR FORCE SAIGON AND [redacted]

Canadian Foreign Minister Martin to the USSR linking them to Soviet-U.S. collusion and accusing Moscow of trying to induce the Vietnamese to stop fighting in return for a halt to U.S. bombing in the North.

Moscow's continuing assault on CPR rejection of united action to help Vietnam is highlighted by the 27 November PRAVDA editorial article and Brezhnev's 29 November speech at the Hungarian party congress. Other Soviet comment again calls attention to Soviet aid and to support for the four- and five-point stands of the DRV and NFLSV. Comment on Foreign Secretary Brown's visit stresses that Britain and the USSR hold differing positions on Vietnam.

WAR IN THE SOUTH

ARTICLE BY "CUU LONG"

The Cuu Long article,* entitled "New Developments in the Guerrilla War in South Vietnam," discusses the scope and potential of the guerrilla war in unusual detail. It is not clear what prompted the article at this particular time, but the content and Hanoi radio's treatment of it suggest disagreement over the conduct of the war including such basic factors as control and the role of the North Vietnamese.

The article is notable for its stress on the importance of "organizing the revolutionary masses" and for its treatment of the nature of the leadership in this effort. Cuu Long says "leadership over the guerrilla war in various localities is not limited to military matters and cannot be understood as mainly the task of military organs." He declares that given new developments, "we must further discuss the problem of leadership," and he goes on to say in a later passage that "the local NFLSV committees obviously play the leading role."

Cuu Long cites DRV party First Secretary Le Duan as well as the NFLSV Central Committee as his authority on the need to develop the guerrilla war movement on the basis of organizing the revolutionary masses. The Hanoi radio version of the article--only partially available at this writing--deletes a quotation from Le Duan on the subject as well as a subsequent reference to him. Other seemingly sensitive passages deleted by Hanoi include a statement that the tunnels, trenches, and other fortifications in the South are "more extensive" than the communist fortifications of the "Dien Bien Phu battleground." Hanoi also excises

APPROVED FOR RELEASE
4/21/98

Cuu Long's unusual details regarding the composition of the guerrilla force: it reports his statement that forces waging guerrilla warfare include all the armed forces from the main-force troops to the regional troops, but it omits his disclosure that they also include "special armed forces, such as the special task force and the ranger force." Hanoi also excises a subsequent reference to "the special task force, the engineer corps, and surveillance units."

Hanoi truncates a lengthy passage in which Cuu Long discusses the organization of the different categories of troops--including "hamlet, village, and intervillage" guerrillas and "specialized and secret" guerrillas. Hanoi omits entirely his statement that the third guerrilla warfare conference, which Liberation Radio reported on 20 October, "determined the procedures for organizing the three types of forces at the basic level." (Hanoi media made a recent reference to the conference in a 19 November VNA report of an article on pacification in the Hanoi weekly TO QUOC. It referred to the conference as having been held at Cu Chi, Gia Dinh Province--a detail which Liberation Radio did not provide.)

While Cuu Long notes in passing that the "regulars" play the decisive role in the war as a whole, his major thesis is that at this stage guerrilla action can successfully counter the allies despite their troop buildup, superior weaponry, and air power. But in a passage reminiscent of his 7 September article, he shows dissatisfaction with the operations against enemy communication lines. Declaring that attacks against communication lines have strategic significance, he says that "if leadership and organization are carried out more realistically, we will deal blows of strategic significance on the heads of the U.S. troops."

Cuu Long concludes his article with the statement that "at present guerrilla warfare in South Vietnam suggests many great problems and is undergoing several developments which cannot be entirely dealt with here."

I. POLITICAL SITUATION

South Vietnam's Constituent Assembly, having approved wording on rights and duties of individual citizens for the draft constitution, is now discussing the form of the future government. Leaders of the present government, meanwhile, are considering proposals by the assembly for changes in the body's founding law, but are not expected to give up their quasi-veto power over the final version of the constitution.

Among other developments, III Corps commander General Khang and several other unnamed senior officers reportedly have misgivings about the recent appointment of General Manh as IV Corps commander. Friction among political party leaders in I Corps could develop into serious trouble for important government programs in the area.

Constituent Assembly Developments

1. On 26 November the Constituent Assembly began a debate on the general principles its drafting committee will follow in writing the constitution. Thus far, the assembly has concluded its debate on rights and duties of individual citizens to be specified in the constitution, and has begun to discuss the form of the future government. The constitution-drafting committee has proposed a straightforward presidential form of executive, but fears within the assembly of a possible return to a Diem-type dictatorship could result in the adoption of a modified system, with a prime minister responsible to the legislature in addition to an elected president.

2. In subsequent meetings, committee representatives recommended a bicameral legislature, an independent judiciary, and an inspectorate in addition to the executive branch of government. The

upper house of the legislature would contain 30 to 35 delegates, and members of the lower house would be elected for every 25,000 to 30,000 registered voters. The judiciary would be headed by a nine-man supreme court. The fourth branch of government, a nine-man inspectorate equal in status to the other branches, would be charged with investigating and monitoring their activities.

3. Previously, the assembly approved 14 rights and four duties of individuals. Duties consisted of obligations to defend the nation and the constitution, to pay taxes, and to fulfill military service. Many of the rights were the usual individual safeguards, such as compulsory and free elementary education; freedom of press, speech, and criticism of the government; right of assembly; and protection from unlawful arrest. Other rights, however, applied more to the specific Vietnamese context. For example, the issue of land réform was introduced as an individual right and produced a heated and disorderly debate. Dr. Phan Quang Dan, a well-known political independent, led the fight for a specific land reform pledge, but received little support; Hoa Hao delegates from the delta were the most vociferous opponents of any land reform provision. Finally, after prodding from assembly chairman Phan Khac Suu, the assembly adopted a provision declaring that the policy of the state would be to make citizens property owners.

4. Another sensitive Vietnamese topic touched upon during the debate on individual rights was civilian-military relations, which were considered as an adjunct to the individual's right to participate in the political process. After a reasonably restrained debate on this subject, the assembly approved the principle that "military personnel on active duty cannot join political parties or participate in the government." The final wording and nuances of this principle, as well as all others, will again be considered by the assembly when the draft constitution itself is presented by the drafting committee; thus the precise application of this principle is not yet clear. However, such a provision could seriously conflict with the government's present administrative system which depends heavily upon military officers all the way down to the district level.

Government Attitudes Toward the Assembly

5. This provision also could have some negative effect on the current thinking of the military leadership regarding proposed modifications of the assembly's founding law, which inter alia would eliminate the government's authority to make changes in the draft constitution reversible only by a two-thirds assembly vote. An assembly committee presented the government with this and other modifications of the founding law on 18 November, and a government reply is expected sometime this week. Although several assembly delegates are optimistic that the government will agree to relinquish its veto power, there is no evidence from government sources that the military leaders are willing to do so. However, compromises on other changes suggested by the assembly are possible.

6. In general, the military rulers are apparently making no concerted effort at present to dictate the constitution. According to a reliable high-level government functionary, the military have no organized plan to influence the activities of the assembly in this regard. Although several members of the inner government circle continue to monitor developments in the assembly, their findings are allegedly reported to Premier Ky and Chief of State Thieu only on an ad hoc basis. The source claimed that government leaders believe the constitution could prove to be too feeble a document to form the basis of any kind of viable government.

Reaction to New IV Corps Commander

7. According to two reliable high-ranking military sources, several senior ARVN officers have misgivings about the assignment of General Nguyen Van Manh as IV Corps commander. They reportedly feel that Manh will not be any improvement over General Quang because Manh and his wife are as guilty of corrupt practices as are Quang and his wife.

8. Rumors of Manh's corruption, however, appear to be only a part of the problem. Manh, a southerner, was apparently Chief of State Thieu's choice for the

IV Corps assignment rather than Premier Ky's. Most of Manh's critics remain unnamed, but III Corps commander General Khang, a close associate of fellow northerner Premier Ky, is one of them. Khang is also a spokesman for the "Baby Turks," a loose association of field-grade officers who, among other things, have been pressing for the removal of southern generals Quang and Co. Most of the unnamed critics of Manh also may fall into the "Baby Turk" grouping, or may otherwise be characterized as supporters of Premier Ky.

9. In this respect, the reports of dissatisfaction over Manh's appointment serve mainly as evidence of the continued factionalism within the military leadership. No action against Manh was intimated in any of the reports, although General Khang reportedly reiterated his desire--and that of Premier Ky--to take action against Deputy Premier General Co at some suitable time.

Nationalist Party Squabbles in I Corps

10. Friction between the Dai Viet and VNQDD parties in Quang Tri and Thua Thien provinces is a current subject of major interest among knowledgeable Vietnamese in I Corps. In general, Dai Viet supporters predominate in the two northern provinces of Quang Tri and Thua Thien, while VNQDD members are stronger in the other three I Corps provinces of Quang Nam, Quang Tin, and Quang Ngai. At present, the focal point of the friction appears to be in Thua Thien, where six VNQDD-oriented district chiefs have complained to the I Corps commander of alleged discrimination by Dai Viet members among police and Revolutionary Development groups. Other, somewhat unrelated friction among VNQDD factions has also been reported in Quang Ngai and Quang Nam provinces.

11. The interparty squabbling has involved considerable speculation about the political orientation of major government officials in I Corps, especially I Corps commander General Lam. General Lam himself claims that he favors neither party, although there have been numerous allegations that

he is a secret Dai Viet party member. Generally, however, Lam is forced to deal with both parties depending upon their local strength in each province. General Lam has stated that his major concern is to keep party differences within reasonable limits, and to avoid a serious shooting incident which would almost certainly involve US/GVN cadre teams.

12. Thus far, Dai Viet - VNQDD differences have taken the form of extensive maneuvering by party leaders for control of local government functions and various government programs reaching into the countryside. These leaders appear to realize that an outbreak of violence would only be costly for all involved. Nevertheless, an assassination or other violent incident remains a possibility which could touch off a major conflict between the parties, with serious effects on Revolutionary Development and other government programs in the area.

II. REVOLUTIONARY DEVELOPMENT

According to a recent report from the US Embassy, the mission of the ARVN in 1967 to provide a security screen for Revolutionary Development activities may cause some serious morale problems in the officer corps. A total of 2,505 Viet Cong defectors came under government control during November, an all-time high for any month since the inception of the Chieu Hoi program. Meanwhile, the Viet Cong are reported to have initiated a program in Bien Hoa Province to sabotage the Chieu Hoi effort. In Quang Nam Province, the National Police are reported to be the target of a new and intensified program of subversion by the Viet Cong. Nearly 16,000 persons have become refugees in Tay Ninh Province since 31 August, largely as a result of recent allied operations.

Effect of ARVN's 1967 Mission on Morale

1. General Do Cao Tri, who is presently unassigned but maintains many good connections among the military, believes there is apt to be bitterness in the officer corps over the plan for the ARVN to concentrate on providing the security screen for Revolutionary Development (RD) in 1967. According to Tri, morale is already very bad because of excessive favoritism in promotions, a situation which often results in the exclusion of combat officers. Tri also alleged that corruption and reluctance to fight on the part of many general officers are other factors eroding the spirit of the officer corps.

2. Leaving the primary task of combating the Communist main forces to Americans and Koreans will, Tri feels, give many ARVN officers the feeling that they are being relegated to a role which is beneath their dignity. Only proper preparation by the Joint General Staff for the ARVN's new role may, in his opinion, be able to avert further unrest among the officer corps.

3. Although Tri's observations may be colored in part by his own anomalous status, there are some indications that some high ranking members of the government share his reservations about the present and future state of ARVN and the morale of its officers. The feeling is that ARVN officers will have to be re-oriented to make them think differently about themselves, their jobs, and the importance of the pacification mission.

Viet Cong Defectors (Chieu Hoi)

4. The total of returnees to government control in 1966 rose to 17,726 as of 30 November. During the week of 24-30 November, there were 772 returnees according to GVN statistics. This is the second highest weekly total for 1966. The previous weekly high occurred in late February when 922 returnees were tallied. The extremely high return in February was attributed largely to an intensive pre-Tet Chieu Hoi campaign mounted by the GVN. A breakdown of this week's returnees by Corps Tactical Zone follows:

I Corps	48	
II Corps	526	
III Corps	62	
IV Corps	136	
	772	(384 military)

5. During November, there were 2,505 returnees (1,380 military)--an all-time high.

Viet Cong Counter-Chieu Hoi Program

6. According to information received from a rallier, the Viet Cong have established a counter-Chieu Hoi training center in Bien Hoa Province. According to this source, selected individuals are trained at this school to rally to the GVN side and then attempt to obtain jobs at Chieu Hoi centers. Once in place, these agents are supposed to attempt to incite ralliers against the government and

persuade them not to serve in the Vietnamese armed forces. Furthermore they are to work to exploit the complaints of the ralliers.

National Police Target of Subversion in Quang Nam

7. The Viet Cong Quang Da Provincial Planning Committee (responsible for what is approximately the GVN province of Quang Nam and Da Nang City) reportedly has directed its security sections to mount an intensive subversion effort against the National Police in their zones of responsibility. The plan is to be carried out in three phases: (1) investigation of individual members of the force, their families, and ideological and political leanings; (2) intensive subversion effort through every means of contact; (3) discrediting, abduction, or assassination of police who do not agree to cooperate.

8. This new Viet Cong effort, according to the source, is not unusual for its target, but for the fact that Viet Cong security sections have been assigned the mission. This is a measure of the importance which the leadership attaches to the effort. An intensive effort to undermine the police in Quang Nam may be part of a countrywide effort of the Communists to reduce the effectiveness of the National Police force, which is an important asset to the over-all Revolutionary Development program.

Refugee Situation in Tay Ninh

9. Preliminary reports from Tay Ninh Province indicate that as of mid-November, there were 23,059 refugees living in temporary shelters. This represents an increase of nearly 16,000 in the number of refugees in temporary shelter in this province since 31 August when only 7,085 refugees were listed as being in temporary shelters. The increase appears to result in large part from the disruption caused by Operation ATTLEBORO--a massive allied sweep of the province.

10. Tay Ninh Province has had the reputation of being able to absorb most of the refugees which have come from the province. Many refugees, for

instance, re-establish themselves individually rather than in government sponsored projects. This new influx will probably prove more difficult to deal with.

11. Current plans for the resettlement of refugees call for the construction of two model hamlets to resettle 1,000 refugee families. These hamlets were to be constructed during 1967. Considering the magnitude of the current flood of refugees, present plans for resettling refugees will have to undergo serious revision.

III. ECONOMIC SITUATION

Price movements were generally favorable during the week ending 28 November. Retail prices of domestic and imported commodities dropped slightly from levels of the previous week. Free market gold prices fell significantly and currency prices declined also. The prices of protein food led the decline in food prices and, significantly, the prices of pork and rice were at or below the levels reached last week.

The pork situation was discussed by US and GVN officials with a tentative agreement that official price ceilings on pork should be removed. This would depend, however, on establishing an adequate reserve stock of about 2,000 tons of frozen pork. Present facilities can accommodate only about 500 tons. The embassy favors construction of additional cold storage facilities to permit the holding of necessary reserve stocks of pork.

Discussions by embassy officers with GVN economic officials ranged over a number of topics. Although Secretary of State for Industry Ton did not attach much urgency to formulating a new rice policy, Secretary of State for Commerce Thien An shared embassy feelings of the urgency to do so. Thien An recognized, however, that political considerations will exert considerable influence on the rice policy adopted by the GVN.

Although problems have continued since the US took on an advisory and action role at the Saigon port, the embassy feels that a continuation of current efforts in the line of confiscating cargos left in warehouses, improving cargo accountability, and a correct credit policy will have some salutary effects on port operations.

Prices

1. Retail prices in Saigon during the week ending 28 November declined slightly with the over-all USAID retail price index down three percent from the previous week. Food prices declined three percent primarily because prices for protein foods fell or remained steady. The price of pork held steady a second week at the relatively low level of 85 piasters per kilogram, while the prices of beefsteak and fish declined. Rice prices held steady. Non-food items were mixed, with prices for charcoal and soap registering increases and other items holding steady. The USAID non-food index declined one percent below the level of the previous week. (A table of selected weekly retail prices in Saigon is included in the Annex).

2. Prices of imported commodities were generally unchanged: the USAID price index for selected US-financed imports declined only slightly from the level of the preceding week. Prices of condensed milk and flour were again a little lower than the level of the previous week as stocks continued ample. Chemicals remained relatively unchanged as fresh supplies reached the Saigon market. Despite the resumption of construction activity with the onset of the dry season, prices of construction materials, except cement, fell slightly with the arrival of new shipments.

Currency and Gold

3. The free money market remained relatively strong. The price of US dollars and MPC (scrip) was down slightly to 170 and 112 piasters per dollar respectively. The price of gold fell significantly during the week from 239 to 227 piasters per dollar as the recent reduction in the official sale price of gold continued to affect market psychology. (Graphics on monthly and weekly free market gold and currency prices are included in the Annex).

Pork Situation

4. US and GVN officials met on 18 November to discuss the over-all pork situation, particularly

increasing or removing official ceiling prices on live hogs and constructing new storage facilities for frozen pork. Although no substantive decisions were made at this meeting, the discussion was unusually frank and gave a clear picture of GVN thinking on pork.

5. The issue of GVN price ceilings provoked the most lively discussion. US officials contend that these price ceilings, which were originally imposed last December, have served no useful purpose and indeed, have suppressed production and disrupted arrivals of live hogs in Saigon. Moreover, the US feels that current and planned USAID programs, such as disease control, mixed feed plants and importation of improved stock, will not lead to increased production at current official prices. GVN representatives conceded that about one third of Saigon's pork supply currently comes through the black market and that because the official price applies only to live hogs at the slaughterhouse, the market price usually is well above the official level. Nevertheless, GVN officials were reluctant to reach the conclusion that official prices should be abandoned or at least greatly increased. Finally, however, they appeared willing to remove price ceilings provided an adequate reserve stock of about 2,000 tons of frozen pork could be established to regulate the market.

6. The US urged importation of both live hogs, at least through Tet, and frozen pork. In reply to a GVN inquiry about US financing for pork imports, it was pointed out that past pork imports had been financed by the GVN. The question of imports quickly became a question of cold storage facilities since present cold storage capacity is only 500 tons and the continued availability of this capacity is questionable. It was agreed that a cold storage facility of 2,000 ton capacity--roughly one month's consumption in Saigon--would be sufficient to supplement domestic supplies as required. US officials agreed to ascertain the cost and time required for construction of such a facility.

7. The embassy reports that the proper use of frozen pork could stabilize the market without displacing domestic production or lowering the return

to the producer below a fair market level. Moreover, in view of the importance of pork in the consumer price index, a stable pork market would contribute significantly to economic stabilization. For these reasons and because the GVN appears willing to remove price ceilings upon the establishment of an adequate reserve of pork, the embassy feels that there is merit in erecting a large cold storage warehouse.

Discussions with Ton

8. At a meeting with USAID Director MacDonald on 23 November, Acting Secretary of State for Industry Ton said that Premier Ky had announced to the GVN cabinet a 1967 budget ceiling of 75 billion piasters, which would be in line with US thinking on the budget. Ky did not, however, indicate the size of the civilian and military portions. According to Ton, Ky also expressed an intention to scrutinize the various ministerial budgets.

9. Ton again confirmed that the GVN was thinking of granting a ten percent wage increase for all GVN employees in early January or just after Tet. Because of concern about the impact of such a wage increase on prices, however, the GVN is exploring the possibility of disguising this proposed wage increase in the form of increased allowances or across the board step increases.

10. With regard to the recent reorganization of the Ministry of Economy, Ton said that Ky had announced the appointment of Ton as chairman of the Economic and Finance Committee. This economic policy committee had formerly been chaired by the Minister of Economy. It is interesting that, while Governor Hanh was away at the Asian Development Bank meeting in Tokyo, Ky chose to reject Hanh's suggestion that Ky chair the committee with Hanh as vice-chairman.

11. Ton's comments on rice policy indicated that he does not attach much urgency to formulating a new rice policy. He reported that the province chiefs were reluctant to become responsible for establishing rice buying stations because they did

not have adequate warehouses and were afraid of losses. Moreover, Ton felt that there were real dangers in getting ARVN too involved in rice collections. The USAID Director outlined some of the considerations involved in the Mission's proposed rice policy and indicated that a new rice price policy must be enunciated quickly by the GVN if the benefit of a price increase is to accrue to the farmers instead of the merchants. Ton asked that this matter be discussed again in a very restricted circle and not at the next meeting of the joint US-GVN economic committee. The US plans to commence discussions on rice with GVN officials and press them to move forward quickly.

Secretary of State for Commerce Thien An on Rice Policy

12. Secretary of State for Commerce Thien An in discussing rice policy with embassy officers gave the general impression that he would support an increase in the price for rice but that because of possible political repercussions it might not be acceptable to Premier Ky at this time. He confirmed the statement by Acting Secretary of State for Industry Ton that the GVN would not be capable of mounting a buying operation in the provinces. He agreed with the embassy, however, that the rice policy should be announced soon, by 15 December at the latest. This would mean that it would be discussed in a fairly final stage at the next cabinet meeting. This sense of urgency contrasts with that expressed by Ton.

Situation at the Saigon Port

13. The US Embassy feels that in placing the US military in an advisory and action role at the Saigon port last summer, the US adopted the best course of action to increase cargo movements through the port with the least disruption to Vietnamese administration of the port. To date, the following measures have been taken to relieve port congestion: reorganization of the port; approval of a new tariff which sharply increases warehouse charges; establishment of a cargo accountability system; improvement in warehouse management; completion of additional barge landing sites; and Ky's approval for enforcement of the 28 July confiscation decree.

14. In spite of these measures, however, the key port problem--the unwillingness of importers to remove their cargo from port warehouses--has not yet been solved. Although US officials, including Ambassador Lodge, have pressed Ky on confiscating cargo left in warehouses for more than 30 days, progress on confiscation has been disappointing. Hopefully, selective confiscation will take place in the near future. There remains, however, the problem of making available to importers adequate credit in order that they can pick up their goods on arrival. Overdue cargo reports are now being supplied weekly to commercial banks to allow them to bring pressure on consignees to remove their cargo. In addition, the GVN has recently proposed that credit for customs charges be extended to importers in an attempt to get them to move their goods out of the port more rapidly.

15. The embassy feels that the only other alternative--a complete US takeover of the port--would not solve the problem of importers' reluctance to remove their goods. Moreover, the US would be confronted with a host of difficult problems including liability for losses of goods, the handling of certain GVN services such as customs, assumption of title for all port equipment, and maintenance of a complicated bookkeeping and financial system for port operations. More important, however, is the fact that it is unlikely that the GVN would ever accept outright US operation of the port. For these reasons, the embassy feels that the best course of action is a continuation of all current efforts--confiscation, cargo accountability and a correct credit policy--to get importers to remove their goods.

them "new criminal acts of aggression." Another domestic service commentator on the 3d, saying the raids will not succeed in frightening the people of the DRV, points out that Vietnam is helped by its socialist friends and that more and more U.S. planes are being destroyed as a result.

Moscow promptly reports the Viet Cong attacks on Tan Son Nhut airfield and on U.S. installations in Saigon, pointing to the resulting "panic" in the American command. And PRAVDA's correspondent, Shchedrov, cites the NFLSV statement that the raids were carried out in "retaliation" for the attacks on Hanoi and the bombing of the DRV "civilian population." A 7 December Moscow domestic service account of a press conference by Dang Quang Minh, the head of the NFLSV's mission in Moscow, to publicize the Front's "black book" on U.S. "chemical warfare" in South Vietnam, also quotes him as referring to the raids near Hanoi as proof of further U.S. escalation and as saying that the raid on Tan Son Nhut airfield was "revenge" for the air strike.

VC Claims Victory in "First Round" of Dry Season Campaign

Hanoi and Front media continue to describe the southern insurgents as responding triumphantly to the NFLSV Central Committee Presidium's 27 October appeal for defeat of the allied dry season offensive. A LIBERATION PRESS AGENCY communique carried by VNA on the 2d ticks off a series of alleged communist victories in the month since the appeal, claims the allies suffered 11,400 casualties in that period, and asserts that "we have won the first round" against the dry season offensive. It pictures an allied debacle in Tay Ninh and heavy allied reverses in the highlands and near the demilitarized zone.

OPERATION ATTLEBORO

Media exert particular efforts to depict Operation Attleboro in Tay Ninh Province as a major victory for the communists. A NHAN DAN editorial on the 30th hails this "glorious and highly significant victory" of the Viet Cong, says the campaign "broke the backbone" of "many elite U.S. units," resulted in some 3,000 enemy casualties, and displayed the "excellent and well coordinated fighting" by the three types of forces. An LPA roundup of the campaign carried by VNA on the 30th and statements by a representative of a regional "Liberation Armed Forces Command" quoted by LPA and carried by VNA on the 3d depict a thorough mauling of allied forces in the operation.

APPROVED FOR RELEASE
4/21/98

The most comprehensive discussion of operation Attleboro appears in a lengthy commentary under the pseudonym "Quyet Thang" broadcast by Liberation Radio on 1 and 2 December. The author claims that Attleboro, "the largest military operation thus far," constituted the "biggest, bitterest and saddest" U.S. defeat. He says that the allies had sought to destroy insurgent main forces and "warehouses" and to pacify the Tay Ninh area, but that in fact the VC waged deep and continuous attacks on allied positions. Apparently sensitive over reports of heavy communist casualties, Quyet Thang claims that the allies "failed to destroy a single platoon" of the insurgents and adds, in describing various engagements, that "all of the guerrillas were safe," that "our side was unharmed."

The author stresses the successful coordination "among the different battlefields" and says that the three types of forces fought in "smooth coordination" and displayed "good mutual support." Some defensiveness seems evident, however, in the claim that the Viet Cong won its engagements "in a dignified manner" and waged "continuous" battles on a "minor scale" while setting the stage for "major battles whenever favorable."

The author notes approvingly that regular and guerrilla units cooperate in "deeply penetrating" disputed areas to promote mass uprisings. Citing engagements in the Tay Ninh campaign in which insurgents allegedly "lured the enemy out of his bases" and then attacked, he declares that "this way is, however, insufficient," that communist forces must "penetrate deeply" into allied territory and attack enemy bases, logistic centers, and urban areas. He asserts that "we must attack the enemy not only when he advances or pauses but also when he retreats," and that the insurgents must always "promote the offensive spirit."

Unlike earlier Front comment which flatly ridiculed the assignment of ARVN forces to pacification work, this article observes soberly that this is a development of "strategic importance." But it goes on to say that pacification efforts "have been frustrated."*

U.S. TROOPS IN DELTA

Some concern over the assignment of U.S. forces to delta areas seems evident in a The Truong QUAN DOI NHAN DAN article broadcast to the South on 2 December. It declares that the delta "continues to be

* Comment on ARVN pacification efforts is discussed in the BLOC SURVEY of 25 November, page 14.

Some dissatisfaction over attitudes of urban intellectuals seems indicated in a 23 November Liberation Radio commentary which claims that "progressive intellectuals in the world approve our just struggle" and "consider siding with us" an "undeniable duty," and that "this truth will surely give our intellectuals food for thought" and will "prompt them to compare it with what they are doing." Urban intellectuals, it adds, "must adopt an appropriate attitude" and "must not turn your heads and feign ignorance" over U.S. "crimes."

Hanoi Edits "Cuu Long" Article on Guerrilla Warfare in South

A seemingly major addition to the literature on the conduct of the war in the South appears with Liberation Radio's 13 November broadcast of an article on guerrilla warfare under the pseudonym "Cuu Long" which was described as having been written for the daily and magazine editions of the DRV army organ QUAN DOI NHAN DAN. The identity of Cuu Long is not known* but he speaks with obvious authority regarding the war in the South. And the article takes on added significance when it is published in QUAN DOI NHAN DAN on 20 November and broadcast by Hanoi radio to the South on 28, 29 and 30 November with a number of apparently sensitive passages deleted or modified.

Cuu Long's article discusses the scope and potential of guerrilla war in unusual detail. And while he notes in passing that the "regulars" play the decisive role in the war as a whole, his major thesis is that at this stage guerrilla action can successfully counter the allies despite their troop buildup, superior weaponry, and air power. The article comes in the wake of considerable propaganda on military theory. Cuu Long now refers to the Front's guerrilla warfare conference, which Liberation Radio reported on 20 October, saying that it had "determined the procedures for organizing the three types of forces at the basic level." In June, July and August there was a flurry of statements on military matters in the propaganda. Most notably an article in HOC TAP by Nguyen Chi Thanh, broadcast by Hanoi to the South on 24 July, detailed allegedly hypothetical pitfalls which the Viet Cong avoided during the dry season. And at the end of July and early August, Hanoi released speeches at a mid-May "determined-to-win" congress of youth of the armed forces by First Secretary Le Duan, Defense Minister Giap and Gen. Song Hao.

* The last available article attributed to Cuu Long was one carried by Liberation Radio on 7 September which predicted a new U.S. dry season offensive and discussed strengths and weaknesses of the Viet Cong and the allies in somewhat polemical terms.

APPROVED FOR RELEASE
4/21/98

Some of Hanoi's deletions of the Cuu Long article raise the possibility of differences on a high level including such basic questions of the role of the VPA in the South and the matter of control of the Viet Cong. The article is notable for its stress on the importance of "organizing the revolutionary masses," and the author cites Le Duan as well as the NFLSV Central Committee as his authority on this matter. Hanoi deletes a quotation from Le Duan on the subject as well as a subsequent reference to him. Hanoi retains Cuu Long's assertion that "leadership over the guerrilla war in various localities is not limited to military matters and cannot be understood as mainly the task of military organs." But Hanoi omits the following passage which says that the matter of leadership must be further discussed.

In the discussion of the role and nature of guerrilla warfare, Hanoi deletes from the middle of a sentence the specification of erroneous concepts as "the idea of depending on concentrated troops and of overestimating the enemy's forces and weapons." And Hanoi omits from a passage on the need for continued attack that statement that: "in this fierce struggle, to pause at the defensive is to invite the danger of being annihilated. Even if we do not attack the enemy, he will attempt to exterminate us."

Hanoi also excises Cuu Long's unusual details regarding the composition of the guerrilla force: it reports his statement that forces waging guerrilla warfare include all the armed forces from the main-force troops to the regional troops, but it omits his disclosure that they also include "special armed forces, such as the special task force and the ranger force." Hanoi also excises a subsequent reference to "the special task force, the engineer corps, and surveillance units." Hanoi also truncates a lengthy passage in which Cuu Long discusses the organization of the different categories of troops--including "hamlet, village, and intervillage" guerrillas and "specialized and secret" guerrillas.

Hanoi Continues to Show Concern Over Internal Problems

LE DUC THO ARTICLE IN NHAN DAN

An article by Le Duc Tho in the 7 November NHAN DAN voices open concern over the shortcomings of some party cadres and stresses that improving the relationship between basic party organizations and the masses is an "urgent demand which must receive the greatest attention." He asserts that commandism and violation of "mass rights" exist in a "serious degree at the basic level." While some of this is a matter of misunderstanding, he says, there are also cases of "bad motives."

INTELLIGENCE MEMORANDUM

The South Vietnamese Army Today

Summary

Plans are under way to shift the South Vietnamese Army (ARVN) away from large-scale offensive operations against Viet Cong/North Vietnamese Army main force units and employ it largely as a force to support pacification activities. The problems and characteristics of the ARVN as it exists today will to some extent determine its performance in this mission. This study sets forth some aspects of the ARVN's current status and reviews many of its more important problems on the eve of its reassignment.

NOTE: This memorandum was produced solely by CIA. It was prepared by the Office of Current Intelligence and coordinated with the Office of Research and Reports, the Office of National Estimates, and the Director's Special Assistant for Vietnam.

I. INTRODUCTION

1. Up to the present, neither the sharply increased level of US military assistance nor the large-scale commitment of US combat troops to South Vietnam appears to have resulted in a significant improvement of the over-all operational posture or combat performance of the South Vietnamese Army (ARVN).

2. The inclusion of major ARVN elements in the planning and execution of combined operations with American forces has, to some degree, improved the morale and aggressiveness of certain ARVN units, including two of the three divisions based in the western half of III Corps. In much of the rest of the country, however, ARVN combat performance has been generally unsatisfactory or, at best, marginal, with the result that US and third-country deployments have been required to counter major Communist thrusts in most critical areas.

3. During the past year, the ARVN's forces have been most effective in the IV Corps area south of Saigon, largely because Viet Cong main forces in this region have been weakened by sizable cadre and combat troop withdrawals to the III Corps and elsewhere.

4. While there has been a generally favorable trend during 1966 in terms of the number of ARVN units considered combat effective,* the over-all capability of the regular army has, nonetheless, continued to be adversely affected by a number of important factors. Among them has been the general expansion of Communist military resources in the I, II, and III Corps Tactical Zones. The ARVN is unable, in many instances, to engage Communist main force units in the field on equal terms because of understrength units and inferior firepower. Another problem has been the ARVN's training. It is considered poor in quality and

* As of 30 September 1966, 130 of ARVN's 158 maneuver battalions were rated by US advisers as combat effective, 24 marginally combat effective, and four combat ineffective.

often oriented more toward conventional warfare than toward counterinsurgency methods and tactics. The insufficient number of qualified, aggressive and highly motivated officers and NCOs is reflected in frequent tactical blunders in conducting both large and small-unit operations.

5. The desertion rate of all component services of South Vietnam's armed forces, especially that of the ARVN, continued to rise throughout much of 1966. Although the rate has declined somewhat in recent months, it is problematical whether the induction system of the armed forces can continue to keep pace with losses from desertions and combat casualties.

6. On balance, the ARVN is considered generally capabie of maintaining internal security in most major population centers, in a few outlying areas, and along certain lines of communication. It is considered wholly incapable, however, of prolonged effective resistance by itself to the military threat posed by intensified North Vietnamese Army (NVA) infiltration and combat activity. It is also questionable whether the ARVN could cope alone with the Viet Cong, were Allied and North Vietnamese combat units to be withdrawn from South Vietnam.

II. GENERAL DEPLOYMENT OF FORCES

1. The 284,633-man ARVN is the predominant force within the South Vietnamese military establishment and comprises about 90 percent of the personnel strength of the regular armed forces.* ARVN forces are deployed by corps zones north to south. For purposes of military command, administration, and logistics, the corps are further subdivided into division tactical areas. Approximately 34,000 ARVN combat troops, including 22,700 in the 1st and 2nd Divisions, operate in the five northernmost provinces of South Vietnam which form the I Corps area. Some 30,000 regular army troops, 19,500 of them subordinate to the 22nd and 23rd Divisions, are based in the central highlands and central coastal provinces of II Corps.

2. The heaviest concentration of ARVN units is in the III Corps area, where nearly 50,000 combat troops, including 34,400 attached to the 5th, 10th, and 25th Divisions, are deployed in an arc screening Saigon and its suburbs on the north, northwest, and northeast. About 38,000 combat personnel, 31,000 of whom are organized under the 7th, 9th, and 21st Divisions, are stationed in the IV Corps southern delta area below Saigon. Finally, the 8,500-man Airborne Division, reinforced by five South Vietnamese Marine battalions, composes the ARVN General Reserve headquartered in the Saigon Capital Special Zone.

Division Alignments

3. The present pattern of ARVN deployment has existed for the past two years, the sole major

*Major ARVN combat units presently include four corps headquarters, ten infantry divisions, one airborne division, one Guard Brigade, one separate infantry regiment, four separate infantry battalions, seven separate artillery battalions, nine armored cavalry squadrons, one Ranger group headquarters, 20 Ranger battalions, and two Special Forces groups.

exception being the creation of the 10th Division in III Corps late in 1965.

4. In 1963 and 1964, two ARVN divisions--the 9th and 25th--were moved from Quang Ngai and Binh Dinh provinces to reinforce the delta because of concern over the deteriorating security situation there. These redeployments, which brought the number of ARVN divisions stationed in the southern III Corps and IV Corps region to four, significantly improved the government's military posture in the delta.

5. Subsequently, the Viet Cong began to skim off cadres and combat elements from their main force units in the delta to permit expansion of their regular force structure in the III Corps area. The withdrawals lowered the combat effectiveness of the Viet Cong main forces in the IV Corps. Communist regulars were largely obliged to disperse and revert to small-unit operations in conjunction with local force battalions. For this reason the ARVN has generally held its own in the delta over the past 18 months, although large Communist forces remain there and the area still serves as a source of manpower and food for enemy units elsewhere.

6. Following the redeployment of the 9th and 25th ARVN Divisions to the delta in 1964, the security situation in Quang Ngai and Binh Dinh provinces went rapidly downhill. During the past year, however, the deployment of US Marines to Chu Lai and of South Korean forces to Qui Nhon has tended to stabilize the military situation in Quang Ngai and Binh Dinh. Offensives by these and other allied units in the area, culminating in the recent highly successful Operation IRVING, have substantially reduced the Communist threat, at least in Binh Dinh Province.

7. The 1st and 7th ARVN Divisions, based in Hue and My Tho, are generally considered the best of the major South Vietnamese units apart from the airborne and ranger outfits. Until six months ago, the 1st Division was more or less holding its own against Communist main forces in Quang Tri and Thua

Thien provinces. The influx of North Vietnamese regulars into the northern part of I Corps, however, was of necessity met by US redeployments. It is questionable, moreover, whether the 1st Division has fully recovered from the heavy involvement of some of its units and officers on the side of antigovernment elements in this spring's political upheaval in I Corps.

8. The ARVN 7th Division has executed a number of successful operations over the past two years which have kept Viet Cong main force units largely off balance in Viet Cong Military Region 8 (the northern Delta area immediately below Saigon). The division has had a number of able commanders and played a key role in supporting the government against coup attempts in 1964-65.

9. The 5th and 25th Divisions, based in the III Corps provinces of Binh Duong and Hau Nghia, were for some time acknowledged as the least effective major ARVN units. However, both divisions have displayed signs of general improvement in the last six months. The greatest single factor in improving tactical efficiency, pacification prowess, troop welfare, and morale of these divisions has been their inclusion in combined operations with US 1st and 25th Infantry Division forces in the area. The division commanders are developing a higher degree of confidence as a result of their direct relationships with American commanders in the planning and execution of joint operations.

10. Since no major US tactical elements are permanently assigned to Long Khanh Province, the 10th ARVN Division (based at the provincial capital of Xuan Loc) has not had a similar stimulus for improvement. This appears to be the major factor in the continued lack of progress in this unit as compared with others in III Corps.

11. In the provinces adjacent to Saigon, and in the Capital Special Zone itself, political as well as strategic considerations play a major role in governing the disposition and effectiveness of ARVN units. The screen of ARVN forces around

Saigon is designed to block any major Communist military effort against the capital as well as a possible movement on the city by coup forces from distant corps areas. Regular army units operating in the capital area thus must be loyal to the government in power. Therefore the zone commander and the commanders of the airborne division, the marine brigade, and the guard brigade which are headquartered in Saigon and make up the ARVN general reserve and the palace guard, are selected as much for their political reliability as for their demonstrated effectiveness in combat.

III. CAPABILITY AS EFFECTIVE FIGHTING FORCE

1. For a number of years, the performance of ARVN combat units in the field vis-a-vis the Viet Cong has been adversely affected by the nature of the training they have received, first from the French during the Indo-China War and then from the US after 1954. In essence, ARVN units have been trained to fight a conventional-type war in a counterinsurgency environment. This, of course, would apply as well to the great majority of US combat troops presently in South Vietnam, who are on the whole outperforming enemy main force units chiefly through the application of conventional warfare techniques. The basic difference, however, lies in the mobility and in the massive logistics-support base available to American combat forces in the field--helicopters, tactical aircraft, heavy artillery, and naval gunfire. US forces, therefore, enjoy an enormous firepower and quick-reaction capability over any Communist unit, a capability which is simply unavailable to most ARVN units on any comparable scale.

2. The large number of automatic weapons available to a main force Viet Cong/North Vietnamese Army (NVA) unit gives it an overwhelming superiority in firepower against the average ARVN infantry unit equipped primarily with M-1s and carbines.* The bulk of the Viet Cong main forces in III and IV Corps, as well as NVA units in I and II Corps, are equipped

---

* ARVN units have been supplied mainly with US arms and military equipment, most of which is of World War II design and manufacture. In addition to the usual inventory of small arms and automatic weapons, the regular army's heavy weapons include mortars (60-mm., 81-mm., and 4.2-inch), rocket launchers (3.5-inch), recoilless rifles (57-mm.), and howitzers (75-mm. self-propelled and pack, 105-mm., and 155-mm.).

with the modern 7.62-mm. family of small arms, 75-mm. recoilless rifles, 12.7-mm. and 7.92-mm. AAA machine guns, and B-40 rocket launchers. Faced with such superior firepower, ARVN units are generally very wary of closing with the Viet Cong, and rely heavily on artillery and air support in situations where close-in combat is almost mandatory to achieve satisfactory results.

3. Individual ARVN battalions are also often unable to meet Viet Cong/NVA main force units on numerically equal terms. As of September 1966, the average present-for-duty strength for the 158 ARVN maneuver battalions was 458, or 63 percent of the authorized strength of 714. Beyond this, the limited mobility capability of the ARVN, and its continuing requirement to provide security for populated areas, tends to reduce even further the actual number of troops available for offensive operations. For example, many infantry and ranger battalions are frequently unable to put more than 250 to 300 men into a field operation, compared with 400 to 600 men in a Communist main force or provincial battalion. This numerical disadvantage is quite evident to ARVN troops as well as to their commanders, and hence limits their confidence and willingness to take risks.

4. US ground forces, on the other hand, have a more substantial capability. In September, the present-for-duty strength of the 66 US combat maneuver battalions in South Vietnam (48 US Army, 18 USMC) averaged 92 percent. The authorized strength of a US Army infantry battalion in South Vietnam is 837 and that of a US Marine infantry battalion 1,200. American units are thus able to field a much larger combat force in the same number of battalions than their ARVN counterparts. This permits them to engage enemy forces on a unit-for-unit basis on numerically favorable terms.

Leadership in Combat

5. As in any army, ARVN combat effectiveness is directly related to the capability of the unit commander. During the first nine months of 1966, leadership in 22 to 35 percent of ARVN's 158 battalions was rated by US field advisers as unsatisfactory or marginal. Such factors as the rapid

expansion of the force structure necessitated by the acceleration of enemy military activity, the lack of an adequate base of experienced leaders, especially junior officers and NCOs, the preoccupation with political maneuvering at the senior officer level, and the frequent command changes in top echelons, have all contributed significantly to the leadership problem. The ARVN also has a tendency to overstaff its headquarters elements at the sector, regimental, divisional, and corps level with an inordinate number of junior officers and NCOs, many of whom have reportedly paid for the privilege of avoiding combat duty.

6. The importance of good leaderhip is clear. The 9th ARVN Division, for example, has had a good combat record largely because it has consistently had effective and efficient leaders. A number of ARVN regiments have had poor combat records except during the tenure of one specific commander; others, such as the 42nd and 47th Regiments, based in Bac Lieu and Phu Yen provinces, have had a succession of able commanders under whom they performed creditably, only to deteriorate under a bad one.

Employment of Forces

7. During the past few years, the most prevalent type of combat activity engaged in by ARVN units of battalion strength or larger has been the search-and-destroy operation. The great majority of these operations have been conducted independently of other allied forces, and have been controlled by a sector, regimental, or divisional headquarters element. When ARVN units have participated in joint search-and-destroy operations with US and third-country combat forces, their role has often been limited to one of support--such as serving as a blocking force along enemy withdrawal routes. Battalion-size and larger ARVN forces also have engaged in operations designed to protect rice harvests or clear and hold territory for pacification, and in road-clearing and local security.

8. There have been a number of basic weaknesses in the conduct of large-scale ARVN operations. In the first place, many of the multibattalion ground

sweeps have not been adequately coordinated with the general pacification objectives in the local sector and thus have failed to produce lasting results. Secondly, as has already been noted, the relative inferiority in ARVN infantry unit firepower vis-a-vis the Viet Cong has resulted in an overdependence upon preparatory artillery fire or tactical air strikes against known or suspected enemy positions prior to the start of an operation. In many instances, the enemy, forewarned by the preliminary action, has been able to elude government forces.

9. A third and often fatal weakness reflected in many large-scale operations has been the dependence of participating ARVN units on the presumed security provided by vehicular convoy deployment to a battle area. In many operations, ARVN units are completely roadbound; they often refuse to venture into enemy territory except in large truck convoys accompanied by equivalent numbers of armored personnel carriers and other armored vehicles. Such units have often become prime targets for annihilation by enemy ambush units. A classic example was provided in the November 1965 ambush of the ARVN 7th Regiment in the Michelin Plantation area of Binh Duong Province, in which government regulars sustained more than 700 casualties in less than two hours.

10. Finally, and perhaps most importantly, tactical plans for ARVN large-unit operations are normally based on attainment of terrain objectives, and success determined on the basis of executing the prescribed maneuver plan, rather than on the basis of destruction of the enemy force in the area. In addition, these operations are usually planned to terminate at nightfall, thus enabling participating units to return to their cantonment areas either to spend the night with their families or to perform static security duties. This is frequently done at the cost of breaking a potentially fruitful contact with the enemy.

11. Operating in a strength of three companies or less, ARVN forces have also participated in numerous "small-unit actions," usually with reinforcement from Vietnamese paramilitary units. These actions are normally of very short duration, involving

for the most part routine day or night patrol activity or the establishment of ambush sites along known or suspected enemy lines of communication.

12. In small-unit operations, ARVN forces can generally be faulted for their lack of aggressiveness, and for their failure to direct these actions toward the neutralization of Viet Cong capabilities to interfere with pacification. In addition, ARVN small-unit operations often suffer from the absence of clear, coordinated patrol and ambush plans. Very often, participating units will establish tactical patterns easily detected by enemy forces, e.g., utilizing the same ambush site for several consecutive nights or traversing by the same paths and roads while on reconnaissance missions.

Effectiveness in Large-Unit Operations

13. A general idea of the combat effectiveness of the ARVN can be derived from an examination of some of the statistics associated with ARVN operations and by a comparison with similar statistics on US military activities in South Vietnam. The comparison is not intended to play up US combat proficiency vis-a-vis the ARVN. It does, however, provide a general reference point from which to evaluate ARVN operations. As noted in the preceding pages, the ARVN suffers from manpower, leadership, and ground and air support problems which are not experienced in the same degree by US units. It is unlikely, therefore, that the ARVN could ever hope to achieve the level of combat effectiveness of US units.

14. ARVN maneuver battalions spent about 30 percent of their available time during the first nine months of 1966 engaged in large-unit actions, while US units spent about 48 percent of their available time in similar operations. Numerically, nevertheless, the ARVN conducted more large operations than did US forces. ARVN actions, however, were substantially shorter in duration, averaging 5.4 battalion days per operation compared with 22.8 for US forces. Often, the longer operations

in Vietnam yield better results, since the enemy is forced to commit himself to combat through the continued tactical maneuvering of the two sides.

15. About 38 percent of the ARVN's large-unit operations during the first nine months of 1966 resulted in contact with the enemy. This was a substantial decline from 1965, when the rate of contact during similar actions was about 44 percent. US units contact the enemy in about 90 percent of their large-unit operations. The over-all ARVN/enemy kill ratio was 1 to 3.2 on large operations. The US/enemy kill ratio was 1 to 5.4. ARVN forces captured an average of 2.2 enemy soldiers per month per battalion, as compared with 4.2 enemy soldiers per month per US battalion. Finally, ARVN forces took an average of 2.3 enemy weapons per month per battalion and US forces an average of 9.3 per month per battalion. The latter figures do not include weapons taken from overrun enemy supply caches.

IV. THE MANPOWER PROBLEM

1. During 1965, a modest manpower buildup was achieved by the South Vietnamese Army despite increasing desertions and battlefield losses. The number of infantry-type battalions increased from 123 at the end of 1964 to 133 by the fourth quarter of 1965, while personnel strength increased from 220,400 to 267,900.

2. However, while ARVN forces increased numerically from 278,000 at the end of the first quarter of 1966 to 284,633 during the third quarter, the rate of growth has tapered off sharply. The drop may be attributed in part, at least, to the growing inability of the South Vietnamese armed forces induction system to keep pace with losses in the regular army accruing from desertions, combat casualties, and other manpower attrition factors.

Desertions

3. The nearly continuous rise in military desertions, dating from at least 1962, constitutes the most serious manpower problem in all the component forces--regular, regional and popular--of the South Vietnamese armed forces (RVNAF). The monthly average of desertions increased from approximately 9,500 in 1965 to about 11,300 during the first half of 1966. At this rate, projected total desertions for 1966 should exceed 135,000--the highest annual total on record.

4. Moreover, for the first time, the number of desertions in the ARVN or regular army this year comprises more than half of the total desertions reported. The average monthly desertion rate per 1,000 personnel in the ARVN has risen sharply from 8.3 and 14.2 in 1964 and 1965, respectively, to 18.3 for the period 1 January - 30 June 1966. Most of the deserters in all components were conscripts.

5. The ARVN reported a total of 43,617 personnel losses for the first half of 1966, 35,387 of whom were dropped from the rolls as deserters. Desertions among officers and NCOs have risen from 116 and 656, respectively, during 1965, to 117 and 941 for the first six months of 1966. Desertions are heaviest from the Airborne Division.

6. A number of factors have contributed to the continued high level of desertions. One factor is that much of the army rank and file, like the population in general, lacks a positive commitment to the government. Political turmoil, such as the 1966 "struggle movement" in I Corps, has also played a role in accelerating the pace of military desertions.

7. Another cause of desertions has been the increase in Viet Cong combat strength and firepower, which has resulted in increased physical danger for ARVN troops during contacts with enemy main force units. Other factors include the lack of attention on the part of unit commanders to personnel management and troop welfare problems, the absence of an effective disciplinary program, and the lack of prospects for discharge from military service for many individuals.*

8. The dissatisfactions which lead to low morale and heavy desertions within the enlisted and conscripted ranks can often be traced to low pay rates, inadequate dependent housing, concern over the welfare of families, infrequent rotation of units in isolated outposts, and inadequate medical care of the wounded. Among junior officers, there is considerable dissatisfaction because rewards, in the form of assignments, honors, and promotions are more often than not predicated on political considerations rather than merit.

9. A solution to the desertion problem has been of major concern to the South Vietnamese military command, and a number of significant steps have recently

---

* Many reserve officers and NCOs, for example, have been on "emergency" active duty since 1950-51 with no real prospects for release. Similarly, few conscripts are released at the end of their two-year active duty obligation.

been undertaken in the hope of reversing the trend.* It is too early to tell whether the problem will be diminished over the long run by these measures. However, total RVNAF desertions for the month of June (9,873) were about 1,500 less than the monthly average for the first half of 1966, while those for July and August were approximately 3,000 less. In fact, the August desertion total (8,108) was the lowest recorded for any month of 1966.

Defections to Viet Cong

10. How many of the South Vietnamese deserters defect to the Viet Cong is unclear. Documents and POW interrogations indicate, however, that there are considerable numbers of ex-RVNAF soldiers in Communist ranks. Some are defectors, others are deserters who have been conscripted by the Viet Cong after their return home. The percentage of former GVN soldiers is probably much higher in Viet Cong irregular units than in main force units. The percentage in the latter, however, seems likely to rise as the Viet Cong's need for manpower outweighs the risks involved in taking in their former enemies. This is borne out by the statements of a Viet Cong lieutenant colonel who defected to the Vietnamese government on 2 August 1966. He claimed that, in a Communist training regiment he had commanded, almost half the trainees had previously served in the RVNAF. The regiment forwarded most of its graduates to regular main force units.

* In June, a comprehensive law providing stiffer penalties for deserters and accomplices, including capital punishment for those crossing over to enemy ranks, was adopted. At the same time, legislation providing a substantial pay raise and other benefits (such as PX and dependent housing privileges) for all military and civil service personnel was put into effect.

Other corrective measures include the adoption by military authorities of modern techniques of deserter investigation and apprehension, and the development of a long-range and comprehensive military leadership improvement program. Finally, a series of major security operations conducted in the Saigon area by the ARVN General Reserve and the National Police have yielded excellent results. Several thousand deserters, draft dodgers, AWOLs, and civilians without proper identification papers have been rounded up.

V. CHANGEOVER TO PACIFICATION ROLE

1. The new mission of ARVN in the Revolutionary Development (RD) program will be, first, to clear areas of whatever organized Communist forces may be present to disrupt the securing of hamlets, and second, to reassert a GVN presence among the people. How successful ARVN will be in this transition is still uncertain. In the IV Corps Zone, for example, where ARVN has not been supported by US ground units, it has done little more than hold its own against the Viet Cong.

2. Some indication of the number of ARVN units which will be committed to the pacification support role is provided in preliminary reports on the changeover. In I Corps, the 1st ARVN Division will commit two maneuver battalions to each of the corps' two provinces; in other words, four of the division's 12 maneuver battalions initially will support RD. In the 7th Division's tactical area, which covers the delta provinces of Go Cong, Kien Hoa, and Dinh Tuong, five of the division's maneuver battalions are initially to be committed to the RD effort.

3. The effect the new mission will have on the morale and efficiency of ARVN officers and men is difficult to judge at present. It may be some time, in fact, before a definite trend can be discerned. Since the ARVN's mission will be to keep Viet Cong units at bay so that RD activities may be carried on, the ARVN may be involved in even more combat than it presently carries out. It is possible that the new mission will result in fewer casualties, but this depends to some extent on how the Viet Cong react.

4. If the Communists decide, for purely psychological reasons, to concentrate their efforts against ARVN units engaged in RD support, casualties could be high and might adversely affect ARVN morale. Also, the Viet Cong may be expected to try to portray the ARVN as playing a secondary role in the war, in the hope of fomenting ill feeling between the ARVN and other allied forces. There is evidence in Viet Cong radio propaganda that such an effort is already under way.

5. The effect of a pacification support role on ARVN desertions is problematical; but in any event, it seems unlikely that the redirection alone will be a critical factor in the desertion rate.

6. The probable reaction of the rural populace to the ARVN's presence in the pacification picture depends in great part on ARVN's performance. The main mission of ARVN will continue to be one of combat rather than one of greater contact with the rural population, but the shift in mission from search-and-destroy to clear-and-hold operations will probably increase contacts with the rural population in the future. Although these conditions will multiply the opportunities for the abuses and pillaging by ARVN which have been so prevalent in the past, there is now an opportunity for a closer sense of identity to develop between the ARVN and the people. The critical factor of troop behavior will depend largely upon the ability and willingness of ARVN troop commanders to maintain close troop discipline. In areas where troops are well led, properly disciplined and behave correctly, they may be expected to be an asset to the RD effort, but the reverse will be the case if units involved do not meet these standards. Because of the importance of harmonious relations between the ARVN and the populace, it is essential that command and troops committed to pacification be aware of the need to present a favorable image to the people with whom they deal. A program is already under way in Saigon to provide the necessary reorientation of those units which will be committed to the support of the RD effort.

7. In the final analysis, the success of the new ARVN mission is likely to depend, to a considerable extent, upon the degree to which it is understood and accepted by individual ARVN field commanders. Political repercussions could be felt, for example, if the present divisional structure is not carefully integrated into the planning of the new mission, or if division and corps commanders feel that their prerogatives are being diminished under the new concept.

8. Top GVN military planners are apparently mindful of these problems in giving their backing to ARVN's supporting role in revolutionary development. Chief of State General Thieu has reportedly indicated that there will be a need to reshape the outlook of many senior officers and that this effort will be undertaken. The chief of the Joint General Staff, General Vien, has also made a point of stressing his own full commitment to the RD support mission by sending a command letter to his subordinates. Moreover, ARVN leaders have made plans for the training in Saigon of teams from all ARVN divisions concerning the new mission. These teams are to return to their parent divisions and initiate similar training programs down to battalion level.

I. POLITICAL SITUATION

Official developments on the political scene in South Vietnam last week were overshadowed by the assassination of a prominent member of the Constituent Assembly. The killer has admitted Viet Cong connections, and there is no evidence to suggest that he is anything other than an enemy terrorist. The assembly postponed further substantive sessions because of the incident. Earlier in the week, the ruling Directorate had met and decided to reject an assembly proposal which would have limited the Directorate's power to amend the draft constitution. The decision, however, has not yet been formally conveyed. In other developments, one of Premier Ky's personal assistants told the US Embassy that several Vietnamese ambassadors will be replaced or moved to other posts.

Constituent Assembly Member Assassinated

1. Work in the Constituent Assembly came to a halt last week following the assassination of Tran Van Van, one of the assembly's most prominent critics of the Ky government. Van was en route to an assembly session on the morning of 7 December when two men on a motorcycle fired the fatal pistol shots into his car. One of the killers was captured shortly thereafter by the Vietnamese police; the other man escaped.

2. According to a Vietnamese source, the alleged assassin at first denied being a member of the Viet Cong. Under subsequent police interrogation, however, he admitted belonging to a section of the Viet Cong Regiment for the Liberation of the Capital. He claimed to have been forcibly recruited for the assassination task three months ago, trained at a base camp in Binh Duong Province, and sent into Saigon a week prior to the killing. Although the terrorist denied firing the fatal shots, the police reportedly found that his hands showed traces of gunpowder and that his pistol had fired a bullet retrieved from Van's automobile.

3. If the killing was indeed a plot of the Viet Cong, as seems likely, the choice of Van as the target would seem a good one from their point of view. He was one of the leading southern activists in the assembly and a thorn in the side of the northern-oriented Ky regime during the recent cabinet crisis. The Communists may have calculated that the murder of a major critic of the Ky government would draw suspicion to the regime itself and further sharpen the conflict between northerners and southerners.

4. A day after Van's death, Radio Hanoi and the Viet Cong radio in South Vietnam accused Ky and Thieu of "sending their agents into the streets" to murder him. The broadcasts cited Western press reports speculating that southern antipathies toward the government might be aroused and bring political turmoil. US officials in Saigon, however, have discounted internal political implications in the killing, and there has been no reported adverse reaction from southern assemblymen. The Viet Cong had threatened publicly, prior to the 11 September elections, that they would assassinate candidates for the assembly.

Other Constituent Assembly Developments

5. The assembly will hold its next substantive session early in the week of 12 December. Before adjourning because of Van's murder, it did hear some recommendations on the organization of the future government put forth by the constitution-drafting committee. Those recommendations were similar to the ones presented earlier by other committees advocating four independent government branches: an elected president, a bicameral legislature, a judiciary, and an inspectorate. Although the deputies are generally in agreement, they are still divided about equally on whether to include a prime minister in the system. They also appear to be in favor of providing for elected province chiefs and mayors under the new constitution.

6. Several committee members who were assigned to study selected aspects of a future constitution argued that the present administrative system is not responsive to regional and local needs. They maintained

that too much power has been vested in the hands of the corps commanders to the detriment of the province, village, and city officials. Moreover, they characterize the presently appointed government officials at the province level and lower as generally ineffective either because they are military officers with little administrative experience or because they are underpaid.

7. The committees also recommended instituting a strong system of checks and balances on the government through the following provisions. The legislature should have the right to vote on the national budget, to approve high-level appointments, and to question the executive. The inspectorate and the judiciary should be allowed to check on the abuses of power. The people and the press should have the right to criticize openly the execution of national policy. A legal opposition and a system of political parties should be formalized. The head of state should be limited to one four-year term in office. Neither the executive head of state nor the national assembly should have the constitutional right to dissolve the other.

Directorate Rejects Assembly Proposals

8. The Directorate has decided to reject proposals which would have changed seven articles in the basic charter of the Constituent Assembly. The proposals were submitted to the Directorate on 18 November by a 12-man delegation of assembly leaders. One of the most controversial clauses in the charter, Article 20, empowers the Directorate to amend the draft constitution before it becomes law. According to reliable clandestine sources, the decision to reject the proposals was made at a meeting in early December, attended by the ten military members and eight of the civilians on the 20-member Directorate, but has not yet been officially conveyed to the assembly. Many of the deputies reportedly know that the decision has been made, according to the US Embassy, but several of them have said that the Directorate's inflexible stand is not likely to disrupt the assembly's work.

Several Ambassadorial Changes Likely

9. Prime Minister Ky has officially requested that the Ministry of Foreign Affairs replace Vu Van Thai, the present ambassador to the United States, with Bui Diem, one of Ky's close civilian advisers. The United States has accepted the nomination. Ambassador Thai now is in Saigon, but no date has been set for Diem's departure for Washington.

10. According to another of Ky's assistants, Dinh Trinh Chinh, several other Vietnamese ambassadors will be replaced or shuffled in the near future. Chinh himself is slated for the ambassadorship to Thailand. Other posts affected include Laos, Japan, South Korea, Australia, Tunisia, Malaysia, and the United Nations observer. Chinh states that some of the new ambassadors will be generals who do not presently have significant positions in the military.

11. Recent reports have indicated that the ruling generals have been pressuring the Foreign Affairs Ministry to assign persons whom they favor to ambassadorial posts. Tran Van Do, the ministry head, has registered several complaints to Ky about the alleged military interference.

II. REVOLUTIONARY DEVELOPMENT

Some 2,500 refugees and 64 defectors returned to GVN control in Kien Giang Province after an intensive psychological warfare campaign, backed up with air strikes. Although Revolutionary Development continues to progress favorably in An Giang Province, many problems remain; the principal one is the Hoa Hao political structure which dominates the province and is resistant to change. Land reform efforts may receive new impetus under a new program to allocate funds for a four-pronged approach to improving land tenure conditions for the farmers. Although impressive gains were reported by the GVN in the number of hamlets secured in October, the embassy notes that many of these may represent only paper gains.

Refugees Flee Viet Cong Areas in Kien Giang

1. In December approximately 2,500 refugees have fled a Viet Cong - controlled area in the Hon Chong Mountain area, some 35 miles northwest of the province capital of Rach Gia, Kien Giang Province. The refugees left the Viet Cong base area, according to a MACV report, largely as the result of the combined pressures of air attacks and an intensive, carefully coordinated allied psychological warfare campaign. The refugee group included about 1,200 children.

2. Although the refugees expressed dissatisfaction with Viet Cong control techniques, they are anxious to return to their home areas to begin harvesting their rice. An exodus of this magnitude demonstrates that Viet Cong control of the population may be effectively challenged by a carefully prepared and executed psywar campaign. A follow-up psychological operation is reportedly being planned to exploit this situation more fully.

3. In addition to the refugees, 64 Viet Cong defectors came under government control in Kien Giang. Included in the defector group were one noncommissioned officer, a tax collector, and several cadre.

Revolutionary Development in An Giang

4. An Giang Province, according to a 10 November embassy report, is today clearly the most prosperous province in the delta region, but much work remains to be done to implement fully all aspects of the Revolutionary Development program. The principal reason for this somewhat dark view of the situation in the province is the tight hold maintained by the Hoa Hao power structure on the affairs of the province and apparent Hoa Hao reluctance to a change in the status quo.

5. Hoa Hao power in the province is not monolithic, but rather fractionalized among several elements. While mutually competitive, these factions will unite in the face of any challenge by US advisers, the GVN, the Viet Cong, or any other outside intruders. In An Giang, the three principal factions are: the Central/Hoa Hao Church organization; a local group headed by the province chief, Lt. Col. Ly Ba Pham; and another element led by "Colonel" Nguyen Van Hue, the chairman of the Province Council.

6. One of the chief failings of the RD program in the province, according to this report, has been in efforts to implement the GVN land reform policy. This program, it seems, will be very difficult to initiate here. For example, although extensive aerial photography has been conducted to determine the province's cadastral structure, the province chief, Lt. Colonel Pham, has "refused to discuss" the uses to which this information may be put. Although recent decisions may have largely negated information relating to the land reform program contained in this embassy report (see Land Reform below), even a concentrated GVN effort may founder in the shoals of regionalism and factionalism.

7. Another aspect of RD in which progress is apt to be slow is public health. A new and well-equipped dispensary exists, but is headed by an inadequately

trained former practitioner of oriental medicine whom the people, because of their mistrust, will not patronize. Consequently, a resident medical assistant and two nurses remain idle. The main source of medical care at the present time is US and third-country programs, such as the MEDCAP and MILPHAP teams which have made a large impact on the population. Improvement in public health facilities in An Giang and the entire delta region would be a significant contribution to the well-being of the peasants who in other respects are relatively well off. The GVN would stand to gain an easy and impressive psychological warfare victory by instituting a well-founded medical program for An Giang--a service which the Viet Cong are wholly ill equipped to provide.

8. The seven Revolutionary Development Cadres (RDCs) teams are working rather rapidly and well in An Giang, spending only two or three weeks in each hamlet. This rapid pace is possible because the security situation is generally good in An Giang. Paradoxically, this situation gives rise to another problem--underemployment of the greater part of the normal 59-man RDC teams. Two-thirds of each team's members carry arms and are responsible for providing security for remaining team members fulfilling census-grievance and other duties. These armed elements are now largely idle, although they have been employed in flood relief work.

9. Several criticisms have been voiced about the RDC teams in An Giang, as in other parts of the country. Specifically, they have been called "cowboys" from urban areas not adapted to work in the countryside. Also, they are not recruited from the areas in which they are to work; they are often poorly motivated, trained, and led, and indifferent to local village traditions or to village elders. Furthermore--and this may be the reason for much of the criticism of the RDCs--village and hamlet officials are not paid as well as the RDCs.

10. Although the over-all situation in An Giang is good, there has been no radical departure from the ways of the past. The people do not appear to demonstrate any greater loyalty to or love for the GVN, and the traditional Hoa Hao power structure which commands loyalties remains intact.

Land Reform

11. Priority emphasis is reportedly being given by the GVN and the US to the implementation of all existing GVN land tenure policies in An Giang Province, according to the recent embassy reporting. Other selected areas will also receive increased attention. In order to assist the program in getting under way, some VN$30 million in counterpart funds has been allocated for the following projects:

a. Distribution, with full titles, of former French-held, expropriated, and squatter lands;

b. Investigation, updating, and renewal of tenant-landlord contracts;

c. Establishing: (1) positions of village land officer/registrar and (2) village agricultural committees;

d. Special assistance to An Giang by means of counterpart funding and use of photogrammetry for preparation of title descriptions, land use and capability studies, and an integrated agrarian development plan for a 6,000- to 7,000-hectare tract.

12. During the past year there have been several instances--accompanied by great fanfare--where land titles were presented to these tilling the soil, but these seemed to be mainly for propaganda purposes. The new program appears to be a serious, concerted effort to solve one of the most difficult problems facing any government in Saigon--the effective redistribution of land to peasants who have spent many years cultivating it without anything tangible to show for their efforts. An effective land reform program could go a long way toward undercutting Viet Cong support among the peasants and winning them over to the GVN cause.

Hamlet Security

13. According to statistics received from the GVN there was a net increase of 156 secured hamlets throughout the country during October. Although this figure is an impressive one, the embassy believes it should be accepted only with caution. There are indications that some of these hamlets are secured on paper only, and that the GVN statistics represent an effort by local officials to meet previously established goals. There was a corresponding increase of 1.4 percent in the secured population, raising the total to 56.8 percent of the population--or 8,541,400 persons--living in secured areas.

Viet Cong Defectors (Chieu Hoi)

14. The total of returnees to government control in 1966 rose to 18,190 as of 7 December. During the week of 1-7 December there were 464 returnees, according to GVN statistics. A breakdown of this week's returnees by Corps Tactical Zone follows:

I Corps	63
II Corps	280
III Corps	44
IV Corps	77
	464

III. ECONOMIC SITUATION

The week ending 5 December was highlighted by a sharp rise in Saigon retail prices, partly because of lower deliveries of rice and protein foods to Saigon. As a result of this increase, retail prices are now at their highest level of the year with the exception of the peak that was reached during the September elections. Prices of imported commodities, on the other hand, declined slightly, and free market gold and currency prices showed only small variations. An embassy analysis of provincial prices during July-October shows that these prices are generally well above those in Saigon, but the degree by which the two sets of prices vary has diminished.

US and GVN officials held their sixth joint economic meeting at which Minister of Finance Kien reported that the GVN had decided to permit importers to postpone payment of customs duties in an attempt to ease the importers' need for credit. The US prefers an expansion of the commercial banks' capacity to extend credit to importers--a proposal which Governor Hanh has approved. A US-GVN subcommittee on pork has recommended removal of the official price ceiling on pork, provided cold storage facilities are constructed to hold reserves of pork. Discussions with senior GVN economic officials indicate general agreement with the US-suggested increase in the government price of rice but disagreement with the US proposal for establishing GVN rice buying stations.

Prices

1. Retail prices in Saigon rose sharply during the week ending 5 December, partly because of lower deliveries of rice and protein foods to Saigon.

Both food and non-food items were higher, resulting in a gain of seven percent in the over-all USAID retail price index. This index is now at its highest level of the year with the exception of the peak reached at the time of the September elections. The food index rose eight percent, largely because of soaring rice and pork prices. On 5 December the price of the type of rice used by the working class reached a new 1966 high of 1,700 piasters per 100 kilograms, or 36 percent above the level prevailing just prior to the June devaluation. The price of pork bellies rose to 130 piasters per kilogram--an increase of more than 50 percent above the previous week--reportedly because demand for pork increased while deliveries to Saigon were lower. Beef, fish, and chicken also were higher. The non-food index was three percent above the previous week, largely because of higher prices for charcoal and calico. Heavy pre-Tet purchases of calico caused an 18 percent increase in the price of this commodity. (A table of weekly retail prices in Saigon is included in the Annex).

2. Prices of imported commodities, on the other hand, were slightly lower as measured by the USAID price index for selected US-financed imports. Condensed milk and wheat flour were lower as the market continued to be well supplied, and sugar was unchanged. Fertilizers, chemicals, and rayon yarn edged up slightly. A similar slight upward price movement was recorded by construction materials because of increased demand occasioned by the start of the new construction season.

Currency and Gold

3. Free market prices for dollars and MPC (scrip) moved up slightly during the week ending 5 December. Gold, on the other hand, declined again, reportedly because of an expectation of a further reduction in the official sale price of gold and the continuation of tight cash conditions. Currency price quotations for 5 December have not yet been reported.

Provincial Prices

4. The embassy has just completed a series of price indexes for each of the four regions of South Vietnam based on price reports received for the period 30 June - 31 October 1966 from selected provinces within each region. Although these indexes are relatively crude and in some cases based on incomplete reporting, they show three rather significant trends: (a) with the exception of Region IV, provincial prices generally are well above those in Saigon; (b) after the initial post-devaluation increase in prices, provincial prices have generally not increased significantly and in some cases have declined; and (c) the degree by which provincial prices exceed those of Saigon has diminished during the period studied.

Joint US-GVN Economic Meeting

5. US and GVN officials recently held their sixth joint economic meeting, which was co-chaired by Acting Minister of Industry Ton and USAID Director MacDonald. On the question of credit to importers, Minister of Finance Kien reported that, quite apart from the issue of bank credit, the GVN had decided to give authority to the Director of GVN Customs to permit importers to postpone payment of their customs duties. Importers will put up real estate as collateral. Kien and Ton believe that this liberalization will be sufficient to satisfy the importers' complaint of a lack of customs credit and will assist in speeding up the flow of goods through the port.

6. Kien also proposed that port congestion be relieved by using importers' declarations as the basis for the assessment of duties instead of checking all imported goods. Spot checks would be made to encourage honest declaration. Ton and Kien again expressed the view that the advent of the dry season will induce importers to clear construction materials through the port.

7. The pork subcommittee set up at the fifth US-GVN economic meeting submitted recommendations on

pork policy. This subcommittee, which is composed of US and GVN economic officials, agreed that the present ceiling price on hogs in Saigon does not and cannot effectively control pork prices. Consequently, the group recommended that this ceiling price be eliminated in order to increase deliveries of hogs from the delta and lower pork prices in Saigon. The subcommittee felt, however, that controls should not be removed until means of indirect supply can be set up. For this purpose, the group recommended the construction of a 2,000-ton capacity freezing plant to hold frozen stocks for use in stabilizing prices and providing emergency supplies in case of acute shortages. Among other measures recommended by the pork subcommittee were: importation of live hogs from Thailand to meet Tet requirements, importation of 500 tons of frozen pork, measures to reduce losses from hog cholera, importation of pure-bred swine for breeding, and the establishment of new feed mills. The US promised to determine promptly whether USAID could finance a cold storage plant.

GVN Views on Rice Policy

8. Separate discussions on rice policy with several senior GVN economic officials--including National Bank of Vietnam Governor Hanh, Minister of Commerce Thien An, and Acting Minister of Industry Ton--indicate a general agreement with the US-suggested increase in the government price of rice and the necessity of announcing a new higher rice price promptly. At the same time, however, these GVN officials do not agree with the US proposal for establishing GVN rice buying stations. Moreover, they all expressed the opinion that announcement of a new GVN rice policy will depend largely on Premier Ky's approval in view of possible adverse political reactions from the urban consumer.

9. Governor Hanh feels that there should be a sharp increase in the rice price paid to the farmer in order to increase production and demonstrate GVN concern for the farmers' welfare. Hanh stated that although the GVN would be running

certain political risks in the urban areas, the new rice policy should be a clear break with the present policy of trying to conciliate noisy urban consumers at the expense of the silent peasant. With regard to the US suggestion for GVN rice buying stations, Hanh stated emphatically that the GVN is incapable of conducting buying operations because such a system would be too enticing for those who wish to make personal gains. As an alternative, Hanh suggested the extensive use of information leaflets to inform the farmers of a new government price. He also felt that a liberal credit policy should be established to finance rice purchases at a new government-supported price. According to Hanh, the greatest problem will be ensuring the security of the rice moving from the delta to Saigon.

10. Minister of Commerce Thien An and his staff generally agree with Hanh's views, especially his opinion that the GVN is unable to operate buying stations. Thien An stated that the low pay of and lack of discipline among GVN officials precluded such an operation. In spite of the possible political repercussions of higher rice prices, Ministry of Commerce officials feel that they should make a technically and economically sound proposal to achieve higher prices for producers. In their view, the questions to be considered are: (a) whether and to what level prices should be raised, (b) whether the market in domestic rice should be liberalized or new higher prices should be set, and (c) if the market is liberalized, what would be the best way to avoid excessive price increases and supply shortages. Thien An evidently feels that a free market--without price or other controls--would be the best solution.

11. As a result of these GVN views, the US Mission is examining the possibility of dispensing with the GVN buying station aspect of the US plan. The GVN proposal to increase credit to finance rice purchases also will have to be examined in terms of the impact of this credit on the inflationary gap and over-all price level.

Credit Policy

12. The US Embassy reports that failure to move immediately to expand the capacity of commercial banks to provide credit for imports could well cause a serious financial crisis and result in irreparable damage to the proposed stabilization program for calendar year 1967. Vietnamese commercial banks are almost fully loaned up and cannot obtain funds to finance imports as they arrive. Unless these banks make credit available immediately, importers will be forced to go to the money lenders or simply leave their goods in the port, thus adding to the already critical port congestion. Moreover, until additional credit is available, all current income of the importers will be needed to move goods already in the port. Consequently, importers will be unable to cover advance deposits and taxes on new import licenses with the result that serious shortages of commodities will develop by next spring.

13. It appears that it was possible for the commercial banks to finance the heavy commitments they made in July and August at the encouragement of the National Bank of Vietnam (NBVN) only because of an accounting bottleneck which resulted in the NBVN's being four months behind in its billing of the commercial banks. This mix-up, however, has now been cleared up, and the banks need funds. The NBVN has been hampered in formulating a proper credit policy because of the incorrect assumption that the volume of credit outstanding on the day of devaluation last June had only to be increased to accommodate for the change in the exchange rate plus the anticipated increase in imports. The IMF also used this method to arrive at its estimates of tolerable credit limits. Both the NBVN and the IMF, however, evidently overlooked the fact that as rapid inflation manifested itself in 1965, wholesalers began to take over financing of high profit imports in an effort to corner supply. Since the devaluation, however, black market prospects--except for a few commodities--are dim, and wholesalers no longer have the cash to continue financing importers. As a result, the amount of credit to be made available for imports should make allowance for the volume of imports previously financed outside the banking system.

14. According to embassy calculations, a minimum of roughly 10 billion piasters of additional credit must be made available before mid-January. Such an expansion of credit to the importing sector will not have a significant inflationary impact because credit to importers involves payments to the NBVN rather than creation of demand deposits. Moreover, about 95 percent of all credit currently supplied by the banks in Vietnam is for financing imports--the major anti-inflationary weapon. Although a definition of credit by end-use is somewhat tenuous, the Vietnamese banking and business community seems to concur in this 95 percent estimate. In addition, US officials feel that an expansion of bank credit is a much more productive and direct approach to combating the shortage of funds for imports than other plans such as the GVN deferred customs duties scheme, which will only satisfy part of the importers' need for credit, while temporarily reducing GVN revenues.

15. On 3 December, the US economic counselor met with Governor Hanh of the NBVN, who agreed that steps must be taken to expand credit. Hanh thought, however, that an additional 10 billion piasters of credit was probably too much. Nevertheless, on 5 December Hanh called a meeting of commercial bankers and informed them he was prepared to make more credit available for imports. Specific details on Hanh's announcement are not yet available.

VIEWPOINT AND PIVALRY BETWEEN FRANCE AND THE UNITED STATES.

4. THE PEKING-MOSCOW DISPUTE. [redacted] AS TO WHETHEP THE PEKING-MOSCOW DISPUTE INFLUENCED THE VIETNAM WAR. [redacted] THE CONFLICT BETWEEN THE TWO POWERS DID NOT SERIOUSLY AFFECT THE VIETNAM WAR. [redacted] THERE WAS SOME RELUCTANCE IN THE SOVIET BLOC TO ASSIST THE NORTH VIETNAMESE WAP EFFORT WHOLEHEARTEDLY. THE NORTH VIETNAMESE GOVERNMENT SEVEPAL TIMES HAD STATED THAT THE WAR AND ITS EFFECTS WERE NOT A PURELY VIETNAMESE AFFAIR BUT WAS A COMMON CAUSE FOR ALL SOCIALIST STATES. [redacted] THE VIENAM WAR WAS A TEST CASE AS TO WHETHEP WOPLD COMMUNISM WOULD SUCCEED OP NOT. PEOPLE WERE ALWAYS TALKING ABOUT "INTEPNATIONAL DUTY" AND "INTEPNATIONAL STRUGGLE FOR THE COMMUNIST MOVEMENT" BUT THESE WOPDS WERE THEOPETICAL AND WERE NOT ALWAYS PUT INTO PRACTICE.

1.5(c)
3.4(b)(1)

1.5(c)
3.4(b)(1)

5. [redacted] COMMUNIST CHINA ALWAYS PPESSED NOPTH VIETNAM NOT TO MAKE ANY APPEASEMENT WITH THE "REVISIONISTS" AND THE NORTH VIETNAMESE DID NOT LIKE THIS KIND OF PPESSUPE. [redacted] THE NOPTH VIETNAMESE SURELY KNEW WHAT TO DO AND COULD HANDLE MATTERS THEMSELVES AND DID NOT

1.5(c)
3.4(b)(1)

1.5(e)
3.4(b)(1)

WANT TO BE DICTATED TO BY ANYBODY ELSE. HOWEVER, CHINA ALWAYS COOPERATED FULLY WITH NORTH VIETNAMESE EFFORTS TO SOLVE THE WAR MATERIALS PROBLEM AND ASSISTED AS MUCH AS THEY COULD AFFORD. ALSO, [redacted] THERE WERE NO SUCH BARRIERS TO TRANSPORTATION OF SOVIET AID ACROSS CHINA AS THE SOVIETS CLAIMED IN THEIR PRESS. NO OBSTACLES WERE PUT IN THE WAY BY THE CHINESE IN THE TRANSPORT OF SOVIET WEAPONS. BEFORE, THERE WERE SOME IRREGULARITIES BUT THEY HAD BEEN TAKEN CARE OF AND PRESENTLY TRANSPORTATION OF MATERIALS WERE BEING "SAFEGUARDED BY THE VIETNAMESE THEM-SELVES." HOWEVER, RAIL TRANSPORTATION WAS DIFFICULT AND THE NORTH VIETNAMESE HAD THEREFORE ASKED COUNTRIES SENDING AID TO MOVE THE MATERIALS BY SHIP WHENEVER POSSIBLE AND "NOT TO BE FRIGHTENED EVEN BY THE SEVENTH FLEET." [redacted] NORTH VIETNAM WAS RECEIVING ONLY ONE-TENTH OF THE AMOUNT OF AID BEING GIVEN TO THE SOUTH VIETNAM GOVERNMENT BY THE UNITED STATES. NORTH VIETNAM BADLY NEEDED MATERIALS. THERE-FORE, IT HAD ASKED EAST EUROPEAN BLOC COUNTRIES WHY THEY WERE KEEPING THEIR EQUIPMENT ONLY FOR THEMSELVES AND STOCK-PILING IT INSTEAD OF TRYING IT OUT ON A LARGE SCALE IN

I. POLITICAL SITUATION

The Constituent Assembly voted in favor of a plan to elect a president and a vice president by universal, secret ballot under the constitution it is preparing. The elected chief executive would, however, appoint a prime minister to render him administrative assistance. The assembly also chose a new member to fill the seat vacated by the assassination of Tran Van Van.

There have been some shifts in the alignment of the official political blocs in the assembly. The second and third largest blocs recently merged to form what is now the largest bloc. Moreover, the Greater People's Bloc, which was previously the largest, is reportedly losing some of its members who claim they want to avoid the "government" stigma that the bloc has allegedly acquired.

Meanwhile, Premier Ky is unwilling to reveal his presidential ambitions even to his closest advisers, according to a reliable Vietnamese source.

Form of Future Government Taking Shape

1. The type of government envisioned under the new constitution is beginning to take shape in the Constituent Assembly. Last week, the deputies approved a modified presidential form of executive branch with a popularly elected president and vice president, and an appointed prime minister. Although the exact wording of the assembly proposals is not clear at this time, it appears that the prime minister and his appointed cabinet can be removed from office by the president acting alone or upon the demand of the national assembly (legislature). The prime minister, however, will merely be an administrative functionary in the proposed system in contrast to the relationship between the chief of state and the prime minister in the present government.

New Constituent Assembly Member Approved

2. In the 14 December session, the deputies approved a motion that the vacant assembly seat of assassinated member Tran Van Van be filled by Dr. Huynh Kim Huu, who had finished behind Van in the 11 September election on the same slate. Dr. Huu is a southern Catholic.

Official Assembly Political Blocs Changing

3. Various sources have indicated that the official assembly blocs, which were formed during the election of permanent assembly officers in late October, are undergoing internal changes involving mergers and shifts in membership. The formation of the Democratic Alliance Bloc was formally announced in the assembly on 13 December. The new bloc is an amalgamation of the heavily northern Catholic, 16-member Democratic Bloc and the 25-member Hoa Hao - Cao Dai - VNQDD Alliance Bloc. With four other members picked up elsewhere in the assembly, it is now the largest bloc in the assembly, although it does not constitute a majority. The US Embassy has reported that the components of the bloc have been considered progovernment, and specifically in favor of Premier Ky.

4. According to one of the members of the new bloc, officers were elected and a policy statement was drafted by bloc members between 3 and 5 December. The reported policy statement deals entirely with constitutional points. This suggests that the merger was brought about by the change in basic issues facing the assembly from the election of assembly officers in October to the drafting of a constitution at present. An earlier report did state, however, that at least some of the impetus for this merger came from Catholic political sources who had been working for the formation of a broad, religious-oriented group.

5. Another delegate has reported that six members of the Greater People's Bloc--heretofore the assembly's largest--have withdrawn from bloc discipline and have joined the ranks of independent assembly delegates. Another 14 members of the bloc

reportedly are considering a similar withdrawal. One of the chief reasons for such action is that many delegates consider the Greater People's Bloc --made up primarily of military, Catholic, and Dai Viet delegates from central and North Vietnam--to be the "government bloc."

6. According to a reliable medium-level official, a new bloc to be known as the Force of the Peasants, Workers, and Military will soon be introduced in the assembly. This group, which reportedly has already obtained the legally required minimum support of 12 assembly delegates, is directly linked to retired General Tran Van Don's southern-based political front group. Both Don and labor leader Tran Quoc Buu are to be listed as advisers to the bloc.

7. The precise status of assembly blocs in terms of their orientation and membership is not clear at present. Various factors, which have been outlined above and which have apparently played a part in the shifts now under way, indicate that these changes may neither be final nor necessarily significant in terms of forming political groupings for next year's national elections.

Premier Ky Still Hesitant on Revealing Presidential Ambitions

8. Premier Ky recently has frequently discussed his political future with three of his closest advisers, but has been unwilling thus far to commit himself to a definite course of action, according to a reliable Vietnamese source with excellent access to those involved in the discussions. Ky reportedly assesses his chances of winning the presidency--should he run--as very strong, but has ended every discussion without committing himself. Ky's advisers believe that Ky wants desperately to run, and that his current indecision is caused by his desire not to lose face, even with them, by committing himself and later being "rebuffed."

9. According to the source, Ky's hesitancy to take any action which might reflect his presidential

ambitions could soon cause him difficulties. For example, Constituent Assembly delegates have unofficially been mulling over a constitutional provision with a minimum age requirement for the president, and thinking seems to be divided between a 35- and a 40-year minimum. Ky, who is 36, reportedly is so sensitive on the age question that he is dreading his scheduled briefing of the Assembly, with the attendant risk of possibly antagonizing any of the delegates while they are considering this question. On the other hand, he does not want to appear as if he is fawning upon the delegates. Despite Ky's unwillingness to influence the Assembly delegates in any way on this question, some of Ky's advisers may attempt to go ahead and take positive action to ensure Ky's eligibility for the presidency on the age basis.

10. Also central to the question of a military candidate for president are the attitudes and actions of Chief of State Thieu, who with Premier Ky forms the basic alliance upon which military unity rests. General Thieu thus far has not committed himself as a presidential candidate, and both Ky and Thieu appear to be waiting for the other to make the first move. Ky and his advisers somewhat naturally feel that he stands a better chance of winning a presidential campaign than would Thieu. They assess Ky as being more popular among the public at large, especially among Buddhists and northerners, and among the relatively younger military officers, while Thieu is favored by a majority of Constituent Assembly delegates in relation to Ky, and is preferred by the senior military officers.

11. Ky and his advisers feel that the Ky-Thieu relationship, and consequently the military unity necessary for political stability, can best be preserved in the future government by Ky running for president and by Thieu becoming a "supreme" military commander. They reportedly admit that the reverse would not be feasible, since Ky would not be an acceptable commander in chief to the senior military officers. In addition, Ky is not willing at this time to accept the post of prime minister under Thieu as it has been outlined in the future government, since he feels that that he would be at the mercy of both Thieu and a national assembly, and subject to removal by either at any time.

II. REVOLUTIONARY DEVELOPMENT

Premier Ky, on 15 December, once again affirmed that the primary mission of the ARVN for 1967 will be to provide a security screen for the revolutionary development. A recent communiqué of the Central Committee of the National Front for the Liberation of South Vietnam indicates that the committee views revolutionary development as a major threat and that a serious campaign probably will be mounted to reduce the program's effectiveness. The South Vietnamese budget for psychological warfare operations will come to $US 36,568,000, and will support the efforts of the Ministry of Information and Chieu Hoi, and the Psychological Warfare Directorate of the armed forces. Politics, professional jealousies, and the disinterest of officials charged with supervising the cadre at the local level are at the root of problems still hampering the revolutionary development cadre program throughout the country. Since July of this year nearly 44,700 refugees have returned to GVN control in the I Corps area, often in very large groups.

Ky Reaffirms New Role of GVN Military Forces

1. Premier Ky, on 15 December, stressed the importance of the military's role in recovering the rural areas from Communist control. Speaking at the graduation of the class of officers who will return to their parent military organizations to teach the fundamentals of pacification, Ky maintained that ARVN must demonstrate a spiritual as well as material regard for the people when it commences its primary task of providing the security screen for the revolutionary development program in 1967. He also restated his government's determination to press forward simultaneously with the policy of defeating the Communists and reconstructing the rural areas.

Viet Cong Concern About Revolutionary Development

2. A 5 December communiqué of the Central Committee of the Viet Cong's National Liberation Front, outlining tasks for the coming year, indicates increasing concern among the Communist ranks over the revolutionary development program. Although the communiqué claims the US/GVN pacification effort "has in the main been foiled," one of the political tasks it cites to be accomplished in the coming year is the "smashing" of GVN rural pacification plans. Both the claim of victory and the call for new victories over the revolutionary development effort suggest that the Communists view it as a major threat. The Viet Cong may be expected to make an expanded effort to disrupt the program and to negate any gains that it has registered.

Psychological Warfare Operations

3. Funds budgeted by the GVN for psychological warfare activities during its fiscal year of 1967 (which concides with the calendar year) are reported to amount to $US 36,568,000. This budget, according to a USIS report, will support the combined activities of the Ministry of Information and Chieu Hoi (MICH), and the Psychological Warfare Directorate in the armed forces. The new budget, which is only slightly larger than that of 1966, will be divided as follows: for MICH, $US 32,050,000; for the Psychological Warfare Directorate, $US 4,518,000.

4. Personnel currently assigned to the psychological operations and Chieu Hoi activities total 21,773, while the military personnel will total 2,307. The bulk of the civilian personnel, 12,774, will be assigned to the field as Vietnam Information Service (VIS) personnel. The USIS report cautions that there is a significant amount of payroll padding in the case of the MICH.

Revolutionary Development Cadre Program

5. Problems rooted in politics, religion, corruption, insecurity, and professional jealousy continued to restrict progress in the Revolutionary Development (RDC) effort in all corps areas during October.

In all, only 16 provinces and Cam Ranh City reported progress in the program. Sixteen other provinces reported no significant progress in RDC activities, and 11 others reported no progress at all. There is reason to believe, on the basis of individual provincial reports that some provinces reporting no progress may actually have regressed.

6. Both GVN and US advisers are trying to solve the problems that have arisen. The onus for failure seems to rest with those provincial and district officials who are either disinterested or lack an understanding of what the objectives of the RDC program are. The Ministry of Revolutionary Development (MRD) has taken steps to replace some of the inept and disinterested officials, a move which may improve performance in some areas of the country. A summary of progress and problems by corps areas follows.

I Corps Zone

7. Reports from this corps indicate erratic progress mingled with disturbing signs of slippage in the program. In the northernmost province, Quang Tri, weak provincial and district leadership has impeded RD progress in some areas. A mixture of ineffectiveness by the RD committee chief and inexperience of a recently appointed district chief has been cited as the source of difficulty with the RD program in this province. In Quang Nam and Quang Ngai provinces, 19-man technical teams (census grievance, civic action, and New Life Development elements) fresh from the National Training Center at Vung Tau have been successfully melded with the 40-man Peoples Action Teams (PAT) already in place. Initial results with these newly combined teams is reportedly very favorable. Clouding the picture somewhat in Quang Ngai Province, however, are the activities of the Vietnam Nationalist Party (VNQDD). This group is endeavoring to place its members on the RD committees in an effort to enhance their own political positions. In Quang Tin Province, lack of organization plus an adverse military situation have combined to hamper the RD effort there.

II Corps Zone

8. The RD effort in this Corps is suffering from inadequate leadership for the provincial programs.

Also, lack of security in many areas has forced the RDC teams to devote most of their time to protecting themselves, and has given officials charged with supervising the programs an excuse for unproductive cadre operations. In Quang Duc, for example, province officials are reluctant to visit teams in insecure areas and are therefore unable to provide guidance or observe results. In Binh Thuan Province, the falsification of pacification results is an even more alarming tendency. In this province, teams have been moved arbitrarily from hamlet to hamlet, apparently without consideration for whether they have been secured or not. The problem may have been partially solved by the replacement of the Deputy Province Chief for Internal Security.

9. Montagnard cadre teams in Darlac Province are reported to be doing an effective job, and are seeking an expanded role in the RD effort. Although the dissident montagnard autonomy movement FULRO has been active in the area, it has not affected the operation of the montagnard cadres. In Kontum Province, a similar favorable account is given of montagnard cadre activities. In this province, the Vietnamese RDCs are also functioning more effectively under the impact of good leadership and the introduction of better trained cadre groups from the Vung Tau National Training Center.

III Corps Zone

10. A major obstacle to the effective use of RDCs in this Corps zone is the reluctance of province officials to allow cadre groups adequate time to accomplish their tasks. The controversial commander of the ARVN 25th Division, General Phan Trong Chinh, has stepped-up the tempo of hamlet construction to one month, and consolidation phases to one and one-half months. Chinh's order has been issued in an apparent attempt to make the pacification effort in his area look good. Only in Long An Province has the province chief resisted Chinh's order and set a more practical time limit for pacifying a hamlet. In Long Khanh Province, montagnard cadre groups are proving to be the strongest element in the civic action program. Their success is largely the result of the intensive effort of chief of montagnard services in the province.

IV Corps Zone

11. The same general problems--lack of leadership and disinterest--prevalent in the other three corps zones are also present in IV Corps. In three provinces--Chuong Thien, Vinh Binh, and Vinh Long--the lack of adequate security to screen the work of the RDCs in the hamlets has been cited as a major obstacle to RD progress. The population lacks confidence in the ability of the Regional Force and Popular Force to protect hamlets after the RDCs leave the area, and covert Viet Cong penetration of the hamlets is also a source of concern.

The Refugee Situation in I Corps

12. There has been an influx of some 44,700 refugees from Viet Cong-controlled areas of I Corps into government areas since July of this year. Some of this influx has been a mass movement of people: 17,000 persons fled from Quang Tri Province to Thua Thien Province after large US/ARVN forces entered the area just south of the DMZ during Operations HASTINGS and PRAIRIE, and 14,000 persons from the Phu Ky area of south central Quang Nam Province sought GVN refuge during operations by the Marines. All of these evacuations from areas of Viet Cong dominance represent a serious loss to the VC in terms of potential manpower reserves for their armed forces, agricultural workers, or other support roles. Additionally, the Communists suffer a severe propaganda blow when large numbers of persons opt to go over to the GVN side. Details below on two recent evacuations in Quang Tin and Quang Nam provinces show some of the reasons why people leave areas under Communist control and some of the steps that have been taken by the Viet Cong to prevent the exodus.

Quang Nam Province

13. Some 2,200 persons recently resettled in the Nong Son coal mining area in south central Quang Nam relate a familiar story of Viet Cong oppression which forced them to seek shelter in GVN-controlled areas. Originating in the village of Son Phuoc in Duc Duc district, the southernmost of the province, these people took the first opportunity to flee from

Communist control. This arose when a US Marine Corps operation moved into their area early this month. This refugee group estimates that there are another 1,000 persons in the Son Phuoc area who would probably come out if given the opportunity.

14. The Viet Cong made a determined effort to prevent the Son Phuoc refugees from fleeing their village. During the course of their flight, Communist snipers gunned down four of the escapees, killing one. Such a response on the part of the Viet Cong is apparently almost unprecedented, and was done at considerable risk to themselves since allied troops were still operating in the area.

15. Further deterioration of the Communist popular base may be taking place in this particular area of Quang Nam Province. Commanders of US units in the area say that there have been numerous instances of people in remote areas begging US troops either to stay in the area to protect them, or to evacuate them when the troops leave. One reason for the desire of villagers in these northern areas to leave Viet Cong-controlled zones is that the Communists are being increasingly denied rice from the major population centers along the coast; this is causing the Viet Cong to put more pressure on the population under their control. While the flow of rice to the Communists from coastal areas has not been stopped, there is evidence that the government's resources control efforts are becoming more effective. Increased logistical problems, particularly in the matter of food supplies, could possibly lead to serious political problems for the Communists.

Quang Tin Province

16. On 8 December, 16 kilometers east of the province capital of Tam Ky, 42 refugees approached elements of a US Marine unit participating in Operation CORTEZ, and requested evacuation from the area. They carried about 1,000 pounds of rice with them. Among the reasons cited by the group for fleeing their homes were: constant Communist harassment, heavy Communist taxation, impressment of their young men into the Viet Cong ranks, and fear of air strikes.

17. According to a report from clandestine channels, the Viet Cong in the general area of Operation CORTEZ have levied a 20-percent tax on rice, as well as taxes on other agricultural produce, on boats, and on real estate. Recently, payment of all these taxes has been demanded in rice--a good indicator of the urgent need for this commodity. According to the same report, this Viet Cong taxation in kind has had the effect of taking 50 to 100 percent of the rice crop. In another area of Quang Tin Province, the agricultural tax of the Communists is reported to be 50 percent.

III. ECONOMIC SITUATION

Retail prices in Saigon reached a new high during the week ending 12 December as rice and pork prices continued to increase. The currency and gold market, however, remained relatively steady. Prices in the provinces during October were generally unchanged in spite of increased transportation difficulties caused mainly by adverse weather conditions. The GVN decided to raise the government buying price of rice. Other aspects of the new GVN rice policy are not yet clear, but the US Mission tentatively feels that the policy is workable. Ambassador Lodge has urged Premier Ky to take measures to solve the problem at the Saigon port. USAID reports that considerable progress was made in industrial development in South Vietnam during FY 1966.

Prices

1. For the second consecutive week, retail prices in Saigon reached another high, second only to the peak reached at the time of the September 1966 elections. According to the USAID retail price index, prices during the week ending 12 December rose four percent above the previous week. Food prices were up five percent and non-food items rose two percent. As during the previous week, these increases stemmed largely from soaring prices for rice and pork. On 12 December the price of the type of rice used by the working class reached another new 1966 high of 1,750 piasters per 100 kilograms, or 40 percent above the level prevailing just prior to the June devaluation and almost 120 percent above the price at the beginning of the year. The price of pork was 140 piasters per kilogram, or eight percent above the previous week and 65 percent above the price during the latter half of November. Lower deliveries of these commodities to Saigon continue to be the major factor causing the higher prices. Pork prices, which in turn influence the prices of other protein food, are also being affected by an increase in the cost of feed. Prices of non-food items were generally unchanged with the

exception of charcoal and firewood, both of which increased because of lower deliveries to Saigon. (A table of weekly retail prices in Saigon is included in the Annex).

2. Prices of imported commodities were mixed; food items held steady and construction materials, fertilizers and chemicals showed slight increases. No changes were noted in the prices of condensed milk and wheat flour. Sugar declined slightly as the market continued to be well supplied. Iron and steel products, on the other hand, rose as a result of increased demand caused by the start of the new construction season. Fertilizers and chemicals also were higher because importers did not receive any new shipments.

Currency and Gold

3. Although the cost of living continues to rise, the currency and gold market remains reasonably steady. During the week ending 12 December, dollars and MPC (scrip) moved down to the level of two weeks ago. Gold, however, rose because of lower arrivals of gold and increased demand for jewelry for Tet. Currency price quotations for 12 December have not yet been reported. (Graphics on monthly and weekly free market gold and currency prices are included in the Annex).

GVN Decision on Rice Policy

4. On 13 December the GVN finally decided to raise the government buying price of rice. The price to the producer for paddy is to be between 8.5 and 8.9 piasters per kilogram, or roughly double last year's price. This new GVN price is below that recently recommended by US officials--a target price of 10 piasters per kilogram with government buying stations offering a support price of 9.5 piasters per kilogram. It is estimated that the new price for paddy will result in a retail price in Saigon of roughly 16 to 16.5 piasters per kilogram for the cheapest type of rice as compared with the present price of 16.0 piasters. Thus, the GVN is, in effect, setting a retail price which is the same or only slightly above

the existing price. Imported rice will be sold at around 13 to 14 piasters per kilogram, as compared with a recent price of 12.5 to 13.0 piasters.

5. On the controversial issue of provincial buying stations, the GVN has decided to ask the National Agricultural Credit Office (NACO), working together with the province chiefs, to act as a buying agent. The exact role of NACO in the provinces and its relationship to the Ministries of Agriculture and Commerce is unclear.

6. Premier Ky has requested that there be no publicity in the cities for the new rice policy. Moreover, acting on a US recommendation, the GVN will institute a vigorous program in urban areas of rice distribution from trucks. The new price policy will be widely publicized in the rural areas, however, by means of nationally printed information leaflets in order to inform delta farmers of the true price situation and prevent the merchants from again taking advantage of the farmer.

7. Although the GVN price increase is less than that proposed by the US, US officials believe that the new GVN rice policy will work out and intend to give all possible assistance to get the program launched. Several aspects of the program, however, remain unclear. The question of a credit policy for rice, for example, has not been determined. Moreover, although National Bank Governor Hanh and Acting Minister of Industry Ton apparently intend to play significant roles in implementing the program, it remains to be seen who will really be in charge of implementation and what role the province chiefs will play.

Provincial Economic Developments During October

8. Economic developments in the provinces during October were highlighted by greatly increased transportation difficulties which resulted from the rainy season in the northern part of the country and the flooding of the Mekong in the southern area. Viet Cong sabotage also contributed to transportation problems. With the exception of the provinces affected by the floods, however, provincial prices were generally steady. Rice

prices and supplies were satisfactory in Region I, but higher rice prices were noted in both Regions II and IV, as a direct or indirect result of the floods.

9. Although Region I experienced transportation difficulties because of the monsoon rains, prices were generally steady throughout the region, and no shortages of construction materials were noted. There were, however, such seasonal price fluctuations as higher seafood prices because of shortages caused by heavy rains. Plentiful rice supplies, which stemmed from a good local harvest and ample imported stocks, resulted in lower prices for this commodity in almost all provinces of the region. These lower rice prices prevailed even though Viet Cong rice levies were stepped up in some provinces, such as Quang Tri and Quang Tin. A rice protection plan in Quang Tri Province was undertaken too late to prevent a large quantity of rice from falling into Viet Cong hands.

10. Prices in most provinces of Region II were also generally steady, although transportation difficulties were caused by the rains and Viet Cong activity. In Ninh Thuan Province, the Viet Cong destroyed three bridges on Route 11, temporarily blocking traffic to Da Lat. Viet Cong interdiction on the Da Lat - Saigon road in Tuyen Duc Province reduced farmers' income because their crops could not be shipped to Saigon, but resulted in lower prices for vegetables in the province. Rice prices were higher in some areas of Region II even though the rice harvest had been completed. These increases apparently resulted partly from the psychological effect of the flood in the Mekong Delta, partly from lower rice production caused by farm labor shortages. It was reported, for example, that a shortage of field workers in Ninh Thuan Province caused a loss of about ten percent of the recent rice crop. A shortage of farm labor also is adversely affecting vegetable production in Tuyen Duc Province.

11. In Region III prices were relatively stable in eight out of the 11 provinces. Prices rose 15 percent, however, in both Bien Hoa and Tay Ninh provinces. The price rise in the former province apparently stemmed from anticipation of food shortages caused by the Mekong floods, whereas the increased presence of troops and limited movement of goods to and from Saigon explained

the rise in Tay Ninh. Although there was some easing of Viet Cong interdiction of roads in Region III, Viet Cong taxation on commerce increased.

12. Flood recovery operations dominated the economic scene in five provinces of Region IV. Reports from the flooded provinces indicated that rice crop damage, although severe, was less than originally estimated. In Chau Doc and Kien Tuong provinces, however, as much as 80 percent of the rice crop probably was lost. Kien Giang Province, on the other hand, lost only 12 percent of its rice crop. Secondary crops also were hard hit by the floods, with some areas experiencing a complete loss of crops. The floods also damaged roads and slowed transportation of commodities. As a result of these factors plus Viet Cong interdiction, prices rose in some provinces of Region IV. These transportation problems, however, benefited the consumer in some areas where increased supplies of goods normally shipped to Saigon resulted in lower local prices.

Discussion With Ky on Port Congestion

13. On 8 December, Ambassador Lodge called on Premier Ky to discuss the Saigon port problem. The ambassador pointed out that US officials feel the port congestion has stemmed from three major factors: (a) lack of adequate credit for importers to finance removal of their goods from the port, (b) inability to provide importers with the location of their cargo in the port and to clear the goods promptly through customs, and (c) use of the port as a warehouse by importers. National Bank Governor Hanh's recent relaxation of credit has solved the credit problem, and some progress is being made in locating and clearing cargo. The major problem, therefore, is the unwillingness of importers to move their goods out of the warehouses.

14. Ambassador Lodge informed Premier Ky that the latter's decree of 28 July, which called for confiscation of goods left in the port more than 30 days, has not yet been implemented. As a result, the port remains congested, and this congestion is interfering with the program to halt inflation. Moreover, the large quantity of imports scheduled to arrive in December and January will further aggravate the problem. To solve

this problem. Ambassador Lodge presented Ky with a list of goods that have been in the port much longer than 30 days and urged Ky to begin confiscation of these goods. In addition, the ambassador asked Ky to deny further import licenses to those importers who do not withdraw their cargo from port warehouses after 30 days. US officials believe that a suspension of these importers for six to nine months will make clear to the Vietnamese importing community that only those importers who remove their goods from the port promptly will be allowed to import.

15. Although Ky approved of blacklisting importers who do not remove their goods, he felt that wholesale confiscation was not the solution to the problem because the GVN would lose taxes and would not know what to do with most of the confiscated goods. Ky then said that the GVN intended to make examples of several big importers by at least imposing heavy fines on them. Ambassador Lodge explained that the US was not advocating wholesale confiscation, but rather selective confiscation based on the US list of gross offenders. Ky finally said he would take action on these matters promptly. In closing, Lodge pointed out that if the port congestion continues, the US would have to consider halting the shipment of goods to Vietnam.

Industrial Development in FY 1966

16. USAID considers progress in industrial development to be one of its five most significant accomplishments in South Vietnam during FY 1966. Other important accomplishments cited by USAID were: implementation of the economic reforms of last June, improvement in the supply of water and electric power, and progress in overcoming illiteracy. A significant indicator of industrial progress is the amount of USAID approvals for imports of industrial machinery--$16 million during FY 1966, or almost half of the total for the past five years.

17. The textile industry is one of the most important industries in the development effort, with textile machinery accounting for almost half of the $16 million. USAID estimates that when all the approved

textile equipment is in full operation, South Vietnam will be able to satisfy more than four fifths of its requirement for textiles. Progress also is being made in the paper industry. Two major paper firms--Cogido and Cong Ty Giap Vietnam--ordered heavy equipment valued at about $3 million. This equipment is being imported to complete a major expansion program, which will result in a total output of 30,000 metric tons annually. This amount represents an increase of 70 percent above current output of paper and will satisfy about three fourths of South Vietnam's requirements for paper.

18. Another important step toward industrial development during FY 1966 was the installation of Vietnam's first steel rolling mill. During early 1967, this mill will begin producing steel ingots from scrap by the converter process and production of rolled products is expected to reach about 15,000 metric tons annually.

THAT WITHDRAWAL OF AMERICAN TROOPS IS A CONDITION FOR THE ESTABLISHMENT OF PEACE, RATHER THAN A CONDITION FOR OPENING TALKS. THE ATTITUDE OF THE VC ABOUT NEGOTIATIONS, [redacted] IS NOT CLEAR, AS THEY DO NOT ALWAYS AGREE WITH HANOI. [redacted] NORTH VIETNAM EXPECTS EVENTUAL AMERICAN INVASION BUT [redacted] THIS WOULD NOT NECESSARILY DRAW CHINA INTO THE WAR. [redacted]

1.5(e)
3.4(b)(1)

[redacted] NOT YET [redacted] ANY DIRECTIVES FROM HANOI ON AMERICAN UNITED NATIONS DELEGATE ARTHUR J. GOLDBERG'S REQUEST TO U THANT TO BRING ABOUT A CEASE-FIRE AND THIS MIGHT INDICATE A LESSENING OF SKEPTICISM IN HANOI ABOUT UNITED STATES INTENTIONS.)

2. [redacted] CONCERNING NORTH VIETNAM'S REFUSAL TO RESPOND TO UNITED STATES PEACE OVERTURES, [redacted] IT WOULD BE IMPOSSIBLE TO AGREE TO NEGOTIATE WHILE THE BOMBING OF NORTH VIETNAM CONTINUES. [redacted] NORTH VIETNAMESE DO NOT AGREE THAT ANY CESSATION OF AMERICAN BOMBING SHOULD BE MET BY AN EQUIVALENT EFFORT ON THEIR PART. THEY CONSIDER THE BOMBINGS AS BEING WITHOUT ANY GENUINE EQUIVALENT ON THEIR SIDE. IN THEIR VIEW THE SUGGESTION THAT THEY SHOULD CEASE TO INFILTRATE SOUTH VIETNAM IN EXCHANGE FOR A CESSATION OF THE BOMBING WOULD MEAN THAT THEY WOULD BE STIFLING THEIR ENTIRE EFFORT, WHILE THE AMERICANS WOULD CONTINUE TO MAINTAIN THEIR LAND WAR INTACT.

1.5(e)
3.4(b)(1)

3. [redacted] THE CHIEF OBSTACLE TO NEGOTIATIONS, IF THE BOMBINGS

ARE STOPPED, IS UNITED STATES FAILURE TO RECOGNIZE THE VC AS A DIRECT PARTNER IN THE BARGAINING. [redacted]

1.5(e)
3.4(b)(1)

THE NORTH VIETNAMESE DEMAND FOR A WITHDRAWAL OF AMERICAN TROOPS AS ONE OF THEIR BASIC FOUR POINTS IS NOT MEANT TO BE A CONDITION FOR THE OPENING OF PEACE TALKS, BUT A CONDITION FOR THE ESTABLISHMENT OF PEACE. A STATEMENT OF THE AMERICAN INTENT TO WITHDRAW ITS FORCES AFTER AN ACCORD ON PEACE TERMS WOULD SUFFICE. THE MODALITIES OF THE WITHDRAWAL CAN BE WORKED OUT IN THE NEGOTIATIONS.

4. [redacted] THERE ARE THREE DIFFERENT POINTS OF VIEW ABOUT THE PEACE NEGOTIATIONS: (A) PEKING IS TOTALLY OPPOSED TO THEM. IT SUITS THE CHINESE TO HAVE THE WAR CONTINUE, INVOLVING THE UNITED STATES WHILE CHINA IS UNTOUCHED; (B) HANOI WOULD BE READY TO NEGOTIATE IF WHAT IT CONSIDERS TO BE THE INDISPENSABLE CONDITIONS ARE MET; (C) WHAT THE VC WANT IS NOT CLEAR. THEY ARE FIGHTING MEN AND DO NOT ALWAYS SEE EYE-TO-EYE WITH HANOI. [redacted] NORTH VIETNAMESE ABILITY TO CONTROL THE VC [redacted] LIMITED, AND [redacted] THEY MUST BE REPRESENTED IN ANY PEACE NEGOTIATIONS.

1.5(e)
3.4(b)(1)

5. [redacted] AS TO WHETHER THE ESCALATION OF THE WAR MEANS AMERICAN INVASION OF NORTH VIETNAM, [redacted] NORTH VIETNAM BELIEVES AN AMERICAN INVASION MUST BE ANTICIPATED SOONER OR LATER AND IS PREPARING FOR IT. [redacted] THIS INVASION WOULD NOT NECESSARILY DRAW CHINA INTO THE CONFLICT, ALTHOUGH [redacted] "OBVIOUSLY AN

MEMORANDUM FOR THE ACTING DIRECTOR

SUBJECT: Report on Pacification Measurement Project in Vietnam

1. I departed Washington on 15 November enroute to Saigon, in accordance with State message 83100. This message, sent on behalf of the White House, Department of State, Department of Defense, AID and CIA, advised the U.S. Mission in Saigon of the grid concept developed in Washington for measuring where we stand in Revolutionary Development (RD) and pacification, and designated me as an inter-departmental representative charged with briefing the Mission in Saigon on the details of this concept and assisting the Mission in refining and testing the concept with a view to implementing such a system in Vietnam by January 1967.

2. Briefings were presented at CINCPAC during a stopover in Honolulu on 16 and 17 November, enroute to Saigon. Admiral Sharp was briefed personally and was very receptive to the evaluation concept, recognizing its value as a management tool. Other elements of the CINCPAC staff were also generally receptive. I was joined in Honolulu by Colonel Carter W. Clarke, Jr., from the staff of DCSOPS, Department of the Army, who was designated as JCS/DOD representative to accompany me on my mission.

3. On our arrival in Saigon on 19 November, we met with representatives of the component agencies of the U.S. Mission, briefed them on the evaluation concept, distributed copies of the proposed checklist, and arranged for a meeting the following week to receive their comments and reactions. Ambassador Porter, whom we briefed the following day, reacted very favorably to the concept. He advised us not to be overly flexible in making adjustments to it; expressing his desire that the system ultimately adopted retain the best features of our initial concept.

SECRET

APPROVED FOR RELEASE
4/21/98

4. Colonel Clarke and I retained responsibility for the project from the outset, with assistance from Ambassador Porter's staff which provided us with office space. We fully recognized that some modifications and refinements of the concept would be necessary in order to adjust it to actual conditions and to capitalize on the rather extensive work already done on this area by some Mission components, particularly by MACV's Revolutionary Development Support Directorate, which was engaged in a long-term research project aimed at developing a similar evaluation system.

5. With Ambassador Porter's approval, we embarked on a series of field tests to determine the feasibility of the concept and the validity of the indicators selected in Washington. These tests, including some conducted by three sub-sector advisors, disclosed that our original checklist was somewhat unwieldy and that it contained a number of ambiguities and inconsistencies. (A list of sub-sectors in which tests were conducted is contained in Enclosure 1.) These faults were eliminated through a major overhaul of the checklist and a switch to a multiple-choice format (a revision also suggested by MACV). The refined checklist, which was tested by seven sub-sector advisors, retained the basic features of the original concept but proved to be much less cumbersome.

6. While the testing was in progress, we engaged in a number of meetings and discussions with various elements of the Mission in Saigon and in the field, incorporating suggestions where feasible. By 11 December we had secured full agreement at the working level on the final checklist and on the procedures for implementing the system. Colonel Clarke and I also drafted detailed guidelines for the use of the sub-sector advisors. The need for such guidelines became apparent when the advisors taking part in the early tests expressed a lack of familiarity with certain major aspects of the RD and pacification effort. This was particularly true with regard to the organization and functions of the VC village guerrilla structure and the VC political infrastructure, and to some extent also with the specific developmental goals of the RD program. Accordingly, in our guidelines we defined the scope of the six basic factors, outlined the RD goals with respect to those factors, provided a detailed description of each of the 18 indicators (i.e., VC village guerrilla organization, VC political infrastructure at hamlet and village levels, etc.), and set forth a detailed description of conditions related to each indicator at each of the five grade levels. The guidelines concluded with a listing of sources of information available to the advisor on each factor. Those advisors who were provided with copies

of the guidelines for use in the final tests welcomed them as a valuable educational tool. The guidelines will be made available in handbook form to all U.S. personnel involved in the evaluation system.

7. We briefed the Mission Council on the project on 13 December, describing the results of our coordination and testing activities and the procedures developed for implementing the evaluation system beginning in January. The Mission Council approved the project, and directed its implementation as recommended.

8. The approved system retains the basic features of the concept developed in Washington, with improvements in format and procedures worked out in coordination with components of the Mission. The hamlet will be the basic administrative/political unit evaluated. The approved system retains the grid of six basic factors and five grade levels. The number of indicators on the hamlet checklist was reduced to three for each factor from the original four to seven, and the number of choices required by the evaluator was reduced to 90 from 191 (Enclosure 2). The final checklist will be reduced photographically to a letter-size page. The switch to a multiple-choice format simplified the processing of the data by the ADPS equipment as well as making it less cumbersome for the evaluator. The sub-sector advisor will be provided each month with a hamlet evaluation summary form printed out by the MACV ADPS equipment (Enclosure 3). This form will list all hamlets in the sub-sector, the village to which they belong, the grid coordinates, hamlet population, and hamlet code number. It will also indicate the hamlet's status under the former classification system (secure, undergoing securing, undergoing clearing, uncontested, or VC-controlled), and its classification under the 1967 GVN 11-point, 6-point and 2-point criteria. It will provide spaces in which the advisor will indicate the grade for each of the 18 indicators. It also has spaces for the answers to some 14 "problem area" questions. These questions, which will not affect the hamlet grade, were developed to meet the needs expressed by various agencies in Saigon for subjective data on attitudes of the populace and problems with respect to performance of GVN officials, pay of officials, etc. (Enclosure 4). Responses to these questions will be compiled in the data bank and can be read out to meet the needs of interested agencies.

9. The advisor will enter on the hamlet evaluation summary form the grade compiled from the hamlet worksheets prepared for each individual hamlet to which he has access. The completed data sheet will be forwarded to province level where it will be reviewed by the U.S. province team, including the sector advisor, and the USAID, JUSPAO and CAS province representatives and/or the senior civilian representative. Any differences will be resolved in consultation with the sub-sector advisor submitting the report. The hamlet summary report forms will then be forwarded to Saigon as enclosures to the province team's monthly Special Joint Report, where they will be processed by MACV's ADPS equipment, which will produce a consolidated print-out. Copies of this print-out will be forwarded to Ambassador Porter's staff, and distributed back down through Corps/Region, Division, Province/Sector and Sub-Sector. The ADPS equipment will compute an average grade for each hamlet. Ambassador Porter's Evaluation and Reports Division will compile a summary of these grades in a format similar to that in Enclosure 5, which will be integrated into the Mission's monthly report on RD which is forwarded to Washington. The initial evaluations for the month of January will be contained in the Mission Report for that month which should be available in Washington in late February. No weighting will be applied to the initial grades; some weighting may be injected later if the need arises. Since the basic data will be transmitted by data-link from Saigon to CINCPAC and DOD, it will be possible to ascertain at all levels which areas may be progressing and which may be lagging.

10. The system will provide an essentially American evaluation. However, it must be borne in mind that very few U.S. officials are capable of completing such an evaluation without consulting at some stage with Vietnamese officials, whether they be at the hamlet level or above. In our guidance, we stressed the need for the U.S. advisor to make an actual visit to the hamlet to observe conditions for himself. Recognizing that he must seek information from others, however, we emphasized that he use his own judgment in assessing the reliability of responses to his questions. There was general recognition also of the need to avoid giving the impression of a unilateral U.S. inspection of what is essentially a GVN program. Accordingly, General Thang was advised in a latter from Ambassador Porter that an evaluation system was being developed and experimented with. Ambassador Porter planned to brief General Thang after 22 December on the system, and to offer his Ministry the opportunity to share in the data and even to adopt the same system if it desired.

11. It was also recognized that a shakedown period of several months will be required to eliminate any remaining bugs and to insure consistent application of the criteria throughout the country. This may necessitate some subsequent adjustments in the initial returns as refinements are worked out. Allowance must be made for the fact that, while the processing of the data will be accomplished by machines, the input will reflect the necessarily fallible and inconsistent human judgment of over 200 separate sub-sector advisory teams. The evaluation system will thus have to be carefully monitored to minimize the potential for imbalanced interpretations of criteria by the large number of humans involved.

12. In conclusion, the constructive and cooperative spirit of all elements of the U.S. Mission in Saigon must be acknowledged. Without that spirit, our task would have been very difficult. The valuable assistance rendered by Colonel Clarke is also worthy of note. His enthusiastic, imaginative and hard-working approach to the project assured its success, and his tact and recognized professional standing contributed to the cooperation we received from his military colleagues in Saigon. With his help, we were able to accomplish our task and develop what appears to be a workable system for evaluating progress in RD and pacification.

13. In response to the request contained in State message 102066 (14 December) Colonel Clarke and I visited Bangkok on 15 and 16 December, where we briefed the U.S. Mission on the evaluation system developed for Vietnam. The Mission is studying the materials we provided them and will forward its comments at a later date. Enroute back to Washington, we briefed the CINCPAC staff in Honolulu on 20 December on the results of our work in Saigon.

VN - Pacification

MEMORANDUM FOR: The Honorable Robert S. McNamara
The Secretary of Defense

SUBJECT : Mr. Allen's Summary Report

For your information I am forwarding Mr. George W. Allen's summary report on his recent trip to Vietnam to explain the grid concept for measuring the status of pacification and Revolutionary Development activity. This report describes the pilot testing program through which the Washington-developed initial concept was tried out under actual field conditions, the way the concept was discussed and coordinated with the U.S. Mission, the modifications made in the concept as a result of this testing and coordination process, the formal adoption of the modified concept by the Mission Council on 13 December, and the procedures by which it is to be implemented on a nation-wide basis as of 1 January 1967. Mr. Allen also reports on the results of his visit to Bangkok to explain the Vietnam pacification measurement technique to the U.S. Mission in Thailand.

As you are aware, Mr. Allen was accompanied and assisted in this venture by Colonel Carter W. Clarke, Jr., an officer on the staff of DCSOPS, Department of the Army, who served as a Department of

ANNEX

THE IMPACT OF THE INTERNATIONAL
VIETNAMESE COMMUNIST SPLIT

ANNEX X

THE EFFECT OF THE INTERNATIONAL POLITICAL CLIMATE ON VIETNAMESE COMMUNIST PLANS AND CAPABILITIES

I. World Public Opinion

The evidence shows that the Vietnamese Communists believe popular opposition throughout the Western world to US policy in Vietnam can be an important factor in restraining the allied hand against the insurgents. Virtually every significant Vietnamese Communist statement on war strategy has stressed the necessity of mustering the maximum amount of world opposition against allied--principally US--action in the conflict.*

Also significant in the eyes of the Vietnamese Communists are the "liberation movements" and other outbreaks of civil unrest and rebellion which occur elsewhere in the world against Western authorities. Hanoi and the Viet Cong see these, in part, as developments which hopefully will draw a direct American military or economic reaction which will distract and weaken the US war effort in Vietnam.** Such "people's action" is also regarded as encouraging the morale

---

*In an important speech setting forth the DRV's terms for settling the war in April 1965, for example, Premier Pham Van Dong devoted nearly a quarter of his address to this theme. "Strong and unrelenting opposition" from the "world's people," Dong said, "has the effect of checking and repelling" the "aggressive and warmongering plots" of the enemy. In the face of this opposition, he claimed, "the rear" of the enemy is "disintegrating" and "contradictions" in his ranks are increasing.

**According to the DRV chief of staff, Van Tien Dung, the US cannot put "all its economic and military potential" into action in Vietnam if it has to "cope with the situation in many other countries and in many fields...to repress other peoples."

of the Communist rank and file in Vietnam by demonstrating that they are not alone in their opposition to Western "imperialism and colonialism." Largely for these reasons, Hanoi has frequently urged greater cooperation and unified action by the Soviet Union and China during the last two years in support of the world "liberation movements." The North Vietnamese apparently consider such action a matter of great significance to Vietnamese Communist interests, since North Vietnamese usually refrain from offering advice to the rest of the bloc.

If the situation in Vietnam develops to the point where the Vietnamese Communists are forced to make a decision on whether to continue to support large-scale insurgency in the South, it is probable that their estimate on the extent of world popular opposition to allied policy in Vietnam and of the strength of the various "liberation movements" would be a significant factor in influencing their decision. It would, however, almost certainly not be a critical factor.

II. Domestic Opposition in the United States

A more important issue in any Vietnamese decision on continuing the war would be the extent and effect of opposition to American policy from within the United States. It is clear that the Vietnamese realize general Western agitation against the allies will never be particularly effective unless accompanied by important opposition in the US.*

The Vietnamese Communists do not view this opposition as simply a manifestation of moral reticence among American intellectuals and leftists over Washington's war policy, but also believe that important opposition may develop as a result of the economic pinch of the war on the American public and business, and that such opposition may be further fanned by the continuing American casualties in Viet nam. It is clear that the Vietnamese believe the US will

---

*This has repeatedly been a theme of Vietnamese propaganda in such assertions as "the struggle of the American people plays an important role in the common struggle of the peoples to check the acts of the US Government in Vietnam."

be forced to go on an extensive wartime footing eventually and that this will greatly increase domestic opposition.*

There have been other indications in private that the Vietnamese believe domestic opposition in the US, if developed strongly, would seriously inhibit US war options. Vietnamese Communist cadres have been told by their leaders that the "increase in anger in world opinion over US activities in Vietnam" could be "among the more important factors," in addition to "casualties and economic costs," which would cause the "American government to desist and decide to give up and get out."**

It is hard, however, to assess just how far the Vietnamese Communist inner councils really believe domestic opposition to US war policy has developed to date. In their view of the American situation, the Vietnamese are doubtless influenced to some extent by their overall lack of sophistication on American politics and by their earlier successful experience in bringing significant pressure from French public opinion to bear on French war policy in 1953-1954. In private conversations with visitors to Hanoi, the North Vietnamese have sometimes compared the present war with their own experiences against the French.

Their lack of sophistication and eagerness to seize on evidence of mounting US domestic opposition can perhaps

---

*We have the word of North Vietnamese party first secretary, Le Duan, on this. Late last year, he told a visiting Western Communist that he was sure the US would have to mobilize a reserve force of 1,200,000 men in order to support a force of 400,000 men in Vietnam. The US, he said, could not maintain that kind of war effort without being forced eventually by opinion in the US to re-examine and change its policy.

**Western statesmen have been told by Vietnamese Communist spokesmen that they believed the opposition to US policy shown by some congressional leaders and by well-known American journalists indicated a basic "lack of confidence" in the administration's policy. According to the Vietnamese, the "US is suffering from a lack of a clear objective which would unify American public opinion" behind the American policy on Vietnam.

best be seen in their reaction to the American student protests over Vietnam policy which reached at least an initial peak in the fall of 1965. There was an increasing air of optimism over the strength of the student agitation in Vietnamese Communist propaganda at that time, capped by an announcement from Hanoi on 24 October that a "united front of the Vietnamese and American people has de facto taken shape." The propaganda strongly suggested that the Vietnamese were overreading the extent and depth of the protests in the US.* It is possible that the optimistic tone of the propaganda was intended in part to give a boost to the Vietnamese rank and file by demonstrating the sympathy which allegedly exists for their position in the enemy's own camp.

There has been some evidence in Vietnamese Communist materials during 1966 of substantial realism regarding the potential for domestic opposition in the US. This could be seen, for example, in General Vo Nguyen Giap's assessment of the war situation in the DRV party journal in January 1966. Giap placed US domestic opposition last when reviewing American weaknesses in the war. He indicated that the opposition would exercise a restraining effect on American options in Vietnam, but implied that it would not de decisive in determining US staying power in the conflict. Giap placed more emphasis on US limitations in maintaining strong economic and military positions throughout the world while pursuing a large-scale commitment in Vietnam. He did not, however, assess even this latter problem as critical in determining the outcome of the conflict.**

---

*Communist misjudgment of American opinion was also evident in Hanoi's threats recently to take punitive action against US flyers, and in its public abuse of the pilots. When Hanoi realized the depth of feeling in the US over the issue, it hastily stopped its propaganda regarding trials. Its willingness to do so is indicative of the importance it assigns to influencing US opinion.

**In private, visiting Western officials in Hanoi have been given much the same line during the past few months. One official was told that the DRV was "not counting" on US opinion to win the war. The same theme has been reflected

(continued on next page)

It would appear that the Vietnamese Communist leadership does not expect any important difficulties for Washington in the near future, at least, as a result of popular opposition to the war or because of economic/military stresses caused by the conflict in the United States. Thus, in any basic decision taken on the war by the Vietnamese Communists over the next few months, the status of domestic American opposition would probably not be regarded as critical. If over the longer pull, however, the US was not forced into extensive wartime mobilization measures and strong domestic opposition was not triggered as Hanoi appears to expect, the situation could possibly become a very important factor in any basic Vietnamese Communist decision on prolonging the fighting.

III. Cambodian Attitudes

Phnom Penh's attitude toward the Vietnam war is of importance to Hanoi's own plans chiefly on two counts: (1) Cambodia's ties to the 1954 Geneva agreements and, (2) its contiguity with Viet Cong operational bases in South Vietnam. By appealing to the nationalistic proclivities of Cambodia's leader, Prince Sihanouk, the Asian Communists have been able to gain a substantial amount of political support for the Vietnamese insurgents during the past several years. This has included Cambodian condemnation of the US role in South Vietnam as well as accusations that the US presence there is, as Hanoi claims, in violation of the Geneve agreements. Both of these themes are regarded by the Vietnamese as important foundation stones in their own political policy on the war.

On the physical side, Cambodia has served as a source and a transit channel for limited amounts of both food and other supplies for the Viet Cong. The Cambodians have also taken a primarily neutral stance in permitting limited use of their territory as a refuge and a secure base for the Vietnamese Communist forces.

---

in the remarks of DRV diplomats abroad. In May, a French newsman was told by the DRV representative in Paris that Hanoi was greatly interested in encouraging the efforts of students and intellectuals in the US in their opposition to US policy, but realized that they represented only a minority.

The Communists, nevertheless, do not have an ally or even a constant sideline supporter in the Cambodians. Cambodia's ambivalent foreign policy has frequently been at odds with Hanoi's stand on such issues as Indo-Chinese neutrality and the exact terms for settlement of the Vietnam war. The Communists have thus had to adopt a basically cautious policy in exploiting Cambodia for their war effort. They are probably reluctant to make any really large scale or far reaching plans for the use of Cambodian territory by the Viet Cong, and they cannot automatically count on receiving consistent and favorable political support from Phnom Penh.

On balance, the situation probably tends to exert a restraining influence on Vietnamese Communist policy options in the sense that it forces the Vietnamese to focus primarily on better strategic use of South Vietnamese and Laotian territory in their efforts to cope with the growing allied military pressure on their operational bases.

IV. The Effect of Links With Western Leaders

The Vietnamese Communists also regard the establishment and preservation of adequate links to leaders and key officials of Western countries as an important element in their war strategy. There are a number of reasons for this apart from a natural inclination to enhance Vietnamese Communist prestige at the international level. Such contacts, for one thing, offer the Vietnamese an opening to promote opposition to allied policy on Vietnam among influential individuals in the free world.

This can be seen in Hanoi's treatment of the Indian Government. Although Indian proposals for settling the war have consistently been rejected by the Vietnamese as unacceptably generous to the allies, Hanoi has been very careful to avoid direct attacks on the Indian Leaders in its propaganda. It has assiduously cultivated its diplomatic relations with New Dehli and treated Indian representatives visiting North Vietnam with considerable courtesy and friendship. The Vietnamese doubtless believe the Indian outlook has an important influence on over-all Afro-Asian opinion about the war. Hanoi apparently also regards some Indian leaders as potential channels for floating Vietnamese views about the war to the allies.

During 1966, the Vietnamese seem to have given special attention to the use of Western statesmen as third party channels to the allied leadership. This development has been most evident in Hanoi's treatment of the Canadian representatives who have visited or have been stationed with the ICC in Hanoi. The North Vietnamese have frankly told them that they wish to preserve the channel which the Canadians provide to the US, and have suggested that Canadian visitors be empowered to discuss more than just ICC business while in Hanoi.

From what has been learned of third party contacts with the North Vietnamese, it does not appear that the greater Hanoi interest in talking to prominent Westerners during 1966 represents any softening as yet in Vietnamese resolve to continue the war. It probably does mean, however, that the Communist leaders realize it might become necessary at some point to change their tactics and actively consider a political settlement of the conflict. At such a time, third party contacts could prove especially valuable, in part because they would provide a channel to the allies that did not first filter through the bloc. At such a critical point, the Vietnamese might not see eye to eye on strategy with bloc leaders.

V. The Public Posture of the National Liberation Front (NFLSV)

Since the creation of the NFLSV in 1960, the Vietnamese have made a continuous effort to demonstrate that the Front enjoys broad political support and control throughout South Vietnam and that its "growing strength" is supplemented by mounting recognition of Front claims and position in international circles. The results of this have been disappointing at best for the Communists. Front influence in South Vietnam is limited chiefly to the rural areas under Communist control; even in those areas, the Front is widely regarded as a facade to cover the operations of the hard core Viet Cong (see ANNEX III for a discussion of the numerical strength and influence of the Front in South Vietnam).

On the international side, although there is a substantial body of opinion in the free world which holds that the insurgency in the South is an indigenous, patriotic and legitimate revolutionary movement, the Front's own activities have contributed relatively little to the spread of this belief.

The Front is widely regarded in the West as more or less a voice for the Communist view on Vietnam. Efforts to achieve quasi-diplomatic status for the Front have not been very successful. Even some of the bloc countries where the Front has opened "permanent representations," have made it clear that the NFLSV is accredited only to local national front organizations and not to the bloc government itself.

The best evidence, perhaps, of the weak position of the Front lies in its failure to establish a provisional national government in South Vietnam. While both North Vietnamese and Front officials have hinted on several occasions in the past year that such a move was in process, it will probably not take place in the predictable future. Such an action would pose formidable problems for the Communists and actually further expose the lack of public support for the Front. It would almost certainly alienate politically active groups in the South, such as the Buddhists, who do not entirely support the Saigon government and have political ambitions themselves. The Front would also find it difficult to establish a satisfactory seat of government in South Vietnam.*

Despite the weaknesses of the Front, however, there are compelling reasons for the Vietnamese Communists to continue to operate under its banner. It provides, for example, a formal medium under which all facets of the insurgent political and military activity in South Vietnam can be organized. Although it does not yet pretend to formal government on a national scale, it does establish for the Communists a needed organizational alternative to the Saigon regime. It is also useful as a platform for advertising the broad program of political and economic objectives which the Communists have set forth as their alleged goals in South Vietnam.

---

*The leadership of any provisional NFLSV government would have little attraction among politically conscious elements of the population in South Vietnam not allied with the Communists. Movement toward the opening of negotiations on the war, should the Vietnamese Communists decide to do so, might also be complicated by the establishment of a Front government.

PORTS

Extracts from CIA-DIA Appraisals

There was no significant increase in the average time in port for either tankers or dry cargo ships during February or March, despite the record high levels of import.

On-The-Spot Reports

EO 12958
3.4(b)(1)>25Yrs
(C)

In the late March early April 1967 period, port congestion in Haiphong continued with merchant ships waiting two and three weeks before unloading cargo. [redacted]

Quantities of building tools and materials, tractors, and forklifts, both crated and uncrated, were stored in the open in the streets and parks near the wharves. There was an obvious lack of storage space.

EO 12958
3.4(b)(1)>25Yrs
(C)
[redacted]

Heavy bomb attacks on Cam Pha and its port facilities on 15 February destroyed the greater part of the town and many citizens lost their homes. A Soviet ships officer expressed fears that bottom mining of the waterways leading into Cam Pha and Hai Phong ports would render impossible the delivery of aid material by sea to North Vietnam.

EO 12958
3.4(b)(1)>25Yrs
(C)
[redacted]

The efficiency of handling cargo, particularly coal exports, at the Haiphong ports, including Hon Gai and Can Pha, has decreased by about 45% since the bombing began in August 64. As a result of the numerous air alerts, the bombing damage outside the city, and the many difficulties encountered by longshoremen in reaching their places of employment, the workers of the ports now have to spend much more time commuting between their home and places of work, since the evacuation of so many of them from the city.

EO 12958
3.4(b)(1)>25Yrs
(C)
[redacted]

USSR missiles and fuel are coming to North Vietnam by ships.

[redacted]

APPROVED FOR RELEASE
DATE: SEP 2008

Extracts from CIA-DIA Appraisals

APPROVED FOR RELEASE
DATE: SEP 2000

Damage inflicted on the North Vietnamese economy by air strikes increased significantly and will have unfavorable repercussions throughout much of the industrial sector. The most telling damage resulted from the strikes against electric power plants.

Despite the increased disruption of economic activity, the North Vietnamese gave no indication of abandoning their programs to expand small scale industry and to plan for post-war economic development.

On-The-Spot Reports

EO 12958
3.4(b)(1)>25Yrs
(C)

The bombardment continues to diminish daily, the industrial potential of the country. [redacted]

EO 12958
3.4(b)(1)>25Yrs
(C)

If industry is subjected to new blows, one certain consequence will be that Hanoi will become more dependent on the Chinese, on whom they are already dependent for their food supply. [redacted]

EO 12958
3.4(b)(1)>25Yrs
(C)

The main cement plant has been so severely damaged that work has halted. [redacted]

The supply of electricity (in Haiphong) appeared to be just adequate. [redacted]

EO 12958
3.4(b)(1)>25Yrs
(C)

Between Phu Ly and Thanh Hoa, an area in which he spent ten days, the traveler saw electric lights on two occasions only. He saw no piped functioning water supply in any town or village area. The main streets of Thanh Hoa had been almost entirely destroyed. Shops open were selling little more than oil, cloth, and occasionally cigarettes. [redacted]

~~SECRET~~

FOOD

Extracts from CIA-DIA Appraisals

The bombing continues to have a disrupted influence on agriculture and fishing. Reports on the food supply are conflicting. Some reports indicate serious shortages while others suggest that supplies are adequate. In no case, however, have there been reports of severe hunger or starvation or any indication at the present time that the North Vietnamese will not be able to maintain at least the minimum consumption levels.

EO 12958 3.4(b)(1)>25Yrs
(C)

On-The-Spot Reports

The next harvest of rice will be mediocre. [redacted]

EO 12958
3.4(b)(1)>25Yrs
(C)

Unless immediate action is taken, insects will destroy the spring rice crop. [redacted]

Irrigation systems must be improved in order to prevent drought and spoilage of rice. [redacted]

EO 12958
3.4(b)(1)>25Yrs
(C)

There did not seem to be much food in the stores and in the restaurants. Outside Hanoi there was only a little meat. [redacted]

EO 12958
3.4(b)(1)>25Yrs
(C)

There was an indication of food shortage in Haiphong. As coolies worked with a cargo of soya beans, they were pilfering the beans and eating them raw. [redacted]

Ships carrying food stuffs to North Vietnam received preferential treatment. One merchant ship carrying such a cargoe completed discharge in about four days after arrival. [redacted]

EO 12958
3.4(b)(1)>25Yrs
(C)

A port guard said that soya beans had become a staple in the diet in North Vietnam, and that while the young working population received sufficient quantities of food the older people were rationed to a subsistence level. [redacted]

APPROVED FOR RELEASE
DATE: SEP 2008

MANPOWER, MORALE, EVACUATION

Extracts from CIA-DIA Appraisals

There has been no evidence to indicate that Hanoi's determination to pursue the war has declined. Likewise, there is no evidence that the morale of the populace has decreased. However, the increasing hardships being borne by the people have resulted in instances of skepticism of the regime's propaganda line.

There has also been continued emphasis on evacuation from urban areas.

Although the role of women in certain activities is to be expanded, North Vietnam does not appear to be suffering from a general manpower shortage.

EO 12958
3.4(b)(1)>25Yrs
(C)

On-The-Spot Reports

The mobilization of the entire population for national defense is producing serious labor difficulties. [redacted]

EO 12958
3.4(b)(1)>25Yrs
(C)

The Vietnamese authorities have decided to evacuate a great portion of civilian population residing in the eastern section of Hanoi near Paul Doumer Bridge and near the electric power station. [redacted]

Evacuation from Haiphong since American bombing began has reduced the population from 400,000 to 250,000 people. The labor force in Haiphong is predominately women. [redacted]

EO 12958
3.4(b)(1)>25Yrs
(C)

If it is excluded that Hanoi will not capitulate before American force, fatigue, and anxiety are also no less real. [redacted]

The streets are deserted between 0900 and 1700. [redacted]

Increased U.S. Air Force activity in the Hanoi area is causing a deterioration of morale in the city. [redacted]

APPROVED FOR RELEASE
DATE: SEP 2000

Manpower, Morale, Evacuation (continued)

EO 12958 3.4(b)(1)>25Yrs (C)

During the night alerts, citizens could be seen running wildly toward shelters. There is a definite breakdown in order and the air raid wardens had difficulty in controlling the people. For the first time, it could be noted that people were making no attempt to hide their fear or fatigue. [redacted]

EO 12958 3.4(b)(1)>25Yrs (C)

The severity of raid (29 Apr near Gia Lam) struck observers who did not hide their pessimism. [redacted]

EO 12958 3.4(b)(1)>25Yrs (C)

On clear days air activities were virtually continual from 0630 to 1900 daily. The constant series of alerts seriously inhibited school, repair work, and agriculture; alerts followed all-clears incessantly. [redacted]

EO 12958 3.4(b)(1)>25Yrs (C)

In early April, the people of Haiphong seemed much more confident than they appeared in September 1966. There appeared to be no shortages of consumer items at this time (no queues were seen and no complaints were heard from the people). This is in contrast to September 1966 when there were shortages of consumer items -- mostly soap, for which there were always queues. [redacted]

EO 12958 3.4(b)(1)>25Yrs (C)

Some villagers in the coastal areas of the North Vietnamese provinces between the 17th and 20th parallels hold the view that if the North Vietnamese government stopped infiltration of troops and supplies into South Vietnam then American bombing of their villages would stop. They state that they are becoming less impressed with their government's claim that attacking aircraft are being shot down, since few have witnessed the downing of any planes. Consequently, they are beginning to doubt seriously the Hanoi regime's boast of inevitable victory. . . . Villagers living in frequently bombed areas are especially terrified of the air strikes and limit their daytime activities to the minimum. [redacted]

EO 12958 3.4(b)(1)>25Yrs (C)

It seemed surprising, none the less the fact, that none of the people in Haiphong took the North Vietnamese government's propaganda seriously, particularly the claims of the number of U. S. planes shot down or the claims of the size and number of North Vietnamese and Viet Cong in the south. [redacted]

EO 12958 3.4(b)(1)>25Yrs (C)

The villagers expressed resentment at having to repair bomb damage and dig defense trenches without compensation. [redacted]

Manpower, Morale, Evacuation (continued)

EO 12958
3.4(b)(1)>25Yrs
(C)

The morale of the North Vietnamese has been dealt a severe blow by the realization that the war is not only lost economically but also militarily. They now know that Soviet missiles are not capable of stopping air raids. They also fear that the MIG-21 cannot cope with the technical superiority of the American planes. . . . Hanoi cannot possibly continue the war for another two years, and even during that period its efforts would be reduced to sporadic raids of sabotage against installations. [redacted]

EO 12958
3.4(b)(1)>25Yrs
(C)

Overflight of the capital did not cause any damage to Hanoi except that all activities were interrupted nine times. However, this war on nerves begins to affect morale of the Vietnamese who are known for their high morale. Some think that this is precisely one of the U. S. objectives. [redacted]

EO 12958
3.4(b)(1)>25Yrs
(C)

All schools have been evacuated from Hanoi and Haiphong. Only people required to man the essential services remain in the two cities.... The morale of the North Vietnamese was at the lowest in late January 67. Food has become scarce since the advent of the bombing and the North Vietnamese live miserably. The conclusion reached from talking to the people is that they would like to see the war end as soon as possible. [redacted]

EO 12958
3.4(b)(1)>25Yrs
(C)

The general level of morale has suffered lately by the continuous U. S. aerial bombardments. The people no longer believe in a victory, but nevertheless continue to support the regime. [redacted]

6 February 1967

MEMORANDUM

SUBJECT: Comparison of US and Soviet Military Expenditures

1. The table below compares US and Soviet military and space spending in 1966. 1/

	Billion Dollars	
	US (FY 66)	USSR (CY 66)
Strategic Offense	4.6	5.5
Strategic Defense	1.6	5.5
General Purpose	30.3	17.3
RDT&E and Space	14.7	10.3
Command and General Support	22.3	13.1
Total	73.5	51.7

As this table indicates, the Soviets are spending somewhat more than the US for strategic offense, very much more for strategic defense, but only about 70 percent as much in total.

1/ This table includes civilian space (NASA) and nuclear weapons programs (AEC) for both countries. Soviet spending is in terms of US costs. The Soviet breakdown differs from the one presented in the CIA Special Report, [redacted] page 4. In the present instance, Soviet expenditures on nuclear weapons (except RDT&E) are placed under command and general support, for comparability with US data.

EO 12958
6.1(c)>25Yrs
(U)

~~SECRET~~

GROUP 1
Excluded from automatic downgrading and declassification

2. The following table shows the percentages of total US and Soviet military and space spending in 1966, by mission.

	US Percent (Dollar Basis) FY 1966	USSR Percent (Ruble Basis) CY 1966 2/
Strategic Offense	6	13
Strategic Defense	2	13
General Purpose	41	30
RDT&E and Space	20	25
Command and General Support	31	19
Total	100	100

3. Following are comments on this comparison:

a. The US percentages are strikingly different from those which prevailed before the US became heavily involved in Vietnam.

b. The US share spent on strategic offense is all intercontinental; in recent years about one-third of the Soviet share has been for systems targeted against Europe and other peripheral areas.

c. The Soviet percentage for strategic defense consistently has been much larger than that of the US.

d. The large US percentage for general purpose forces is unusual. Before Vietnam it was about one-third of the total.

2/ These percentages are based on the ruble costs of Soviet military and space expenditures and not on the dollar costs presented on the first page of this memorandum.

PLACE & DATE ACQ. (Laos, Vientiane (4 February 1967)) [redacted] BAN SI KOUN NE 4971

THIS IS UNEVALUATED INFORMATION. SOURCE GRADINGS ARE DEFINITIVE. APPRAISAL OF CONTENT IS TENTATIVE.

SOURCE: [redacted]

1. [redacted] stated that at the time of his escape from the prison at Si Koun there were 40 PL guards and 30 prisoners. Some of the prisoners were villagers who had been accused of aiding the Lao Armed Forces or who had refused to cooperate with the PL. [redacted] knew of two prisoners who had been killed for planning an escape. [redacted] escaped while working outside the prison.

2. According to [redacted] there were no Thais or Americans in the prison at Si Koun.

3. After [redacted] escaped, he walked east on Routes 71 and 7 to Ban Ban (UG 4971) where he and two other escapees who were with him raided a PL storage depot to obtain ammunition for the weapon [redacted] had taken from a prison guard. Chased by about a platoon of North Vietnamese Army (NVNA) troops, [redacted] and the other escapees fled along Route 7 to the Nam Tien Bridge (UG 6166), then left the road and headed south. At Ban Ko Liens (UG 6364) the NVNA troops and the escapees engaged in a fire fight. Three NVNA troops and one of the escapees were killed. [redacted] and the third escapee got away but the NVNA troops continued to track them. At [redacted] villagers hid and fed them even after the NVNA troops had offered villager 50,000 kip for their apprehension. Three days after the NVNA troops left [redacted] the villagers provided a guide who took the two to [redacted] (unlocated). The village chief of [redacted] sent them with guides to San Tiau.

When some villagers in the coastal areas of North Vietnamese provinces between the 17th and 20th parallels were asked specifically, most of the fishermen linked the bombing of North Vietnam to the active pursuit of the war in the South by the Hanoi regime. The crew of a fishing boat from the Quang Xuong district believe that if the North Vietnamese Government stopped infiltrating troops and supplies into South Vietnam, the American bombing of North Vietnam would cease. None of the fishermen demonstrated any spirit for the war and none volunteered the opinion that the reunification of the two Vietnams was a cause worth fighting for. Their principal interest in the war is having the bombing stop.

Local Lao Dong Party Cadre tell the villagers that the bombing is in revenge for the terrible losses the United States and its "puppet"

APPROVED FOR RELEASE
DATE: DEC 2000

South Vietnamese Army are sustaining in the South. The villagers give progressively less credence to this claim as the war drags on, more men are drafted and never heard of again, and rationing becomes more acute. Although village officials report that many of the attacking aircraft are being shot down, the villagers do not believe this because they have witnessed little, if any, effective defense measures, and the air raids continue. One of the few who witnessed the downing of an American aircraft related how the aircraft flying protective cover took a heavy toll of militia and army troops who were attempting to capture airmen from the plane which had been shot down.

The North Vietnamese regime's inability to end the air attacks by counteractions has caused some villagers to seriously doubt the Government's oft-repeated boast of "the inevitability of victory." Many judge the decision to continue fighting in the South as a lack of official concern for the dangers and hardships the bombing is causing the people in the coastal villages.

Although many of those questioned described the bombing as "indiscriminate," when pressed most admitted that principal targets for attacking aircraft appeared to be security posts, bridges, radar installations, and coastal and inland waterways traffic. (Comment: Off-target bombs and flimsy construction of nearby structures seem to cause the majority of civilian casualties.)

The villagers, especially in areas that have been bombed repeatedly, are terrified by the raids. The populace, therefore, holds daytime activity to a minimum, and many of the Government-operated economic and administrative units, including the fishing cooperatives, have been either damaged, abandoned, or evacuated to areas that have not been bombed.

Because of air attacks on fishing boats, Government confiscation of boats for use in coastal and inland waterways cargo shipping, and breakdowns because of the lack of spare parts, fish production has been reduced in many areas to a point where the fishermen cannot turn in enough fish to the cooperatives in exchange for sufficient rice to support their families. The fishermen admitted that in such cases they often resort to hiding a portion of their catch for sale on the black market. The hours they spend fishing are dependent on considerations of safety from air attacks rather than on when the fish are likely to bite. The size of the crews on those boats remaining operative have accordingly increased.

In spite of monetary incentives offered by the Government to professional fishermen to serve as coastal shipping laborers, the fishermen avoid this service whenever possible because of the dangers involved from air strikes.

People in the coastal villages are resentful of the time they are required to spend, with no compensation, in repairing bomb damage and digging coastal defensive trenches and air raid shelters.

The fishermen frequently mentioned that Regular Army units in their villages were withdrawn after the village was bombed and that militia units are now providing internal security and manning anti-aircraft artillery sites. In at least one village the militia disregards orders instructing it to fire at all enemy aircraft because it assumes the ground fire will draw retaliatory attack.

17 March 1967

MEMORANDUM

SUBJECT: A Proposal for Increasing Viet Cong Defections

1. The rate at which the Viet Cong have surrendered in January and February of 1967 is running 65 percent higher than that the first two months of 1966. Tet, the Vietnamese New Year celebration, falls in this period. In the past, large numbers of both government and enemy personnel have taken advantage of the traditional Tet visits to their families as an opportunity to desert, go AWOL or over-stay their leaves. But this year, the marked upsurge in the number of Viet Cong who have formally rallied to the government through the Chieu Hoi system, reveals two major causal factors. The high defection rate is obviously a direct reflection of the erosion in morale and the worsening conditions which the Viet Cong have experienced in the year that has elapsed since Tét 1966. As Allied and GVN pressure increases and expands, this attitude of personal defeat and loss of will to continue will become more widespread in Communist military and political ranks of the enemy causing the Communists internal problems. But since people are the essence of this war, negative attitudes are insufficient for victory. There must be a demonstrable crossing of the line, a cessation of active support for the enemy and at least an implied political acceptance of the Saigon government.

2. Defection is a personal act, and this raises the second factor underlying the recent step-up in the Chieu Hoi rate. The Tet truce removed the most immediate, and probably most important, barrier to defection. It enabled individual VC to leave their units openly, with the blessings of their commanders and without the fear that is present, at any other time of the year, that such an act could mean death. During the past ten months captured documents and prisoner interrogations have shown that the prevention of desertion has become a major enemy

APPROVED FOR RELEASE
DATE: JAN 2001

pre-occupation. In April 1965 a captured document, essentially a primer on how to spot incipient defections, revealed that the VC was willing, that early, to chance the psychological losses that the admission of the seriousness of the problem might cause, in an effort to stem this rising tide. Security restrictions will become increasingly severe and will dissuade many from straying whose decision, given the overall climate of defeat, might otherwise be to give up the fight. The major impediment to an even greater disintegration of the Viet Cong organization in the months ahead will be the very real, individual fear of immediate VC reprisal. The improvements in the national administration of the Chieu Hoi program, the addition of a host of new defection inducements are actually less important than getting the individual VC to lay down his gun and take the first step away from his unit. Advice on how and when to leave the VC, and a believeable guarantee of safe escort out of the zone of retribution would be the most incisive blow we could strike in the exploitation of the breakdown in morale.

3. With 1,100 ralliers now being processed through the Chieu Hoi machinery weekly, we have that many successful case histories to cull to determine, pragmatically, how security restrictions can be circumvented. And in that number we also have the source of talent for a program that will enable us to aggressively engineer more defections. Experience with the few armed Chieu Hoi teams that were created on the model of the People's Action Teams showed that, when properly re-motivated, they were highly effective, zealous workers in the GVN cause.

4. We propose that under the Ministry of Information and Chieu Hoi, teams of five to six ex-VC with political and military experience be formed, trained and posted to populous districts where Allied/GVN military actions are planned or where Revolutionary Development programs are being expanded. Actual utilization of the teams would vary from province to province, but when assigned to combat units as a psywar adjunct they would have access to prisoner interrogations to assess, on the spot, the status of the enemy units' morale and the potential for large-scale defections at squad and platoon level. They

could inventory the internal frictions, personnel and disciplinary problems which could be exacerbated later by tailored propaganda and determine as well the identities of those others most likely to defect to whom personal appeals then could be made.

5. With the entry of RD teams into new hamlets, ex-VC Chieu Hoi teams, preferably ones native to that area, would make initial appeals to the inhabitants to contact their VC relations and encourage them to desert the lost cause. During their stay in a hamlet, these teams could actually provide a confidential counselling service on modes of contact and escape. Citing their own experiences they could offer their assistance to any VC willing to defect--providing him the bridge to the nearest secure reception point. If the control and utilization of such teams were properly coordinated with province and district officials (particularly with an expanded provincial constabulary structure), the teams could provide the contact instrument through which secure defections were arranged.

6. No single program or technique is going to crack the Viet Cong organization, but in the pool of ex-VC who have already defected we have an unutilized resource which, if properly exploited, could produce dramatic results.

NLJ.002.191.002/3

17 March 1967

MEMORANDUM

SUBJECT: Attacking the Vietnamese Communists' Southern Organization

I. THE TARGET

1. The Communist insurgency in South Vietnam is basically a triumph of organization. The Communists do not now have any widespread or deep-rooted emotions working for them as they did in Viet Minh days when they were able to capitalize on a pervasive surge of nationalist sentiment and opposition to continued French rule. Nor do the Communists now have any mass base of genuine popular sympathy. (They were able to develop the beginnings of such a base in the earlier years--1954-1963--but in recent years this base has been eroding rather than growing.) What the Communists do have is an efficient, flexible, tightly disciplined and usually locally-rooted organization, carefully built up over a long period of time (in some areas, over more than two decades). It is this organization which holds the insurgency together and keeps it going. Even if all North Vietnamese troops and North Vietnamese logistic support were withdrawn from South Vietnam, the Communists' southern organization (which started the insurgency and through which the insurgency was exclusively waged through 1964) would remain a potentially fatal cancer within the Vietnamese body politic.

2. The Communists' southern organization is knit together and controlled through an elaborate, hierarchical committee structure which runs the People's Revolutionary Party, the name used by the Lao Dong (Vietnamese Communist) Party south of the 17th Parallel. At the apex of the southern pyramid the Communists have an entity known as the Central Office for South Vietnam (COSVN), which is actually the Central Committee of the PRP. Below COSVN, the Communists divide South Vietnam into six regions.

APPROVED FOR RELEASE
DATE: JAN 2001

Each region, in turn, is divided into Communist provinces (whose boundaries are not always the same as those of the GVN's provinces), each province into districts and each district into villages. At every command echelon the Communists direct all of their activities--political, military, subversive and terrorist--through a PRP committee which is subordinate to the PRP committee controlling the echelon above it and which, in turn, directs the PRP committees controlling the various echelons below it. These directing committees vary in size and organizational complexity (depending in part on the command responsibilities of the echelon in question and in part on the degree of Communist control in the area involved). Every committee has a chairman and a panoply of subcommittees. The number and designation of these subcommittees varies from locale to locale, but at every echelon there are always subcommittees for military affairs, Front (i.e., NLF) affairs, and security.* In the upper reaches of the Communist structure, these subcommittees themselves may be large and complex bodies; in the lower reaches (or in areas where Communist control is weak) they may consist of only one person or a very small group.

3. The heart of the Communists' southern organization is their network of provincial and district committees. It is these committees which hold the organization together and maintain the insurgency's essential base at hamlet and village level--the base which exerts control over the rural population and provides the local manpower and resources (e.g., food) without which the insurgency would collapse.

*The chairman of the Military Affairs Subcommittee controls all Communist military activity within his parent committee's area of geographic jurisdiction. (At the village and district level, the Military Affairs Subcommittee chairman is usually the commander of the village VC platoon or district VC company.) Similarly, the chairman of the Front Affairs Subcommittee at each echelon directs all NLF activity within his parent committee's geographic jurisdiction. The Front has an organizational structure which parallels the PRP structure, and is controlled by it at every echelon.

The success and even the continuation of the Communist insurgency depends directly on the performance, morale and effectiveness of these committee cadre, particularly at district and provincial levels. These committee cadre constitute the target group addressed in this paper.

4. In terms of numbers, the target we are talking about is relatively small. The activities of all the Communists' regional, provincial and district committees throughout South Vietnam are probably directed by something less than 10,000 people. Virtually all of these are ethnic southerners, though most of them were trained in North Vietnam and infiltrated back into the south, usually to their native areas. It is through these southern Party members that the Lao Dong and Hanoi control the southern insurgency. It is these southerners who would remain even if all North Vietnamese troops should leave the country.

5. This target cadre group constitutes the Communists' greatest source of strength, but also their area of greatest vulnerability. Losses among this cadre group--whether by death, capture or, particularly, defection--constitute blows at the vitals of the Communist movement. Thus efficient and effective attacks on this target produce maximum results for GVN and allied effort expended.

II. CURRENT PROGRESS

6. A successful attack on the Communists' southern organization requires (a) precise target intelligence and, (b) effective action based on that intelligence. The intelligence required includes the names and physical descriptions of the regional, provincial and district PRP committee members, the aliases or disguises they employ, where they live, where they work, their movement patterns, their backgrounds (e.g., schools, professions, interests, associates, friends, etc.), the names, descriptions and locations of their families and relatives, and the channels of access through which these target personalities can be reached. The object of all action taken against such target personalities is to detach them from the Viet Cong organization by

inducing and accomplishing their voluntary defection (the optimum method), by capture or--if neither defection nor capture is possible--by physical elimination.

7. During the past year, a variety of collection programs including Provincial Interrogation Centers, GVN Police Special Branch activity, GVN Central Intelligence Organization activity and, particularly, Census Grievance programs operated in conjunction with Revolutionary Development cadre activity have made impressive progress in obtaining intelligence on the individuals who comprise the Viet Cong's district, provincial and regional leadership. Progress in this field is not uniform throughout the country; but in many local areas, notable achievements have been recorded in obtaining intelligence on Viet Cong leaders operating in that area--i.e., the Viet Cong opposite numbers of GVN provincial and district officials. The achievements are real, though they are hard to quantify on a national scale with any meaningful precision, partly because much of the intelligence gleaned remains at province and district levels (where, at least potentially, it does the most good) and is not reported in detail to Saigon, let alone Washington.

8. Both the Police Special Branch and, particularly, the Special Operations Corps of the Central Intelligence Organization are endeavoring to develop penetrations of the Viet Cong organization at district, provincial and regional level, penetrations which will not only serve to provide new intelligence and authenticate intelligence received from other sources, but will also provide mechanisms through which defection operations can be mounted. A number of such penetration operations have already been initiated. Efforts are constantly underway to improve them by continued review and assessment of each case and cross-checking of its production with information or intelligence obtained from other sources. On the books, there are 107 going cases and approximately 250 developmental cases which are currently being vetted. This figure is constantly changing, but provides the base from which new penetrations develop.

9. The GVN has made considerably more progress in collecting intelligence on the Viet Cong provincial and district organizational structure than in taking effective action against identified members of that structure. General pressure has been exerted on that structure by improved police operations, by the US Marine Corps' "County Fairs" in I Corps, and by integrated police-military-intelligence operations such as Operation FAIRFAX in the Saigon area. In terms of pinpoint operations, against precise VC organizational targets, the Provincial Reconnaissance Units (PRUs) have proven themselves an increasingly effective instrument. These units, generally not more than eight to ten men (all intensively trained) both can and do operate in Viet Cong territory. Utilizing intelligence collected by other sources such as the Census Grievance Program and intelligence collected by their own efforts, PRU teams are extensively used in operations designed to capture or, when capture is impossible, ambush Viet Cong cadre.

III. MAJOR OBSTACLES

10. At the present time, there are three major classes of obstacles which hamper our attack on the Communists' southern organization. First, although there has been a significant increase in relevant intelligence information, much of this information is imperfectly exploited, analyzed, and collated. While American intelligence organizations are generally well-coordinated, considerable work remains to be done in improving the cooperation among the various Vietnamese military police and civilian entities with intelligence collection functions and in making a total intelligence product available to Vietnamese action agencies. These problems are more serious in some areas than others and are generally more pronounced at district rather than province level, but they do significantly hinder present action against the Viet Cong target.

11. Secondly, Viet Cong security practices present a formidable obstacle to our efforts to reach key figures in the Viet Cong organization. The Communists are past masters in the art of clandestine operations, including the use of aliases, clandestine

meetings, frequent movement, and the whole professional paraphernalia of covert activity. The Viet Cong are well aware of the importance of their cadres and the need to protect them against blandishments as well as simple bodily harm. The Viet Cong tend to coddle their important leaders in matters of personal safety and the Communists' inverted pyramid of bodyguards reaches impressive numbers when a provincial or regional officer is being protected.

12. Thirdly, with the exception of some PRU teams, GVN elements lack the ability to reach important members of the Communist organization. The police, as now constituted, are incapable of penetrating VC-held areas. Nor, considering the slow growth of Police Field Forces, is it likely they will have such a capability on the national scale in the near future. Similarly, efforts to recast elements of the Regional Forces and Popular Forces into a national constabulary are beset by a variety of obvious difficulties. Military sweeps do provide a shield for the National Police who, when armed with well-drawn black lists provided by a variety of intelligence sources, can screen the population in swept areas and do some separating of the sheep from the goats. The level of VC cadre apprehended in this manner, however, is rarely much above that of hamlet or village committee. Provincial and district Communist leadership is generally far too well protected to be surprised by the ponderous movements of a conventional military sweep.

13. Police action, expanded Chieu Hoi programs, and even some military sweeps can make inroads into the Viet Cong cadre structure at village level and below at a pace which should accelerate as security grows in the countryside. General government success and military pressure will also contribute to a weakening of Communist cadre morale at this level and make such cadre ever more susceptible to GVN blandishments. The district, provincial and regional Communist leadership, however, will continue to be another matter. These cadre have a higher position to protect and are more steeped in and subject to Party discipline, which can be counted on to keep the majority in place. Furthermore, the higher one goes in the Communist hierarchy the greater will be

the sense of outlawry, the greater the estrangement from or hostility toward the GVN, and the greater the reluctance to expect conciliatory treatment from the GVN or its agents. In addition, even when cadre at the district or provincial level are disaffected with the Viet Cong movement, they may not know how to disengage or turn themselves over to the government.

IV. RECOMMENDED COURSES OF ACTION

14. A continuation of all the various forms of pressure now being exerted on the Communists plus continued GVN progress in the pacification/Revolutionary Development field and in the creation of national political institutions should increasingly hamper Communist effectiveness, lower Communist morale and improve the general climate for work against the Communists' southern organization at all levels. A wide range of GVN rural actions already in train, particularly if integrated with an expanded Chieu Hoi program, will augment the drain on the lower rungs of the Viet Cong hierarchy. Work against the upper (i.e., COSVN) level hierarchy is a difficult, highly specialized task requiring separate consideration. Our attack on the district, provincial and regional levels of the Communist organization can be considerably enhanced by efficient execution of the actions outlined below.

15. First, we must improve the collation, integration and exploitation of intelligence already in hand or available through already existing collection channels, particularly at the district (sub-sector) level. This is really a more immediately urgent task than that of acquiring new collection

EO 12958 3.4(b)(6)>25Yrs
(S)

[redacted]

16. This does not mean that we should try mechanically to establish duplicate centers in every district in South Vietnam. Instead, there should be a province by province analysis of local coordination problems and the means best suited to solve them in that province and its districts. Since the optimum means in each area will be determined by the status of local programs in that area and the calibre of the locally-assigned people operating them, what works best in province X or district A will not necessarily be the best solution for province Y or district B. Nor should we devote the same degree of effort in all provinces. Instead, we should concentrate initially in those areas where the operational climate and assets available (including effective GVN officials) provide the best environment in which to work.

17. Secondly, in view of the need for an effective instrument capable of attacking the Viet Cong organization on a province-by-province basis, it is essential that on urgent effort be made to develop an effective, well-trained constabulary force. This constabulary would combine various elements such as Regional Forces, Popular Forces, Police Field Forces, and the PRUs into a body which could take effective action on intelligence produced by the Police Special Branch, CIO, Census Grievance program and all other collection sources.

18. Basically, operations aimed at individual VC leaders are appropriately the responsibility of the police, or of a provincial constabulary structure such as that sketched above. The PRUs have, in effect, filled a void created by the weakness of the GVN's present provincial police structure. The PRUs can continue to function effectively as a specialized arm of a provincial constabularly but they can never become a satisfactory substitute for it.

19. The primary objective of PRU teams is the capture of selected, identified Communist cadre. Heavy emphasis is placed in PRU training on kidnap techniques and methods of escorting prisoners through hostile territory. This training has produced an expertise which permits PRUs to operate in Viet Cong areas, to ambush when capture is impossible and in

the process to collect intelligence. This training, however, has produced another critically important capability, namely the ability to provide a means through which a disaffected Viet Cong can be physically contacted and escorted to safety, a means through which he can defect.

20. Defection, not capture, of VC leaders should really be our prime objective. The killing or the arrest of a Communist official can have the effect of a closing of ranks for his comrades; but should he defect he leaves behind ripples of doubt and suspicion among his superiors, his peers and his subordinates.

21. Defection operations at province and district level require the closest kind of supervision, coordination and expert local direction. From the wealth of intelligence data that we have, primarily that from Census Grievance sources, we can discover the location of the wife, mother or father of a VC leader on whom conventional psychological warfare approaches and showers of Chieu Hoi leaflets might be wasted. We know, or can learn, a great deal about him and his background from his neighbors or boyhood friends. At this point we come to grips with the peculiarities of the Vietnamese psyche. The divisiveness, suspicions, and jealousies that complicate our dealings with our Saigon allies, fortunately, are personality characterisics of the enemy as well. The policy of downgrading provincial cadres to district and district level officials to village level cannot help but ruffle feathers among some of those shifted and offers a fulcrum for exploitation. Penetration reporting regularly reveals internal jealousies, antipathies and general backbiting among the Party officials, on personal rather than ideological grounds. Similarly, the intense sense of family identity is a stout bridge to use to dissuade the VC relative to return--particularly when the fight is so evidently not going well. Clergy or friends can be used as go-betweens to either the family or the target himself. In other instances, police or constabulary teams (including PRUs) could handle the communications into safe haven and stand willing to see the defector safely into GVN hands. Protection from VC reprisals on the way out has been a major concern in almost every defection engineered in this fashion.

22. Within each province, all sources of intelligence should be continually screened and collated to sort out the personality targets of sufficient status and interest to warrant individual attention. Stature alone should not be the sole criterion, some reasonable prospect of access or issue for exploitation must exist: family relationships, hard data on fixed location or on regular routes of movement, intimations of disaffection, internal Party troubles, etc.

23. Once the screening process has identified a valid target, however, the decision must then be made on the optimum instrument for reaching that target and detaching him from the Communist organization. Then, when the decision is made, it must be translated into action. All of this requires the kind of coordinating staff now seldom found at district level, a staff which can be created within the framework of a constabulary structure designed for effective provincial operations with U.S. advice and support.

24. For security's sake, but also to enhance the chances for success, the staff should be kept small, informal and directly responsible to the province chief. Its nature and composition should be tailored to each province's individual needs and assets. Should such staffs be created by a Saigon-imposed national directive, their establishment might well result in a pro forma bureaucratic exercise. They should be created on a province-by-province basis without initial reference to a national program. As the executive agent for civil and military matters for his province, the province chief's total support is mandatory; if it is not forthcoming, the staff will not function. We are certain that General Thang, the Minister of Revolutionary Development, would give his blessing and support to such activity, however, knowing it to be generated province by province in much the same way that the Census Grievance program was built.

Document # 46

46

On the night of 22-23 April approximately 80 trucks were reported moving south in the area of the Mu Gia Pass. This is the first significant southbound convoy spotted in the pass this month, and is far in excess of the average of five trucks a day moving southward through the pass during the first three weeks of April.

Such activity may be a Communist effort to rush additional supplies through the infiltration corridor before the heavy spring rains make some of the Laotian roads impassable. The rainy season does not normally hit the panhandle until June but there are indications that it may be early this year--standing water and deep mud have been observed along parts of Route 23 and Route 911. (Map)

The Military Situation in South Vietnam: No significant contact with Communist forces has been reported in South Vietnam since the heavy enemy artillery, rocket, and mortar attacks in northern I Corps on 27 and 28 April. [redacted]

EXECUTIVE SECRETARY, USIB

SECRET
CONTROLLED DISSEM

The following intelligence organizations participated in the preparation of this estimate:

The Central Intelligence Agency and the intelligence organizations of the Departments of State and Defense, and the NSA.

Concurring:

Vice Adm. Rufus L. Taylor, Deputy Director of Central Intelligence

Mr. George C. Denney, for the Director of Intelligence and Research, Department of State

Lt. Gen. Joseph F. Carroll, Director, Defense Intelligence Agency

Lt. Gen. Marshall S. Carter, for the Director, National Security Agency

Abstaining:

Dr. Charles H. Reichardt, for the Assistant General Manager, Atomic Energy Commission and Mr. William O. Cregar, for the Assistant Director, Federal Bureau of Investigation, the subject being outside of their jurisdiction.

WARNING

This material contains information affecting the National Defense of the United States within the meaning of the espionage laws, Title 18, USC, Secs. 793 and 794, the transmission or revelation of which in any manner to an unauthorized person is prohibited.

SHORT-TERM POLITICAL PROSPECTS FOR LAOS

THE PROBLEM

To estimate the prospects for political stability in Laos over the next year or so. In addition, to estimate the reactions of Souvanna Phouma and the effect on his government of expanded Allied ground action in the Laos Panhandle. The reactions of other foreign governments to these courses of action are not considered.

CONCLUSIONS

A. During the past several years, the Kingdom of Laos has achieved a substantial degree of political stability. This rests, in part, on the international support which the Royal Lao Government has enjoyed since the 1962 Geneva settlement, support which Prime Minister Souvanna Phouma earnestly seeks to retain. More important, it rests on an understanding among Souvanna, the military, and—to a lesser degree—the conservatives and neutralists, which aims at preserving Lao independence and the attributes of neutrality and tripartitism. In the short term, at least, we see no serious diminution of military support for the regime, nor does a military-inspired coup attempt seem likely.

B. We believe that Souvanna, if approached officially, would disapprove any proposals put to him involving Allied ground action in the Laos Panhandle. He has stated that he would not authorize the introduction into Laos of US or other Allied ground troops. Nevertheless, he has demonstrated some tolerance for small-scale, limited actions of which he is not officially informed; the key test in his view is the ability to avoid acknowledgement. Activities meeting these criteria might, as in the past, be ignored by Souvanna. He would, however, vigorously oppose any action involving the open or prolonged presence

on Lao soil of any substantial number of Allied troops—e.g., one battalion. If the US proceeded with such visible actions despite Souvanna's opposition, he would probably resign, though there is a small chance that he might tolerate the US action in hopes of somehow limiting it.[1]

[1] Mr. George C. Denney, for the Director of Intelligence and Research, Department of State, believes that Souvanna almost certainly would resign. Souvanna regards the preservation of the Geneva settlement as indispensable to the survival of Laos and would see the visible introduction of allied ground forces as signaling the abandonment of that settlement. He has made these points many times. If, despite his opposition, the actions contemplated in this sentence were undertaken, he would assume, against the background of previous US assurances to him, that the US had broken the relationship of confidence built up since 1962 and had lost interest in preserving the Geneva settlement and in his remaining in office. He would have no hope, therefore, that by remaining in office he could exercise any further influence on our courses of action.

DISCUSSION

I. PROSPECTS FOR POLITICAL STABILITY

A. Internal Factors

1. After 14 years of independence, the Kingdom of Laos remains economically and politically underdeveloped. Only a few thousand individuals, most of them French-educated, participate in government and politics; the bulk of the population is illiterate and politically apathetic. Popular identification with the country, the government, and the Crown—though stronger than in the past—is very limited, and regional and family loyalties continue to play a predominant role in domestic politics.

2. The Lao political situation is further complicated by two decades of international contention in the Indochina area. A formula was devised by the 14-nation Geneva Conference of 1962 to bring peace to Laos by making the country a neutral buffer state. A tripartite coalition government was organized in Vientiane by the three major Lao political factions—conservative, neutralist, and Communist—and headed by the neutralist Prince Souvanna Phouma. But this design for national reconciliation and territorial unification soon proved unworkable and the internal struggle resumed. Today the Communists control about 40 percent of the area and 20 percent of the population, generally tribal groups inhabiting the rugged and sparsely-populated uplands bordering China and the two Vietnams. The government controls the populous Mekong River lowlands and commands considerable support among some upland ethnic minority groups, particularly the Meo.

3. Since Geneva, Lao politics have undergone major changes. In early 1963, the Lao Communists withdrew from active participation in the tripartite government, and Communist Pathet Lao and North Vietnamese troops initiated attacks on neutralist-held positions in northern Laos. Souvanna obtained the support of the conservative leadership of the Royal Lao Armed Forces (FAR) for his neutralist force and the US provided needed military equipment and supplies. Since then, Souvanna has come to believe that, in the last analysis, the security of Laos depends on the US.

4. While privately favoring US policies in the Indochina area, Souvanna nevertheless maintains an international position of neutrality and a commitment to tripartite government. He sees the maintenance of these Geneva principles as indispensable to the legitimacy of the Royal Lao Government (RLG) and its international acceptance. He believes that so long as they are retained, even if only as a facade, Moscow will support the present political equilibrium in Laos; and that Hanoi and Peking—whose main military interests now lie outside the territory controlled by the Vientiane government—will at least make no major efforts to upset the present equilibrium. He also believes that the

maintenance of tripartitism may facilitate the reintegration of the Pathet Lao into the national community at some future date.

5. The departure of the Communists from the tripartite government in 1963 reduced it to a neutralist-conservative coalition, with the latter faction numerically predominant. The net result has been the achievement of a substantial degree of political stability. Neutralist-conservative cooperation has grown, almost obliterating the differences which once existed between these factions. Souvanna now frequently ignores any distinction between the two, and in policy terms there is virtually none. The conservatively-inclined military leaders have also become increasingly acceptable to Souvanna. He knows that their support is essential to the preservation of his government, not only because of the military strength they control but also by virtue of the political power they hold in their regional commands. This increased acceptance of the military is also a result of the departure from Laos in recent years of some of the more disaffected and contentious elements among the military, notably General Phoumi and his adherents.

6. For their part, the key Lao military figures accept and support Souvanna in the interest of maintaining, with US support, a broadly-based national resistance to Communist territorial encroachments. The military leaders are also conscious of the restraints placed on them by continuing international interest, particularly that of the US, in keeping Souvanna in power. Souvanna's position is further strengthened by King Savang Vatthana's desire to maintain legitimacy and by divisions among the military arising from regional and family considerations.

7. The neutralist faction, once Souvanna's main support, has been unable to build a true political party and has lost much of its elan. The neutralist label presently attracts little popular support; neutralist candidates, except those identifying with regional interests, have generally suffered defeat at the polls. Kong Le, the military symbol of neutralism, has recently been removed from his command in the interest of integrating neutralist forces into the FAR, and has left the country. Nevertheless, the neutralist label is retained, primarily for cosmetic reasons—to distinguish those who occupy the cabinet posts originally reserved for that faction and to demonstrate that tripartitism survives.

8. The newly-elected National Assembly is more disciplined and cohesive than its predecessor. In the first serious test of its character and intentions, Souvanna's national budget was passed without opposition. This issue had contributed to a major governmental crisis in the fall of 1966. In contrast to the disorganized and obstructive legislature which it replaced, the new Assembly contains a safe majority of deputies obligated to regional military leaders who in turn have agreed to support Souvanna.

9. The Lao Communist political organization—the Neo Lao Hak Sat (NLHS)—is neither strong nor deeply rooted in Laos; it is almost completely a creature of the North Vietnamese on whose support and direction it has

become increasingly dependent. Although the NLHS abandoned its role in the national government in early 1963, it continues to hold to the tripartite concept as a source of legitimacy at home and overseas, a framework within which to reenter the government should the overall situation in Indochina once again warrant the suspension of hostilities and the adoption of political tactics. Although undoubtedly disturbed by Souvanna's effective cooperation with the conservatives, the Lao Communists and their North Vietnamese mentors also realize that the tripartite arrangement under his leadership places significant international constraints on the Lao military and indirectly on the US.

10. *Prospects.* Political stability in Laos will continue to depend on the maintenance of cooperation and mutual respect between Souvanna, the FAR military commanders, and the King. Despite some misgivings about Souvanna on the part of certain of the military leaders, it is probable that they will continue to support his government and its policies. The present arrangement offers them adequate scope for the exercise of political influence within their regions, and they do not appear to have any major policy differences with Souvanna at this time. There is always the possibility, however, that personal rivalries among the military may spark outbreaks of internecine strife as in 1965 and 1966, but a military-inspired coup attempt against Souvanna's government, as in 1964, seems unlikely. Moreover, no military leader has sufficient stature to gain the acquiescence of his peers for any takeover of the government.

B. External Factors

11. *Hanoi and the War in Vietnam.* To Hanoi, the war in Laos is secondary to its campaign to take over South Vietnam. Hanoi seeks through the agency of the Pathet Lao to control the regions adjacent to its own borders. It supports the Pathet Lao as a military and political force in order to preserve a viable instrument for any future Communist takeover of Laos. Of principal immediate importance to Hanoi, however, is control of the southern panhandle area containing the corridor which it views as an essential route between North and South Vietnam.

12. Since 1964, Hanoi's objectives in the southern panhandle have been served by a condition of relative military stalemate in which it retains control of the uplands bordering South Vietnam while FAR forces occupy the flanking Mekong lowlands. At present, Hanoi shows no intention of extending its occupation westward into FAR territory. Nor is it exerting strong political and military pressures on Souvanna's government elsewhere in Laos. It is probable that Hanoi will maintain this posture toward Souvanna so long as the status quo obtains.

13. For his part, Souvanna would like to see the North Vietnamese eventually driven from all Lao territory, but he does not share the intense US concern with the Communist-controlled panhandle area, a rugged region only sparsely populated by non-Lao tribal peoples. So long as Hanoi evidences no interest in extending its occupation westward into the Mekong lowlands, Souvanna is

reluctant to see the boat rocked by attempts to force the NVA/VC out of the highlands.

14. *Souvanna's International Position.* Underlying all Souvanna's actions are his concern for the preservation of the Geneva tripartite framework of government and his dedication to a foreign policy of neutrality for Laos. He has collaborated closely with the US, which is fighting the common enemy in Vietnam and is the only source of large-scale assistance in terms of military hardware and air support. However, he has stated that he would not authorize the introduction into Laos of US or other Allied troops. He is particularly anxious to avoid disturbing relations with the Soviets on whom he relies to provide an additional check on Hanoi's expansionist tendencies and whose recognition he regards as fundamental to the policy of neutrality. He also weighs presumed Soviet reactions in arriving at decisions on domestic affairs. He is also careful to avoid provoking Peking, but he is less hopeful that the Chinese Communists would attempt to restrain Hanoi.

15. Souvanna has accepted certain US military activities in Laos such as bombings that benefit his troops as well as hamper Hanoi's war effort in South Vietnam, and certain covert activities. However, in both cases, his agreement rests on absolute prohibition of publicity. He has refused to acknowledge the existence of any US military activity in Laos with the exception of armed air photoreconnaissance. He has never been informed by the US of its involvement in small-scale ground reconnaissance activities, although he may be aware of them. He has firmly taken the position, both privately and publicly, that he cannot approve US military ground operations in Laos.

16. Souvanna, although prepared to cooperate with the US in actions that he believes will assist Laos without exposing it to new and excessive political or military dangers, has many reasons for placing close limits on such operations. He is aware, as is the Lao elite in general, of the tremendous drain on Lao resources imposed by the hostilities, even at their present level, and of a casualty rate that, particularly for an underpopulated country, is very high. He believes that the introduction of friendly foreign ground troops would be contested by the North Vietnamese and that the level of hostilities would inevitably rise and that Laos would become another battleground of the Vietnam war.

C. The Succession

17. There is no present expectation that Souvanna will resign, either for political or health reasons, though he is 66 years old and has often in the past used the threat of retirement to obtain acceptance of his policies. He appears to enjoy his position and is conscious of his role in building a Lao nation. He is also aware that he is probably the only Lao leader other than the King with sufficient international stature and acceptance to lend credence to the tripartite formula. He is also concerned about the succession problem and wants more time to select and build up an acceptable successor. At

present, he apparently sees Minister of Finance Sisouk na Champassak in this role.

18. Should Souvanna die, there would be considerable jockeying for power which would be likely to continue even after the installation of a new government. Awareness of the importance of US support would affect decisions, but a number of major domestic factors would also come into play. An essential element would be the preference of King Savang Vatthana, constitutionally the most powerful man in Laos and almost universally respected. Another important factor is the military. The Lao military would probably prefer a conservative civilian since the only military figure who might qualify at this time is General Kouprasith Abhay. He would be strongly opposed by many of his colleagues who fear ascendancy of the Vientiane-based Sananikone clan with whom Kouprasith is closely associated. If the King, taking international interests into account, acted vigorously on behalf of a neutralist, such as Prince Sisoumang Sisaleumsak, his decision would probably be accepted.

19. The choice of a successor would, of course, have important implications for the survival of the Geneva structure. Moscow would be particularly concerned about and expect to influence the selection process and would certainly prefer a neutralist. Hanoi, if satisfied through the choice of a neutralist successor that Souvanna's departure would not lead to significantly increased military pressures on its use of Lao territory, would probably accept the replacement with only *pro forma* complaints. If so, its Pathet Lao clients would follow suit. The appointment of a conservative figure would raise questions regarding adherence to the tripartite formula. The emergence of any Lao figure clearly hostile to the tripartite formula would be completely unacceptable to Hanoi and Moscow: Moscow would denounce the new government as without standing under the Geneva agreements, and openly support the Pathet Lao; and Hanoi might take new military initiatives.

II. REACTIONS TO EXPANDED ALLIED GROUND ACTION IN THE LAOS PANHANDLE

20. We believe that Souvanna, if approached officially, would disapprove any proposals put to him involving Allied ground action in the Laos Panhandle. He is predisposed to do so by his whole approach to the war. His resistance would be reinforced by expectations of a North Vietnamese reaction that would enlarge the war in Laos. He would expect that Hanoi would strike back, not only in areas in which the Communists were being attacked but also in areas now under RLG control, which would be of much greater concern. Moreover, he would be inclined to react not merely to a particular proposal, but to the progression of events that he would envisage as likely to follow the first move. Thus, he would be reluctant to authorize officially seemingly low risk, very small-scale, and deniable actions because he would anticipate that, whatever the original US intention, the new actions and the enemy response would generate a momentum of their own.

21. Because Souvanna understands the stake of Laos in the outcome of the war in Vietnam, and realizes that until it is over Laos will perforce remain a theater of operations, he has demonstrated some tolerance for actions of which he is not officially informed. The level of such tolerance will vary from time to time and has, generally speaking, been on an ascending scale. Although he has privately as well as publicly drawn the line against ground operations, the key test in his view remains the ability to avoid acknowledgement. The essential elements in his tolerance of presently-conducted actions have been that: insofar as his official relations with the US are concerned, these actions have not existed; they have been unacknowledged, small, clandestine, and shallow penetrations conducted by specially trained forces; and they have not become, in any sense, a public or diplomatic issue. Expanded activities of this type, so long as they met the same criteria, might continue to be ignored by Souvanna.

22. Souvanna would vigorously oppose any action involving the open or prolonged presence on Lao soil of any substantial number of Allied troops—e.g., one battalion. He would expect a Communist military reaction and, eventually, a much larger and destructive war throughout Laos. If consulted in advance, he would almost certainly oppose the move strongly. Moreover, most of the other Lao political and military leaders, including the King, would share his misgivings and accept his lead in this matter.

23. If the US proceeded with such visible actions despite Souvanna's opposition, he would probably resign, though there is a small chance that he might tolerate the US action in hopes of somehow limiting it.[2] In the event of his resignation, a Lao leader, conservative or military, could probably be found to form a government that would cooperate with the US, but it is uncertain that the King would legitimize the new government. Externally, moreover, the departure of Souvanna under these circumstances would change the Lao situation dramatically. The Vietnamese Communists would no longer have any political restraints on their military actions in Laos, and the Soviet Union would probably swing to direct political support of the Pathet Lao.

---

[2] Mr. George C. Denney, for the Director of Intelligence and Research, Department of State, believes that Souvanna almost certainly would resign. Souvanna regards the preservation of the Geneva settlement as indispensable to the survival of Laos and would see the visible introduction of allied ground forces as signaling the abandonment of that settlement. He has made these points many times. If, despite his opposition, the actions contemplated in this paragraph were undertaken, he would assume, against the background of previous US assurances to him, that the US had broken the relationship of confidence built up since 1962 and had lost interest in preserving the Geneva settlement and in his remaining in office. He would have no hope, therefore, that by remaining in office he could exercise any further influence on our courses of action.

INTELLIGENCE MEMORANDUM

The Intelligence Attack On The Viet Cong Infrastructure

I. The Targets

1. The Communist insurgency in South Vietnam is basically a triumph of organization. The Communists' efficient, flexible, tightly disciplined and--most important--locally-rooted organization has been carefully built up over a long period of time. Through an intricate network of provincial and district committees, the organization is held together and is able to maintain the insurgency's essential base at hamlet and village level. From this base, control is exerted over the rural population which provides both the local manpower and resources, without which, the insurgency would collapse. The success of the insurgency, therefore, depends directly on the performance, morale and effectiveness of the cadre who comprise the district and provincial level committees. These cadre are, at one time, the Communists greatest source of strength and their greatest area of vulnerability, for losses among this group by death, capture or defection constitute blows at the vitals of the entire movement. Obviously the Communist hierarchy is no less aware than we of both the value and the vulnerability of their cadre. Through their organizational skill and control of the population the Communists have been highly successful in enshrouding these cadre from our eyes. An attack aimed at this target group, to be effective, requires a reciprocal, painstaking organizational effort on our part. Stated simply, we require a) the collection of precise, timely intelligence on the targets, b) the ability to collate and process rapidly the exhaustive data that we do acquire and, c) the means to take prompt, direct action commensurate with the identified target.

APPROVED FOR RELEASE
DATE: DEC 2000

SECRET

II. Collection

2. During the past year a variety of collection programs have made impressive strides in obtaining intelligence on the individuals who comprise the Viet Cong's provincial and district leadership. The primary producers of this intelligence are the G-2 of ARVN, the Military Security Service (MSS), the special branch of the Directorate General of National Police (DGNP), the special operations corps of the Central Intelligence Organization (CIO), the Provincial Reconnaissance Units operating under the province chiefs, the Census Grievance program, the various interrogation facilities (28 provincial interrogation centers with ten more under construction, the National Interrogation Units), and unilateral intelligence collection mechanisms of the US Armed Forces and CAS.

3. Obviously these collection units overlap, but this is desirable since each contribution creates, in effect, a laminate of the VC organization, province by province. Their progress has been substantial. Our problem now, in fact, is not so much the acquisition of new data as the collation and exploitation of the information being obtained through present collection sources.

III. Collation

4. Considering the number of disparate collectors who contribute to the political order of battle which spreads throughout the 44 provinces and ranges from region to hamlet level, orderly collation of the data is a crucial link in its exploitation. The bulk of useful intelligence on the Viet Cong infrastructure is low-level and requires collation and exploitation at district or province level. Existing facilities for intelligence collation include the Sector Operations and Intelligence Centers (SOIC) which operate at province level and are committees of Vietnamese representatives of intelligence organizations and their American advisers; the Province Intelligence Coordinating Center (PICC), an effort by CIO to improve and systematize province coordination of intelligence; the Combined Intelligence Coordinating Center (CICC) operating under GVN executive order in the Viet Cong MR-4 region in and around Saigon and jointly

staffed by Vietnamese and Americans under Vietnamese command; the collation facilities of the Provincial Interrogation Centers (PIC) supported by CAS and operated by the National Police; and District Intelligence Operations Coordinating Centers (DIOCC) of which the center operating in Dien Ban, Quang Nam Province, is the principal prototype. This DIOCC, although staffed by both Vietnamese and Americans, is under American supervision.

5. On the American side, special mention should be made of the MACV, J-2, Central Registry Detachment which has also taken on the task of developing data on the Viet Cong infrastructure utilizing the machine records facilities of the Combined Intelligence Center. Experience has shown that the Vietnamese producers and users of intelligence are subject to parochialism and inter-agency jealousies which afflict the effective collation and exploitation of intelligence. Under these circumstances, American-energized, supported, and in effect controlled, collation centers have been the most effective of the various facilities devised.

6. Collation mechanisms procedures at province level are fairly well established, although there are variations in effectiveness which are related in part to the competence of Vietnamese officials concerned. Improvements in effectiveness at that level will come with time through experience, more effective training, and constant but tactful advisory efforts from the American components. At district level, however, resources collation activity are limited, except in instances where the deployment of U.S. combat units has provided additional trained intelligence manpower and additional facilities. Vietnamese intelligence operations are province-oriented, in part because of shortages in trained manpower, and in part because exploitation means are more readily available at that level. District-level operations, thus, are based largely on intelligence collated and disseminated from the provincial level, fleshed out with whatever additional detail or more current data may be available within the district. This system has proven generally workable insofar as it has provided basic data on the infrastructure in support of pre-planned operations. It is not, however, geared to providing simultaneous rapid response to requirements from lower echelons for intelligence on a number

of targets of opportunity. The performance of the province level elements in this regard can be expected to improve with time, but greater reliance must be placed on developing adequate collation capabilities at district level to meet the need for timely information. This development must be related, however, to the means available at district level to exploit such an improved capability.

IV. Exploitation

7. Since speedy action is vital to the effective use of intelligence, the DIOCC and the CICC (which is internally organized into district level desks) appear to be the most useful mechanisms for collation purposes. However, the entire capability for exploitation, in its many forms, must be considered lest we hastily attempt to recreate in every district capital the success that has been achieved in special circumstances in the Dinh Ban DOIC in Quang Nam Province. What works best in one place in Vietnam does not necessarily work well in another.

8. Many channels--Census Grievance is one example, unilateral penetrations another--do not lend themselves to reporting at other than province level. The province headquarters will, of necessity, continue its clearing house function even where DIOCC programs exist. In addition, this overview is also made necessary by the fact that the Viet Cong have a province, district, village and hamlet breakdown which, although sometimes similar to that of the GVN, varies significantly in many instances. The Viet Cong military organization is superimposed on this system. These adminstrative boundary differences greatly complicate intelligence collation and exploitation and necessitate close coordination among neighboring districts and provinces. Collection and collation of intelligence on the VC infrastructure has far outstripped our ability to take action. At province level the sector G-2, the MSS, the Census Grievance study center, the PIC et al, have kept comprehensive books on the VC apparatus as they see it in each of the province's several districts. However, in our concentration on the identification of the VC cadre, we tend to forget that the VC military and political order of battle are closely enmeshed.

9. The Communists take great pains to prevent their cadre from being exposed, through physical protection provided by their military arm and through their own intelligence resources, which give early warning of impending danger from the GVN. Only where we have sufficient and readily available strength to cope with the enemy's local military resources can we expect to exploit, as thoroughly as we would like, the extensive intelligence which is at hand.

10. The means available at district level for exploiting intelligence on the infrastructure vary considerably and are frequently inadequate. Most district chiefs have at their disposal no more than one mobile RF company and, perhaps, a platoon or two of PF troops, whose operations are not normally oriented against the infrastructure. Police resources in most districts are negligible. Provincial Reconnaissance Units normally operate under the control of provincial authorities. Generally speaking, only when American forces are available are the means--and impetus--provided for operations directed against the infrastructure by district authorities. In the absence of these resources, district authorities lack the will and the impetus to do much more than attempt to cope with the military operations of the Viet Cong, and even if they possessed accurate and timely intelligence on the infrastructure they would not be inclined to react to it effectively.

V. Conclusions

11. The increased awareness that Revolutionary Development progress was being sharply hindered by lack of security, has tended to make us consider the problem solely in terms of the security of the RD cadre teams, despite the fact that the extirpation of the VC cadre system is the sine qua non for pacification. The two thrusts must be considered in tandem. Our successes where Americans have dominated the collation of intelligence at province or district level, have occurred in areas where, because of American troop locations, we were militarily dominant over the VC. In Operation CEDAR FALLS, for example, MACV J-2 advisers, and CAS officers working within the context of the VC/Military Region 4/combined intelligence team were able to provide the military and the police with the intelligence on which they

were able to take action. However, action in this hard core VC area, was made possible by the aggressive presence of the US II field force. Under their protective screen, district-based planning and exploitation was highly productive. Few districts in Vietnam have less information on VC cadre and guerrillas and military displacements that was available in the CEDAR FALLS operation. But the reaction assets available to the average district chief are woefully inadequate.

12. With the reorientation of ARVN battalions into a role in support of RD cadre programs, we should be able to take advantage of this strength and plan our intelligence operations accordingly. ARVN units or Free World forces thus assigned into a new area should determine in which districts the DIOCC concept will be employed. This presupposes--in the case of ARVN troops--that such forces will not merely be a screen; but, instead, will be employed in actively seeking out province and district main force units and destroying them. As the VC lose their protective elements, their cadre become exposed and, thus, vulnerable. The population, aware that retribution for cooperation with the GVN is not the all-prevasive threat that it was previously, become a greater source of intelligence and more of the arcane VC organization is surfaced.

13. For the very same reason that we cannot expect political progress, in depth, if the RD teams are working in an area where company strength VC reaction is an ever-present possibility, our exploitation of intelligence will continue to be no match for the rate at which it can be produced. Collection and collation techniques are constantly being improved and show every promise of continuing in this direction. Reaction capability is the bottleneck which will be broken only if we are successful in defining a new, broad pacification support posture for ARVN and in seeing that these necessary techniques are diligently practiced. The rate at which the redeployment of ARVN into the RD security role is processing does not augur well for an appreciable step-up in the destruction of the VC infrastructure in the near future.

14. The long-discussed concept of a National Constabulary is predicated on this real need for an aggressive, locally oriented force capable of coming to grips with the VC. Unfortunately, the National Constabulary idea is a long way from realization and cannot be considered as a force in being in this effort to increase the tempo of the attack.

15. In the final analysis, then, the problem becomes one of: (a) improving the effectiveness of existing mechanisms at province and higher levels for providing basic intelligence data to support operations at lower levels; and (b) developing an effective mechanism at district level where the means exist to exploit this basic intelligence as supplemented by locally available and timely information. The impetus for both of these must come from the U.S. side, in the first case through tightening up our own advisory procedures, and in the second case by taking the lead in establishing the mechanism built around the intelligence element of whatever U.S. combat forces are deployed in the district. We can press for similar mechanisms when Vietnamese Army units are employed within a district, but in the absence of a full-time U.S. intelligence ingredient as a catalyst (e.g., a battalion S-2 section) the performance will probably not be satisfactory. We can also seek to decentralize Provincial Reconnaissance Unit operations to some extent as a means of reinforcing the resources available to the district, but past experience has shown that if this were done without close U.S. supervision the effectiveness of such operations would be diluted; such a move would be productive only if the U.S. catalytic element were available at the district level.

16. A basic consideration to this problem--one which also affects other aspects of the pacification effort--is that available resources do not permit us to undertake an attack in all areas simultaneously. If properly concentrated, however, our resources are sufficient for us to focus on selected areas where the job can be done effectively. Success and experience thus gained would permit the reallocation of resources--or their duplication--to extend the attack to other areas. The development of additional DOICs should be limited initially to those areas where sufficient resources are available to

warrant the effort. These areas would presumably be those where the concentration of other resources would make the attainment of our pacification goals feasible, and those areas where the destruction of the infrastructure is a priority task. Close coordination of police, PRU, RF, and PF and RD team activities, and Census Grievance activities should be developed at provincial level to support the DOICs established in selected districts, using existing advisory and liaison channels. Once the DOIC mechanism and requisite procedures linking the DOIC to province have been refined, efforts could be made to extend the concept to other districts where Free World or ARVN resources provide the potential for reaction, again bearing in mind the availability of other resources required to further the pacification goal. In this fashion, the infrastructure can be attacked in a rational, effective manner.

FIELD NO.

1.3(a)(4)

1. SUMMARY. [redacted] THERE ARE FIVE ACTIVE UNDERGROUND POWER STATIONS SERVICING HANOI WHICH ARE LOCATED IN THE CITY AND IN THE SUBURBS. THE MAJORITY OF CHILDREN AND OLD PEOPLE HAVE BEEN RELOCATED OUTSIDE THE CITY. ALSO, MAJOR INDUSTRIES HAVE BEEN MOVED OUTSIDE THE CITY, WHILE SMALL CONSUMER GOODS INDUSTRIES HAVE BEEN TRANSFERRED TO THE CENTER OF THE CITY. AN AGREEMENT WAS REACHED REGARDING THE TRANSSHIPMENT OF SOVIET GOODS FROM THE USSR THROUGH CHINA TO NORTH VIETNAM WHEREBY THE NORTH VIETNAMESE GOVERNMENT ASSUMES CONTROL AT THE SINO-SOVIET BORDER.

2. [redacted] THERE ARE FIVE ACTIVE UNDERGROUND POWER STATIONS SERVICING HANOI, THREE OF WHICH ARE LOCATED WITHIN THE CITY LIMITS AND THE OTHER TWO ON THE OUTSKIRTS. [redacted] ONE OF THE POWER STATIONS IS LOCATED NEXT TO THE INDIAN CONSULATE GENERAL ON LE THAN KIET. IT IS DESCRIBED AS A

[redacted] (classification) [redacted] (steam controls)

1.3(a)(4)

1.3(a)(4)

• [redacted] [redacted]
(classification) (dissem controls)

RELATIVELY SMALL SOLID CONCRETE BUILDING WITH MANY ELECTRIC CABLES EMANATING FROM IT AND WITH THE WORKS LOCATED UNDERGROUND. THERE IS A LARGE POWER PLANT UNDERNEATH THE MAIN POWER STATION WHICH APPARENTLY HAS NOT BEEN SEVERELY DAMAGED. THERE HAS BEEN NO RATIONING OF ELECTRICITY. AUTHORITIES HAVE URGED ALL RESIDENTS INCLUDING THE FOREIGN COMMUNITY TO CUT DOWN ON THE USE OF AIR CONDITIONERS AND OTHER ELECTRICAL APPLIANCES. HOWEVER, NO EFFORT HAS BEEN EXERTED TO ENFORCE THIS EDICT AND THE PLEAS HAVE BEEN DISREGARDED BY RESIDENTS. APART FROM THE IMMEDIATE EFFECTS OF THE 19 AND 20 MAY BOMBINGS, THERE HAS NOT BEEN ANY SHORTAGE OF WATER IN HANOI.

3. DURING THE AIR RAIDS, THE WELL TRAINED POPULACE RESPOND TO THE AIR RAID ALARMS BY GOING TO THE AIR RAID SHELTERS QUICKLY IN A DISCIPLINED FASHION. A FEW REMAIN OUTSIDE BUT STILL IN THE VICINITY OF THE SHELTERS IN CASE OF AN ACTUAL RAID.

4. THE MAJORITY OF CHILDREN AND OLD PEOPLE HAVE BEEN RELOCATED IN AREAS WITHIN AN EIGHT TO SIXTY KILOMETER RADIUS AROUND HANOI. ONLY THOSE WHO ARE ENGAGED IN SOME ESSENTIAL INDUSTRY OR ACTIVITY REMAIN IN TOWN. ALL SCHOOLS HAVE BEEN CLOSED AND ARE NOW OPERATING IN SMALL GROUPS DISPERSED OUTSIDE OF HANOI. THE PEOPLE ARE NOT SENT TO ANY SPECIFIC RELOCATION SPOTS, BUT RATHER SEEK REFUGE WHEREVER THEY CAN. NO ONE LIVING OUTSIDE OF HANOI IS PERMITTED TO REFUSE SHELTER TO THEM. MANY WHO ARE SENT OUT OF HANOI RETURN, BUT THEY ARE SENT BACK ON BUSES. THERE ARE MANY SOVIET BUSES IN EVIDENCE BOTH IN HANOI AND IN THE ENVIRONS. THE HOURS OF OPERATION ARE FROM 0400 TO 0600 HOURS IN THE MORNING AND AFTER 1900 HOURS IN THE EVENING. MANY SMALL CONSUMER GOODS INDUSTRIES HAVE BEEN PURPOSELY TRANSFERRED TO THE CENTER OF HANOI IN ORDER TO AVOID THE BOMBING. MAJOR INDUSTRIES

1. / SUMMARY - FORTY DISTRICT AND REGION LEVEL CADRES WERE ARRESTED IN VIET CONG/VC/ MILITARY REGION /MR/ 4 BETWEEN 31 OCTOBER 1966 AND 31 MAY 1967. FOUR OF THESE WERE MEMBERS OF THE MR 4 PARTY COMMITTEE, TWO WERE MEMBERS OF THE DI AN DISTRICT PARTY COMMITTEE, AND ONE WAS A MEMBER OF THE THU DUC DISTRICT PARTY COMMITTEE. FUNCTIONALLY, THE MR 4 ECONOMIC-FINANCE SECTION HAS LOST ITS CHIEF AND FOUR OTHER CADRES, AND THE WORKERS' PROSELYTING SECTION HAS LOST

5 4 3 2 1

APPROVED FOR RELEASE
DATE: DEC 2000

ITS CHIEF, DEPUTY CHIEF, AND FOUR OTHER CADRES. IN SAIGON, THE MARKET PARTY COMMITTEE HAS LOST THREE CADRES. IN ADDITION, FRONT ORGANIZATIONS, SUCH AS THE LIBERATION WOMEN'S ASSOCIATION AND THE VIETNAM HIGH SCHOOL TEACHER'S ORGANIZATION HAVE SUFFERED LOSSES, WITH THE LATTER PROBABLY CRIPPLED. THE ELIMINATION OF THESE CADRES FROM THE MR 4 INFRASTRUCTURE HAS PUT A SEVERE CRIMP IN VC POLITICAL AND ECONOMIC OPERATIONS, PARTICULARLY IN THE FIELD OF CIVILIAN PROSELYTING. FEW OF THESE PEOPLE WILL BE REPLACED BECAUSE OF THE SERIOUS SHORTAGE OF CADRES. OPERATIONS IN THE SAIGON-CHOLON URBAN AREA HAVE BEEN HARD HIT AND, ALTHOUGH RURAL VC ORGANIZATIONS ARE STILL RELATIVELY INTACT AND THE VC STILL HAVE THE CAPABILITY FOR SABOTAGE, ASSASSINATION AND SMALL-SCALE ATTACKS, IT IS PROBABLE THAT MANY VC MR 4 PLANS FOR 1967 HAVE HAD TO BE POSTPONED OR CANCELLED./

THOSE LOST TO THE INFRASTRUCTURE

2. FORTY DISTRICT AND REGION LEVEL VIET CONG/VC// CADRE FROM VC MILITARY REGION /MR/ 4/ WERE ARRESTED FROM 31 OCTOBER 1966 THROUGH 31 MAY 1967 BY THE GOVERNMENT OF

5

(C)

VIETNAM /GVN/. /FIELD COMMENT - VC MR 4 COMPRISES SAIGON-CHOLON AND THE DISTRICTS OF BINH TAN, CU CHI, DI AN, GO MON, NGA BE AND THU DUC./ SINCE MANY OF THOSE CADRES ARRESTED HELD SEVERAL, INTERRELATED POSITIONS,THEIR LOSS TO THE MR 4 INFRASTRUCTURE IS EVEN MORE SERIOUS. /FIELD COMMENT - MANY HAD POSITIONS IN BOTH THE PARTY AND FRONT. SEVEN WERE OFFICIALS OF THE FRONT ONLY./ FOUR OF THOSE ARRESTED, LE THI RIENG, TRAN QUANG TINH, LE VAN TU, AND HUYNH MINH TUAN, HAVE BEEN TENTATIVELY IDENTIFIED AS MEMBERS OF THE MR 4 PARTY COMMITTEE IN ADDITION TO OTHER POSITIONS. TWO MEMBERS OF THE DI AN DISTRICT COMMITTEE, NGUYEN NGU DANG AND NGUYEN VAN TRANH[redacted], AND ONE MEMBER OF THE THU DUC DISTRICT COMMITTEE, TRAN VAN TAM, WERE INCLUDED IN THE ARRESTS. THE ECONOMIC-FINANCE SECTION OF THE MR 4 COMMITTEE HAS LOST LE QUANG KIEN, TRAN DINH LONG, NGUYEN VAN MUOI, WHO HAS BEEN DESCRIBED AS A LEADER IN THE SECTION, NGUYEN THANH TOT, AND LE CANG TANH[redacted], THE CHIEF OF THE SECTION. THE INTELLECTUALS' PROSETYTING UNITS OF THE MR 4 COMMITTEE HAS LOST NGUYEN THI CHON[redacted], LE NGOC LAN, TRAN KHIEM NINH, AND TRAN VAN TAM.

3. THE MR 4 WORKERS' PROSELYTING SECTION HAS LOST ITS

EO 12958 3.4(b)(1)>25Yrs
(C)

CHIEF, LAM VAN KUONG, NGUYEN VAN NAM, THE ASSISTANT SECRETARY OF THE STRATEGIC ENTERPRISES SUBSECTION - NGUYEN THI PHUNG, WHO WAS IN CHARGE OF THE LIBERATION LABOR ASSOCIATION IN THE KHANH HOI AREA OF SAIGON - LE VAN TU, THE DEPUTY CHIEF OF THE SECTION - HUYNH MINH TUAN, A CADRE IN THE STRATEGIC ENTERPRISES SUBSECTION - AND TRAN VAN HOA. IN SAIGON, THE MR 4 MARKET PARTY COMMITTEE HAS LOST THREE CADRE - TU OM, NGUYEN VAN THANH AND NGUYEN THI TUYET.

4. A TOTAL OF THIRTEEN KEY MEMBERS OF SEVERAL VC FRONT ORGANIZATIONS WERE ALSO ARRESTED. THE DEMOCRATIC PARTY LOST ONE MEMBER, THE LIBERATION LABOR ASSOCIATION LOST TWO MEMBERS, THE LIBERATION WOMEN'S ASSOCIATION LOST THREE MEMBERS, AND THE VIETNAM HIGH SCHOOL TEACHERS' UNION LOST SEVEN MEMBERS, INCLUDING ITS SECRETARY-GENERAL, NGUYEN VAN BUOI, AND THREE OTHER MEMBERS OF THE EXECUTIVE COMMITTEE.

5. ONE OF THE MORE IMPORTANT OF THE ARRESTED CADRES IS LE THI RIENG, WHO HAS BEEN A PARTY MEMBER SINCE 1948 AND A MEMBER OF THE CENTRAL COMMITTEE OF THE NATIONAL FRONT FOR THE LIBERATION OF SOUTH VIETNAM /NFLSV/ SINCE 1961. SHE HAS BEEN A LEADER IN THE FIELD OF WOMEN'S PROSELYTING SINCE

5
4
3
2
1

EO 12958 3.4(b)(1)>25Yrs
(C)

VIET MINH DAYS. ANOTHER ARRESTED CADRE IS NGUYEN THI CHON, ALSO A LEADER IN WOMEN'S PROSELYTING AND THE WIFE OF TRAN BACH DANG, WHO IS BELIEVED TO STILL BE IN CHARGE OF PROPAGANDA AND TRAINING FOR THE CENTRAL OFFICE OF SOUTH VIETNAM /COSVN/. A THIRD DETAINEE, NGUYEN HUU QUE, AN INTELLECTUALS' PROSELYTING CADRE, REPORTEDLY WORKED FOR MILITARY INTELLIGENCE IN HANOI PRIOR TO 1955 - AND TRAN QUANG TINH, WHO WAS ARRESTED ON 29 MARCH 1967, REPORTEDLY WAS ALSO AN INTELLIGENCE OFFICER IN HANOI.

CONCLUSION

7. THE ELIMINATION OF THESE FORTY DISTRICT- AND - REGION-LEVEL CADRES FROM THE MR 4 STRUCTURE WILL UNDOUBTEDLY PUT A SEVERE CRIMP INTO THE VC'S POLITICAL AND ECONOMIC OPERATIONS IN THE SAIGON AREA, PARTICULARLY IN THE FIELD OF CIVILIAN PROSELYTING. THIS IS DUE NOT ONLY TO THE LOSS OF THESE CADRES, SOME OF THEM WITH LONG EXPERIENCE IN PARTY OPERATIONS, BUT ALSO TO THE PRESENT SHORTAGE OF VC REPLACEMENT CADRES IN MR 4 AREA. LE THI RIENG HAS STATED AFTER HER ARREST THAT SHE DOUBTS SHE WILL BE REPLACED BECAUSE OF THIS SHORTAGE AND THAT HER DUTIES WOULD HAVE TO

E0 12958 3.4(b)(1)>25Yrs
(C)

BE ASSUMED BY THE REMAINING MEMBERS OF HER SECTION AND HER IMMMEDIATE SUPERIORS. THIS SITUATION IS ALSO TRUE OF OTHER PARTY ORGANIZATIONS IN MR 4.

8. OPERATIONS WITHIN THE SAIGON-CHOLON URBAN COMPLEX HAVE BEEN HIT PARTICULARLY HARD, AND IT WILL BE SOMETIME BEFORE THE VC WILL BE ABLE TO RECOVER. HOWEVER, THE RURAL ORGANIZATIONS ARE STILL BASICALLY INTACT, AND, WHATEVER THEIR SHORTCOMINGS AND WEAKNESSES, STILL PROVIDE AN ORGANIZATIONAL BASE FROM WHICH TO EXPAND IN THE FUTURE.

9. IN ADDITION, THE MILITARY ORGANIZATION WITHIN MR 4 STILL MAINTAINS THE ABILITY TO CONDUCT SABOTAGE, ASSASSINATIONS, AND SMALL SCALE ATTACKS, WHICH CAN KEEP THE URBAN AREA UNSETTLED. THUS IT IS NOT POSSIBLE TO SAY THAT THE VC THREAT TO MR 4, OR EVEN TO SAIGON, HAS BEEN ELIMINATED. THE THREAT HAS, HOWEVER, BEEN SERIOUSLY DETERRED BY THE LOSS OF THESE CADRES, AND IT IS LIKELY THE VC HAVE HAD TO POSTPONE OR CANCEL MANY OF THEIR 1967 PLANS.

II. REVOLUTIONARY DEVELOPMENT

The Government of Vietnam since the beginning of 1967 has distributed more than 70,000 permanent land titles to farmers. This activity in combination with other GVN-sponsored land reform projects is in part calculated to reap immediate short-term political advantages as well as longer range economic benefits. Revolutionary Development cadre efforts continue to meet with varying degrees of success in several widely scattered parts of the country. The resettlement of some 7,000 persons currently underway in Pleiku Province is now 80 percent complete. The newly settled areas are, however, already showing signs of Communist penetration. In Saigon, a pilot program of free medical service for the needy was scheduled to being last month and it is hoped to expand it into the provinces during July.

Land Reform

1. US officials in Saigon have reported that the Government of Vietnam (GVN) has distributed more than 70,000 permanent land titles since 1 January 1967. These permanent titles replace temporary land-ownership certificates issued during the Diem regime and have been issued by the GVN to farmers cultivating former French lands and lands seized in 1956 under Ordinance 57. Permanent land titles have reportedly been issued in cases where full payments for the land have not yet been made to the government. The title holders are, however, still liable for the payments due.

2. Two recent decrees are concerned with restructuring the land tenure system. One, a decree of 19 May, clarifies the status and policies of the government relating to lands distributed to people

APPROVED FOR RELEASE
DATE: DEC 2000

by the Viet Cong but which since have come under government control. The second forbids either landlords or government officials from using the Vietnamese military to collect back rents on these lands. In most cases the collection of back rents on the redistributed lands has been suspended by the government.

3. Major problems and inequities which continue to plague the rural areas include: the violation of tenant-landlord contracts and terms of tenure relationships; a biased or inadequate village administrative authority to cope with land disputes; excessive landlord influence on village affairs; and the problems caused by the Communist land distribution and taxation systems.

4. The basic legislation for the redistribution of land in Vietnam--Ordinance 57--was written in 1956. This legislation limited riceland holdings to 247 acres per landlord and an additional 37 acres was allotted for burial purposes. Provisions were made in the legislation to provide payments to landlords for land expropriated under these laws. Of the approximately 772,000 acres seized under Ordinance 57, 615,000 acres were redistributed. Much of the remainder of the land is in insecure areas and no actions have been taken concerning this land.

5. Land reform projects currently sponsored by the GVN are directed toward the redistribution of land and rent controls in order to achieve an immediate political return and some long-term economic benefits. By giving the farmer a firm, permanent title, the government hopes to induce him to invest labor and capital in the land in order to raise production above a marginal level and create an agricultural surplus.

6. One of the programs to strengthen land tenure is being tested in the An Giang (Province) Priority Area. In this area, aerial photos are being taken of the entire province and maps of land holdings are being made from them. This method offers speed, accuracy, and security since little work needs

to be done on the ground. A title produced by this process contains a description of the land and a photo of it, and since the titles are easily reproducible, copies may be given the owner as well as filed centrally. This program has suffered from technical problems, however, and 70 percent of the aerial coverage done thus far must be reflown.

7. Although accurate statistics on rural affairs are not available, USAID has made the following estimate of the percentage of farmers by tenure:

Tenure	Southern provinces(%)	Central lowland provinces(%)
Owner-operators only	23	29
Operators with only rented land	47	11
Operators with both owned and rented land	30	60

Revolutionary Development Cadre Highlights

8. In an attempt to eliminate corruption found in his area of operations, the leader of an RD team in Chau Doc Province provided provincial authorities information on the illicit activities of the chief of the village in which his team was operating. The village chief had been using the local Popular Forces, to terrorize the local residents, collect illegal taxes, and unlawfully seize private property.

9. In an effort to stop the RD team's investigation of these activities, the village chief had gone so far as to have two of the villagers who had been cooperating with the team killed. Provincial authorities had been reluctant to take any actions against the offender but--when faced with evidence of the murders and with the threat of the resignation of the RD team leader--finally jailed the village chief on murder charge. The team leader is continuing to investigate the villagers' charges of corruption against colleagues of the village chief

who are still in office. The province chief--although commending the RD team leader for his actions--has warned him of "danger to his personal security."

10. In Binh Dinh Province on 14 June two RD teams--recent graduates of the National Training Center--moved into two hamlets in the southern part of the province where the Communists in 1964 had forced the majority of the local residents to leave. The arrival of the RD teams was soon followed by the return of approximately 1,200 former inhabitants of the area. In addition, an estimated 600 residents from nearby hamlets have temporarily resettled in the two hamlets for security and have indicated that they will return to their native residences when RD teams are available to help them reestablish their hamlets.

11. Elsewhere in this province, an RD team operating in Phu Cat District enlisted the support of the US engineer battalion to blast rock needed to build a dam being constructed under the self-help program. When the US unit first arrived they had to do all the work themselves; soon, however, the villagers and RD cadre had taken over the manual labor while the engineers provided only technical guidance. This joint venture reportedly has generated more cordial relations between villagers, RD personnel, and US troops in the area.

12. In Vinh Binh Province four RD teams have been working in what were Communist-controlled areas of Cang Long District since February 1967. At the end of May the teams began to discern signs that they had finally begun to overcome the people's apathy and distrust. The teams have been able to stimulate the people to commit themselves to working on a variety of programs designed to improve hamlet life and have enrolled large numbers of the children in government schools. In adjacent Tien Can District, RD teams have helped newly resettled families--who in the early part of the year had left areas under enemy control--to build approximately 400 new homes for themselves.

13. In Phuoc Tuy Province, the Provincial Intelligence Officer--using intelligence furnished by an RD team operating in one of the villages--apprehended 17 members of that village's chapter of the "Liberation Women's Association." The suspects have been sent to the Provincial Interrogation Center.

14. In Khanh Hoa Province the RD Control Committee has initiated a series of broadcasts from the Nha Trang radio station stressing the importance of RD work in the province and citing examples of the people's participation in RD efforts. This is one of the first reported instances of a provincial control committee taking advantage of the local radio station to promote its RD effort. Similar promotional work needs to be done by Vietnamese officials throughout the country in order to explain the goals and achievements of the RD program to the local populace.

Refugees

15. The Edap Enang highlander resettlement project in Pleiku Province which has as its goal the resettlement of approximately 7,000 people is now approximately 80 percent complete. When the project is completed, approximately 1,200 families will have been moved from the Pleiku-Cambodia border areas and resettled along Highway 19 east and south of the city of Pleiku. The movement of the people is the responsibility of the US 4th Infantry Division, with Civil Operations and Revolutionary Development Support (CORDS) and the GVN's Special Commission for Refugees (SCR) providing the personnel and resources to assist the montagnards in resettling. The security of the resettlement area is being maintained by a Vietnamese Ranger battalion, two Regional Force companies, and two Popular Force platoons.

16. As of the middle of June over 5,600 people--residents of 44 of the 51 hamlets scheduled for resettlement--were evacuated from their previous residences with the majority of the people electing to relocate in the new areas. Within the resettlement areas construction has been completed on 439 new homes while 782 are still being built. There are indications, however, of Communist penetration of the resettlement area. On at least four occasions in May large numbers of highlanders were cajoled or pressured into abandoning the resettlement area by Communist cadre. One of the prevalent propaganda themes of the Communists is to circulate among the highlanders rumors that the US forces do not have enough rice to feed them and that all US forces will soon be leaving Pleiku Province.

17. In Phu Yen Province work has begun on approximately 1,163 self-help homes for refugees. The SCR has announced that it will pay a second resettlement allowance to previously resettled refugees who are constructing new homes for themselves and, in addition, the SCR will provide these people with seed and farm land. The progress made so far in 1967 in the Phu Yen refugee program is encouraging; in 1966 provincial activities were catagorized by US advisors as "stagnant."

"New Life Development" Activities

18. The Vietnamese Mutual Assistance Association, a voluntary organization, in cooperation with the Ministry of Social Welfare is making plans to provide free medical check-ups and treatment to the needy. Approximately 300 civilian and military physicians have volunteered to participate, and pharmaceutical companies in Saigon have agreed to contribute drugs valued at over 500,000 piastres. The program was scheduled to begin in Saigon at the end of June and expand into the provinces during July. Needy persons seeking medical assistance under this new program have to contact their provincial social welfare center to obtain examination tickets.

SUBJECT AGREEMENT BETWEEN CHIEF OF STATE THIEU AND PRIME MINISTER KY THAT THIEU, AS PRESIDENT, WILL BE A FIGUREHEAD AND KY, AS VICE PRESIDENT, WILL RETAIN PRINCIPAL CONTROL AFTER THE ELECTIONS

ACQ VIETNAM, SAIGON [redacted]

SOURCE [redacted]

E0 12958
3.4(b)(1)>25Yrs
(C)

1. (SUMMARY: IT IS AGREED AMONG PRIME MINISTER KY, CHIEF OF STATE THIEU AND THE ARMED FORCES COUNCIL (AFC) THAT THEIU WILL BE A FIGUREHEAD AS PRESIDENT AND KY WILL BE DE FACTO IN COMMAND. THIEU'S PERSONAL PRESTIGE HAS DECLINED CONSIDERABLY AMONG AFC OFFICERS BECAUSE OF HIS SELF-SEEKING BEHAVIOR DURING THE DELIBERATIONS WHICH PRECEDED THE DECISION TO FORM A JOINT THIEU-KY TICKET. KY'S BIGGEST PROBLEM NOW IS TO EXPLAIN, DISCREETLY, TO HIS BACKERS THAT

SECRET [redacted]

E0 12958 3.4(b)(1)>25Yrs
(C)

HE WILL ACTUALLY HAVE BROAD AUTHORITY IN THE NEW GOVERNMENT AS THOUGH HE WERE PRESIDENT IN FACT, AND TO PERSUADE HIS CAMPAIGN ORGANIZATION TO WORK FOR THE NEW THIEU-KY SLATE.)

2. CHIEF OF STATE THIEU AND PRIME MINISTER KY HAVE REACHED AN AGREEMENT ON WHAT THEIR RESPECTIVE ROLES WILL BE IF ELECTED AS PRESIDENT AND VICE PRESIDENT. THIEU WILL FUNCTION IN A LIMITED, FIGUREHEAD CAPACITY ONLY, WITH KY AS DE FACTO COMMANDER OF THE ARMED FORCES AND THE ONE WITH EXECUTIVE AUTHORITY OVER THE MINISTRIES OF DEFENSE, REVOLUTIONARY DEVELOPMENT, AND INFORMATION, EACH OF WHICH WILL LIKELY BE HEADED BY A MILITARY OFFICER. KY WILL ALSO SELECT ALL THE CABINET MEMBERS. THE PRIME MINISTER WILL BE A CIVILIAN; AND ALTHOUGH HE HAS NOT YET BEEN SELECTED, HE WILL PREFERABLY BE SOMEONE WITH A BACKGROUND IN ECONOMICS AND WILL HANDLE THE OTHER MINISTRIES WITH PERHAPS OCCASIONAL GUIDANCE FROM THE VICE PRESIDENT. THIEU UNDERSTANDS THIS ENTIRE ARRANGEMENT CLEARLY AND IS WILLING TO ACCEPT HIS LARGELY TITULAR ROLE. TO AVOID MISUNDERSTANDING OR LATER MANEUVERING BY THIEU, THE AGREEMENT WILL BE PUT IN WRITING, KEPT ON AN UNOFFICIAL AND CONFIDENTIAL BASIS, AND WILL BE ACKNOWLEDGED BY BOTH

E0 12958 3.4(b)(1)>25Yrs
(C)

THIEU AND KY IN PRESENCE OF THE SENIOR MILITARY OFFICERS OF THE ARMED FORCES COUNCIL.

3. THERE HAS BEEN A BROAD AND RATHER STRONG REACTION TO THE ANNOUNCEMENT OF THE THIEU-KY SLATE THROUGHOUT THE COUNTRY IN THE PAST TWO DAYS, AND MANY PEOPLE, INCLUDING THE "BABY-TURKS" MILITARY OFFICERS, HAVE FOUND IT DIFFICULT TO UNDERSTAND AND ACCEPT THIS COMBINATION. QUITE A NUMBER OF PEOPLE HAVE STATED THEY FEEL THAT THIEU MAY BE AN ALBATROSS AS THE PRESIDENTIAL CANDIDATE AND MAY MAKE IT DIFFICULT FOR THE SLATE TO WIN DESPITE KY'S OWN CONSIDERABLE PERSONAL POPULARITY AND VOTER APPEAL. THERE IS ALSO THE DISTINCT PROBLEM OF THE GENERAL PERVERSITY OF THE VIETNAMESE, WHO IF FORCED TO ACCEPT SOMEONE THEY DO NOT FAVOR FOR PRESIDENT, SUCH AS THIEU, MAY CAST THEIR VOTES ELSEWHERE SIMPLY TO EXPRESS THEIR DISPLEASURE. KY'S PREVIOUSLY-ORGANIZED AND PERSONAL CAMPAIGN ORGANIZATION HAS BEEN REQUESTING INSTRUCTIONS FROM KY; AND ITS UNITS THROUGHOUT THE COUNTRY HAVE INDICATED THAT THEY ARE FINDING IT DIFFICULT TO UNDERSTAND THIS SWITCH IN PLANS AND HAVE ASKED WHETHER THEY SHOULD CONTINUE PROMOTING KY FOR PRESIDENT DESPITE THE AGREEMENT REACHED

E0 12958 3.4(b)(1)>25Yrs
(C)

FOR KY TO RUN AS VICE PRESIDENT. KY PLANS TO LET THE EXCITEMENT AND CONFUSION ABATE FOR A FEW MORE DAYS AND THEN INSTRUCT HIS SUPPORTERS EXPLICITLY TO WORK FOR THE THIEU-KY TICKET.

4. IT IS DIFFICULT FOR KY TO EXPLAIN HIS DECISION TO MOVE DOWN TO THE VICE PRESIDENCY, AND PARTICULARLY TO GET THE WORD TO HIS SUPPORTERS IN A SUBTLE FASHION THAT HE WILL HAVE A BROAD AUTHORITY IN THE NEW GOVERNMENT AND THAT THIEU'S ROLE WILL BE TITULAR. INFLUENTIAL VIETNAMESE, INCLUDING BUDDHIST LEADER THICH TAM CHAU, HAVE CONTACTED KY IN THE PAST TWO DAYS TO ASCERTAIN THE RATIONALE BEHIND HIS MOVE. ENLIGHTENING PEOPLE SUCH AS THIS AND LINING UP BROAD SUPPORT FOR THE NEW THIEU-KY TICKET WILL TAKE A GOOD DEAL OF PATIENCE AS WELL AS TIME. IF IT IS TO BE DISCREETLY DONE. GENERAL NGUYEN NGOC LOAN HAS EXPRESSED HIS BELIEF TO KY THAT THE LATTER MUST HAVE "LOST HIS MIND" ON THIS MOVE AND HAS SAID HE CANNOT UNDERSTAND HOW KY COULD "LET DOWN" HIS MANY SUPPORTERS WHO REALLY BELIEVE IN HIM AS AN INDIVIDUAL AND IN HIS QUALITIES OF LEADERSHIP. LOAN HAS ACCEPTED THIS TURN

SECRET [redacted]
(classification) (dissem controls)

E0 12958 3.4(b)(1)>25Yrs
(C)

OF EVENTS, HOWEVER, MUCH AS HE DID HIS OWN RECENT REMOVAL AS CHIEF OF THE MILITARY SECURITY SERVICE, AND LOAN WILL ABIDE BY A RECENT ORDER FROM KY THAT HE STAY OUT OF POLITICS AND ELECTION CAMPAIGN ARRANGEMENTS.

5. KY'S DECISION TO STEP DOWN TO THE ROLE OF VICE PRESIDENT WAS NOT A "POLITICAL" DECISION, IT WAS ARRIVED AT PRIMARILY TO SAVE A BAD SITUATION FROM GETTING WORSE WITHIN THE MILITARY ESTABLISHMENT WHICH HAS BEEN DIVIDED OVER THE THIEU-KY CONFRONTATION. IT MAY DEVELOP HOWEVER, THAT IT WILL ADD TO KY'S POLITICAL STATURE AND INCREASE THE NUMBER OF HIS SUPPORTERS BOTH WITHIN AND OUTSIDE THE MILITARY RANKS. THE ARMED FORCES COUNCIL (AFC) MEETINGS OF 29-30 JUNE WHICH RESULTED IN FORMATION OF THE THIEU-KY TICKET HAVE ALSO RESULTED IN A CONSIDERABLE LESSENING OF THIEU'S PERSONAL PRESTIGE AMONG ALMOST ALL THE AFC OFFICERS WHO HAD THIS OPPORTUNITY TO OBSERVE THIEU CLOSELY AT FIRST HAND DURING THESE MANY CRUCIAL HOURS. THESE OFFICERS GOT A CLEAR IMPRESSION OF HIS LACK OF REAL PATRIOTISM AND HIS TOTAL PREOCCUPATION WITH AND CONCENTRATION ON HIS OWN PERSONAL AMBITIONS, REGARDLESS OF THEIR DETRIMENTAL EFFECT ON THE UNITY OF THE ARMED FORCES AND FUTURE OF THE COUNTRY.

E0 12958 3.4(b)(1)>25Yrs
(C)

EO 12958 3.4(b)(1)>25Yrs
(C)

[redacted]

EO 12958 3.4(b)(1)>25Yrs
(C)

THE CLINCHER WAS THIEU'S APPARENT AGREEMENT TO ABIDE BY WHATEVER DECISION THE AFC REACHED, EVEN IF IT WAS WITHDRAWAL OF HIS OWN CANDIDACY, AND THIS HE RENEGED ON ONLY A FEW HOURS LATER DURING THE DISCUSSIONS. THIS AFFORDED THE AFC OFFICERS A REAL INSIGHT INTO THIEU'S CHARACTER, AND THEY DID NOT LIKE WHAT THEY SAW. CURIOUSLY, DURING THE LATE EVENING SESSION OF 29 JUNE, CHIEF OF THE JOINT GENERAL STAFF (JGS) GENERAL CAO VAN VIEN AND THE FOUR CORPS COMMANDERS HAD CONFERRED PRIVATELY AND RESOLVED TO PRESENT THIEU WITH AN ULTIMATUM EITHER TO ACCEPT THE POSITION OF CHIEF OF THE JGS IN THE NEW GOVERNMENT, OR TO RESIGN AS CHIEF OF STATE AND FROM THE ARMED FORCES IMMEDIATELY, AND TO PRESENT HIMSELF ENTIRELY AS A CIVILIAN CANDIDATE FOR PRESIDENT. WHEN GENERAL VIEN CAME INTO THE ROOM TO PRESENT THIS ULTIMATUM TO THIEU, THE LATTER APPARENTLY SENSED THAT IT WAS COMINT, AND IMMEDIATELY ANNOUNCED HE WOULD ACCEPT AND ABIDE BY WHATEVER DECISION THE AFC WOULD REACH. VIEN AND THE CORPS COMMANDERS WERE THUS CLEVERLY LED TO BELIEVE THAT THEIU WOULD WITHDRAW ENTIRELY FROM THE RACE IN FAVOR OF KY, AND THEREFORE THEY DID NOT CONVEY

EO 12958 3.4(b)(1)>25Yrs
(C)

THEIR ULTIMATUM TO THIEU. EARLY THE NEXT MORNING THIEU REVERSED HIMSELF COMPLETELY WITH HIS ANNOUNCEMENT THAT HE WOULD ENTER THE RACE FOR PRESIDENT. THIS DUPLICITY, COUPLED WITH KY'S DEMONSTRATED WILLINGNESS TO SACRIFICE HIS OWN PERSONAL POSITION AND DO WHATEVER WAS REQUIRED OF HIM TO PRESERVE THE UNITY OF THE MILITARY, HAS CONSIDERABLY INCREASED KY'S SUPPORT AND INFLUENCE IN THE MILITARY. MANY OF THE SENIOR ARMED FORCES COUNCIL OFFICERS PERSONALLY MADE A POINT OF COMMENDING KY FOR HIS DECISION TO STEP DOWN TO THE ROLE OF VICE PRESIDENT, WHILE THIEU WAS LARGELY IGNORED EVEN THOUGH SELECTED AS THEIR PRESIDENTIAL CANDIDATE. GENERAL VINH LOC, II CORPS COMMANDER, FOR EXAMPLE, EXPRESSED HIS ADMIRATION FOR KY AS A MAN, INDICATING HE HAD NEVER BEFORE USED THE WORD "ADMIRE" TO DESCRIBE HIS FEELINGS FOR ANOTHER OFFICER, AND GENERAL MINH, ACTING COMMANDER OF THE AIR FORCE, STATED THAT THIS WAS THE FIRST TIME HE PERSONALLY HAD FELT REAL ESTEEM FOR ONE OF HIS SENIOR MILITARY OFFICERS.

6. KY'S PRESENT DILEMNA IS THAT ALL OF THESE DEVELOPMENTS WILL MAKE IT DIFFICULT TO GENERATE BROAD POPULAR SUPPORT FOR THE THIEU-KY TICKET, SINCE IT REQUIRES SUCH A MENTAL

SHIFTING OF GEARS ON THE PART OF PEOPLE WHO HAVE BEEN WORKING IN HIS BEHALF AS A PRESIDENTIAL CANDIDATE AND WHO NOW HAVE TO BE PERSUADED THAT THEIR EFFORTS MUST BE REDIRECTED TO SUPPORT THIEU FOR PRESIDENT INSTEAD. KY'S CIVILIAN SUPPORTERS WILL HAVE TO BE PERSUADED OF THE WISDOM OF HIS MOVE, AND THE YOUNGER "BABY TURK" MILITARY WILL HAVE TO BE MADE TO UNDERSTAND THIS THIEU-KY COMBINATION IS A FACT OF LIFE THEY MUST LIVE WITH. WITHIN THE PAST TWO DAYS THERE HAVE ALREADY BEEN RUMORS OF COUP PLOTTING AMONG THE BABY TURK MILITARY. THERE IS NO SUBSTANCE TO THIS, BUT THIS SORT OF TALK DOES INDICATE HOW MUCH CONSTERNATION THERE IS AMONG SOME OF THE MILITARY OVER THE POLITICAL DEVELOPMENTS OF THE LAST SEVERAL DAYS. KY WILL WORK HARD AT THE TASK OF ELIMINATING THESE TENSIONS AND PERSUADING HIS SUPPORTERS TO GO ALONG WITH THE NEW ARRANGEMENT ON GROUNDS THAT THERE IS NO LEGAL ALTERNATIVE SINCE THE OFFICIAL FILING DEADLINE IS CLOSED.

7. THE MULTIPLICITY OF PRESIDENTIAL CANDIDATES (17) AND SENATE LISTS (66) SHOW QUITE CLEARLY THE DIFFICULTIES A PURELY CIVILIAN ADMINISTRATION WOULD FACE IF ELECTED IN

VIETNAM. THE VARIOUS CIVILIAN POLITICAL GROUPS OR WOULD-BE GROUPS ARE POORLY ORGANIZED AND ARE SO SELF-SEEKING THAT THEY CANNOT GET TOGETHER EVEN TO INSURE THEIR OWN SUCCESS AT THE POLLS. THE MANY SENATE LISTS ARE INCOMPREHENSIBLE EVEN TO EDUCATED, INTELLIGENT VIETNAMESE, AND TO THE AVERAGE CITIZEN THEY ARE ALMOST USELESS AS A MEANINGFUL LIST FROM WHICH HE CAN SELECT OUR QUALIFIED CANDIDATES OF HIS CHOICE. CONSEQUENTLY, THE SENATE ITSELF WILL PROBABLY BE A DISORGANIZED AND INEFFECTUAL BODY. FOREIGN MINISTER TRAN VAN DO AND DEPUTY PRIME MINISTER NGUYEN LUU VIEN RECENTLY STATED TO KY THAT THEY NOW REALIZE THE FALLACY OF EXPECTING PURE UNLIMITED DEMOCRACY TO WORK IN TODAY'S VIETNAM, AND CITED THE MANY CUMBERSOME SENATE LISTS AS CASES IN POINT. ANOTHER INTERESTING PROBLEM IS HOW TO PROVIDE EQUAL FACILITIES SUCH AS AIRCRAFT, RADIO-TELEVISION AND NEWSPAPER COVERAGE FOR ALL OF THE 17 PRESIDENTIAL CANDIDATES. ALTHOUGH KY WILL ATTEMPT TO ACCOMPLISH THIS, IT WILL BE NEXT TO IMPOSSIBLE TO ARRANGE FROM A PRACTICAL POINT OF VIEW.

8. KY'S PERSONAL CAMPAIGN ORGANIZATION WHICH HAS FORMED

~~SECRET~~ [redacted]
(classification) (dissem controls)

EO 12958 3.4(b)(1)>25Yrs
(C)

TO PROMOTE HIS OWN PRESIDENTIAL CAMPAIGN WILL LIKELY BE USED TO SUPPORT THE THIEU KY SLATE SINCE THIEU HAS NO ORGANIZATION OF HIS OWN AND WILL PROBABLY NOT MAKE ANY CONCERTED EFFORT TO PUT ONE TOGETHER. ALTHOUGH THIS DECISION HAS NOT YET BEEN REACHED, FULL USE WILL PROBABLY HAVE TO BE MADE OF THE KY CAMPAIGN MECHANISM SINCE THE THIEU-KY COMBINATION WILL REQUIRE AN EVEN MORE EFFECTIVE ORGANIZATION THAN IF KY HIMSELF WERE RUNNING FOR PRESIDENT.

(C)

UNIDENTIFIED AIRFIELD NORTH OF HANOI WHERE THE FOLLOWING AIRCRAFT WERE SEEN: A TWIN ENGINE MILITARY PLANE, ABOUT 20 KHAKI-COLORED MILITARY HELICOPTERS AND FIVE OR SIX CIVILIAN CRAFT.

6. A FAIRLY LARGE SIZE AUTOMOBILE REPAIR PLANT SITUATED SOUTH OF THE FANCHIMU (PHONETIC) HOTEL APPEARED TO HAVE EVACUATED ITS MAJOR FACILITIES AND WAS CONCENTRATING PRIMARILY ON MINOR REPAIRS. TWO OTHER FACTORY BUILDINGS LOCATED SOUTH OF THE HOTEL HAD BEEN EVACUATED AND WERE VACANT.

7. CHINESE WERE SEEN IN VARIOUS PARTS OF HANOI. FIVE OR SIX HAD QUARTERS IN THE FANCHIMU HOTEL. THEY WOULD DEPART IN THE MORNING, RETURN AT NOON AND LEAVE LATE IN THE AFTERNOON FOR SOME UNKNOWN DESTINATION. THEIR MISSION IN HANOI WAS NOT KNOWN.

8. VIETNAMESE WORKERS WERE REPORTEDLY VOLUNTARILY RETURNING 20 PER CENT OF THEIR PAY TO THE GOVERNMENT, AND ALLEGEDLY PRODUCTION HAS GREATLY INCREASED IN RECENT MONTHS.

ACQ [redacted]

SOURCE

1. ON THE EVENING OF 7 JULY, MOST OF THE CITY OF HANOI WAS ILLUMINATED. SMALL SECTIONS OF THE WESTERN AND CENTRAL PART OF THE CITY WERE BLACKED OUT. AT GIA LAM AIRPORT, THE USUAL TWO FLOODLIGHTS WERE BEING EMPLOYED IN THE PARKING AREA. GIA LAM DISTRICT ITSELF WAS FULLY LIGHTED. THE PONT DES RAPIDES WAS NORMALLY LIGHTED.

2. ~~IT WAS RELIABLY REPORTED IN HANOI THAT THE CENTRAL THERMAL ELECTRIC PLANT APPEARED TO BE 90 PERCENT REPAIRED.~~ → THE AREAS

UNDERGOING REPAIR WERE WELL CAMOUFLAGED. WATER CONSUMPTION APPEARED NORMAL. HANOI OFFICIALS HAVE, HOWEVER, BECOME CONCERNED WITH THE POSSIBILITY OF AN ABNORMAL PERIOD OF DROUGHT. THE LEVEL OF THE RED RIVER IS FROM TWO TO THREE METERS BELOW ITS USUAL LEVEL AND THERE IS CONCERN ABOUT HAVING SUFFICIENT WATER FOR THE FORTHCOMING RICE SEASON. HANOI OFFICIALS HAVE, IN FACT, ALREADY SERVED NOTICE THAT EMERGENCY MEASURES MIGHT BE NECESSARY TTCTRANSFER WATER FROM ONE RICE AREA TO ANOTHER BY A DIKE SYSTEM. SIGNS WERE OBSERVED IN TMB CITY DIRECTING INHABITANTS TO HELP EACH OTHER. THE CIVILIAN POPULATION WAS SHOWING LESS HOPE AND VITALITY, AND THIS WAS DEFINITELY RELATED TO THE 9 — 10 JUNE RAIDS ON THE CENTER OF HANOI, WHICH WERE A TRAUMATIC EXPERIENCE FOR THE HANOI POPULACE

3. TRANSPORT IN HANOI WAS NORMAL. TRAMWAYS WERE FUNCTIONING AND TRAFFIC WAS MOVING AT ITS NORMAL PACE. THERE WAS NO EVIDENCE OF CONSTRUCTION WORK.

4. ON 7 JULY A HEAVY CONVOY WAS SIGHTED AT 1940 HOURS HANOI TIME, WHICH COINCIDED WITH THE ARRIVAL OF THE ICC PLANE. WHEN THE AIRCRAFT LEFT AT 2010 HOURS THE CONVOY HAD ALREADY MOVED INTO THE CITY OF HANOI.

INTELLIGENCE MEMORANDUM

Problems Posed for North Vietnam by the Death of Politburo Member Nguyen Chi Thanh

Summary

Nguyen Chi Thanh's death of a heart attack in Hanoi on 6 July poses two immediate and important problems for the remaining ten members of the politburo and could have certain longer range and deep ramifications for the party leadership. The most immediate problems facing the Hanoi leaders are the questions of replacing Thanh both as head of the Communist apparatus in South Vietnam and as a full member of the politburo. Choosing a replacement for Thanh in each of these positions could occasion considerable maneuvering within the politburo between the militants and the slightly more moderate elements of that body. The militants, led by party first secretary Le Duan, will probably try to appoint one of their own men to fill Thanh's shoes. The moderates, led by Pham Van Dong and Vo Nguyen Giap, may well try to replace him with one of their men or at least to divide Thanh's many responsibilities among several candidates, thus cutting back on militant strength.

Note: This memorandum was produced solely by CIA. It was prepared by the Office of Current Intelligence.

SECRET

Nguyen Chi Thanh's Background

1. Nguyen Chi Thanh's combined military background and political experience will make him difficult to replace. He was the only individual besides General Vo Nguyen Giap to hold the rank of senior general in the armed forces, and he was a leading member of the militant wing of the North Vietnamese politburo. He also held a key post on the party secretariat which is responsible for the implementation of party policies. As a member of the Party Military Committee, he also had a voice in running the armed forces. Since early 1965 Thanh had been the number one man at the Central Office for South Vietnam (COSVN), the political and military headquarters for the Communist insurgency in South Vietnam.

2. During his two-and-a-half year tour in South Vietnam, Thanh is believed to have held decision-making authority in both the planning and implementation of the strategy and deployment of Communist forces, subject only to review by the full politburo in Hanoi. Thanh's assignment to COSVN in early 1965 was probably prompted by Communist optimism that one final military push against ARVN forces would bring their revolution to a successful conclusion. The leadership in Hanoi wanted a man on the spot who could pull off this military victory and also speak with the authority of the politburo on subsequent political developments.

3. Thanh was apparently hand picked for this job by party first secretary Le Duan--the principal architect of revolutionary strategy in the South. Thanh had the political rank to assume direction of this operation; he had extensive experience in military affairs as the former head of the political department of the army, he held the highest military rank the country could give, and he was philosophically in tune with Le Duan's choice of militant and aggressive solutions to important problems.

4. Shortly after Thanh's arrival in South Vietman he was faced with the necessity of developing both strategy and tactics to deal with the rapid introduction of US combat forces. Thanh believed that

the Communists could sustain the momentum they had built up against ARVN and that the Communists could continue to launch large-scale attacks against US forces. He argued that the US hoped to force the Communists to abandon mobile warfare tactics and to return to guerrilla warfare.

5. Thanh's views did not go unopposed. Opposition apparently came from both old-time Viet Cong guerrilla leaders and from members of the regular military establishment in the North, presumably led by Defense Minister Giap. These men argued for more emphasis on the guerrillas to tie down and disperse the US forces. Thanh's opponents saw his approach as putting too great a strain on manpower resources in the South. They complained that he robbed guerrilla units of manpower in order to bolster main force strength quickly. Thanh's call for the infiltration of large numbers of regular units from North Vietnam also placed considerable strain on manpower and training resources in the North.

6. Thanh was given the forces he asked for in 1965 and early 1966, but the inability of these forces successfully to maintain the initiative against heavy US fire power and mobility seriously undercut his thesis. By the fall of 1966, Vietnamese Communist commentary on the proper conduct of the war emphasized the importance of guerrilla tactics and urged a more balanced use of main forces and guerrillas in the war with the US--an apparent compromise between Thanh and his opponents. Thanh remained commander of the Communist forces in South Vietnam and as late as 31 May 1967 he published an authoritative commentary on the war in the South.

Replacing Thanh in South Vietnam

7. If the politburo wants to replace Thanh with someone of nearly comparable status, only a few men would appear to be likely candidates. Le Duc Tho, the sixth ranking member of the politburo, is a former deputy commander of Viet Cong forces, serving under Le Duan in the war against France. For the last ten years or more he has been holding the important post of chief of the Party Organization

Department, which controls the party in South Vietnam as well as in the North. He was chosen to head the funeral committee for Nguyen Chi Thanh and is known to be a hardliner and close to Le Duan.

8. Another possible candidate, because of his former experience in the South, is Pham Hung, a Viet Cong leader who came north around 1954. He is the number five man on the politburo. Since his return north, however, Hung has devoted his primary and almost exclusive attention to the fiscal management of the DRV economy and is regarded as a follower of Phan Van Dong rather than of Le Duan. General Van Tien Dung, chief of staff of the North Vietnamese Army, is an alternate member of the politburo and also served in South Vietnam previously. As such he might make a good choice to replace Thanh at COSVN.

An Opening in the Politburo

9. Thanh's death not only poses a problem in relation to the top spot in South Vietnam, it also raises the question of replacing him on the politburo. This is the first time since at least 1960 that an opening has occurred in the governing body of the party. Thanh's career over the past ten years was very closely tied to Le Duan--number two man in the party and leader of the more militant element in the North Vietnamese leadership. Nguyen Chi Thanh's promotion to senior general occurred in the late 1950s shortly after Le Duan moved into the number two position in the party. Thanh was removed as head of the army's political department in 1961--apparently after significant differences with Defense Minister Giap. Giap argued for the development of a professional military but Thanh pushed for the use of the army as a political and economic force to promote social reform, particularly in agriculture. This argument was ultimately resolved in Giap's favor, at least insofar as Thanh was removed as head of the army's political department. Thanh re-emerged two years later into the mainstream of party affairs to provide the cutting edge for one of Le Duan's policies--a shift away from traditional North Vietnamese neutrality in the Sino-Soviet dispute toward support

of Peking. Although almost all of the politburo eventually and apparently with some reluctance endorsed this move publicly, Nguyen Chi Thanh was the first and most outspoken to use Chinese-style invectives in criticizing the Soviet "revisionists."

10. The kinds of differences which have separated Giap and Nguyen Chi Thanh over the years are believed to reflect fundamental differences within the entire North Vietnamese politburo. Thanh's death could compound those differences. If the leadership intends to replace him immediately, General Giap and those who think like him will most certainly urge a replacement more in tune with their more moderate and pragmatic philosophy. Premier Pham Van Dong is the leading spokesman for the moderates and over the past two years has appeared to have gained considerable power at the expense of Le Duan. Le Duan, on the other hand, holds the powerful post of party first secretary and he will be eager to replace Thanh with another militant on whom he can count for strong support.

11. If Thanh is not immediately replaced, his loss could affect the relatively even balance in the politburo. With Thanh alive, the 11-man politburo was probably divided evenly along militant/moderate lines with five militants, five moderates, and Ho Chi Minh standing above both groups as final arbiter. Although not all issues find the politburo divided clearly along militant/moderate lines, such a division is believed to be characteristic of many of the important decisions that the leadership has made in pursuing its national objectives.

12. The politburo could be expanded by the addition of one or several members. Alternate politburo member Van Tien Dung is the most likely candidate to be elevated to full politburo status. General Dung, however, is regarded as a Giap man, and his status as a professional military man might work against him. The party would not want to weight the politburo too heavily with military members.

13. Several other central committee members present themselves as likely candidates for politburo membership by virtue of their active and prominent roles in party affairs. To Huu is a possibility because of his position on the party secretariat. He would probably satisfy Le Duan's requirements for a hardliner. Xuan Thuy, the director of the party's foreign relations department, although removed as minister of foreign affairs a few years ago for reasons of health, has become extremely active in foreigh affairs again and could be considered politburo material. He has appeared to take a hard line in the past on relations with the Soviet Union, but as foreign minister he was also close to Pham Van Dong, suggesting that he might make a good compromise candidate.

Prospects

14. A possible solution for the replacement of Thanh would be to divide up his several responsibilities among both militants and moderates. This is the kind of solution which might appeal to Ho Chi Minh, who likes to keep a balance between the two wings of the party. Such a solution might also appeal to the moderates who would see it as cutting down militant strength to some extent. There is currently some question, however, as to Ho's health and his ability to deal effectively with major problems. Ho has only made two public appearances since 15 March, once in late April for a local election and again on 7 July for Nguyen Chi Thanh's funeral. Several recent travelers to Hanoi have been told that Ho is ill and cannot receive visitors.

15. Ho's illness may be only temporary. If, however, he should become incapacitated and unable to carry the weight of arbitrating between the competing elements in the party leadership, a struggle for power might well ensue. The two major contenders for power would probably be Pham Van Dong and Le Duan. There have been some indications over the past two years that these two men hold differing views on the proper tactics to be used in regard to the war, although both men appear to share the same goal, eventual control of South Vietnam. Pham Van Dong appears

to have greater confidence than Le Duan in the use of negotiations as a tactic in gaining control over the South whereas Le Duan seems to put more stock in the purely military aspect of the struggle. The man or men chosen to replace Nguyen Chi Thanh may provide some hint as to the relative strengths of the two men and their supporters.

Document # 1

NORTH VIETNAMESE ARMY CHIEF OF STAFF VAN TIEN DUNG ON DRV MILITARY STRATEGY

An article by North Vietnamese Army Chief of Staff Lt. Gen. Van Tien Dung, published in the June magazine of the DRV army organ QUAN DOI NHAN DAN, presents an analysis of the air-defense war which is notable for its directness and detail. Dung echoes his past articles in vigorously defending Vietnamese "people's war" tactics. He describes foreign assistance as "very important" and says it has never been so great, but he argues forcefully against uncritical acceptance of foreign military doctrine or dependence on modern weapons alone. The article is generally consistent with positions Dung has taken before on foreign aid, modern weapons, and indigenous military theory; what prompted the exposition of his views at this time and, specifically, what bearing the article may have on developments in DRV relations with the Soviet Union are left unclear.

Dung's article is also notable for its emphasis on the close link between the war in the North and the war in the South. Dung insists that the "war of destruction" against the North will end only after the "war of aggression" in South Vietnam is completely defeated--a thesis only rarely voiced by DRV leaders in the past. Dung's stress on this point now raises questions about his attitude toward DRV Foreign Minister Nguyen Duy Trinh's suggestion last January that U.S.-DRV talks might follow a halt in the bombing.

Hanoi media gave Dung's article extensive publicity, broadcasting it in installments in the domestic service from 13 to 16 June. NHAN DAN published it on the 15th and 16th, and the VIETNAM NEWS AGENCY transmitted it on 28 and 29 June. Prior articles by Dung publicized in Hanoi media since September 1964 are listed in the appendix to this report.

CALL FOR BASIC RELIANCE ON PEOPLE'S WAR, BACKED BY BLOC AID

In his latest article Dung repeats the standard DRV position that North Vietnam must rely mainly on its own strength in the war, while at the same time "striving to struggle for international assistance." The DRV's response to U.S. air attacks, according to Dung, has been based on the traditional Vietnamese strategy

APPROVED FOR RELEASE
DATE: JAN 2001

of people's war. He maintains that the party's "creative application" of people's war in the new circumstances of the "war of destruction" has not only marked an advance in the party's theory of people's war but has also "brought some sharp changes in current military theory applied by many developed countries of the world today--especially the theory concerning the role of an air force, missiles, and various means and methods against modern weapons and means."

Dung asserts that while "reality has shown that we must and can, to a limited extent, equip our people's armed forces with modern weapons and means such as jet aircraft and missiles," at the same time it has also demonstrated that "jet aircraft and missiles are not omnipotent" or suitable to all conditions. Therefore, he says, the party has not just built up its air force and missile units but has developed air-defense artillery of all sizes and has enhanced the effectiveness of infantry arms to cope with U.S. planes. He adds polemically that "this is not an unusual phenomenon, but for some time and even today it has caused great surprise to many military theoreticians who have blindly revered modern weapons and techniques."

Dung claims not only that the DRV has developed an original strategy of air defense, but that the DRV armed forces have created "efficient, clever, and versatile" combat methods and tactics. "Even our air force and missile units," he says, "can creatively develop our original Vietnamese combat methods which are suitable to Vietnamese conditions and are not dogmatic and imitative." Dung does acknowledge that the armed forces have "learned the techniques and experience of the fraternal countries," and he says "we must study and grasp some scientific and technical knowledge to be able to properly use the new weapons and methods." But he argues that "the basic problem deciding the success of air defense lies first of all in the thorough understanding and execution of the party's guideline on the direction of people's war with a view to creating original offensive and defensive methods for our air-defense forces."

A 19 December 1964 NHAN DAN article had contained one of Dung's most extensive defenses of traditional Vietnamese military doctrine against unnamed domestic and foreign opponents who, he argued, put undue emphasis on the DRV's need for modern weapons. In the 1964 article Dung pointed out the need to modernize the DRV armed forces, but his main quarrel was with those who "advocate purely military and technical actions, praise modern techniques and weaponry, and reduce the importance of the political factor, the

morale factor, and the masses." He was particularly critical of those who rejected Vietnamese experience and sought guidance from foreign military doctrines.

In his 1964 article--written prior to the air war and the inception of large-scale bloc military aid--Dung expressed much stronger opposition than he does in his more recent writings to reliance on foreign countries for weapons as well as strategy. Rather than acknowledging, as he does now in effect, that socialist countries will help supply necessary modern arms, in 1964 he advocated reliance on the DRV economy "to solve the problems of weaponry and armaments for our army." He explained that "with the spirit of self-reliance and self-sufficiency, and with the help of socialist countries, we are gradually realizing the socialist industrialization of our country in North Vietnam" and that "our industry will create the conditions under which it can supply and modernize our army."

Dung's December 1964 article seemed pointed at the Soviets, appearing a month after Pham Van Dong's visit to Moscow to meet the new Soviet leaders and two months before Kosygin's visit to Hanoi for talks on Soviet-DRV relations and Soviet assistance. But he also directly reprimanded Vietnamese "comrades" who "follow the fighting techniques of an army which is well equipped with modern weapons" and who are therefore "busy with calculations of how to fire a gun, how to calculate the force of a main army in the confrontation with another main army, and so forth." He condemned them for "failing to see the realistic economic, topographical, material, and technical factors in using weapons and armaments of our own army and forces" and for "wanting to use the fighting standards of a foreign regular army and apply them to our army, and hence neglecting our own precious experiences of the past and the present in South Vietnam." While admonishing that "we should learn from the experiences of our fraternal armies," Dung said the learning should be "selective."

In the more than two years since the start of the U.S. air strikes at the DRV, Dung has--though with less candor and less polemically than in his latest article--discussed the question of the role of modern weapons and laid claim to the use of "unique" Vietnamese air defenses. For example, in a 5-6 August 1965 NHAN DAN article he reasoned as follows in explaining why a relatively weak North Vietnam was able to "defeat" the United States' modern tactics and technical means:

> Our armed forces and people have heightened the absolute revolutionary spirit and have used the collective strength and collective intelligence to discover and apply the highly skillful, creative, and clever tactics that are unique to Vietnam. These tactics rely on the strength of the combative spirit and have fully used and developed to a high degree all kinds of our weapons and means to limit the strong point and exploit the weak point of aircraft, warships, and various kinds of modern techniques, such as the U.S. Air Force's guided missiles.

In an article in the February 1966 HOC TAP Dung also alluded briefly to the dangers of dogmatism in military doctrine, declaring that "it is necessary to base oneself continuously on the principle of using a weak force to defeat a stronger one and to overcome all tendencies to rely on weapons, to use a strong force to strike at a strong force, and to apply fighting techniques mechanically and dogmatically." In the same article Dung compared the party's "military science of people's war" with the United State's "rotten bourgeois military art" and claimed that it was the "science" of people's war which allowed DRV pilots with no previous combat experience to down U.S. planes and helped the militia shoot down U.S. jets with rifles.

ANALYSIS OF THE U.S. WAR AGAINST THE NORTH

Maintaining that successful prosecution of the war depends upon a correct understanding of the enemy's plans and capabilities, Dung proceeds to discuss the U.S. position in some detail. In general terms, he says that since the United States is fighting an "unjust" war against an independent country belonging to the socialist camp, it has become "politically isolated" and has been forced to limit its military actions and to resort to "deceptive political and diplomatic tricks." In fact, he says, the "basic weakness" of the U.S. Air Force is its inability to "freely develop its strength," which is "restricted" by the political isolation of the United States. While Dung does not spell out the view that the United States is inhibited by the power of the bloc, he suggests this in stating that "the present balance of the international forces" is one of the factors forcing the U.S. Air Force to "escalate step by step" and preventing it from "attacking the North massively and swiftly through strategic, large-scale, and surprise bombing."

Dung also cites the DRV's "strong resistance" and alleged limitations on the U.S. military capacity as factors inhibiting the U.S. air war. He repeats the optimistic view, periodically expressed in DRV statements, that the number of U.S. aircraft is "limited, aircraft losses have surpassed productive capacity, ...the number of bombs and shells is insufficient, ...professional pilots have gradually been lost and the shortage of pilots has become serious, and, in particular, the U.S. Navy has to employ the pilots of the U.S. strategic defense forces... ."

Dung had addressed himself to similar questions in his August 1965 NHAN DAN article and concluded, among other things, that

> the U.S. imperialists have the habit of boasting that they are rich in money, weapons, ammunition, and planes. But their Strategic Air Force is limited. The U.S. imperialists' losses in planes and pilots have reflected their heavy defeat in the military field.

LINK BETWEEN THE WARS IN THE NORTH AND IN THE SOUTH

In his latest article, Dung says more explicitly than he has in previous writings that there will be no end to the air strikes against the North until after the United States is completely defeated in the South.* Since the "enemy" has not "resigned himself to being defeated in the South," the argument runs, "he certainly does not yet renounce his plots and acts of destroying the North." Dung's past writings have reflected the view that the war in the South governs the course of U.S. actions against North Vietnam and have conveyed strong opposition to any tendency to divorce the two conflicts. In his article published in NHAN DAN 5-6 August 1965, Dung said that along with fighting in the North, "wholehearted support" should be given to the South and that the defeat of the United States and "liberation of South Vietnam" would bring about the defeat of the U.S. war against the North.

Dung maintains in his latest article that the problem of insuring communications and transportation is the "central task" of all the

---

* This position has rarely been spelled out by DRV leaders. It was, however, taken by DRV Defense Minister Vo Nguyen Giap in an article for the October 1965 issue of the party journal TUYEN HUAN (PROPAGANDA AND TRAINING), as well as by Hong Chuong, editor of the party theoretical journal HOC TAP, in a September 1965 HOC TAP article.

party and people. And he claims that "in defiance of enemy attacks, we have considerably increased the assistance of the great rear to the great front... ." North Vietnamese spokesmen rarely claim so directly that the DRV is increasing assistance to the South. For example, an article under the pseudonym Truong Son, also published in the June 1967 QUAN DOI NHAN DAN magazine, attributed to Western news reports the statement that North Vietnam was giving "greater and more effective assistance" to the South. And an 18 April 1967 Lao Dong Central Committee circular for May Day, published in NHAN DAN on 23 April and carried by VNA on the 28th, said somewhat ambiguously that "in North Vietnam the armed forces and people are... increasing their economic and national defense potential to defeat the U.S. war of destruction, and at the same time are making every effort to increase the forces for the South Vietnam revolution."

In his 19 December 1964 NHAN DAN article, Dung had attacked opponents who he apparently believed were too concerned with the safety of the North and who may have counseled against too great involvement in the South. Dung declared then that

> we oppose those who want peace but who refuse to countenance war; those who only consider the situation of North Vietnam without considering South Vietnam, too; those who only see the rear without seeing the front also; and those who only pay attention to building up and training the army without grasping the notion that the army must be ready for combat and must also fight hard. We should criticize and overcome attitudes which reflect pacifism and relaxation in combat determination and readiness and vigilance.

ATTACK ON "PEACE ILLUSIONS," FORECASTS OF MILITARY VICTORY

Dung's stress on the notion that the "war of destruction" will end only when the Americans are defeated in the South seems incompatible with the 28 January suggestion by DRV Foreign Minister Nguyen Duy Trinh, in his response to a question from Australian journalist Wilfred Burchett, that U.S.-DRV talks might follow an unconditional halt in the U.S. air strikes against the North. Dung says "we must never slacken our vigilance, we must combat all illusions and tendencies toward taking temporary action and adopting a wait-and-see attitude, and we must protect and strengthen our forces...in order to conduct a protracted fight." In a preceding passage, Dung says that "recently the enemy at times has de-escalated, and in the future he may at times de-escalate, and he has also stopped

bombing at various periods." And he goes on to claim that the "enemy," because of his military setbacks, was forced "to conduct psychological warfare and to spread the illusion about peaceful negotiations."

Dung's remarks may simply reflect a difference in emphasis, deriving from his role as a military leader, rather than indicating opposition to Foreign Minister Trinh's suggestion. It could be argued that Trinh's proposal was merely a gesture aimed at world public opinion and that the DRV leadership was in basic agreement in assuming that the United States would not stop bombing the DRV while the war continues on its present course in the South. But the thrust of Dung's remarks seem polemical; and it should be noted that his writings have consistently warned against "illusions" about negotiations and have stressed, more than is usual in DRV statements, that a military victory over the United States is possible. One of Dung's bitterest attacks on the idea of negotiations was in his August 1965 NHAN DAN article:

> U.S. military activities can intimidate only chicken-hearted people. Their "good will for peace" can deceive only those who do not have a revolutionary spirit or have a semirevolutionary spirit, but cannot deceive and intimidate our people who know too well the intimate thoughts of the imperialists and who have gloriously defeated any aggressor. At this time, to let ourselves be trapped by the "peace negotiations" of the Americans is to let them continue to massacre our people, partition our country forever, and prepare for further enlarging the war.

While this statement does not rule out negotiations at some later date, subsequent articles by Dung seem in effect to foreclose the possibility of a negotiated settlement at any time by stressing that the communists can win a military victory in South Vietnam. This view had been expounded by Dung in an article in the 17 March 1966 QUAN DOI NHAN DAN, broadcast in the domestic service on 20 March and belatedly transmitted by VNA on 21 May. Dung contended in that article that the South Vietnamese "army and people" had created "dependable conditions" which would "lead to a military victory...under any circumstances." The article was devoted to an analysis of the balance of forces in Vietnam contrived to prove this point, and it concluded that confidence in Vietnamese ability to defeat the United States both militarily and politically "is firmly based on scientic knowledge and has been confirmed by facts."

Dung expressed similar views in an article in the party journal HOC TAP in April of this year. Asking rhetorically whether the Vietnamese "people" would defeat the United States militarily, Dung stated that "the military victories of the people's war in the South and throughout the country have made it unmistakably clear that in Vietnam the U.S. imperialists have sustained and are sustaining heavy military defeats and will surely face complete defeat." He added that the Vietnamese experience demonstrated a "truth of our era": that a small nation "is fully able to defeat U.S. imperialism militarily... ."

Dung's insistence that air strikes will end only with a U.S. defeat in the South comes against the background of periodic repetitions in Hanoi propaganda of the Trinh formula linking a cessation of bombing with possible U.S.-DRV talks. The formula appeared most recently in VNA's 6 June account of a 29 May Trinh interview with Japanese journalists.* Most notably, the editorial in the April HOC TAP--on the occasion of the second anniversary of the DRV's four points--quoted Trinh's statement and declared that it "clearly repeated the unchanged stand of our government and people and reflected our government's good will for peace." An article by Trinh in the same issue of the journal did not directly spell out the substance of his January remark, but Trinh complained that the United States was calling for reciprocal action before it would agree to stop bombing, despite the fact that "on 28 January we pointed out once again our extremely correct stand and attitude." Trinh's remarks in the HOC TAP article on the efficacy of negotiations under proper circumstances stand in sharp contrast to Dung's stress on a military victory. Trinh wrote:

> When the time and place for peace negotiations are right, the revolutionary vanguard must weigh and skillfully coordinate various aspects of the struggle for peace. As Lenin taught us, it is necessary to have a clearsighted patience and to be extremely objective, to ponder many factors at home and in the world, and, at the same time to take into account also the experience acquired by various revolutionary movements.

Dung's statement in his latest article that "the military, political, and diplomatic offensives of the people's war in both parts of

---

* DRV media have not mentioned an interview with a correspondent of the Austrian CP organ VOLKSSTIMME, published in the 2 July issue of that paper, in which Trinh is reported to have recalled the formula.

our country are coordinated more and more smoothly and closely, and have developed vigorously," seems noteworthy in the light of differing treatments of Trinh's January formula in North and South Vietnamese communist media. The South Vietnam Liberation Front did not acknowledge the substance of Trinh's proposal. On 31 January VNA carried a LIBERATION PRESS AGENCY interview with Vice Chairman of the NFLSV Central Committee Presidium Huynh Tan Phat in which Phat purported to support Trinh's statements but in fact completely ignored the exchange on U.S.-DRV talks. The only known appearance in Front propaganda of the formula linking DRV-U.S. talks with the unconditional cessation of the air strikes was in Liberation Radio's broadcast of the text of Ho Chi Minh's February letter to President Johnson. Front comment on Ho's letter did not raise the question of negotiations.

SOURCE: [redacted]

1. Summary: During the period 30 December 1965-17 April 1967, the Viet Cong (VC) in Binh Long Province had five prison camps known as B5, B4, B3, B2 and B1. The first camp, B5, appeared to be a holding area where a prisoner's disposition was decided. In camps B4 and B3, interrogations were conducted. At B2, the final decision was made as to whether a prisoner was to be executed or released. A prisoner slated for release was then moved to B1, where he underwent daily indoctrination and had to sign a statement that he would keep secret everything he had seen. All five camps were composed of thatched huts and were well guarded. There was no indication that any of the five camps held American prisoners.

2. During the period 30 December 1965 - 17 April 1967, the Viet Cong (VC) in Binh Long Province appeared to have a system of handling prisoners of all categories that involved the use of five successive detention camps designated B5, B4, B3, B2 and B1. Each camp served a specific function and prisoners were moved from one camp to the next one in accordance with what appeared to be a standardized system. The specific functions of the individual camps were the following:

CS-311/07913-67

a. The first camp into which a prisoner was introduced was Camp B5, located 15 kilometers southwest of Tay Ninh City (exact location unknown). The initial decision concerning the prisoner's disposition probably was taken here. After an undetermined period of time, the prisoner would be transferred to Camp B4.

b. At Camp B4, the prisoner was interrogated frequently, usually about the same subjects, namely, personal background, American and Vietnamese intelligence services worked for, etc. Prisoners were sometimes tortured and were forced to dig trenches and foxholes around the prison compound. The camp was located at approximately XT 905967 and consisted of six thatched houses, each 5 x 10 meters in size and housing 46 prisoners, guarded by about 70 VC. The prisoners were mainly Montagnards, Cambodians and Vietnamese.

c. At Camp B3, located at approximately XU 887034, prisoners underwent further interrogation. The camp consisted of nine thatched houses and was the strongest of the five in terms of defensive positions. Three trails were used to reach B3: one from Loi Minh Hamlet, one from Tra Thanh Village, and the third from the Song Be River, which forms the natural boundary between Government of Vietnam Phuoc Long and Binh Long Provinces. All other trails leading to B3 were mined and/or trapped with spike pits. Normally, about 90 VC were stationed permanently at the camp, but, on occasion, there were as many as 800. One prisoner succeeded in escaping from B3 but was shortly recaptured and killed by the VC.

d. Camp B2 was located at XU 906107 and was where a prisoner's final fate was decided, that is, whether he was to be released or executed. Before any prisoner was executed, his crimes were announced publicly to the other prisoners. Three Vietnamese prisoners were executed in October 1966, one of them a former candidate for the National Assembly. At B2, all prisoners were kept in their cells at all times; like Camps B4 and B3, B2 held approximately 46 prisoners. The permanent guard force was composed of between 150 and 200 Montagnards.

e. If it was decided to free a prisoner, he was then transferred to Camp B1, located at XU 980111. He remained here for an indeterminate time, during which he was subjected to daily indoctrination and was finally forced to write a declaration stating that he would keep secret after his release everything he had seen. As the final step, the prisoner was led to Tra Thanh Village, where he was set free. At B1, 32 prisoners were confined in 26 thatched houses. An estimated 150 VC were in the camp. On occasion the camp served as a temporary base for regular units moving through the area. Once, about 1,500 VC troops camped there for the night.

[redacted] Comment: It cannot be determined from Source's comments if this procedure was standard for handling all VC prisoners or if Source's experiences were unique. Source was also unable to identify the particular point at which each prisoner is introduced into this VC penal system. At no time during the 17 months he spent in the five camps described did he see any American prisoners.

SC NO. 08720/67
26 July 1967

MEMORANDUM

SUBJECT: Preliminary Assessment of 19 and 20 July 1967 BLACK SHIELD Photography

Summary

Two BLACK SHIELD missions flown about 24 hours apart on 19 and 20 July obtained cloud-free photography of about 80 percent of North Vietnam, including most of the high priority surface-to-surface missile search areas, much of the North Vietnamese air defense system, and many US strike and interdiction target areas. No evidence of surface-to-surface missile deployment was detected.

Note: This memorandum was prepared by the Directorate of Intelligence with the assistance of the Directorate of Science and Technology.

1. Mission 6709 on 19 July obtained photography of about 75 percent of North Vietnam, including the southern DRV down to the DMZ and the Hanoi-Haiphong area. Weather conditions were excellent with the exception of a few scattered areas. Mission 6710 on 20 July covered the DMZ and the area to the north, the Hanoi-Haiphong area, and parts of the Sino-DRV border. Light to heavy haze and cloud cover hampered intelligence exploitation of the 20 July photography, however, expecially in the Sino-DRV border area. (A [redacted] U-2 mission over South China on 20 July provided some coverage of the border, however.)

EO 12958
3.4(b)(1)>25Yrs
(T)

2. No evidence of surface-to-surface missile deployment was obtained by either BLACK SHIELD mission. The two missions covered most of the high priority MRBM search areas west and north of Hanoi and the tactical and coastal defense missile search areas in the southern and central DRV.

3. North Vietnamese air defenses: The mission of 19 July photographed 166 of the almost 200 usable surface-to-air missile (SAM) sites, including four new sites in the Yen Bai area. Of the 137 sites which could be read out, 12 were occupied (including 2 new ones), 124 were unoccupied, and one near Yen Bai has been returned to cultivation. The mission of 20 July covered 80 SAM sites, including two new ones (one occupied) in the Haiphong area. Five sites were occupied, 63 unoccupied, and the occupancy of 12 could not be determined.

4. The level of SAM site occupancy falls slightly below our estimate that the North Vietnamese have between 25 and 35 SAM firing battalions, but we cannot tell how many units may have been shifting locations at the time of the photography. Previous BLACK SHIELD missions have photographed up to 20 firing battalions at one time, [redacted]

EO 12958
3.4(b)(1)>25Yrs
(T)

5. The two missions together covered the seven major North Vietnamese airfields, but a firm air order of battle (AOB) cannot be derived because

weather conditions and variations in flight paths prevented simultaneous coverage of all seven. Despite these limitations, it appears that the current estimate of fighter strength is fairly accurate. The photography revealed that the mix of fighter types is somewhat different than we have been estimating, however. For example, 10 MIG-21 and 25 MIG-15/17 fighters were photographed on the 19th. Our estimate as of that day was that a total of 29 fighters remained in the DRV--16 MIG-21s and 13 MIG-15/17s.

6. On the basis of this photography--and taking account of subsequent losses as well as aircraft airborne at the time of the photography--it appears that there are now between 25 and 35 jet fighters stationed in the DRV. Of these, at least 10 are MIG-21s.

7. Bomb damage assessment (BDA): The two missions obtained extensive coverage of targets of the US strike effort in North Vietnam. All 23 of the targets being followed at first priority in CIA's BDA studies were covered, as well as nearly all of those being followed at second priority.

8. Coverage of the Hanoi power plant provided the best photography since the US strike of 10 June. Repair work is under way on both the damaged boilerhouse and the control building. The photography confirmed damage to three boilers which supplied steam for about half the generating capacity. Excellent photography of the Nam Dinh powerplant revealed destruction of the coal processing building in a strike on 26 June. Cumulative heavy damage to this facility will probably prevent even partial operation for at least six months. Coverage of the Ben Thuy powerplant showed no change since May, indicating that air strikes in early July inflicted no significant additional damage.

9. Transportation: As in previous BLACK SHIELD missions, wide coverage of rail and road transport routes and facilities was obtained. Detailed analysis of key targets such as bridges and rail yards is under way to assess the current status and

serviceability of the North Vietnamese rail system. Good coverage of the major rail lines between China and the DRV has provided information for analysis of the level of rail transport activity and the inventory of rolling stock available in the DRV. Although the coverage was extensive, however, the resolution is not good enough to determine the extent of the present program to equip the North Vietnamese meter-gauge railway system with an extra track to accommodate Chinese standard-gauge rolling stock.

10. Haiphong--the major ocean port of entry--was covered, but haze hampered analysis. Pinghsiang, the major Chinese storage area and transportation hub near the northeastern DRV border, was photographed, but scattered clouds prevented a complete count of trucks and rolling stock.

11. Chinese activity in North Vietnam: A figure-8 driver training course was observed for the first time near the area of military camps and storage facilities probably built by Chinese engineers in the Lao Cai area at the northwest Sino/DRV border. The course, which is probably designed to train cargo truck drivers, is similar to other courses in North Vietnam and south China. Interrogation reports have mentioned North Vietnamese truck driver students being sent to south China for training. It is possible that this training is now being carried out in the sanctuary zone of northern North Vietnam.

SUMMARY

Source saw a captured American pilot near HAI PHONG city in November 1966. Source spoke with the three security men guarding the American prisoner and learned that he was being taken to HANOI to be detained with "600" other American prisoners who were being detained in a four-story building. These security guards stated that the American POW's were being well cared for and were receiving the equivalent of "a general's ration." Source could provide no additional data regarding the POW's.

1.3(a)(4)

1. Source saw a captured American pilot (not handcuffed) riding in a jeep accompanied by three security guards near HAI PHONG City in November 1966. The pilot had been flying a jet when he was shot down, but Source did not know the type of aircraft.

2. Source described the American pilot as Caucasian ("He had pink skin.") and having light blue eyes. He did not know the name or rank of the prisoner.

3. From the security guards, Source learned that the pilot was being taken to HANOI to join "600" other American prisoners who were being detained in a four-story building. Source did not know the location of the building but stated that the top three floors were for American POW's and the bottom floor for the guards. The security guards also stated that the American POW's were being well cared for and were receiving the equivalent of "a general's ration."

4. Source could provide no additional data regarding the POW's.

Northeast Thailand

Insurgency in parts of northeast Thailand—the Khorat Plateau—is the most recent development in a long history of political disaffection between the people of the northeast and the central government in Bangkok. Communist exploitation of this disaffection was attempted as early as the late 1920's, when branches of the Vietnamese Communist Party were established in the towns of Nong Khai and Khon Kaen. Since then subversive activity has waxed and waned and has been repressed repeatedly by the central government. Armed insurgency increased markedly in late 1964 and early 1965, after two Chinese Communist-oriented Thai front groups—the "Thailand Independence Movement" (TIM) and the "Thailand Patriotic Front" (TPF)—were formed in Peking. Thai insurgents are being indoctrinated in Communist China and trained in North Vietnam.

Three factors have traditionally fostered the development of dissidence in northeast Thailand: 1) the physical isolation of the region from the remainder of Thailand in contrast to its relatively easy accessibility to Laos, 2) the failure of much of the population to identify with the central government in Bangkok, and 3) the relative poverty of a rural population living in a precarious agricultural environment. The Thai Government is devoting increased attention and resources to the task of counteracting these problems.

Location and Transportation

Northeast Thailand covers some 70,000 square miles and comprises about one-third of the entire national area. About 10 million people, one-third of the total population of the country, live here. The region is strategically located relative to Indochina. Imports to Laos from overseas move through the port of Bangkok and across northeast Thailand to their destination. In the present conflict the area serves as a logistical base and as an "aerial back door" for planes flying to Vietnam. Dry and wet season route capacities and the location of selected airfields are shown on Map 58654.

The region is a plateau physically separated from Bangkok and the rest of the nation by a mountainous escarpment consisting of the north-south trending Thiu Khao (mountain range) Phetchabun and the east-west aligned Thiu Khao Phanom Dongrak. At the right-angle junction of the two ranges, some 75 miles northeast of Bangkok, the elevation is over 4,000 feet; the average elevation throughout the mountains is about 2,000 feet. These mountains are formidable obstacles to surface movement either from the lowlands of central Thailand or from locations in southeast Thailand, such as the port area of Sattahip. Villages on the plateau also are largely isolated from one another. Although the monotonous, almost flat surface offers few physical obstacles to road-building other than streams which must be bridged, many of the estimated 15,000 villages are connected to one another or to distant roads only by oxcart tracks that may become almost impassable in the rainy season.

The Thai Government has taken important steps to breach the isolation of the plateau. In 1958 it completed the Friendship Highway from Sara Buri in the central valley to Nakhon Ratchasima (Khorat) and subsequently it extended the road northward to Nong Khai. The eventual completion and improvement of the road system from the strategically important Sattahip-U Taphao (the new B-52 airfield) complex to Nakhon Ratchasima, as well as the construction of two roads into the northwestern part of the plateau (the roads from Lom Sak in the central lowlands to Chum Phae and Loei, respectively), will also help tie the plateau to the lowlands. Under the Thai 7-year highway development plan, 1965-71, a new first-class highway will replace the road from Udon Thani (Udorn) via Sakon Nakhon to the province (*changwat*) of Nakhon Phanom; a road will also be constructed along the Mekong border area from Nong Khai to the province capital at Nakhon Phanom. Both of these roads are under construction. A new road will connect Nakhon Ratchasima with Ubon Ratchathani (Ubon or Ubol) and the present road between Roi Et and Ubon Ratchathani will be improved to make it an all-weather, first-class highway. Many secondary roads connecting isolated villages in security-sensitive provinces are being planned and constructed under accelerated programs.

Rail and air transport facilities are also being improved. The rail line from Bangkok bifurcates at Nakhon Ratchasima and extends northward to Nong Khai and eastward to Warin Chamrap, the rail station for Ubon Ratchathani. Civil airlines link Bangkok with most major towns on the plateau.

Population

Cultural differences and, frequently, very parochial loyalties, in addition to the physical isolation of the area, seem to be paramount in the failure of the plateau population to identify with the central government. The environment of central Thailand, particularly that around the great urban center of Bangkok, comes as a cultural shock to the many peasants from the northeast seeking temporary work in the city. Bangkokians look down upon the northeasterner as a rustic bumpkin who cannot even speak "proper" Thai; he therefore finds it difficult to identify with them. In contrast, the peasant who seeks temporary work in Laos encounters a culture, society, and language much like those of his home community. Thus in some ways his identification is easier with the Lao than with the central Thai. This cultural affinity has led to some ill-organized separatist movements in the past and to the fear in Bangkok that Communist elements would try to exploit these sentiments to undermine the control of the central government over the Khorat Plateau.

Although the peasant in the northeast tends to relate to the Lao, it seems more realistic to characterize both his cultural identity and loyalty as localism, which is often defined by the village limits. Such attitudes are being discouraged by Thai Government programs such as radio broadcasts which encourage the villager to transcend local orientations and to identify with wider segments of the northeast. As a consequence of these efforts, a sense of regionalism epitomized by the term "isan" is appearing. Isan denotes to the Thai that which is distinctly associated with the northeast, as contrasted to the interests and goals of central Thailand. Isan identity, however, does not necessarily imply rigid distinction between the northeast and central Thailand. The "Thai way" does have certain attractions for the northeast villager, and greater acculturation will probably be achieved through government programs. A growing number of northeasterners are being accepted in Thai

This memorandum was produced by CIA. It was prepared by the Office of Basic and Geographic Intelligence and coordinated with the Offices of Current Intelligence, National Estimates, and

The traditional lack of national identification in northeast Thailand is complicated by the presence of several minority groups. Major minorities and their estimated numbers include the Cambodians (200,000), Kuis (80,000), Phu Thai (100,000), and Vietnamese (35,000). The degree to which these groups have been assimilated to the predominant culture of northeast Thailand varies, but very few of the people identify with Bangkok. Only the Vietnamese are considered to be security problems or disruptive forces, and the central government has registered most of them.

The Cambodians generally retain their own language and to some extent their culture. The Kuis (more commonly known as the Soai) and the Phu Thai, tribal peoples who share in the common pattern of life in the northeast, are very much aware of their distinctive identity. They tend to marry within their own groups and often feel both envy and hostility toward the central Thai.

Of the more than 70,000 Vietnamese estimated to have resided in Thailand before 1959, some 35,000 were repatriated to North Vietnam between 1959 and 1964 by agreement of the two governments. Approximately 30,000 Vietnamese are still in Thailand, and about 30,700 of the estimated 35,000 on the Khorat Plateau are government registered (see Map 56655). The majority are not overtly militant, but they are subject to North Vietnamese influence and are a thorn in the side of Thai security.

Geo-Economic Factors

The poverty of the area is essentially a rural phenomenon. The average income of the northeastern peasant is only about 60 percent of that prevailing in rural areas elsewhere in the country, whereas the income of the townsman here compares favorably with that in other towns of Thailand. The distribution of income also is uneven among the rural population. Those comprising the uppermost 2 percent of villagers in the northeast are reported to receive 10 times as much cash income per capita as the 78 percent in the lowest income category. Farmers in the latter group average only $15 annual cash income per capita; the inclusion of in-kind income would considerably raise this figure. A United States Operations Mission (USOM) advisor has observed, however, that the villager in northeast Thailand, although poorer than his counterpart in central Thailand, is better off materially than the vast majority of people in many other parts of Asia. A survey of village attitudes in northeast Thailand conducted in the spring of 1966 produced the surprising response that most villagers rated themselves "reasonably well off" rather than "poor."

More than 90 percent of the economically active population derives its livelihood from agriculture, with over 80 percent of the cultivated land in most northeastern provinces devoted to rice production. As in the rest of Thailand, rice is the most important crop, but the yield is poor. In 1966 rice production averaged only 964 pounds per acre in the northeast compared to 1,523 pounds per acre in the central lowlands. Exacerbating the situation is the high nutritional population density (the number of people per square mile of *cultivated* land)—567 in the northeast compared to 463 in the

NND 941536 — 3715

The poorer yield of rice in the northeast is explained largely in terms of the natural environment. The bordering escarpment intercepts moisture-bearing winds from the southwest and creates a rainshadow that reduces both the amount and reliability of rainfall. As a consequence most of the plateau receives far less than the accepted minimum of 70 inches annually that is required for the successful growth of rice in tropical Southeast Asia. Irrigation is therefore required for optimum rice cultivation in the northeast. Only 26 percent of the cropland of the region is irrigated, however, as against 61 percent of the cropland in the central lowland. Generally permeable sandy soils and the relatively level terrain of northeast Thailand restrict the number of locations suitable for sizable reservoirs and hinder the design of effective irrigation systems.

Most low-lying land suitable for irrigated paddy rice is already under rice cultivation. This land is located chiefly in the central and southern provinces, along the Mae Nam (River) Mun and Lam Nam (River) Chi and their tributaries, and generally on the lower slopes but above the valley bottoms, which in many cases are subject to severe flooding. The gradients of rivers on the Khorat Plateau are comparatively low (the main river, the Mun, falls only 300 feet in 250 miles), and runoff is slow. Floodwater arrives so suddenly, is so deep, and remains so long that some of the land otherwise best suited to cultivation cannot be used even for "floating rice," a variety commonly grown in deeply flooded areas.

Most of the area devoted to irrigated rice cultivation is located on the so-called "Roi Et" soils, which are generally acid, sandy loams, giving medium yields at best. Chemical fertilizer most often is a cultural innovation and has seldom been used by the peasant. Further, without heavy subsidization, the peasant rarely has the cash to buy the necessary fertilizer; to remedy this situation the government is encouraging the formation of cooperatives which will furnish loans to the peasant at a minimal interest rate. Outside the irrigated areas, the peasant cannot always be assured of a profitable relationship between fertilizer cost and increased rice yield even though he may be gradually accepting the concept of chemical fertilization.

Deterioration of the natural fertility of the soil has caused rice cultivation to be extended to marginal lands. The movement of people away from the most densely settled areas in parts of the Mun and Chi river valleys (as to new lands in northern Thailand) affords evidence that nutritional density in these areas is becoming critical. Although the potential paddy lands in thinly settled provinces along the Mekong River might support greater numbers, a significant redistribution of the population on the Khorat Plateau in the near future appears to be generally unfeasible in view of the limitations of irrigation works planned for early completion. Projected tanks (reservoirs) and dams will result in complete irrigation systems for only some 10 percent of the present cultivated area. Not until the huge, multipurpose Pa Mong dam of the Mekong Project becomes a reality in the more distant future will it be possible to irrigate a substantial part—an estimated 2 million acres or about 22 percent of the present cultivated area—of the Khorat Plateau. Selected proposed and completed Mekong Project dams are shown on Map 56654.

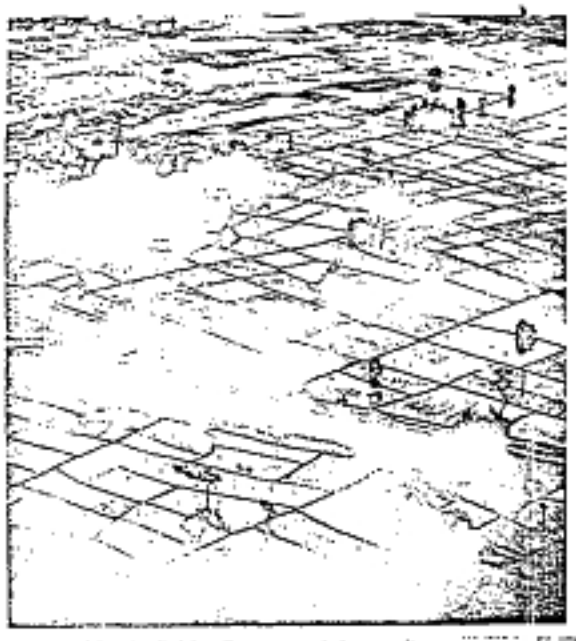
Other than rice, the chief crops grown on the Khorat Plateau are cotton, kenaf (a fiber plant), and maize. These "upland crops" are generally cultivated on higher slopes by peasants practicing a shifting type of agriculture. Slopeland is cleared by cutting and burning the forest, and the crop is fertilized by the residual wood ashes. Plots are normally cultivated for a few years; further use is inhibited by a rapid diminution of yield.

The area suitable for growing upland crops is estimated to be at least twice as large as the area of paddy land. While this shifting cultivation may be acceptable in thinly settled areas where a long period of bush fallow restores fertility, in parts of the central and southern provinces of the northeast the growing population density has progressively shortened the period of natural soil regeneration; as a result, the land is becoming gradually exhausted. An estimated 20 percent of the upland now lies abandoned. The introduction of a system of permanent agriculture to replace shifting agriculture would significantly improve economic conditions in the region.

Future exploitation of mineral resources may help to stimulate the economic growth of the northeast. According to a survey conducted recently by a US Geological Survey team, there are an estimated 78 million tons of copper ore (representing some 660,000 tons of saleable metal) and 27 million tons of iron ore in the province of Loei. Although coking coal resources are lacking, power generated at the planned Mekong Project dam on the Nam (River) Ngum in Laos might permit the use of electric furnaces at a smelter which could be built in the vicinity of Loei. The Khorat Plateau also has one of the world's largest deposits of rock salt; well drillers have encountered layers of salt more than 800 feet thick. The UN Mekong Committee Secretariat is examining the feasibility of establishing a chemical complex, most likely in the province of Chaiyaphum, which could use up to 50,000 tons of salt annually.

Dry paddy ricefields. Termite mounds, front middle-ground, contain more fertile soil than the surrounding paddy. The mounds are truncated and planted to vegetables. Resin, used for torches and for waterproofing boats and baskets, is extracted from the large yang trees in the background. Mound "farming" and extractive activities are evidence of the subsistence farming in which most northeast peasants

NND 941536 --- 37/6



Wet paddy ricefields. Trees are left standing in the fields so that the humus derived from the fallen leaves will enrich the soil, which often tends to be infertile.

Counter-Insurgency Measures

The Thai Government with the advice and aid of various US Government agencies has taken a number of steps designed to strengthen its position in the northeast. Since 1962, civic action programs that stress the improvement of health and educational facilities, well drilling, development of agricultural techniques, and limited road building have been carried on under the aegis of the Mobile Development Units (MDU) in the National Security Command. In 1964 the Accelerated Rural Development (ARD) program was established under the civilian control and guidance of the Committee for Coordination and Operational Planning (CCOP) in an attempt to meet the Communist challenge more effectively. It provides a vehicle for accelerated, sustained followup to MDU area operations and represents a new concept of coordinated and concentrated programing of all rural development efforts in critical areas.

In 1966 the Counter Subversion Operation Command (CSOC), established to coordinate the countersubversion efforts of all Thai Government agencies operating throughout the country, developed the "0910 plan" (name derived from the 1966-67 lunar calendar year 2509–2510). The "0910 plan," commonly known as the "dry season plan" (operations were to be carried out during the winter-spring dry season), abandoned the previously used but generally ineffective large-scale sweeps of suspected insurgent areas by Thai security forces. Instead, it placed 12-man squads and police reinforcements in 250 selected villages, located in 10 priority areas within 7 security-sensitive provinces, with the objective of denying insurgents access to the population and resources. This measure has proved successful in forcing Communist bands to move out of their former strongholds, but as a result they have increased their activities in adjacent areas.

Prospects

The insurgency threat in Thailand is mitigated by major forces for stability that did not prevail in Vietnam, namely, a strong and effective central government, a history of independence of foreign control, a long tradition of reverence for the king and monarchy, almost universal acceptance of Buddhism, and exceptional economic prosperity by Asian standards. It is apparent, however, that these stabilizing forces apply chiefly to central Thailand; a less favorable situation prevails in the rural areas of the northeast. The generally apolitical peasant of the northeast neither commits himself positively to the central government nor shares to any great extent in the benefits of the current prosperity. There appears to be no active widespread disaffection with the government at present, but the Communist cadre, numbering about 1,300 armed insurgents, is attempting to create disaffection through propaganda, often presented at compulsory propaganda sessions in the villages, and through terrorism.

The combined developmental and security programs of the central government constitute a monumental task of social and administrative reform, and one that, if it is to succeed, must persuade the villagers that their aspirations can be better met by the government than by the Communists.

Dense deciduous and evergreen forests on upper slopes of Phu Phan Mountains. These wooded mountains are a core area for much of the insurgent activity in this part of the northeast.
